(W. A. S. KHALIDI)

BAYZARA, (Arabic), denotes "the art of the flying-hunt", and is not restricted to the designation of "falconry". (Its Persian origin (from *bāz*: goshawk; see below) is more closely related to the notion of "ostring art"). Derived from *bayzār*, "ostringer", an Arabicised form of the Persian *bāzyār/bāzdār*, it was preferred to its dual form *bāzdara*; the words *bāziyya* and *biyāza* were scarcely used in the Muslim Occident. The use of rapacious predatories (*kāsir*, pl. *kawāsir*) as "beasts of prey" (*djāriḥ*, pl. *djawāriḥ*) was undoubtedly known to the Arabs before Islam, and Imru' al-Ḳays sketches, in his *ayyam al-ṣayd*, some descriptions of flying-sport. However, hawking only assumed importance with them after the great Muslim conquests which brought them into contact with the Persians and the Byzantines. It quickly won the favour of the new leaders who discovered in it the possibility of diversion and of satisfying peacefully their passion for riding. Caliphs and high Muslim dignitaries were zealous in elevating it, with venery, to the rank of an institution under the direction of a "master of chases" (*amīr al-ṣayd*), and later (*amīr shikār*). The Umayyad caliph Yazīd b. Muʿāwiya (680-83) was one of the first to show an unbridled enthusiasm for the flying-hunt. Historians, biographers and chroniclers in the Arabic language provide information, each according to his own period and country, on the current practice of hawking, and relate for the occasion lively anecdotes of the exploits of certain princes in this field. (see al-Ṭabarī, Ibn al-Athīr, al-Suyūṭī, al-Maḳrīzī-Quatremère, in J. Sauvaget, *Introduct. à l'hist. de l'Orient Musulman*). Much more valuable is the information concerning *bayzara* found in certain encyclopedic works, edited for the purpose of *adab* or philological learning, such as the *K. al-Ḥayawān* of Al-Djāḥiẓ (Cairo 1947), the *Al-Mukhaṣṣaṣ* of Ibn Sīda (Alexandria 1904, vol. viii, and indices by M. Ṭālbī, Tunis 1956), the *K. Ṣubḥ al-Aʿshā* of Al-Ḳalḳashandī (Cairo 1913, vol. ii), the *K. Murūdj al-Dhahab* of al-Masʿūdī.

The Maghrib and Muslim Spain, as well as the Orient, had their enthusiasts for the hawking-sport. In Aghlabid Ifrīḳiya, the governor Muḥammad II (864-75), called not without reason the "Cranesman" (Abu 'l-Gharānīḳ), exhausted the state exchequer with his wild expenses on the "flying-play" (*laʿb*) (see Ibn ʿIdhārī, *Bayān*, trans. Fagnan, Algiers 1901, 147-48). Later the Ḥafṣids, too, were smitten by hawking. Like a Sāsānid prince, Al-Mustanṣir (1249-77) found his pleasure, with the hawk on his fist, in a vast "preserve" (*maṣyad*) near Bizerta (see Ibn Khaldūn, *K. al-ʿIbar*, trans. De Slane et Casanova, ii, 338). In the 15th century his descendant ʿUthmān (1435-88) spent several days a week in this entertainment (see R. Brunschvig, *Deux récits de voyage inédits ...*, Paris 1936, 212). At the Umayyad court in Cordova, the Grand Falconer (*Ṣāḥib al-bayāzira*) enjoyed a high office, close to the ruler (see Ibn ʿIdhārī, *op. cit.*, in E. Lévi-Provençal, Xe s., Paris 1932, 55). The fashion of hawking, widespread in the countries of Islam during the Middle Ages, was the livelihood of a great number of people, and its practice was not limited to the privileged classes, as it was in Christendom. The rural population and the nomads continued to devote themselves to it and preserved the tradition, down to the beginning of the 20th century. From this fact it is easy to evaluate the rôle played by the sporting-bird in Muslim economic life, especially during the medieval period, by the commerce it provoked and the people required for its maintenance. (see A. Ṭalas, *La vie économique aux IIème and IIIème siècles de l'Hégire*, in Arabic in *Madjallat al-Madjmaʿ al-ʿIrāḳī*, 1952, ii, 271-301; al-Djāḥiẓ(?), *K. al-tabaṣṣur, bi 'l-Tidjāra*, ed. H. H. Abdul-Wahab, Cairo 1935 34-35, trans. Ch. Pellat, in *Arabica*, i, 2, 1954, 160-61).

Most often, in fact, the master of the hawk-keepers train was not a falconer in the strict sense of the term, and he only put on the glove (*dastabān*; Maghrib: *ḳuffāz*) during the hunt. The care of the "hawk's room" (*bayt al-ṭuyūr*) was entrusted to hawkers' assistants (*ghulām*, pl. *ghilmān*) who had besides the task of keeping the aviary well provided with pigeons and other game-birds, for the nourishment and training of the hawks. The latter, a technical term of the *bayzara*, necessitated, according to the kind of sporting-bird, the competence of the ostringer (*bāzyār* pl. *bayāzira*. On the preference of *bāzyār* to *bayyāz* see Ibn Saʿīd al-ʿAkfānī, *Irshād al-Maḳāṣid*, 92; the terms *bayyāz, bayyāzī, biyāz, bāziyy, bayzārī* in the general sense of hawker, are Spanish-Maghribī, and frequently give way to *ṭayyār*), or of the falconer (*ṣaḳḳār*); both were often assisted by the *kallābazi*, the master of the hawking-pack who sets his greyhounds (*sulūḳī*, pl. *sulūḳiyya*) on the gazelle or the hare, and the Goshawk, occasionally the Saker Falcon or even the eagle, flying "waiting on" (*ḥā'im*), distances the pack and binds to the quarry.

The traditional classification in the Orient of predatories worthy of training (*ḍarāwa* and *ḍarā'a*), based on the black or yellow colour of the iris denoting remarkable visual powers, corresponds exactly to the modern ornithological system. In fact the "dark-eyed birds" are found only in the *genus Falco*, "*falconidae*", who alone have a black iris. These are "long-winged sweeping birds, "lured-birds, used to "highflying" (the flight of the heron: *balshūn*, of the crane: *kurkī* or *ghirnīḳ*, of crows: *ghirbān*, from time to time the eagle: *ʿuḳāb*, the kite: *ḥidā'*, and the wild water-fowl: *ṭayr al-mā'*). The Arabist is often puzzled by the abundance of terms designating sporting-birds, a such abundance not being due to the multiplicity of types, but to the great variety of adjectives qualifying the innumerable shades of plumage worn by the bird according to its sex, its age and habitat. The Arabs saw several different types when it was only a question of individual birds of the same family, whether immature, young or adult, male or female. One can discover, however, among that accumulation of names

the generic term, with the aid on the one hand of scientific inventories of the avifauna of each country, and on the other, of the descriptions provided by the great Muslim naturalists, such as al-Ḳazwīnī (1203-1283) in his *K. ʿAdjāʾib al-Makhlūḳāt*, al-Damīrī (1341-1405) in his *K. Ḥayāt al-Ḥayawān*, and especially by the authors of cynegetic works (see below).

Thus the *ṣaḳḳār*, falconer, was occupied in training only: a) the Ger-Falcon, *Falco rusticolus*, (*sunḳūr*, *shunḳūr*, *shunḳār*) which, unknown in the Arab countries, had to be imported at great expense from Siberia, and which often figured among the ceremonial gifts upon an exchange of ambassadors; b) the Saker Falcon, *Falco cherrug*, (*ṣaḳr*, *ṣaḳr al-ghazāl*, *sharḳ*); c) the Peregrine Falcon, *Falco peregrinus*, under its three oriental sub-species: *perigrinator*, *babylonicus* and *calidus* (either *shāhīn* or *baḥrī* for the "Passage-Peregrine"); d) the Black-winged Kite, *Elanus caeruleus* (*zurraḳ*, *ṣaḳr abyaḍ*, and Pers. *kūhī*); e) the Merlin, *Falco columbarius aesalon* (*yuʾyuʾ*, *djalam*); f) the Hobby, *Falco subbuteo* (*kawindj*); g) the Kestrel, *Falco tinnunculus* (*ʿāsūḳ*); h) the Lesser Kestrel, *Falco Naumanni* (*ʿuwaysiḳ*); i) the Red-footed Falcon, *Falco vespertinus* (*luzayḳ*) (see A. Maʿlūf, *Muʿdjam al-hayawān*, Cairo 1932, to be consulted with great care in view of the numerous errors in a scientific apparatus so often outdated).

In the Muslim West highflight hawking knew only four *falconidae*: the Saker (*nublī* or *lublī*, derived from the name of the Andalusian town Niebla, which points to a loanword); the Barbary Lanner Falcon, or the "Alphanet" of the Christian falconers, *Falco biarmicus* (*burnī*); the Barbary Falcon, *Falco peregrinus pelegrinoides* (*turklī*); and Eleanora's Falcon, *Falco eleonorae* (*baḥrī*) (see Leo Africanus. *Il Viaggio*, Venice 1837, 166; L. Mercier, *La chasse et les sports chez les Arabes*, Paris 1927, ch. V, *La fauconnerie*, 81-106, and bibl.; E. Daumas, *Les chevaux du Sahara*, Paris 1853, with the *Réflexions de l'Emir Abdelkader*, 359-372). These four falcons are described in the Maghrib as "noble" (*ḥurr*). As for the "yellow-eyed birds", raised only by the *bāzyār*, ostringer, they are the class most used in the hawking-sport. They are all "short-winged soaring birds" or "fist-hawks" trained for "lowflying". This category is composed largely of the genus *Accipiter* or *accipitridae* and includes in some parts of Persia and Turkey the smaller *aquilidae*.

The bird which has enjoyed the greatest favour since remote antiquity and in every country of the Orient is undoubtedly the Goshawk, *Accipiter gentilis*, and its subspecies *Accip. albidus* (either *bāz*, or *shāhbāz*) which, because they do not belong to the avifauna of the Arabic countries, were imported by merchants from Greece, Turkestan, Persia and India; the Maghrib scarcely knew of them. It was believed that the Goshawk was born to the flying art. Its Persian name *bāz*, passed into Arabic before Islam, was applied apparently through ignorance to every sporting bird, and the term *bayzara*, ostring art for the experts, meant hawking in general. Conversely, it was "falcon" which prevailed over "goshawk" in Europe, and "falconry" covered the technique of the ostring art. In the arabisation of the name *bāz*, it was necessary to give it a triliteral root, of which the choice caused some trouble among philologists and lexicographers. Three alternatives were proposed: a) BZW-BZY, giving by derivation *bāzⁱⁿ*, *al-bāzī*, *bāziyy*; pl. *buzāt*, *bawāzⁱⁿ*/*al-bawāzī*, *buzʾān*; b) BWZ-BYZ giving *bāzᵘⁿ*, pl. *abwāz*, *bīzān*; c) BʾZ giving *baʾzᵘⁿ* pl. *baʾzāt*, *abʾuz*, *buʾūz*, *biʾzān*, *buʾuz*, *buʾz*. After the Goshawk, it was the Sparrow-Hawk, *Accipiter nisus* (*bāshaḳ*, *ʿulām*, *ṭūṭ*) and its short-footed subspecies called "Shikra", *Accip. badius brevipes* (*baydaḳ*), which was preferred owing to its docility and the vast area of its distribution; its hen (*ṣāf*) is still used at Cape Bon in Tunisia for flying at the passage-quail in spring (see D. M. Mathis, *La chasse au faucon en Tunisie*, in *Bull. Société Sc. Natur. de Tunisie*, ii, 3-4, Tunis 1949, 107-18 and illustrations; idem, in A. Boyer et M. Planiol, *Traité de Fauconnerie et Autourserie*, Paris 1948, 242-48; L. Lavauden, *La chasse et la faune cynégétique en Tunisie*, Tunis 1920, 20-21; *al-Laṭāʾif*, in Arabic, Tunis, May 1955, 24-27 and illustrations).

As for eagles, they never have had in fact the rank of sporting-birds (*ʿitāḳ al-ṭayr*); however, Persians and Turks trained with success the Crested Hawk Eagle, *Spizaetus cirrhatus* (*tughrūl*), Bonelli's Eagle, *Hieraetus fasciatus*, and the Booted Eagle, *Hieraetus pennatus* (both called *zummādj*). The Harriers (*murzāt*) and Buzzards (*saḳāwā*) were neglected owing to their untamable ferocity; the kite and the vulture (*nasr*) as well, because of their taste for carrion. The Persians carried the art of training as far as the Eagle Owl (*būha*) which served to attract the other predatories. All of the "yellow-eyed birds" were earmarked for the lowflying at the quail (*sumānā*, *salwā*), the partridge (*ḥadjal*), the Chukar partridge (*ḳabdj*) and the See-See (*ṭayhūdj*), the sandgrouse (*ḳaṭā*), the Bustard (*ḥubārā*), the Little Bustard (*raʿʿād*), the Francolin (*durrādj*), the Ruddy Shieldrake (*ʿanḳūd*) and other game-birds of the steppe and desert.

The techniques proper to *bayzara* were early in Islam the objects of numerous treatises which, for the most part, have not survived; Ibn al-Nadīm mentions ten of them in his *Fihrist*. On the other hand a large number of the manuscripts in the public and private libraries in Europe and the Orient have yet to be studied (cf. Brockelmann, chapters on "Naturwissenschaft" and "Jagd"). Nevertheless these techniques are comparatively well known to us thanks to several works already edited. The oldest of these texts, treating falconry, might be the basis of the Latin-Roman versions not yet identified but attributed to the two authors Moamin and Ghatrif (see the excellent critical edition of these texts by H. Tjerneld, Stockholm-Paris 1945). Recently, the Syrian Kurd ʿAlī had the happy idea of publishing (Damascus 1953) a treatise *Al-Bayzara* devoted to the falconry of the Fāṭimid caliph Al-ʿAzīz bi-llāh (975-96); the anonymous author offers us the profit of his own long experience and that of the specialists in hawking (*luʿʿāb*) in a style stripped of extraneous erudition: poetical citations are arranged in a special chapter. This work is by far the most valuable of those we possess in Arabic on the training methods. At almost the same time Asʿad Ṭalas edited (Baghdād 1954) the oldest known Arabic text, *K. al-Maṣāyid wa 'l-Maṭārid*, the work of the famous poet Al-Kushādjim (d. 961 or 971) (cf. Brockelmann, I, 85, and S I, 137; Ṭalas, *Madjalla* ... *op. cit.*, with an analysis of the work). This complete treatise on venery and falconry was one of the sources most exploited by later authors of cynegetic works; there emanates from it unfortunately too great a preoccupation with *adab* which relieves it of any practical significance. Very different and far more lively and useful are the "hawking-sport memories" of Usāma Ibn Munḳidh (d. 1188) in his *K. al-Iʿtibār* (ed. P. Hitti, Princeton 1930, ch. iii,

192-229) composed during the period of the Crusades (see Derenbourg, *Vie d'Ousâma* . . ., and texts, Paris 1885 and 1893). The work of the Mamlūk Muḥammad al-Manglī, *K. Uns al-Malā' bi-Waḥsh al-Falā'*, written in 1371 (cf. Brockelmann, II, 136 and S II, 167) and published (Paris 1880) with a mediocre French translation by Florian Pharaon, has lost much of its value since the treaty of Al-Kushādjim has been available. Further, *bayzara* is treated in didactic poems such as the *ḳaṣīda* in 213 lines of the Maghrībī al-Fadjīdjī (d. 1514; Brockelmann, II, 136), and the *Djamhara fi 'l-bayzara* (Ms. Escorial, n. 903) of a certain ʿIsā al-Azdī (10th century?) often cited by al-Manglī. These compositions deserve publication, though they have already been exploited by L. Mercier (*op. cit.*) who has in addition used the manuscripts of Al-Fākihī (d. 1541) and Al-Ashʿarī (1444) (MSS. Paris, B.N. nos. 2831 and 2834). Ṭalas (*Madjalla* . . .) has restored to its original version the beautiful *ardjūza* on the flying-sport by Ibn Nubāta (1287-1366) entitled *Farā'id al-Sulūk fi Maṣāyid al-Mulūk*.

From all these texts it results that snaring and training methods were nearly the same for all species of sporting-birds. The young hawk was caught "eyas" or "yellow beak" (*ghiṭrāf, ghiṭrīf*) or "branchiers"-"rockers", *i.e.*, the nest-forsakers (*nāhiḍ*) from her eyrie; when "redfalcon" (*farkh*) or "haggard" (*waḥshī*) "native" (*baladī*) or "passage-hawk" (*ḳāṭiʿ* or *rādjiʿ*), she was limed or snared by means of nets, of nooses and chiefly of "flying-decoys" (*bārak*) (cf. the system of the hut in Ibn Munḳidh, *op. cit.*, 200-01; M. Planiol, *op. cit.* 154-56). When, captured, she was "reclaimed", *i.e.*, made tame (*taʿbīr, tahdī'*); her eyelids were "sealed" (*khayṭ*) and she was "abated" (*tadjwīʿ, tanḳīṣ*) by fasting and then, progressively unsealed, she was induced to step, of her own accord, on the fist by offering her some "beakfuls" (*talḳīm*) and tempting her with flesh of live preys (*talḳīf*). When become tame and stepping on to the fist at call, she was tied to the "creance" (*ṭiwāla*), and it was now the beginning of her training to stoop at such and such game. Her carnivorous instinct was awakened and her keenness (*farāha*) to bind to the quarry developed by releasing before her training-birds (*kasīra*) selected from the species for which she was being trained to hunt. These exercises were patiently repeated, each time at a greater distance. When estimated "essured" (*mustawin li-l-irsāl*), the pupil was fitted with "jesses" (*al-sibāḳān*) and "bells" (*adjrās, khalkhāl*) and then she was accustomed to wear on her head the "hood" (*burḳaʿ, kumma*, Maghrib: *kanbīl*) and to be "mailed in the sock" (*ḳabā'*), gaining some "manning" (*uns*) by long hours spent among the crowds of the streets and markets. Once familiarised with people, horses, dogs and domestic animals, she was taken to the hunting places where she was flown "for good" (*ṣāda ṭalḳan*) at waterfowl and sparrows. She returned at the sound of a drum (*ṭanbal*) attached to the saddle of the falconer (see L. Mercier, *op. cit.*, 98), and she was allowed to "take her pleasure" (*ishbāʿ*) on one of her takes. In the Maghrib training was never carried to such a degree of refinement: always taken in adulthood, the bird was released in the autumn and underwent only a rudimentary training (cf. L. Mercier, *op. cit.*, 96-104). Being set down to rest, the hawk was placed on the "block" (*ḥamūla, ḳuffāz*) or on the "perch" (*ʿāriḍa, kandara*), and was "weathered" (*tashrīḳ*) in the sun, near her bathing-pool. During the period of moult (*ḳarnaṣa, takrīz*), she was kept apart, from any noise, and her "mutes" (*dharḳ, ramdj*) were carefully controlled. By this means her good health was assured. The treatises on *bayzara* devote long chapters to the diagnosis of diseases particular to sporting-birds and their cure, revealing most often a barbaric empiricism combined with hygienic superstitions.

From the time of the Prophet the question has been posed, with regard to Ḳur'ānic law, of the legality of eating a game-bird caught by means of a trained (hawk) predatory; it was a question of whether the bird ought to be slaughtered in accordance with the rites. Averroes, in his *Bidāyat al-Mudjtahid* . . ., (cf. Averroes, *Le livre de la chasse*, extr. of the *Bidāya*, text and trans; annotated by F. Viré, in *Revue Tunisienne de Droit*, nos 3-4, Tunis 1954, 228-59), gives a clear account of the different positions adopted by each of the four schools of law. This same question constitutes the introductory part of all of the works dealing with falconry and venery.

The *bayzara* on the other hand did not fail to inspire poets and, from the time of the Umayyad period, it became with the coursing hunt one of the principal themes of popular poetry in *radjaz*. In fact the *ardjūza*, more supple and lively than the rigid classical *ḳaṣīda*, soon became, with al-Shammākh (d. 22/643), al-ʿAdjdjādj (d. 89/708), his son Ru'ba (d. 145/762) and several others, the typical form of the cynegetic poem (*ṭaradiyya*). The latter, very much in fashion under the ʿAbbāsids, was adopted by the great masters of verse such as Abū Nuwās, Ibn al-Muʿtazz, Kushādjim and Al-Nāshī, and afforded them, through research into rare terms (*gharīb*), "the occasion of displaying their learning" (Ch. Pellat, *Langue et Litterature Arabes*, Paris 1952, 108-09) (on the *ṭaradiyyāt*, see idem, *Le milieu baṣrien*, 160 ff. and notes. *Ṭaradiyyāt* are found in the *dīwāns* of the poets; those of Abū Nuwās are for the most part cited by Al-Djāḥiẓ, *Ḥayawān*). It is regrettable to note that this pedantic erudition led to the use, by those who took pleasure in it, of a language which has very little in common with that employed by the lovers of the flying sport. In Muslim Spain the poets, especially from the 11th century on, exploited principally the theme of the hawking-sport, which could not escape their pronounced taste for nature. They were able to inject into it that romantic note unknown to Oriental versifiers (cf. H. Pérès, *Poésie Andalouse*, Paris 1953, 346-9). Besides these creations in a learned language, there was a poetry of falconry prolonged and preserved, in their different dialects, by the great Arab nomads. It is interesting to note that the Touaregs have never known of the hawking art (cf. H. Lhote, *La chasse chez les Touaregs*, Paris 1951). The disdain displayed by the Arab anthologists for the "vulgar" tongue has deprived us of these Bedouin "songs" which were still recently honoured in the confines of the Sahara, revealing in their descriptions of the hawk, her flight and her quarries, a realism difficult to find in classical poetry (cf. M. Sidoun, *Chants sur la chasse au faucon attribués à Si El-Hadj Aissa, Chérif de Laghouat*, in *R.Afr.*, nos. 270-71, 1908, 272-94, text, trans, notes).

The very large rôle played by the hawking-bird, as a theme of inspiration in Islamic works of art, is material for considerable study. In fact the artistic modes of expression: miniatures, decorative sculpture in stone, in stucco, wood and ivory, engraving on crystal, glass and copper, moulding in bronze, glass and precious metals, ceramics, tapestry

and embroidery, owe to the "hawk motif" a great deal of their inestimable accomplishments. Indeed, it is from this motif, in its innumerable interpretations, that Muslim art of East and West has drawn many of its characteristics (cf. A. U. Pope, *A survey of Persian Art*, Oxford 1939; G. Migeon, *Art Musulman*, Paris 1956; G. Marçais, *L'Art de l'Islam*, Paris 1946). We add in conclusion that this same motif was vastly exploited by Mamlūk heraldry (cf. L. A. Mayer, *Saracenic Heraldry*, Oxford 1932; Artin Pacha, *Cont. a l'étude du blason en Orient*, London 1902).

BĀZ [see BAYZARA].

BĀZ BAHĀDUR, The last ruler of independent Mālwa before the Mug̲h̲al conquest in the time of Akbar, Bāz Bahādur was the son of S̲h̲udjāʿ K̲h̲ān, a relative of S̲h̲ir S̲h̲āh Sūr, whom the latter appointed governor of Mālwa after its conquest by S̲h̲īr S̲h̲āh's forces in 949/1542. On the death of S̲h̲udjāʿ K̲h̲ān in 962/1554, Bāz Bahādur murdered his brother Dawlat K̲h̲ān, governor of Ud̲j̲d̲j̲ayn (Ujjain) and had himself proclaimed as sultan in 963/1555. He then brought most of Mālwa under his rule by forcing his youngest brother Muṣṭafā K̲h̲ān to give up Rāisin and Bhīlsa. In 968/1560-1, a Mug̲h̲al army under Adham K̲h̲ān advanced to conquer Mālwa. Bāz Bahādur was forced to relinquish his capital Mandū. The next year he succeeded in defeating Pīr Muḥammad, Adham K̲h̲ān's successor, but towards the end of 969/1562 was obliged by Mug̲h̲al reinforcements to flee into the hills of Gondwāna. Though from his refuge there Bāz Bahādur made several guerilla attacks upon the Mug̲h̲al forces, he grew tired of the struggle and in 978/1570 submitted to Akbar eventually to receive a *manṣab* of 2000. He died not long after and is probably buried at Āgra.

Bāz Bahādur is celebrated in popular legend for his love for his mistress Rūpmatī for whom he is said to have composed love-songs and verses. He is also an eponymous figure in the development of a new passionate style of central Indian painting, in which the twin cultures of Mālwa, Hindu and Muslim, were blended.

(P. Hardy)

BAZA [see BASṬA].

BĀZAHR, Bezoar, a remedy against all kinds of poisons, highly esteemed and paid for throughout the Middle Ages up to the 18th century, and in the Orient even up to this very day. The genuine (Oriental) Bezoar-stone is obtained from the bezoar-goat (*Capra aegagrus Gm.*) and, according to the investigations of Friedrich Wöhler, the famous chemist (1800-1882), and others, it is a gall-stone. The stone seems to have been unknown to ancient Arabs, for neither in the lexica nor in A. Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, 1919, is the word mentioned. The generally accepted etymology is Persian (*pā*(*d*)-*zahr* "against poison" (P. Horn, in Geiger-Kuhn, *Grundr. d. ir. Phil.*, i/2, 159). The Arabic books of stones and drugs present various spellings and etymologies that do not always correspond with each other, nor are the etymologies themselves throughout correct (see later).

For the first time in Islamic literature the Bāzahr seems to appear in some of the Hermetic writings (none of them printed), and in the (partly edited) pseudo-Aristotelian writings inspired by the Oriental translations of the Alexander Romance. In the Lapidary ascribed to Aristotle (J. Ruska, *Das Steinbuch des Aristoteles*, 1912, 104 f.) Bāzahr is erroneously stated to be Greek, while the explanation is the usual *al-nāfi li 'l-samm*. The poisons coagulate the blood; this effect is prevented by the stone which frees the body of the poison by strongly sweating. Aristotle also registers the different colours of the Bāzahr and the places where it is found, namely, China, India, the "East" and K̲h̲urāsān. Also as amulet and sealing-stone the Bāzahr is useful, as well as against the sting of poisonous insects (see below).

Some MSS. of the pseudo-Aristotelic *Sirr al-Asrār* (*Secretum secretorum*) offer a chapter on precious stones, namely, Oxon. Laud 210 and Paris 2418. The text of the former was translated in *Opera hactenus inedita* Rogeri Baconi (!), V: *Secretum secretorum*, ed. R. Steele, 1920, 253; the latter has only been noted by ʿAbdurraḥmān Badawī, *Fontes Graecae* (*sic*) *doctrinarum politicarum Islamicarum*, i, 1954, 167, n. 3. Steele also gives (174) the Latin text according to ed. Achillini, 1501, and

points to the Hebrew text (ed. and transl. by M. Gaster, *JRAS*, 1907-8, para 130). The name of the stone is rendered *al-nāfi al-ḍurr* or *mumsik al-rūḥ* (Hebrew *ʿōṣēr hā-rūaḥ*) (?). Its action is described similarly to that in the above-mentioned stone-book.

The *Ikhwān al-Ṣafā*ʾ, ii, 81 Bombay = 104 Cairo explain the action of the stone in an elaborate theoretical way. It is worth noting that they use the name also as an appellative in the plural, along with *sumūmāt* and *taryāḳāt*. In the *K. al-Sumūm wa-Dafʿ maḍārrhā* by Djābir b. Ḥayyān, Bādzahr is, according to A. Siggel, *Das Buch der Gifte etc.*, 1958, 213 mostly used in the sense of "antidote" in general; only on 186 Siggel translates "Bezoar". The stone is only called one of the major remedies. Djābir is one of the sources quotes by al-Bīrūnī in his elaborate article, *al-Djamāhir fī Maʿrifat al-Djawāhir*, 1355, 200-202; cf. M. J. Haschmi, *Die Quellen des Steinbuchs des Berūnī*, Thesis, Bonn 1935, 19, who does not realise that the numerous quotations from Djābir's *K. al-Nukhab* mean his *K. al-Baḥth*, extant in MS. Istanbul Djārullāh 1721. Al-Bīrūnī's account, deriving from various sources, although opening with the statement that the stone is a mineral, offers also descriptions which make its being an organic material possible. He also teaches methods of examining its genuineness, and concludes with anecdotes.

The next author according to chronology is al-Ghāfiḳī, for the time being accessible only in Barhebraeus' abridgment, ed. M. Meyerhof and G. P. Sobhy, 98, para 185 (English translation 356-58 with elaborate commentary, where later sources are quoted *in extenso*). Al-Ghāfiḳī's rendering of the name is *muḳāwim al-samm*. For al-Tīfāshī, see also the long chapter on Bāzahr in Clément-Mullet, *JA*, vi/11, 1868, 143-50. Later sources not quoted by Meyerhof-Sobhy: the Arabic text of Ibn al-Bayṭār, 1291, 1, 81 f.; the German version of al-Ḳazwīnī (J. Ruska, *Das Steinbuch aus der Kosmographie des al-Ḳazwīnī*, Kirchhain, 1896). Al-Tīfāshī and also al-Anṭākī, *Tadhkirat ūli 'l-albāb*, i, 60 call the stone *pāk-zahr* "cleaning from poison", cf. P. Anastase-Marie de St.-Elie's commentary on Ibn al-Akfānī, *Nukhab al-Dhakhāʾir*, 1939, 75 ff., para 13.

A story of a lad stung by a scorpion who was cured by a drink of incense sealed with a seal of Bāzahr is preserved in Aḥmad b. Yūsuf ibn al-Dāya's commentary on Ps.-Ptolemy's *K. al-Thamara* (*Centiloquium*), aphorism 9, and was reproduced in *Ghāyat al-ḥakīm* (*Picatrix*), ed. Ritter, 1933, 55 (in the forthcoming German translation 56).

On the later history of the Bāzahr, also in Europe, and its high esteem in contemporary Persia see C. Elgood, *Medical History of Persia*, 1951, 369-71 who also describes modern methods of examining its genuineness. (J. Ruska-[M. Plessner])

BĀZĀR [see sūḳ].

BĀZARGĀN [see tidjāra].

BAZĪGH b. **MŪSĀ**, called al-Ḥāʾik, Shīʿite heretic. A disciple of Abu 'l-Khaṭṭāb [*q.v.*], he was, like his master, denounced by the Imām Djaʿfar al-Ṣādiḳ as a heretic and was even, according to Nawbakhtī, disowned by Abu 'l-Khaṭṭāb himself. Kashshī reports a tradition that when Djaʿfar al-Ṣādiḳ was told that Bazīgh had been killed, he expressed satisfaction. This would place Bazīgh's death before that of Djaʿfar in 148/765. Like many of the early extremist Shīʿites, Bazīgh was an artisan—a weaver of Kūfa, and some amusement was expressed at the religious pretensions of one of such lowly status. His followers were known as Bazīghiyya.

BĀZINḲIR (commonly *bazinger, bazingir, basinger, besinger*), slave-troops, equipped with fire-arms; a term current in the (Egyptian) Sudan during the late Khedivial and Mahdist periods.

Etymology: The derivation is obscure. Sir Reginald Wingate's assertion (*Mahdiism and the Egyptian Sudan*, London 1891; 28, n. 1) that it was the name of a tribe may be rejected: it does not appear to come from any southern Sudanese language. Professor E. E. Evans-Pritchard's statement ("A history of the kingdom of Gbudwe", *Zaire*, Oct. 1956, no. 8; 488, n. 36) that it derives from a Nubian (?Dunḳulāwī) word, *bezingra*, lacks confirmation. Its origin should perhaps be sought in Turkish or Persian, possibly in connexion with *bāz* and/or *ṣunḳur*, "falcon", (cf. the use of *farkha*) or *bāzīgar*, "juggler" (cf. djānbāz).

Origin: The term first appears among the ivory and slavetraders of the Baḥr al-Ghazāl. Originally at least it was not current among those of the upper White Nile: it is not mentioned by Sir Samuel Baker, to whom C. G. Gordon explained its meaning in a letter dated 26 May 1878 (T. Douglas Murray and A. Silva White, *Sir Samuel Baker: A memoir*, London 1895, 242). G. Schweinfurth, apparently the first European to use the term, equates *bāzinḳir* with *furūkh* (Ar. = "chickens"; *farkha* = *khādim* is still a Sudanese colloquialism) and with "narakik" (? *al-raḳīḳ*). Other sources state that the *furūkh* were the gun-boys of the *bāzinḳir* (Wingate, *op. cit.*, 103, n. 1: G. Schweinfurth, F. Ratzel, R. W. Felkin and G. Hartlaub, *Emin Pasha in Central Africa*, Eng. trans., London 1888; 409, footnote).

Historical rôle: Schweinfurth (*The heart of Africa*, London 1873; ii, 421) describes the *bāzinḳir* of the Baḥr al-Ghazāl (c. 1870) as private slaves of the traders. They constituted nearly half their fighting forces and accompanied the Nubian troops (*ʿasākir*) on expeditions. They were excellent soldiers but, because of their propensity to desert, less reliable than the Nubians. Many Niam-niam (Azande) voluntarily became slaves in order to serve as *bāzinḳir*. The greatest slave-army in the Baḥr al-Ghazāl was that of the merchant-prince, al-Zubayr Raḥma Manṣūr. When it was broken up, after 1875, the employment of his *bāzinḳir* was one of the problems confronting the governor-general, Gordon, who described them as "truly formidable" (G. Birkbeck Hill, *Colonel Gordon in Central Africa*, London 1881; 336). Many of the Nubian commanders entered the khedivial service with their *bāzinḳir*, receiving the designation of *sandjaḳ beyi*, then usually bestowed upon commandants of irregulars (R. Gessi, *Seven years in the Soudan*, London 1892; 280). One such, al-Nūr Bey Muḥammad ʿAnḳara, was subsequently a Mahdist commander of some importance; (Richard Hill, *A biographical dictionary of the Anglo-Egyptian Sudan*, Oxford 1951; 297: P. M. Holt, *The Mahdist*

state in the Sudan, Oxford 1958; 52, 56, 94, 196). After the defeat of Sulaymān b. al-Zubayr Raḥma (1879), a group of his *bāzinḳir*, commanded by Rābiḥ Faḍl Allāh (Rābiḥ al-Zubayr), escaped westwards, and Rābiḥ made himself ruler of a territory in the Chad region, where he was defeated by the French and killed in 1900 (Richard Hill, *op. cit.*, 312-13: Max v. Oppenheim, *Rabeh und das Tchadseegebiet*, Berlin 1902). Of the *bāzinḳir* who remained in the Egyptian Sudan many were probably incorporated in the *dj̲ihādiyya*, the Mahdist professional soldiery, or in the Sudanese battalions of the new Egyptian army. ʿArabī Dafaʿ Allāh, the Mahdist governor of al-Radj̲dj̲āf (upper White Nile) raised new *bāzinḳir*, sending 600 as tribute to the K̲h̲alīfa ʿAbd Allāh in S̲h̲awwāl 1312/March 1896 (Sudan Government Archives, Khartoum; *Mahdia* 1/32, 18/1, 75/1; 1/32, 18, 76; 1/34, 1, 10).

Bibliography: Principal references in text.

(P. M. Holt)

BAZIRGAN, Bezirgan, Turkish forms of the Persian *Bāzargān*, a merchant. In Ottoman Turkish usage the term *Bāzirgān* was applied to Christian and more especially Jewish merchants. Some of these held official appointments in the Ottoman palace or armed forces; such were the *Bazirgan-bas̲h̲i*, the chief purveyor of textiles to the Imperial household (D'Ohsson, *Tableau général*, vii, Paris 1824, 22; Gibb-Bowen, 1/1, 359), and the *Odj̲āḳ Bāzirgānī*, the stewards, usually Greek or Jewish, who handled the pay and supplies of the corps of Janissaries. This office tended to become hereditary in certain families (D'Ohsson, vii, 318; I. H. Uzunçarşılı, *Kapukulu Ocakları*, i, Ankara 1943, 407 ff.). (B. Lewis)

BĀZŪKIYYŪN, (Pāzūkī), a tribe settled, according to M. A. Zakī (*Taʾrīk̲h̲*, 370-71) either in Persia or in Turkey (having relations with the tribe of Suwayd). The tribe was divided in two parts: K̲h̲ālid Beklū and S̲h̲aker Beklū, of which the former was more important. Its places of habitation were K̲h̲nis, Malāzgird and to some extent Mūs̲h̲. The latter was subject to the *amīr* of Bidlīs. The founder of the K̲h̲ālid Beklū was Ḥusayn ʿAlī Bek. His descendant, K̲h̲ālid b. S̲h̲āhsuwār Bek b. Ḥusayn ʿAlī Bek, a fellow warrior of S̲h̲āh Ismāʿīl, took part in a number of battles in which he won fame but lost an arm, whence his sobriquet One-armed K̲h̲ālid (like Aḥmad K̲h̲ān of Barādust [*q.v.*]): K̲h̲ālid D̲h̲u'l-yad al-Wāḥida. As a reward for his valour, the S̲h̲āh gave him K̲h̲nis, Malāzgird and the *nāḥiya* of Uk̲h̲ān (Udj̲kān) at Mūs̲h̲. Later he declared his independence of the S̲h̲āh and allied himself with Sulṭān Selīm Yāwūz. This submission was, on the other hand, of short duration; he was finally arrested and executed, though his family continued for a long time to exercise power. During the time of his son *amīr* Ḳilidj̲ Bek, a part of the tribe emigrated to the Donbolī [*q.v.*], though remaining subject to the Ottoman sultan. The existence of a tribe of this name is, on the other hand, mentioned by M. A. Zakī (*K̲h̲ulāṣa*) in the region of Tehran (15), in the south of Persia (465) and in the neighbourhood of Erivān (466). A *Pazegui* tribe is mentioned by Lerch (i, 96) at Tarow.

Bibliography: Muḥammad Amīn Zakī, *Taʾrīk̲h̲ al-Duwal wa 'l-Imārāt al-Kurdiyya fi 'l-ʿAhd al-Islāmī*, Cairo 1945; M. A. Zakī, *K̲h̲ulāṣat Taʾrīk̲h̲ al-Kurd wa-Kurdistān*, Bag̲h̲dād 1937.

(B. Nikitine)

BAZZĀZISTĀN [see ḳayṣariyya].

BEČ (Bedj̲), the Ottoman name for the town of Vienna. The Turks (as also the Serbs and Croats) took this word from the Hungarian, where it has the meaning of "suburb, outer city" (Hungarian: *külváros*; hence it is explained as *külwar* by Ewliyā Čelebi, vii, 251), where the word probably goes back to the Kuman-Pečenek (perhaps also Avar.) *beč* (Gombócz-Melich, *Magyar Etymologiai Szótár*, Budapest 1914 s.v.). There is only scanty and superficial information on the town in Ottoman geographical literature and diplomatic reports (cf. Hammer-Purgstall's translation from Ebū Bekir b. Behrām in the *Archiv f. Geographie, Historie, Staats und Kriegskunst*, 1822, 28 ff.; also Hammer-Purgstall, viii, 215; Fr. Kraelitz, *Bericht über den Zug des Grossbotschafters Ibrahim Pascha nach Wien im Jahre* 1719, in *SBA Wien*, 1907), although in the 16th and 17th centuries, Vienna was the immediate goal of two large campaigns under sultan Suleymān the Magnificent and under the Grand Vizier Ḳara Muṣṭafā Pas̲h̲a (cf. Sturminger, *Bibliographie und Ikonographie der beiden Türkenbelagerungen Wiens 1529 und 1683*, Vienna 1955; comments on this in *WZKM* 52; and R. Kreutel, *Kara Mustafa vor Wien*, Graz 1955); Ewliyā Čelebi is an interesting exception. He claims to have visited Vienna (cf. *WZKM*, 51, 188 ff.) in 1665 in the entourage of the Ambassador Ḳara Meḥmed Pas̲h̲a. His extensive description of the town (*Siyāḥat-nāme*, vii, 247-329; translation: R. Kreutel, *Im Reiche des Goldenen Apfels*, Graz 1957) contains numerous absurdities, as well as many correct observations. In the first half of the 19th century (*tanẓīmāt*), the name Beč was replaced by Viyana (from Vienna) in Ottoman writing, and today this is the usual form. (R. F. Kreutel)

BEDEL-I ʿASKERĪ [see badal].

BEDEL-I NAḲDĪ [see badal].

BĒDEL [see bīdil].

BEDJ̲A (usual Ar. form, Budj̲a), nomadic tribes, living between the Nile and Red Sea, from the Ḳina-Ḳuṣayr route to the angle formed by the ʿAṭbarā and the hills of the Eritrean-Sudanese frontier. The principal modern tribes are the ʿAbābda [*q.v.*], Bis̲h̲ārīn [*q.v.*], Ummarār, Hadanduwa and Banī ʿĀmir. The ʿAbābda now speak Arabic; the others (except the Tigre-speaking sections of B. ʿĀmir) speak tu-Beḍawiye, a Hamitic language. The Bedj̲a subsist mainly on their herds of camels, cattle, sheep and goats. Since grazing is sparse, they move usually in very small groups. Bedj̲a origins are obscure but Hamitic-speaking groups have inhabited the region from ancient times. The usual identification with the pre-Islamic Blemmyes was rejected by Becker (see bedj̲a in *EI*[1]).

Relations with Muslim Egypt. ʿAbd Allāh b. Saʿd encountered some Bedj̲a on his return from Nubia (31/651-2) but regarded them as politically insignificant. The first Bedj̲a-Arab treaty, made with ʿUbayd Allāh b. al-Ḥabḥāb in the reign of His̲h̲ām, regulated Bedj̲a trade with Egypt and safeguarded the Muslims from their depredations. The Arabs penetrated Bedj̲a territory in search of emeralds (mined in the desert of Ḳifṭ) and gold, found in the Wādī al-ʿAllāḳī [*q.v.*]. The dominant northern Bedj̲a tribe was the Ḥadārib, traditionally descended from pre-Islamic immigrants from Ḥaḍramawt. They were disunited but there are occasional indications of a supreme chief, living in a village named Hadj̲ar. A more numerous servile class, the Zanāfidj̲, acted as herdsmen. Muslim immigration resulted in a superficial islamisation of the Ḥadārib and Arab-Bedj̲a intermarriage. Bedj̲a raids on

Upper Egypt led to a Muslim expedition, which defeated the chief, Kanūn, and imposed a treaty (216/831). The caliph was acknowledged as suzerain, mosques in Bed̲j̲a territory were to be respected, Muslim merchants and pilgrims were to pass in safety, and collectors of *zakāt* from converts were to be allowed entry. Other provisions sought to prevent an alliance of the Bed̲j̲a with Christian Nubia. Further raids and the withholding of tribute from the gold-mines ensued. A cavalry expedition, sent by sea, defeated the Bed̲j̲a camel-men, whose chief went to Sāmarrā in 241/855-6 to make his personal submission to al-Mutawakkil. Soon however the Bed̲j̲a began to raid al-Fusṭāṭ itself. After a particularly severe attack, a force mustered by ʿAbd al-Raḥmān al-ʿUmarī intercepted a raiding-party and killed its chief. Supported by the Rabīʿa and D̲j̲uhayna, al-ʿUmarī established control over the mining districts (c. 255/868-9) and, after his death, Rabīʿa, who intermarried with the Ḥadārib, came to dominate the area. Al-Masʿūdī describes the chief of Rabīʿa in 332/943-4 as the owner of the mines; he commanded 3,000 Arabs and 30,000 Bed̲j̲a camel-men. The ratio is probably more significant than the numbers. The rise of ʿAyd̲h̲āb [*q.v.*] in the mid-5th./11th. century increased the importance of the Ḥadārib, whose territory was crossed by the route from the Nile valley to the port. A chief, called by Ibn Baṭṭūṭa al-Ḥadrabī, shared in the customs of ʿAyd̲h̲āb. Information about the southern Bed̲j̲a is sparse. Al-Yaʿḳūbī lists six Bed̲j̲a "kingdoms". Al-Uswānī depicts the further Bed̲j̲a as a fragmented, pagan society, in which each group had its own *kāhin* to give guidance on grazing and raids.

Decline of the Ḥadārib and formation of the tribes. By the 8th/14th century the gold-mines had been abandoned and ʿAyd̲h̲āb was in decline. These economic factors may explain the disappearance of the Ḥadārib, who appear to have migrated southwards, perhaps becoming the Balaw ruling-caste which dominated the Bed̲j̲a of the Suakin-Massawa hinterland. The spread of Arab tribes up the Nile and the establishment of the Muslim Fund̲j̲ sultanate (c. 910/1504) resulted ultimately in the general, if superficial, islamisation of the Bed̲j̲a. This is reflected in the adoption of Arab pedigrees. Some of these (*e.g.*, the derivation of the Bishārīn, Ummarār and ʿAbābda from K̲h̲ālid b. al-Walīd or al-Zubayr b. al-ʿAwwām) are obviously fictitious: others, such as the Hadanduwa claim to descent from an otherwise unknown Ḥijāzī refugee from the Ottomans, may be a genuine memory of the tribe's development. The Fund̲j̲ period saw the appearance and expansion of the modern tribes. Fund̲j̲ suzerainty was recognised by the southernmost group, the B. ʿĀmir, a congeries dominated by a caste of Sudanese-Arab descent, the Nabtāb, which had superseded the Balaw about the end of the 16th. century. The 18th. century witnessed the westward expansion of the Ummarār and the drive of the Hadanduwa to the Ḳās̲h̲ and ʿAṭbarā. [See also ʿABĀBDA and BISHĀRĪN]. Suakin had meanwhile become the principal port of the region and was connected with the Sudanese Nile by several routes across Bed̲j̲a territory. From 1517 it was an Ottoman possession but by the early 19th. century the port was controlled by a Bed̲j̲a group, the Ḥadārib, probably distinct from the medieval Ḥadārib but, like them, linked genealogically with Ḥaḍramawt. They were ruled by the five Artayḳa clans.

The Egyptian conquest to the present day. The Egyptian conquest of the Nilotic Sudan (1821-22) did not immediately affect the Bed̲j̲a. Tribute-gathering raids into al-Tāka (the Ḳās̲h̲ region) failed permanently to subdue the Hadanduwa but an administrative post was founded at Kasala (1840), which became a trading centre and the headquarters of the important K̲h̲atmiyya *ṭariḳa*. The Ummarār levied tolls on the Suakin-Berber trade-route and, like the Hadanduwa, were employed in transport. Although administrative control was imperfect, this was a time of pacification and economic progress. Artayḳa took the lead in developing the agriculture of the Baraka, previously slightly cultivated by the B. ʿĀmir. Attemts were made to grow cotton commercially in the Ḳās̲h̲ and Baraka deltas. The growing security and prosperity were shattered by the Mahdiyya. This aroused no response among the Bed̲j̲a until the arrival of ʿUt̲h̲mān b. Abī Bakr Diḳna in 1883. He owed his success less to his partly Bed̲j̲a ancestry than to the support given him by the local head of an indigenous *ṭariḳa* which had felt the rivalry of the government-backed K̲h̲atmiyya. ʿUt̲h̲mān Diḳna cut the Suakin-Berber route, captured the government posts in Bed̲j̲a territory and threatened Suakin itself. His followers, mainly Hadanduwa and Ummarār, fluctuated in their support, and the capture of his headquarters at Tūkar in 1891 by an Anglo-Egyptian force marked the beginning of the Mahdist decline among the Bed̲j̲a. Pacification and development were resumed under the Condominium (1899-1956). The tribal organization was reconstructed. Security was effectively established. Schools and hospitals were set up in the towns. Contacts between the Bed̲j̲a and the outside world were increased by economic developments—the creation of Port Sudan, the construction of railways linking the coast and Kasala with the Nile valley, the commercial production of cotton in the Ḳās̲h̲ and Baraka deltas. The old way of life is however slow to change, and the full integration of the Bed̲j̲a into the Sudanese polity remains a problem for the new Republic.

Bibliography: Principal references only. The principal medieval source is al-Maḳrīzī, *K. al-Mawāʿiz*, ed. G. Wiet, Cairo 1922, iii, 267-80, which incorporates the 10th century account of Ibn Sulaym al-Uswānī and other material. Wiet's footnotes give valuable bibliographical references. Modern European sources to 1937 are listed in R. L. Hill, *Bibliography of the Anglo-Egyptian Sudan*, London 1939. To this should be added O. G. S. Crawford, *The Fung Kingdom of Sennar*, Gloucester 1951; A. Paul, *A History of the Beja Tribes*, Cambridge 1954; and the following articles in *Sudan Notes and Records*: D. C. Cumming, *A History of Kassala and the Province of Taka*, xx/1, 1937, 1-46; xxiii/1, 1940, 1-54; xxiii/2, 225-271; W. T. Clark, *Manners, Customs and Beliefs of the Northern Beja*, xxi/1, 1938, 1-30; S. F. Nadel, *Notes on Beni Amer Society*, xxvi/1, 1945, 51-94; A. Paul, *Notes on the Beni Amer*, xxxi/2, 1950, 223-245. The collection made by the late Sir Douglas Newbold, entitled *History and Archaeology of the Beja Tribes of the Eastern Sudan*, now in the Griffith Institute, Ashmolean Museum, Oxford, contains tribal and other material. Copious documentation on the Bed̲j̲a during the Mahdiyya exists in the Mahdist archives, held by the Ministry of the Interior, Khartoum.

(P. M. HOLT)

BĒD̲J̲WĀN [see BĀD̲J̲ALĀN].

BEDOUINS [see BADW].

BEG or **BEY**, a Turkish title, "lord", used in a number of different ways. The various dialect forms (*bäg, bäk, bek, bey, biy, bi, pig,* etc.) all derive from the old Turkish *bäg* as seen from the Orkhon inscriptions (8th Century) and the Chinese transcriptions concerning the Turks of Mongolia of the same period. The word has no Altaic origin (Mongol *begi* being a later loanword from Turkish; the series Turkish *bärk, bäk*/Mongol *bärka, bäki* "strong, sound", etc., owes nothing to the old Turkish *bäg* and should be dissociated from it; the same is true of the series: Turkish *bögü, bög* "wise-man, sorcerer" Mongol *böge, bö* "Shaman"). Like many other titles, *bäg* is a loan-word possibly deriving from the Iranian *bag, viz.* the title of the Sāsānid kings ("divine", from an older form *baga* "God", cf. *Bag-dād*).

In the Orkhon inscriptions the compound term *bäg-lär* refers to the "nobility", "the order of beys", as opposed to the *bodun* "people, masses". The word *bäg* also appears in these texts to denote the second rank in the hierchy of high dignitaries. Finally, there is the evidence of a *Bars Bäg* who becomes Khān and brother-in-law of the Turkish Grand Khan. These different usages show that the title *bäg* (as later with *beg* or *bey*) does not imply a specific position or duty but is essentially honorific. Hence among many Turkish peoples it is joined to the name of the "eldest brother", *agha* (*bäg agha*, or *agha bäg* = old Ottoman *aghabey* "lord elder brother"). Some Turkish societies have reserved the title for personages of high rank; others have given it an extended general meaning of "chief", "master", "husband" or "Mr.". It can only assume a precise connotation in a given social and administrative context, often as the second part of a compound (*on begi* "chief of ten", "corporal", Golden Horde; Ott. *sandjak bey(i)*; etc.); or as a title when used with a proper name which it usually follows: *Bars Bäg, Meḥmed Bey.* The feminine title of *Begum* [*q.v.*] is simply a possessive form of the 1st pers. sing. of *beg* (= *bäg-im* "my lord", thence "my lady"; cf. *khān-um*, a similar possessive formation which has assumed a feminine connotation).

(L. Bazin)

ii. In Islamic times we find the word applied under the Ḳarakhānids to at least one high official; and it was the title first borne by Ṭughrul and his brother Čaghrī, the founders of the Saldjūḳid empire. Under the Saldjūḳid and other subsequent Turkish régimes, as Turkish terms began to be used officially side by side with the traditional Arabic and Persian, *beg* came to be employed as the equivalent of the Arabic *amīr*, as in the titles *beglerbegi* or *beylerbeyi*, equivalent to *amīr al-umarā*, and *sandjak-beyi*, equivalent to (*a*)*mīr liwā*. Under these régimes, again, whereas the great monarch would be entitled *khāḳān, khān*, or *sulṭān*, lesser sovereigns, such as those of the Anatolian states successor to the Saldjūḳid, the Ḳaraḳoyunlu, and the Aḳḳoyunlu, were entitled *beg*, as indeed was the great Tīmūr himself.

Under the Īlkhāns *beg* was sometimes used for women, and under the Moguls of India the feminine form, *begam*, was common. Under the Ṣafawids, since the ruler went by the title *shāh, beg* lost ground for lesser personages to *khān* and even *sulṭān*. Under the Ottomans, on the other hand, it remained in wide use for tribal leaders, high civil and military functionaries, and the sons of the great, particularly *pashas*.

(H. Bowen)

BEGDILI, a tribe of the Boz-oḳ branch of the Oghuz (Türkmen) peoples. Anūshtagīn, ancestor of the Khwārizmshāh dynasty, is sometimes believed to be of this tribe, but this is probably not so. A large Begdili community was found among the Türkmens in Syria in the 8th/14th century. At that time they were led by Tashkhun (Tashkun) Oghullarī. They were regarded as one of the most important Türkmen tribes in Syria in the 9th/15th century. Another important branch of this tribe lived in the 14 villages of the Gülnar district of the Içel province in the same century; their leaders were in possession of fiefs (*dirlik*). The Begdili of Syria were the largest of the Türkmen tribes in the Aleppo region in the 10th/16th century; they had 40 clans during the first half of the same century. The Syrian Begdili also had important clans in the Yeni Il and among the Boz Ulus in the Diyārbakr region. Another branch of these Begdili went to Iran together with the *ḳizilbash* Shāmlū tribe. The finest grazing grounds between Diyārbakr and Aleppo were, in the 11th/17th century, in their possession. They were, however, punished by Khusraw Pasha during his Baghdād expedition (1039/1630), for refusing to pay taxes and for allowing their cattle to destroy the crops of the local people. They are estimated to have had 12,000 tents during the second half of the same century. Like many other tribes, the Begdili were called to take part in the Austrian campaign in 1101/1690.A few years later the government made an attempt to settle the Begdili and other Türkmen tribes living near them, in the Raḳḳa region. Consequently some Begdili settled in Raḳḳa and the rest in the Aleppo and ʿAynṭāb region. As already mentioned a branch of the Syrian Begdili went to Iran together with the Shāmlū. Many important Ṣafawī commanders and governors were of this tribe. A branch of Begdili is seen among the Göklen Ili in the Astarābād region.

(Faruk Sümer)

BEGLERBEGI, *beylerbeyi*, Turkish title meaning '*beg* of the *begs*', 'commander of the commanders'. Like other titles it suffered progressive debasement: having originally designated 'commander-in-chief of the army' it came to mean 'provincial governor' and finally was no more than an honorary rank. In the first sense it was used by the Saldjūḳs of Rūm as an alternative title for the *malik al-umarāʾ* and by the Ilkhānids as the title of the chief of the four *umarāʾ al-ulus*. In the empire of the Golden Horde the title was used for all the *umarāʾ al-ulus*. In Mamlūk Egypt it was perhaps used for the *atābak al-ʿasākir*. (For references to the sources see M. F. Köprülüzade, *Bizans Müesseselerinin Osmanlı Müesseselerine Te'siri*, Istanbul 1931, 190-5 [Italian translation, *Alcune osservazioni* . . ., Pubblicazioni dell'Instituto per l'Oriente di Roma, 1944], and I. H. Uzunçarşılı, *Osmanlı Devleti Teşkilâtına Medhal*, Ist. 1941, index; cf. also D. Ayalon in *BSOAS* XVI [1954], 59).

Among the Ottomans too the title seems to have meant originally 'commander-in-chief' (in which sense it is used by Saʿd al-Dīn, i, 69). It is said to have been first bestowed on Lala Shahin by Murād I when, after the capture of Edirne, he himself returned to Brusa (Giese's *Anon.* 22_{19} = Urudj 22_9). Lala Shahin was succeeded by Timurtash, still apparently the sole *beglerbegi*, who was left to guard Anadolu

when Bāyezīd I marched against Mirče (Neshrī [Taeschner] i 86). When Mūsā, during the 'time of troubles', had seized the European territories he appointed a *wezīr*, a *ḳāḍī*ʿ*asker* and 'a *beglerbegi*' (Giese's *Anon.* 49_{24}, but '*beglerbegi* of Rumeli' in Urudj 39_{13} and ʿĀshıḳpashazāde [Giese] § 69). By the end of the reign of Meḥemmed I at the latest there existed two *beglerbegis*, with territorial designations, one 'of Rumeli' and one 'of Anadolu' (cf. ʿĀPz. § 81, '*beglerbegi* of Anadolu' and § 83, '*beglerbegi* of Rumeli'; such referencer for earlier periods in later historians may be anachronisms). This was clearly the case under Murād II, by which time the *beglerbegi*s of Rumeli and Anadolu were the governors-general of the two provinces, their main responsibility being the supervision, through the *sandjaḳ-begi*s [*q.v.*], of the feudal *sipāhī*s, whom in time of war they led into battle. As Ottoman territory expanded, new provinces were created, so that by the end of the 10th/16th century the *beglerbegi*s numbered nearly forty. The *beglerbegi* of Rumeli (who from 942/1536 onwards was admitted to the *dīwān*, cf. Ferīdūn[2] i 595) always took precedence, the others, if of the same rank (see below), taking precedence according to the dates of the conquest of their provinces. It was not unknown for the Grand Vizier to hold also the office of *beglerbegi* of Rumeli.

It is clear from a Ḳānūn-nāme of Meḥemmed II that already in his reign *beglerbegi* had come to be also an honorary rank (as it had perhaps been under the Saldjūḳs of Rūm, cf. Köprülüzade, *op. cit.*, 192), holders of which took precedence immediately after *wezīr*s. By the end of the 11th/17th century *Rumeli beglerbegisi* too had become an honorary rank, besides denoting the actual governor-general. Conversely, from the 10th/16th century onwards, the office of *beglerbegi* of important provinces was often bestowed on holders of the rank of *wezīr*, who had authority over *beglerbegi*s of neighbouring provinces. The *wezīr* was entitled to three ṭughs, the *beglerbegi* to two. Both *wezīr*s and *beglerbegi*s bore the title *pasha*, whence the *sandjaḳ* in which the *beglerbegi* resided was known as *pasha sandjaghī*.

The *beglerbegi* was regarded as 'viceroy', *salṭanat wekīli*; he had a miniature court and presided at his own *dīwān*. At first he had full powers to grant *tīmār*s and *ziʿāmet*s, his appointments being automatically ratified, but after 937/1530 he could grant with his own *berāt* only the smaller (*tedhkiresiz*) *tīmār*s.

In the 12th/18th century the terminology became further confused, for (1) the name *wālī* [*q.v.*] was increasingly given to the governor-general, and *beglerbegi* in this sense fell into desuetude (except for the *beglerbegi*s of Rumeli and Anadolu, to judge from D'Ohsson, *Tableau général*, vii, 278); (2) the Persian *mīr-i mīrān*, *mīrmīrān* [*q.v.*], which had earlier been used indiscriminately (together with Ar. *amīr al-umarā*ʾ [*q.v.*]) as a synonym for *beglerbegi*, was increasingly used to denote the honorary rank of *beglerbegi*, and bestowed as such even on governors of *sandjaḳ*s. With the thorough re-organisation of provincial administration by the law of 1281/1864 the term *wālī* became the official designation of the provincial governor (cf. A. Heidborn, *Droit public et administratif de l'Empire Ottoman*, Vienna-Leipzig, 1908, 157 ff.). Thenceforth only the terms *Rumeli beglerbegisi*, *mīrmīrān* and *mīr-i umerā* survived, and they only as honorary titles.

In the Ṣafawid state the *beglerbegi*s formed the second of four classes of provincial governors (*Tadhkirat al-Mulūk*, tr. and comm. V. Minorsky, GMS New Series xvi, London 1943, 25, 43, 163).

(V. L. Ménage)

BEGTEGINIDS, an important seigneurial family which, though it never completely freed itself from the overlordship of its powerful neighbours, possessed for a century extensive lands in Upper Mesopotamia, partly in the east around Irbil and partly in the west, for a shorter period, around Ḥarrān. The founder of the family, Zayn al-Dīn ʿAlī Küčük b. Begtegin, was a Turcoman officer whose fortune was linked from the beginning with that of Zenki. Probably as a result of his participation in this prince's campaigns in Kurdish territory, we find him in possession of a number of districts stretching from the Great Zāb to the lands of the Humaydī and Hakkarī Kurds, Takrīt, and Shahrzūr, with Irbil at their centre. In 539/1145, after the revolt of the Saldjūḳid Alp-Arslan at Mosul, Zenki further gave him military control over this town. Despite this power he remained a faithful lieutenant of Zenki's two successors in Mosul, Sayf al-Dīn and Ḳuṭb al-Dīn, as well as of their vizier Djamal al-Dīn al-Iṣfahānī, until the time of his disgrace; the last-named of these princes added to his territories Sindjār and Ḥarrān, the latter in compensation for Ḥimṣ in Syria which one of his brothers had to give up to Nūr al-Dīn, the uncle of Ḳuṭb al-Dīn and prince of Aleppo. However, at the end of his life Zayn al-Dīn surrendered all his lands to Ḳuṭb al-Dīn, securing in exchange his son's right of succession to Irbil alone. He died an old man in 563/1168, and left the reputation of being brave, upright, temperate, and a protector of the devout.

His fame, however, was surpassed by that of his son Muẓaffar al-Dīn Gökburi. The latter, ejected first from Irbil by the governor of that town (and later of Mosul), Ḳāïmāz, to the advantage of his younger brother Zayn al-Dīn Yūsuf. From Ḳutb al-Dīn he received in compensation Ḥarrān, which his father had held. At the opportune moment he aligned himself with Saladin, who added Edessa and Samosata and married him to one of his sisters. From that time on he played a glorious part in most of Saladin's campaigns, in particular the conquest of Palestine and Syria and the struggle against the Franks (third Crusade). Then in 586/1190, his brother Yūsuf having died after he also had had to surrender to the confederate armies in front of Acre, Gökburi surrendered his Ḍiyār Muḍar territories to Saladin on behalf of his brother Taḳī al-Dīn ʿUmar and obtained from him as *de facto* overlord of the Zenkids the succession to the entire province of Irbil. He held this for forty-four lunar years, until he was eighty-one years old, and judging from his revenues considered himself from the time of Saladin's death as the vassal of the Caliph alone. He played an astute part in the struggles which went on all this

time among the various rulers of Upper Mesopotamia, supporting first the Ayyūbids against the Zenkids, and later the weakened Zenkids, to whom he married two daughters, against the sons of al-ʿĀdil. Finally he set himself to opposing the ambitions of Badr al-Dīn Luʾluʾ, the lieutenant and successor of the Zenkids, who was an ally of the Ayyūbid al-Ashraf. At the end of his life, having no son and fearing the intervention of his different neighbours, Gökburi bequeathed his principality to the Caliph, who brought it under effective occupation (630/1233).

Apart from diplomatic and military matters Gökburi was concerned with various enterprises of social value, especially at Irbil, though their influence extended beyond the town itself. He instituted *madrasas*, *khanaḳāhs*, hospitals and almshouses, and public services in aid of pilgrims, as well as contributing to the ransom of prisoners of the Franks, etc. He seems to have been the first prince to celebrate formally the *Mawlid* festival, perhaps as a reaction to the Shīʿī nativity festivals or Christmas as kept by the Irbil Christians. He was a devout and a well-read man, much visited by scholars and writers from foreign lands. In governing he was assisted, particularly on such occasions, by his vizier, who was known by reason of his former activities as Mustawfī of Irbil, and compiled the history of the town. Ibn Khallikān and his family were among their most famous protégés. Around the town of Irbil, which had always remained Christian and somewhat aside from the current of Muslim history, there grew up a new lower town, and the whole became transformed into a Muslim centre of some standing. This advance, which was attended by a rather severe fiscal policy, was set at naught by the Mongol sack of 634/1237.

BEGTIMUR [see shāh-i arman].

BEGUM (Indo-Persian Begam, Turkish Bigim), feminine of Beg [*q.v.*]. During the Mughal period of Indian history its use, as an honorific, was confined to the royal princesses only. Djahānārā Begam [*q.v.*] the unmarried daughter of Shāhdjahān [*q.v.*], bore the official title of Pādshāh Begam during the reign of her father. She retained it even after the dethronement and subsequent incarceration of Shāhdjahān. During Akbar's rule the Begams (queens and princesses) received from 1028 to 1610 rupees per annum as privy purse. After the death of Djahāngīr, his widow Nūr Djahān, received 200,000 rupees per annum allowed her by Shādjahān. Mumtāz Maḥall, the consort of Shāhdjahān, drew 1,000,000 rupees annually from the Imperial Exchequer while Pādshāh Begam enjoyed an allowance of 600,000 rupees per annum, half in cash and half in lands. Awrangzīb gave the latter 1,200,000 rupees per annum. Before the establishment of Pakistan (1947), Indian Muslim ladies of high and noble birth were designated as "begams". Now all married women in Pakistan, with the exception of those belonging to the poorer classes, are called "begams", the equivalent of *khānim* Mrs., or Madame. In this sense the word is practically unknown to the Arabic and Persian speaking countries. Husbands, in public and private, not infrequently, address their wives as begam, scrupulously avoiding pronouncing their given names. Domestics and menials, as a rule, address their mistresses, in India and Pakistan, as begams. Conventionally, every newly-born girl bears this word as a suffix to her name, but the practice is now fast disappearing.

BEKRĪ MUṢṬAFĀ AGHA, the name of a drunkard, who lived in the reign of Sulṭān Murād IV (1623-1640), and is said to have led him into habits of drunkenness; the name *bekrī* therefore in Turkish still commonly means a drunkard. In the popular literature and in the Karagöz plays the drunkard Bekrī Muṣṭafā Agha is a well-known figure, characterised by his sharp and ready wit and his Bohemian way of life. Ewliya even gives the title of a *Taḳlīd*: *Bekrī Muṣṭafā and the Blind Arab Beggar* (*Seyāḥat-nāme*, i, 654).

BEKTĀSH [see bektashiyya].

BEKTĀSHIYYA, a Dervish order in Turkey. The patron of the order is Ḥādjdjī Bektāsh Walī, whose biography as given in the order's traditional writings, (the first version of which goes back to about the beginning of the 9th/15th century) is legendary, its purpose being manifestly to bring together the saint with famous religious personalities and to account for the later political importance of the Bektāshiyya by insisting on the activity of its alleged founder. It is quite out of the question that Bektāsh was ever in relation with ʿOthmān and Orkhān or that he consecrated the Janissary corps (established for the first time under Murād I), as is maintained by the Bektāshī tradition and by some historical sources written under its influence.

We can however consider as certain the appearance in the 7th/13th century, among the dervishes of Anatolia, of Ḥādjdjī Bektāsh from Khurāsān. He was probably a disciple of Bābā Isḥāḳ [see bābāʾī], whose revolt had taken place in 638/1240. The aristocratic entourage of the rival Mawlawiyya order later laid emphasis on this. According to the researches of M. Fuad Köprülü, the order originated from the circle of his disciples. However, in the *Maḳālāt* of Ḥādjdjī Bektāsh, originally written in Arabic and translated into Turkish verse by Khaṭīb-oghlu and afterwards rendered also into Turkish prose, the secret rites and doctrines characteristic

of the Bektāshiyya are not particularly emphasised. At all events, the order, whose immediate predecessors appear to have been the Abdālān-i Rūm, already existed in the 8th/14th century; it was at the beginning of the 10th/16th century that the grand master Bālīm Sulṭān, the "second *Pīr*", gave it its definite form.

Turkish dervish institutions had received their characteristic features in western Turkestan from Aḥmad Yasawī (d. 562/1166); they had acquired an ever increasing expansion in Anatolia, but at the same time they had adopted heretical tendencies. The Bektāshiyya was able to conserve a good deal of pre-Islamic and heretical elements. In those regions where the order absorbed Muslim as well as Christian sects it came to include a large part of the population, as for instance in southern Anatolia and particularly in Albania, where there arose a kind of mixed religion, composed of Islamic and Christian elements. Also other communities with closely related related dogmas and rites, and especially the groups comprised under the denomination of Ḳīzīlbash, stood in certain relations to it.

The attitude of the Bektāshīs towards Islām is marked both by the general features of popular mysticism, and by their far-reaching disregard for Muslim ritual and worship, even including the *ṣalāt*. In their secret doctrines they are Shīʿīs, acknowledging the twelve imāms and, in particular, holding Djaʿfar al-Ṣādiḳ in high esteem. The centre of their worship is ʿAlī; they unite ʿAlī with Allāh and Muḥammad into a trinity. From 1 till 10 Muḥarram they celebrate the nights of mourning (*mātem gedjeleri*); also the other ʿAlid martyrs and especially the *maʿṣūm-i pāk* (those who perished in infancy) are highly venerated by them. In the 9th/15th century the cabbalistic number speculations of the Ḥurūfīs spread among them, while the *Djāwidān* of Faḍl Allāh Ḥurūfī in its Persian redaction, and the Turkish exposition of the doctrines of the sect written by Ferishte-oghlu under the title *ʿAshknāma*, have canonical authority with them. Furthermore they believe in the migration of souls.

The Christian elements may already partly have belonged to the Anatolian predecessors of the Bektāshīs; other parts were perhaps taken over from Christian groups who joined them later. On the occasion of the reception of new members there is a distribution of wine, bread and cheese, which is probably a survival of the Holy Communion as practised by the Artotyrites. Moreover the Bektāshīs make a confession of sins before their spiritual chiefs, who grant them absolution. Women take part in their rites without veiling their faces. A narrower group vow themselves to celibacy, the celibates wearing earrings as a distinctive mark. It is not yet made clear whether celibacy existed already in early times among the Bektāshīs; probably it was introduced for the first time by Bālīm Sulṭān.

The Bektāshīs not seldom settled in famous places of pilgrimage, explaining the sanctity of the latter in conformity with their own traditions, for instance in Seyyid Ghāzī near Eskishehir and in several places in Albania. The miracles described in the legends of their saints have often conserved shamanistic features.

The entire order was governed by the Čelebi, who resided in the mother-monastery (*pīr-ewi*) at Ḥādjdjī Bektāsh, constructed over the saint's tomb (between Ḳīrshehir and Ḳayseri). This office used to pass in the 18th and 19th centuries from father to son; it was not, however, always hereditary. The celibates have their own grand master or *dede*. The head of one single monastery (*tekke*) is called *baba*; the fully initiated member *derwish*, the member who has only taken the first vow *muḥibb*, the not yet initiated adherent *ʿāshiḳ*. The discipline is chiefly governed by the relation of the *murshid* to his disciples and novices.

The Bektāshīs wear a white cap, consisting of four or twelve folds. The number four symbolises the "four gates": *sharīʿa, ṭarīḳa, maʿrifa, ḥaḳīḳa*, and the four corresponding classes of people: *ʿābid, zāhid, ʿārif, muḥibb*; the number twelve points to the number of the imāms. Particularly characteristic are also the twelve-fluted *taslīm tashi*, which is worn round the neck, and the *teber* (double-axe). Illustrations are to be found in the work of J. K. Birge (see bibliography).

The big *tekke*s comprise the following parts *maydān evi*, the monastery proper with the oratory *ekmek evi*, the bakehouse and the women's quarters: *ash evi*, the kitchens; *mihmān evi*; the guest quarters;

Among the many earlier settlements of the order the following should be mentioned. In Rumelia: Dimetoka and Ḳalḳandelen; in Anatolia: ʿOthmāndjīḳ north-west of Amasya and Elmali in Lycia; near Cairo first at Ḳaṣr al-ʿAyn and soon afterwards also on the Muḳaṭṭam slope (already as early as the 9th/15th century); there are others in Baghdād and at Karbalāʾ.

The Bektāshī form of the dervish religion deeply influenced the pious attitude of the Turkish people. Next to the mystical writings proper of the order there flourished also a rich and fervent lyric poetry of Bektāshī poets.

The order's political importance was due to its connexion with the Janissaries; the latter had been from the beginning, in the same way as all other early political institutions of the Ottomans, under the influence of religious corporations. In the second half of the 9th/15th century at the latest the Bektāshīs acquired exclusive authority amongst them. The receptivity of the Janissaries to Bektāshī beliefs may perhaps be explained by their Christian origin. Their connexion with this strictly organised order gave the Janissary corps the character of a closed corporation. The Bektāshīs also took part in several dervish rebellions against the Ottoman power, *e.g.*, the revolt of Ḳalender-oghlu (933/1526-1527). The destruction of the Janissaries in 1241/1826 by Maḥmūd II affected also the order to which they were linked; many monasteries were destroyed at the time. Towards the middle of the 19th century began the renewal of the order and the rebuilding of the monasteries; the Bektāshīs experienced a revival which found expression in its literary activity at the end of the 19th century and even after 1908.

In the autumn of 1925 the Bektāshīs, like all dervish orders in Turkey, were dissolved; it was, however, precisely the Bektāshīs who had opened the way for many measures inaugurated by the Turkish republic (relation to Islamic orthodoxy; position of women). To-day the Bektāshīs continue their existence in the Balkan peninsula, particularly in Albania where their chief monastery is in Tirana; according to certain documents, there were still 30,000 Bektāshīs in Turkey in 1952 (cf. *C.O.C.*, 1952, 206).

BELEN [see BAYLĀN].

BELEYN. The name of a tribe-group of herdsmen and cultivators in the southern part of the Keren province of Eritrea. Known to themselves as Bogos, and numbering some 30,000 souls, they are organised in two main tribes, the Bayt Tarké and Bayt Tawké, strictly similar in culture and habit, though claiming distinct (mainly mythical) origins. A characteristic master-and-serf relationship has long been traditional among them, but tribal has now largely given place to direct govermental authority. The Beleyn generally followed Coptic Christianity until the Egyptian occupation of Keren area in 1277-1294/1860-1876), but have since adopted Islam.

The Beleyn language, unknown elsewhere, is an unsemitised dialect of the Agau group of Kushitic (Hamitic) languages. This, and their social structure and folk-lore, indicate that their presence in Eritrea is due to the immigration of little-diluted Agau elements from northern Ethiopia in the 10th and 11th (16th and 17th) centuries into territory previously occupied by folk of lower culture and energy.

Nadel), *Races and tribes of Eritrea*, Asmara 1943. (S. H. Longrigg)

BELGRADE (in modern Serbian: *Beograd* = White City), capital of the Federal People's Republic of Yugoslavia and of the People's Republic of Serbia, at the confluence of the Sava and the Danube. It comprises Beograd, the old town on the right bank of the Sava and the Danube, Novi Beograd (= New Belgrade), a new settlement still under construction, on the left bank of the Sava, and Zemun, the old town on the Danube. A number of smaller places on both banks of the Sava and the Danube also belong to Belgrade. It has more than 500,000 inhabitants.

Since Belgrade became the capital of Yugoslavia in 1918, it has begun to spread to the far side of the Sava and the Danube. In former times it covered only the area along the right bank of the Sava and the right bank of the Danube below the confluence. It was here that the Celtic Scordici founded a settlement and named it *Singidun*, a name which the town retained in the days of Roman rule (Singidunum). During the Bulgar rule in the 9th century, the town received its Slavonic name, which it retained, despite frequent changes of rulers (including Byzantine and, later, Hungarian ones). It was, however, frequently translated (Alba Bulgarica, Nandeor Alba, Nándeor Fejérvár, Alba Graeca, Griechisch Weissenburg). In their day, the Turks referred to it as بلغراد (Belgrad). In order to distinguish it from other towns in Albania, Hungary, and Transylvania which also bore the name of Belgrade, the Turks occasionally called it *Belgrad Üngürüz* (in the 9th/15th century), *Ashaghî Belgrad*, *Tuna Belgradî*, *Belgrad-i Semendire*, or similar names. In some Turkish documents, and in contemporary geographical and historical works, Belgrade is sometimes designated by names applied in the Islamic world to border towns and strategically important fortresses. Thus the name *dār al-djihād* is found frequently, and this has led some of the earlier Serbian historians to state that this was the Turkish name for Belgrade. Prof. F. Bajraktarević has proved that such a statement is unfounded.

Up to the First World War, Belgrade was an important fortress on the road from Central Europe to the Near East. Thanks to its strategic importance, Belgrade has had a stormy past. After it had changed rulers frequently in the Middle Ages (Byzantines, Bulgars, Hungarians, and Serbs), Belgrade was ceded to the Hungarians after the death of the Serbian despot Stevan Lazarević (1427). For nearly a century, it was the most important base for the defence of the southern borders of Hungary against Turkish raids.

If we disregard some uncertain reports concerning a siege of Belgrade by Bāyezīd I, the Turks twice attacked Belgrade prior to 863/1459: in 843-44/1440, when the town resisted a six months' siege, and under Meḥemmed II the Conqueror, who in 860/1456, arrived with a great army, a fleet, and strong artillery. Encircled on the landward side, with the Turkish fleet blocking the Danube, and heavily bombarded, Belgrade none the less held out. Assistance reached the town, and under the leadership of János Hunyady, who took over the defence after the break-through, the garrison of Belgrade resisted successfully, despite the fact that the Turks had penetrated into the lower fortress. After a premature assault, the Turks gave up the siege on July 23rd. This was the second occasion on which Belgrade won fame as "The outer wall of Christendom". In 845/1441-2, the Turks built a fortress opposite Belgrade, on the mountain Avala (Havala). This fortress played an important part in the Turkish raids on Belgrade after Serbia finally fell under Turkish rule (863/1459). The defensive power of Belgrade decreased during the first decades of the 10th/16th century in the clashes with the Turks. Broken by financial and political crises, Hungary was not able to give regular pay to the garrison; still less could it improve its defences.

During Sulṭān Sulaymān's first campaign (927/1521), the Turkish army entered Belgrade on 29 August 1521, after a long siege. The Hungarian troops were sent home, the Serbian population was settled in Constantinople, and some of the Serbian crews of the warships in the Danube became sailors in Turkish service. At that time, the seat of the *sandjak* of Smederevo (Semendire) was moved to Belgrade, and Bali-bey (died 933/1527) the son of Yaḥyā Pasha, was made governor. In order to make Belgrade secure, Bali Bey destroyed all settlements in the neighbouring areas of Syrmia, and he used the building materials of these destroyed Syrmian towns for Belgrade's new fortifications,

which now became the most important fortifications against Hungary. After the battle near Mohács (932/1526) the towns in eastern and central Syrmia came under the rule of the *sandjak-beg* in Belgrade. After Bali Bey's death, his brother Meḥmed-Bey (who died in 955/1548 as Pasha of Buda) continued the policy of conquest. Until 944/1538, the conquered regions of Syrmia, Slavonia, and southern Hungary remained under the rule of the *sandjak-beg* in Belgrade. After that, the *sandjak* of Požega was founded in Slavonia. After the conquest of Buda (948/1541), and the foundation of the eyalet of Buda, the *sandjak* of Smederevo, with its seat in Belgrade, fell to this *eyālet*. The representative (*ḳā'im-maḳām*) of the Pasha of Buda resided in Belgrade, as this town had lost none of its great military importance as a marshalling-place for Turkish troops before their wars against the west, even after the conquest of Buda. Together with the Turkish armies, sultans and Grand Viziers passed through Belgrade and paused there for varying periods. There are many events in Turkish history connected with Belgrade. Diplomatic missions, too, which came down the Danube from the west on their way to the Turkish Sultan, stayed in Belgrade for a short time, for this is where the overland route began.

Immediately after the conquest of Belgrade, the Turks began to consider further fortifications there. As during the Hungarian rule, these consisted of the lower and the upper fortress, which were now, however, well equipped with artillery. Each of these two fortresses had its own commander (*dizdār*). The Turks equipped Belgrade with a garrison and a fleet. The fleet on the Danube was particularly necessary because of the wars with Hungary, and in the first half of the 10th/16th century, Serbian *Martolos* were stationed there (in 943/1536-7 there were 385 *Martolos* in 40 *oda* with 39 *odabashi*, under the command of the *voyvoda* Vuk). In the second half of the 16th century, there was also a considerable garrison in Belgrade (in 1560 there were 223 *müstaḥfiẓ*, 9 *djebedji*, 41 *topdju* with 5 *bölükbashi*, 4 *kumbaradji*, 101 *azab*, 96 *Martolos* with one Agha and 8 *odabashi*; the *Martolos*, with the exception of the Agha and one *bölük* of the *topdju*, were Serbs).

Whilst Belgrade, one the one hand, developed quickly as a fortress after coming under Turkish rule, the same could not be said for its economic and commercial recovery. In 943/1536-7, there were in Belgrade 4 Muslim *maḥalles* with 79 households around four mosques. Nearly half of the non-military Muslim population was registered as craftsmen. There were 68 Christian households in the 12 *maḥalles* of the town. These inhabitants did not have to pay taxes, but their duty was to maintain the fortress. At that time there were 72 households of settled *eflak* (here used for semi-nomadic herdsmen, and not to be taken in the ethnical sense) in Belgrade, who guarded the imperial powder magazines, and there were 20 households of gypsies, whose duty it was to repair the ships in the harbour. In the thirties of the 16th century, a colony of Dubrovnik merchants from Smederevo settled in Belgrade.

After the middle of the 10th/16th century, Belgrade took on the character of an oriental town. The Muslim population was recruited in three ways; from the arrival of the whole administrative machinery and the military garrison, from the settling of merchants and craftsmen from other parts of Turkey, and from the islamisation of the local population. After Buda (948/1541) and Temesvar (959/1552) came under Turkish rule, Belgrade became very important as an entrepôt. By 967/1560, there were already 16 Muslim *maḥalles* with more than 360 households, and more than 60 Christian households in Belgrade. Craftmanship developed considerably, and new, more delicate crafts appeared. Details from the *Defter* of 980/1572-3 bear witness to the rapid rise of Belgrade. At that date, there were over 200 Christian households, and over 600 Muslim (in 21 *maḥalles*), 133 gypsy, and 20 Jewish.

The end of the 10th/16th century, and the first half of the 11th/17th century in particular, were times of great prosperity for Belgrade. According to a statement made by a Papal visitor to the archbishop of Bar, Peter Masarechi, Belgrade had 8,000 households with some 60,000 inhabitants (in 1632). According to Ewliyā Čelebi, there were 38 Muslim *maḥalles*, and 11 others (Serbs, Greeks, Gypsies, Armenians and Jews), and 98,000 permanent residents in the year 1070/1660. The town had a large garrison and was the seat of the commander (*kapudan*) of the Danube fleet. There were large storehouses for food for military purposes, workshops for the repair of cannons and nearby a powder factory. According to Ewliyā Čelebi, Belgrade had 217 *miḥrābs* (Kātib Čelebi mentions only up to 100 mosques there). The mosques of Sulṭān Sulaymān in the fortress (according to Ewliyā Čelebi, its builder was Miʿmār Sinān), and the one in the lower town, which Meḥmed Pasha, the son of Yaḥyā Pasha, had built, are worthy of special mention. There were 160 palaces (*sarāy*) and 7 baths in Belgrade, and a great number of squares and market places with a beautiful *bezistān*, 6 *kārvān sarāys* and several *khāns*. There was also a mint. During that time, the janissaries left their mark on the town and the guilds. Belgrade was the seat of a *mollā* who had three *nā'ibs*, and it was also the seat of a *muftī*. There were 17 *tekiyes*, 8 *medreses* and 9 institutes for the study of *ḥadīth* (*dār al-ḥadīth*), and there were also churches and cultural institutions of the Christian and Jewish minorities. The figures quoted by Ewliyā Čelebi are sometimes exaggerated, but the accounts of all travellers in the 11th/17th century describe Belgrade as a big town, particularly stressing its commercial importance. Foreign travellers noted especially the oriental character of the town.

After one month's siege, the imperial army under the Elector Maximilian of Bavaria took Belgrade in 1099/1688. Belgrade suffered greatly on that occasion. It remained under Austrian rule for two years; the Turks then recovered it, and it remained under Turkish rule even after the Peace of Karlovci (Karlowitz-1110/1699). Under the command of Eugene of Savoy, the imperial army beat the Turkish army near Belgrade 8 Ramaḍān 1129/16 August 1717. After the peace of Požarevac (Passarowitz-1130/1718), Belgrade became the capital of northern Serbia under Austrian occupation. Once again, destroyed Belgrade began to flourish. The fortifications were renewed, and the present-day walls date from that time.

The Sava and the Danube became boundary rivers by the Peace of Belgrade (1152/1739). Belgrade was neglected and sank to a mere border garrison for janissaries. It became the seat of a Pasha with the title of Vezir. Northern Serbia began to be referred to as the Belgrade *pashalik*, although it was still called the Smederevo *sandjak* (*Semendire sandjaghi*) in official documents. From 1789 to 1791, Belgrade was once again under Austrian rule. By

the end of the 18th century, it had about 25,000 inhabitants.

After the Peace of Svishtov (1791), the janissaries were driven from Belgrade, though Sulṭān Selīm III had to agree to their return not long afterwards. The rule of terror which they introduced gave rise to the first Serbian revolt in 1804; the rebels surrounded Belgrade immediately, but only succeeded in taking it towards the end of 1806. Belgrade remained the capital until the collapse of the rebel Serbian state in 1813. After the outbreak of the second Serbian revolt (1815) and the Turkish compromise to which it led, which established dual rule in Serbia, Turkish authorities and garrison remained in Belgrade. As the vassal state of Serbia grew stronger, Belgrade, too, began to change more and more into a Serbian town. After a bloody clash there between Serbs and Turks, the Turkish garrison bombarded the town (1862). This was followed by lengthy diplomatic negotiations. In 1867, fortified towns were handed over to Serbia, and Belgrade then became the capital of Serbia.

Only a few buildings of the earlier periods were preserved in Belgrade, and similarly there are but few monuments of the Turkish rule left. A few of them are in the older fortress (now a park). In the town itself there are only two, a mosque and a *türbe*. More obvious traces of Turkish rule can be found in the names of parts of the town and of places in the neighbourhood, such as Kalemegdan (*ḳalʿe meydānî*), Karaburma, Tašmajdan (*tash maʿdeni*), Dorćol (*dört yol*), Rospićuprija(*rospi köprü/sü/*), Topćider (*topdju dere/si/*), Avala (*havale*) etc.

Muslims living in Belgrade at the present time are not the descendants of the earlier Muslim population of Turkish times. The last Muslim families of old Belgrade emigrated in 1867 (many of these settled in northern Bosnia) The Muslim population found in Belgrade to day came after 1918 from Bosnia, Hercegovina, Macedonia and other Yugoslav regions where there are Muslims.

(B. Djurdjev)

BELĪGH, Ismāʿīl of Bursa, Turkish poet and biographer. Little is known of his life. Like his father and grandfather he was an *imām* in a small Bursa mosque. He also served as a minor government official in various departments in that town, except for a short appointment in a Toḳat court. He died in 1142/1729 in Bursa where he is buried. According to Ṣafāʾī's *Tedhkire*, Belīgh composed a *dīwān* which has so far not come down to us. His known poetical works consist of a number of poems quoted in various contemporary *medjmūʿa*s and *tedhkire*s and two *mathnawī*s, *i.e.*, *Serguzesht-nāme*, which relates his journey to Toḳat and his adventures there, with vivid descriptions of his colleagues in court and the provincial town, and a *Shehrengiz* which is a description of the beauties of Bursa. Belīgh's most important work is his well known book of biographies, *Güldeste-i riyāḍ-i ʿirfān we wefiyāt-i dānishwerān-i nādiredān*. The *Güldeste* consists of five parts and deals with the biographies of Ottoman sultans, princes, *wazīr*s and notables of Bursa such as poets, scholars, musicians, physicians, storytellers, etc. (printed in Bursa 1302/1885). Belīgh also wrote a supplement to Ḳāf-zāde Fāʾiḍī's *Tedhkire*, *Zübdet al-ashʿār*, and called it *Nukhbat al-Āthār li dheyl Zübdet al-Ashʿār*. It covers the period between 1620 to 1726 (autograph MS, Üniversite 1182). Two works, both in verse, have not come down to us: *Gül-i Ṣadberk*, a commentary of 100 *ḥadīth*s, and *Sebʿa-i Seyyāre*, a collection of seven *tawḥīd*s.

Bibliography: Ṣafāʾī, *Tedhkire*, s.v.; Faṭīn, *Tedhkire*, 28; Gibb, *Ottoman Poetry*, iv, 117; Sadeddin Nüzhet Ergun, *Türk Şairleri*, Istanbul 1936, ii, 809-817; *IA*, s.v. (by F. A. Tansal).

(Fahir İz)

BELĪGH, Meḥmed Emīn of Yenishehir, Turkish poet. Little is known of his life. He belonged to the *ʿulamāʾ* and served as *ḳāḍī* in various Balkan towns. He does not seem to have been appreciated by his contemporaries as most biographers do not mention his name. He died in 1174/1760 in Eski Zaghra after a hard life, according to his writings. His small *dīwān* was printed in Istanbul in 1258/1842. His *kaṣīda*s are of mediocre quality. Some of his *ghazal*s show a certain power of description, but his most original work is his four poems in *tardjiʿband* form: *Kefshgernāme*, *Ḥammāmnāme*, *Berbernāme*, *Khayyāṭnāme*, written in a fluent and unadorned style, which contain vivid descriptions of craftsmen and their trades.

Bibliography: Rāmiz, *Tedhkire*, s.v.; Faṭīn, *Tedhkire*, 28; Gibb, *Ottoman Poetry*, iv, 117-133; *IA*, s.v. (by F. A. Tansal); Sadeddin Nüzhet Ergun, *Türk Şairleri*, Istanbul 1936, ii, 817-820.

(Fahir İz)

BENARES (or Banāras), also known as Kāshī, derives its name from two tiny monsoon streams, Varūna and Āssī, that flow through the northern and southern parts of the town. Situated on the left bank of the Ganges, this ancient city, said to have been founded by Kāshyā, son of Suhottrā, about 1200 B.C., is a centre of the Hindu faith and is also revered by the Buddhists. Pop. (1951) 341,811.

Benares was captured by Muʿizz al-Dīn Muḥammad b. Sām in 590/1193, and many of the idols decorating its numerous temples were destroyed and the town reduced to ruins. In 757/1356 Fīrūz Shāh Tughluk, while on his return journey from Bengal, gave battle to the ruler of Benāres and formed him into submission. In 797/1394 the town and the *pargana* were bestowed by Muḥammad b. Tughluḳ

on his minister Khwādja Djahān. It was captured by Bābur in 936/1529. During the reign of Akbar, Rādjā Djay Singh Sawāʾī built many a temple and an observatory here, the latter is now in ruins. Shāhdjahān appointed his eldest son, Dārā Shukoh, as the governor of the town when he came into close contact with Brahmans and imbibed Hindu learning. Awrangzīb, enraged at Muslim students also being taught by Brahmans, ordered the closure of its *madrasas*. He also built a mosque on the site of an ancient Hindu temple which he destroyed on the plea that it was being used as a seat of conspiracy. The name of the city was also changed to Muḥammadābād but it never gained popularity, although it appears on his coins struck here. Muḥammad Shāh "Rangīlā" (1132/1719-1162/1748) bestowed the *pargana* of Benares on Mansārām, a Rādjpūt *zamīndār*, whose son Balwant Singh sided with the British during the Battle of Buxar, (1764) when he became independent of the Nawāb of Awadh It was ceded to the British in 1189/1775. In 1950 the estate was merged into the Indian Union forming part of the Banāras Division (Uttar Pradēsh).

Kabīr, the Indian *ṣūfī*-poet, came of a weaver family of this place. ʿAlī Ḥazīn, the Persian poet, lies buried here. It is also the birth-place of Āghā Ḥashr, an Urdū dramatist. Benares is famous for its silks and brocade manufactured by Muslim weavers. The morning at Benares, like the evening at Lucknow, has become proverbial in Urdū literature.

BENAVENT, (in al-Idrīsī *b.n.b.n.t.*), Benevento, never captured by the Muslims, even for a short period as were Bari and Taranto. However, in the 3rd/9th and 4th/10th centuries the Muslims became involved in the history of the town and principality of Benevento, having frequently been both enemies and allies of its princes in their domestic struggles, as well as often plundering and threatening its territory. The period on which we are best informed, thanks to the Latin sources, is the middle portion of the 3rd/9th century (the Arab sources are silent in this regard or give only very vague information). We know that in 228/843 a Saracen *amir* Apolaffar or Apoiaffar (Abū Djaʿfar), who had come from Taranto, became the ally of prince Siconulph against his rival Radelchis, but eventually quarreled with Siconulph and was killed defending Benevento. In 237/851 we find a certain Massar (Abū Maʿshar), with a troop of Saracens, allied to this same Radelchis. Massar was later treacherously seized by Radelchis and executed together with his family. Some years after this Benevento was again threatened by Sawdān, the emir of Bari. It was only during the 4th/10th century that the Muslim danger receded, to disappear in the 5th/11th century with the Norman conquest of Sicily. According to the testimony of al-Idrīsī the town of Benevento is very old (*azaliyya*), and its population large.

(F. Gabrieli)

BENAVERT, a Muslim leader who inspired Arab resistance to the Normans in eastern Sicily from 464/1072 until 479/1086. His name figures as *Benavert* or *Benaveth* in the account of the historian of the Normans, Malaterra. This person, of whom the Muslim sources make no mention, defeated the son of Count Roger in 467/1075 near Catania, captured this town in 474/1081, and in 478/1085 led expeditions from it into Calabria. In the following year he was besieged by Roger in Syracuse, and made a supreme effort to free this stronghold, which seems to have been the centre of his power. He was killed in the ensuing naval battle in the port, on 8 Ṣafar 479/25 May 1086. The real Arab name of this champion of Islam in Sicily was Ibn ʿAbbād. His memory has been handed down only by his enemies, who admired his courage. Almost certainly he was a forbear of the Muḥammad b. ʿAbbād who a century and a half later led the last great revolt of the Sicilian Muslims against Frederick II, by whom he was put to death.

Bibliography: M. Amari, *Storia dei Musulmani di Sicilia*², iii, 151-169. (F. Gabrieli)

BENDER, a town in Bessarabia; the name appears on a coin of Mengli Gerey dated 905/1499-1500. It is found in the Tatar documents as *Bender-Kerman* (V. Zernov, *Materiaux*, 16). Bender, from Persian *Bandar*, was called earlier *Tigina* or *Tighinea* which may have a Kuman origin. That the town was first established by the Genoese is a legend (*Chronique d'Ureche*, ed. Giurescu). Its rise as a trading town with important customs revenue was due to its being on the "Tatar-route" on which an active trade was carried on between Lvov and the Crimea and Aḳ Kirmān [*q.v.*] in the 14th century. The place seems to pass from under the rule of the Tatars to that of the Moldavian princes around 1400. The Tatars tried to reconquer it (Ulugh Muḥammad in 1428 and Iminek Mīrzā in 1476), and, finally Mengli Gerey in cooperation with the Ottomans took it with Kavshan and Tombasar in 1484. When in 945/1538 Süleyman II invaded Moldavia and formed the new *sandjaḳ* of Aḳ Kirmān with the incorporation of the south Bessarabia he ordered the erection of a strong castle on the new border at Bender. A good desription of the castle was given by Ewliyā Čelebī (v, 116-120) in 1067/1656-57. It became the seat of a *sandjaḳ-begi* toward 1570 and later it was attached to the newly formed *eyālet* of Özü. The ḳāḍī of Bender had 40 *nāḥiye* [*q.v.*] under his jurisdiction and the customs house, always active, was under an *emin* [*q.v.*]. Ewliyā Čelebī reported that its "varosh" lying on the west and

the south of the castle consisted of 7 Muslim and 7 non-Muslim districts with 1700 houses and about 200 shops. Bender was, Ewliyā adds, "the key of the empire" in the north, a stronghold especially against the Cossacks of Dnieper.

Bender was also famous as the refuge of Charles XII of Sweden between 3 August 1709 and 17 February 1713 and of Potocki in 1768. The Russians captured it first on 27 September 1770, in 1789 and on 8 November 1806 keeping it only with the treaty of Bucharest, 28 May 1812.

BENDER [see BANDAR].

BENG [see BAND̲J̲].

BENGAL [see BANGALA].

BENGALI.

(i) Muslim Bengali Language.

Bengali belongs to the Indo-European family of languages. It may have begun to evolve as a separate language with a distinct identity, out of Gauṛa Apabhramsa, about the 8th or 9th century A.D. The greater part of the vocabulary of Bengali was derived or borrowed from Sanskrit.

The Muslims conquered Bengal at the beginning on the 13th century, and ruled the country for nearly six hundred years. Under Muslim rule Persian was one of the languages of culture, provincial administration, and inter-state communication. Because of this, large numbers of Persian words and, through Persian, Arabic and Turkish words, became part of the Bengali language.

In 1836 English replaced Persian as the language of administration. From then onwards Persian no longer enjoyed the same status as before in the national life of Bengal and of northern India generally. Before the handing over of power in 1947, which resulted in the partition of Bengal, words of Perso-Arabic origin constituted nearly 8% of the total vocabulary of Bengali, and a little more than 15% of Muslim Bengali vocabulary. Hindustani began to be spoken in Calcutta from the latter half of the 18th to the middle of the 19th century, and a number of Hindustani words were received into Bengali vocabulary. At the beginning of the 19th century, there was in written Bengali something of a conflict between Sanskritised Bengali, that is, Bengali in which Sanskrit words preponderated, and Persian Bengali; examples of this can be found in the works of Mrityunjay Bidyālankār and Rām Rām Basu. During this period innumerable Muslim *punthis*, known as Musalmānī Bānglā, appeared. These were written in a mixture of Bangali, Hindustani and Awadhi.

Words of Persian, Turkish or Arabic origin which have become part of Bengali can be classified under seven broad heads, namely: (1) Administration and warfare, *e.g.*, *phouj* (soldiers) < *fawd̲j̲*, *tak̲h̲t* (throne) < *tak̲h̲t*, *laṛāi* (war) < *larā'ī*, *shahid* (martyr) < *s̲h̲ahid*, *d̲j̲akham* (wound) < *zak̲h̲m*, etc.; (2) Revenue and law-courts, *e.g.*, *d̲j̲ami* (land) < *zamīn*, *khād̲j̲nā* (revenue) < *k̲h̲azāna*, *Āin* (law) < *ā'īn*, *hakim* (judge) < *ḥākim*, *kazi* (judge) < *ḳāḍī*, *phaisala* (judgement) < *fayṣala*, etc.; (3) Religion and ritual, *e.g.*, *Āllah* (God) < *Allāh*, *khodā* (God) < *k̲h̲udā*, *nāmāz* (prayer) < *namāz*, *rod̲j̲ā* (fasting) < *rawḍa*, *had̲j̲* (pilgrimage) < *ḥad̲j̲d̲j̲*, *korbāni* (sacrifice) < *ḳurbānī*, etc.; (4) Education, *e.g.*, *doāt* (inkpot) < *dawāt*, *kalam* (pen) < *ḳalam*, *kāgad̲j̲* (paper) < *kāg̲h̲ad̲h̲*, *tālbilim* (student) < *ṭālib-i ʿilm*, etc.; (5) Races, religions, and professions, *e.g.*, *Ihudi* (Jew) < *Yahūdī*, *Hidnu* (Hindu race) < *Hindū*, *Muslim* (Muslim), *Phiringi* (English) < *Farangī*, *dard̲j̲i* (tailor) < *darzī*, etc.; (6) Culture and civilisation, *e.g.*, *rumāl* (handkerchief) < *rūmāl*, *golāb* (rose) < *gulāb*, *āṭar* (perfume) < *ʿiṭr*, *āynā* (mirror) < *ā'ina*, *korma* (preserved meat) < *ḳurma*, *koftā* (meat ball) < *kūfta*, *hālwā* (a type of sweetmeat) < *ḥalwā*, etc.; (7) Common things and notions in life, *e.g.*, *naram* (soft) < *narm*, *bāhbā* (Well done!) < *bah bah*, *shābāsh* (Bravo!) < *s̲h̲ād bās̲h̲*, *khabar* (news) < *k̲h̲abar*, etc.

Persian contributed as many as 2,500 words to Bengali vocabulary in general, and nearly another 2,000 words to the vocabulary of the Muslims inhabiting the south-eastern part of East Pakistan in particular. In addition, Persian suffixes like *ī*, *dān*, *dānī*, *dār*, *k̲h̲wur*, *bād̲j̲*, *gīrī*, are used to form Bengali adjectives, abstract nouns etc., *e.g.*, *desh* + *ī* = *deshi* (country-made), *phul* + *dānī* = *phuldāni* (flower-vase), *dokān* + *dār* = *dokāndār* (shopkeeper), *guli* + *k̲h̲wur* = *gulikhor* (drunkard) *mamlā* + *bād̲j̲* = *mamlābād̲j̲* (litigant), *bābu* + *gīrī* = *bābugiri* (interested in fashion), etc. Persian words like *nar* and *māda* denote gender in Bengali, *e.g.*, *pāirā* (pigeon), *narpāirā* (male pigeon), *mādi pāirā* (female pigeon). Similarly *mardā* and *mādi* before a Bengali word of common gender denote the male and the female of the species respectively, *e.g.*, *mardā kukur* (dog), *mādi kukur* (bitch).

Arab merchants developed commercial relations with the people of the south-eastern coastal regions of Bengal long before the political conquest of the country by the Muslims. The Muslim conquest in later times strengthened the religious and cultural ties of the people of this area with the Islamic way of life, and resulted in an increase in the numbers of the Muslim population. It left its mark on the pronunciation of words in this part of Bengal; for example, in the districts of Noakhali, Čittagong and Sylhet the use of the Arabic voiceless velar fricative *k̲h̲* (خ) in place of the Bengali plosive *k* and *k̲h̲* of the same category, *e.g.*, *k̲h̲apoṛ* < *kāpoṛ* (cloth), *k̲h̲āi* < *khāi* (I eat), etc., and the Arabic voiced alveolar fricative *z* (ز) in place of the Bengali voiced plosive-like affricate *d̲j̲* of the standard Bengali dialect, *e.g.*, *zāi* < *d̲j̲āi* (I go), *zānā* < *d̲j̲ānā* (to know) etc.

Since the handing over of power in 1947 there has been in East Pakistan a growing tendency to absorb words of Perso-Arabic origin in large numbers through Urdu, as a result of cultural and political contact with West Pakistan.

Bibliography: Halhed, *Bengali Grammar* 1783, intro.

(M. ABDUL HAI)

(ii) Muslim Bengali literature.

Formative Period (900-1200 *A.D.*). Bengali sprang up as a distinct branch of the Indo-Aryan language about three hundred years before Muslim rule in Bengal and flourished as a regional literature a century and a half after the Muslim conquest. But it did not exist either as a language or as a literature before Bengal came in contact with Islām and the

Muslims. Archaeological excavations at Pāhārpur (Rājshāhī) and at Maināmatī (Tripurā), which led to the discovery of a few ʿAbbāsid coins of the period from the 8th to the 13th centuries, and the history of Muslim saints like Bāyazīd Bisṭāmī (d. 874) at Nāṣirābād, Čittagong, Sulṭān Maḥmūd Māhīsawār (1047) at Mahāsthān, Bogra, Muḥammad Sulṭān Rūmī (1053) at Madanpur Mymensingh, Bābā Ādam (1119) at Vikrampur, Dacca, prove that there was constant maritime and missionary communication between the Muslim world and Bengal while the Bengali language was being formed.

Turki Period (1201-1350 *A.D.*). The Turks conquered Bengal in 1202 and took 150 years to establish their administration all over the country. This was the period of creation of an Islāmic atmosphere through administrative, religious and social machinery. Sanskrit, the fountainhead of Hindu culture, fell into desuetude; Persian, the official and cultural language of the Muslims, came into prominence; and Bengali, the language of the masses, developed rapidly. *Shek Subhodayā*, a Sanskrit hagiology on Shaykh Djalāl al-Dīn Tabrīzī (d. 1225), and *Niranjaner Rushmā*, a Bengali ballad by Rāmāi Pandit, contain sufficient materials indicative of the growing Islāmic atmosphere in Bengal.

Period of Independence (1351-1575 *A.D.*). Bengal became independent under Sulṭān Iliyās Shāh (1342-1357) and preserved her independence for 225 years. The Sultans of Pandua and Gauḍ identified themselves with the people and extended their patronage liberally to Bengali literature irrespective of caste and creed. The *Bhāgavata*, *Rāmāyaṇa* and *Mahābhārata* were translated into Bengali under their direct patronage; the great poets Vidyāpati and Čandīdās flourished; and Muslims, participating with their Hindu neighbours, opened up new avenues of literary themes primarily derived from Perso-Arabic culture.

The first attempt at popularising Bengali among Muslim scholars was perhaps made by the saint-poet Nūr Ḳuṭb-i ʿĀlam (d. 1416) of Pandua, who introduced the '*Rīkhta* Style' in Bengali, in which half the hemistich was composed in pure Persian and the other half in unmixed Bengali. The saint was a classmate of Ghiyāth al-Dīn Aʿẓam Shāh (1398-1410) and a life-long friend of the Sultan, under whose patronage Vidyāpati of Mithilā and Muḥammad Ṣaghīr of Bengal, the author of the first Bengali romance *Yūsuf-Zulaykhā*, flourished. Other writers of romances, like Bahrām Khān with his *Laylā-Madjnūn*, Sābirid Khān with his *Hānifā-Kayrāparī*, Donāghāzī with his *Sayf al-Mulk* and Muḥammad Kabīr with his *Madhumālatī* (1583-1588), followed Ṣaghīr in quick succession.

Muslim historical tales too were introduced in Bengali by a few poets. Zayn al-Dīn wrote *Rasūl Vijay* on the exploits of the Prophet, under the patronage of Yūsuf Shāh (1478-1481), who also helped Māládhar Basu to compose *Shrīkrishṇa Vijay*. Sābirid Khān also wrote a *Rasūl Vijay*, while Shaykh Fayḍ Allāh (1545-1575) composed *Ghāzī Vijay* and *Gorakṣha Vijay*.

The earliest Muslim poet introducing Islāmic precepts in Bengali literature, was Afḍal ʿAlī. His book of admonition, *Naṣīḥat-nāma*, was written on the tenets of Islām. He was also a composer of songs, in one of which he mentions the name of Fīrūz Shāh (1532-1533).

Positive literary evidence on the fusion of Hindu and Muslim culture is found in Shaykh Fayḍ Allāh's *Satyapīr* (1575). He described in it the beliefs and practices of a new cult aiming at a common platform of worship for Hindus and Muslims alike. Čānd Ḳāḍī and Shaykh Kabīr, two composers of songs on the common ideals of Ṣūfīs and Vaishṇabs, flourished during the time of Ḥusayn Shāh (1493-1519) and his son Nuṣrat Shāh (1519-1531).

Mughal Period (1576-1757 *A.D.*). Bengal came under the Mughals in 1576, to whom the country was a 'hell full of the bounties of heaven'. They introduced their own culture with more stress on Persian and neglected the provincial literature. Notwithstanding this, Hindu literature developed on the themes of Čandī, Manasā, Dharma, Annadā and Gangā; Vaishṇab literature reached its climax and Muslim Bengali literature, deeply influenced by Indo-Persian literature, flourished as never before.

Among Muslim literary figures, two major poets deserve special mention, namely, Sayyid Sulṭān (1550-1648) and Ālāwal (1607-1680). The former was the saint-poet of Čittagong; *Nabī Vaṃsha*, his *magnum opus*, rivalled the Bengali *Rāmāyaṇa* and *Mahābhārata* in all respects; the latter, who was a scholar poet of the Arakanese Court, adopted the theme of *Padmāyatī* (1651), from Hindī. Both of them exerted a wide and abiding influence on successive generations of poets, who not only improved upon the old themes, but also discovered new ones.

In the field of religion, the *Naṣīḥat-nāma* of Shaykh Parān (1550-1615) and *Kifāyat al-Muṣallīn* of Muṭṭalib (1575-1660) are outstanding. Naṣr Allāh Khān (1560-1625), a prolific writer on religious subjects, wrote the *Sharīʿat-nāma*, *Mūsār Sawāl* and *Hidāyat al-Islām*. The *Bayānāt* of Nawāzish Khān (1638), *Hazār Masāʾil* of ʿAbd al-Karīm (1698), *Naṣīḥat-nāma* and *Shihāb al-Dīn-nāma* of ʿAbd al-Ḥakīm (1620-1690), *Sarsāler Nīti* of Ḳamar ʿAlī (1676) also deserve notice.

In the realm of Muslim tales, the *Nabī Vaṃsha*, *Rasūl Vijay* and *Shab-i Miʿrādj* of Sayyid Sulṭān; *Djang-nāma* of Naṣr Allāh Khān (1560-1625), *Amīr Ḥamza* (1684) of Ghulām Nabī and *Anbiyāʾ Vāṇī* (1758) of Ḥayāt Maḥmūd narrate many legends about the Prophet and his uncle Ḥamza. Sayyid Sulṭān's *Iblīs-nāma*, Muḥammad Khān's *Ḳiyāmat-nāma*, Shaykh Parān's *Nūr-nāma* and Muḥammad Shafīʿs *Nūr Kandīl* were built up with the Muslim concepts of Satan, Doomsday and Cosmogony respectively.

Romances introduced earlier were developed by ʿAbd al-Ḥakīm in his *Yūsuf Zulaykhā* and *Lālmatī Sayf al-Mulk*, Nawāzish Khān in his *Gul-i Bakāwalī* (1638), Gharīb Allāh in his *Yūsuf Zulaykhā* and Muḥammad Akbar in his *Zeb al-Mulk* (1673). When pure romances became monotonous, Sherbāz in his *Fikr-nāma* and Shaykh Sāʿdī in his *Gadā Mallikā* (1712) introduced moral instruction in romances.

A good elegiac literature developed centring round the tragedy of Karbalā. Muḥammad Khān in his *Maḳtūl Ḥusayn* (1645), ʿAbd al-Ḥakīm in his *Karbalā*, Ḥayāt Maḥmūd in his *Djang-nāma* (1723), and Muḥammad Yaʿḳūb in his *Maḳtūl Ḥusayn* (1694) contributed largely to the wide popularity of this theme.

British Period (1757-1947). The Hindus took advantage of Western education at least half a century before the Muslims, and revolutionised Bengali literature by the introduction of a new prose and a new poetry embodying Western ideas, thoughts and forms. Iswar Chandra Vidyāsāgar (1820-1891), Bankim Chandra Chatterjī (1835-1894) and Madhu-

sūdan Datta (1824-1873) played a great rôle in this literary regeneration.

The Muslims entered the field half a century later. Mīr Musharraf Ḥusayn (1848-1931), Pandit Riyāḍ al-Dīn Mashhadī (1850-1919) Shaykh ʿAbd al-Raḥīm (1859-1931), Kayḳobād (1858-1951), Muzzammil Ḥaḳḳ (1860-1933) and Dr. Abu 'l-Ḥusayn (1860-1916) took to this new Bengali to lay the foundation of modern Muslim Bengali literature and a host of others came in their wake. Among them Ismāʿīl Ḥusayn Shīrāzī (1870-1931) was the most illustrious.

Meanwhile, Rabindranāth Tagore (1860-1941), the Nobel prize-winner, appeared on the literary scene of Bengal and raised her literature to a world stature.

Nadhr al-Islām (b. 1899), the Rebel Poet of Muslim Bengal, ushered in a new school of realistic poetry full of life, light and vigour. He shared the sorrows and sufferings of his countrymen in particular and of oppressed humanity in general. He was the only singing bard to herald a new era of common men and awaken them to struggle for the independence of their motherland, a struggle which culminated later in the creation of Pākistān. In his wake, the poet Djasīm al-Dīn (b. 1902) came forward to sing the songs of rural Bengal, particularly of its east portion, now known as East Pākistān.

(Md. Enamul Haq)

BENGHĀZĪ, the principal town of Cyrenaica, formerly the district of Barḳa [*q.v.*], situated on the western plain on a strip of shore partly cut off from dry land by lagoons. Its position is not advantageous, as its harbour is exposed to winds from the north and west, while the neighbouring regions are arid and the fertile districts on the al-Mardj and Djabal Akhḍar plateaux are some way off. The town is built on the site of the former Euhesperides, a colony founded by the Greeks in the fifth century B.C. During the reign of the Egyptian Ptolemy III Euergetes the settlement became known by the name of his wife Berenike, and retained this name, as Bernik, in the Middle Ages. It was always a town of secondary importance, and declined in the Middle Ages, possibly vanishing completely.

The modern town dates from the immigration at the end of the 15th century of Tripolitanians from Zliten and Mesrata who had commercial connexions with Derna, an Andalusian settlement established some time previously on the eastern seaboard of Cyrenaica. It takes its name from Sīdī Ghāzī, a saint buried locally, but about whom little is known. The Tripolitanians were gradually reinforced by immigrants from the other Ottoman countries, notably Cretans, who came in numbers before and after the Greek conquest of their island (1897); other immigrants were Jews from Tripolitania, tribesfolk and oasis-dwellers from various districts of Cyrenaica, and a few Europeans. The population of the town was 5,000 at the beginning of the 19th century, and 15,000 towards 1900, including about a thousand Italians, Maltese and Greeks and 2,500 Jews. It had risen to 19,000 when the Italians landed at Benghāzī in 1911. Formerly the centre of a Turkish *wilāyet*, Benghāzī then became the chief town of the eastern part of the colony of Libya, which was finally pacified only in 1931. It was connected by railway to Solūk in the south (35 miles) and al-Mardj in the east (68 miles), and became the terminus of the road skirting the Great Syrte, as well as of those which radiate out across the northern plateau, the heart of the country. A new harbour was built, protected by breakwater, and the town was provided with municipal services as in a European city. The old town had been built within a quadrilateral 700 metres long by 300 metres wide, to a fairly regular plan. The great mosque, dating from the 16th century, was restored. A new, generously planned suburb was built to the south of old Benghāzī, in the direction of the former suburb of El Berka which had sprung up around a Turkish barracks. In 1938 Benghāzī had 66,800 inhabitants, of whom 22,000 were Italians. Its harbour was the busiest in Cyrenaica, and several industries were based in the town: leather and footwear, furniture, building, and tunny-fish processing. Greeks and Italians fished in the Great Syrte, and this, together with the salt-pans on the coastline, increased opportunities for employment.

Benghāzī suffered much from the bombing of late 1942, and from the departure of the Italian population, who evacuated it and the whole of Cyrenaica on the arrival of the British 8th Army. It became the capital and seat of the sovereign of the Federal Union of Libya (1951), and the principal town of Cyrenaica, but lost its industries and much of its importance as a port. The value of its airfield is primarily strategic. Its population in 1954 was about 63,000, all Muslims except for a very small number of Jews and Europeans.

(J. Despois)

BENJAMIN [see BINYĀMĪN].

BENNĀK, also called *benlāk* in the 9th/15th century, an Ottoman *ʿörfī* (*ʿurfī*) tax paid by married peasants (*muzawwadj reʿāyā*) possessing a piece of land less than half a *čift* [*q.v.*] or no land, the former being called *ekinlü bennāk* or simply *bennāk* and the latter *djabā bennāk* or *djabā*. The word *bennāk* might possibly be derived from the Arabic verb *banaka*.

Actually the *bennāk resmi* made part of the *čift resmi* [*q.v.*] system and can be considered originally as consisting of two or three of the seven services (*ḳulluḳ*, *khidmet*) included in the *čift resmi*. The rate of *bennāk* was 6 or 9 *akča* in Meḥemmed II's *ḳānūnnāme* [*q.v.*], but in some areas (Teke, 859/1455) it was only 5 *akča*. In later times it was usually 9 for *djabā bennāk* and 12 for *ekinlü bennāk* and when the *čift resmi* system was extended to eastern Anatolia in 1540 the rate there was 18 for *ekinlü* and 12 or 13 for *djabā bennāk*.

In principle *bennāk resmi* was paid by the Muslim peasants directly to the *tīmār*-holders for whom they were recorded as *raʿiyyet* in the *defter* [*q.v.*].

In the *defters* the term *bennāk* showed the peasants themselves paying *bennāk resmi*. If a bachelor was married he was immediately subject to this tax. If later divorced he paid only the bachelor tax (*müdjerred resmi*). If married, the nomad *reʿāyā* without stock animals paid also *bennāk*. Thus this tax was considered essentially as a poll-tax and called also *raʿiyyet resmi*.

(Halil İnalcık)

BERĀR, formerly a province of British India consisting of the four districts of Amraotī, Akola, Buldāna, and Yeotmāl; area: 17,809 sq.m.; population: 3,604,866 of whom 335,169 were Muslims (1941 Census). Under British rule it was administered as part of the Central Provinces. It has recently been incorporated in the Bombay State.

The territories of the Vākātakas, comtemporaries of the Guptas, roughly corresponded to modern Berār. It was first invaded by Muslims in 1294 but was not permanently occupied until 1318. It formed the northernmost province (*ṭaraf*) of the Bahmanī kingdom of the Dakhan but towards the end of the 9th/15th century became an independent sultanate under the ʿImād Shāhīs until annexed by the Niẓām Shāhīs of Aḥmadnagar in 1574. It was conquered by Akbar towards the end of his reign and remained a *ṣūba* of the Mughal empire until 1724 when Āṣaf Djāh Niẓām al-Mulk became independent in Ḥaydarābād. Until the defeat of the Marāthās by Arthur Wellesley at Assaye in 1803 it was frequently overrun by Marāṭhā forces [see NAGPUR]. In 1804 the Berār territories ceded by the Bhonsla Raja of Nāgpur were handed over to the Niẓām. During the governor-generalship of Lord Hastings, Berār was for a time controlled by the banking firm of Palmer and Company (vide *Preliminary Report on the Russell Correspondence relating to Hyderabad*, C. Collin Davies, *The Indian Archives*, vol. viii, no. i, 1954 ff.). In 1853 Berār was assigned to the East India Company and its revenues were partly employed in the payment of the Niẓām's debts and partly in maintaining the Ḥaydarābād Contingent. By a fresh agreement in 1902 Lord Curzon reaffirmed the rights of the Niẓām over Berār but the province was leased in perpetuity to the Government of India at an annual rental of 25 lakhs of rupees. During the viceroyalty of Lord Reading a demand by the Niẓām for the restoration of Berār met with no success. Later under Lords Willingdon and Linlithgow a number of gestures were made to the Niẓām, but Berār continued to be administered as part of the Central Provinces until 1956.

Burton, *History of the Hyderabad Contingent*, Calcutta 1905; *Imperial Gazetteer of India*, s.v. Berar, Oxford 1908; *Parliamentary Papers*, Berar: 1925, Cmd. 2439; 1926, Cmd. 2621.

(C. Collin Davies)

BERĀT, A word of Arabic origin (for the Arabic meaning see BARĀʾA) which in Ottoman Turkish denotes a type of order issued by the Sultan. Several words of Turkish or other origin were used with the same meaning: the Turkish *biti*, *yarligh*, *buyuruldu*, the Arabic *berāt*, *emr*, *ḥüküm*, *tewḳīʿ*, *menshūr*, *mithāl*, *irāde*, the Persian *fermān*, *nishān*. Some of these words were used during the entire Ottoman epoch, others were used only during certain periods; some of them had only a general meaning, others had also a more special, limited meaning. In the same document several words could be used to designate the "sultan's order"; they could denote an order in the wider sense and also in a narrower, more limited sense.

Biti meaning a sultan's order was not much used after 1500. *Emr* (*amr*), in use for 400 years, did not only mean a general order issued in the name of the sultan, but also a special order which decreed the issue of a *berāt*; hence the expression in the preambles of the *berāt*: *eli emirlü* "he who has the order concerning the issue of the *berāt* in hand". *Ḥüküm* (*Ḥukm*) always occurs in the sense of general order, but also meant a special type of order, the documents of which used to be separately dealt with by the administration and which, at present, are registered in the Turkish archives as a separate archival unity (*aḥkām defterleri*). The *nishān* meant all orders, without any restriction of subject, that were provided with the *tughra* (*nishān*), but (since the 10th/16th century) especially those which were drawn up by the highest financial department of the empire, the *defterkhāne*, and were concerned with financial matters. Synonymous with the term *nishān* was *tewḳīʿ* (*tawḳīʿ*) which could be used, without further limitation, to designate any document which was provided with the *tewḳīʿ*. (Their identical meaning is proved by the derivatives of both words, the *tewḳīʿī* and the *nishandji*, which are synonymous). An order of higher rank was meant by the more rarely used *menshūr*, the *mithāl* and the *irāde* (in use only since the 19th century). The *berāt* had a more limited meaning, that of a "deed of grant", "a writ for the appointment to hold an office"; the documents belonging to this group were also handled separately by the administration; the memory of this is preserved in the designation of some public records: *rumlarin berāt defteri* "the *defter* of the *berats* issued in matters concerning the Orthodox Greek Church", *katolik berāt defteri* etc. (Midhat Sertoğlu, *Muhteva bakımından Başvekâlet Arşivi*, 29, 32).

As all grants in the Ottoman empire derived from the sultan, the *berāt* was always issued in the sultan's name and its constant attribute was: *sherif* or *humāyūn* ("imperial *berāt*").

In the Ottoman empire all appointments were made by "grants", those which were paid by a temporary tenure of estates as well as those paid in ready money; thus all appointments to the civil service, whether that of a high-ranking pasha or that of a low-ranking employee of a mosque, were effected by a *berāt*. The bishops of Syria also received their licences from the sultan in the form of a *berāt*. *EI*[1], 678, s.v. *Barāʿa*). Even the vassals of the empire, *e.g.*, the princes of Transylvania, received their recognition in their principality in the form of a *berāt*, with the difference that in the diploma issued to them the expression in question was complemented the following way: *bu berāt-i humāyūnu we ʿahdnāme-i ṣidḳ-meshḥūnu verdim*" I have issued the imperial *berāt* and the treaty full of faith". Thus under the name of *berāt* an exceedingly great number of orders were issued and these could be grouped according to their contents: *wezīrlik berātı*, *tīmār berātı*, *mālikāne berātı*, *iltizām berātı*, and, if issued for the benefit of a corporation, *odjaḳlıḳ berātı* etc.

The word *berāt* became especially part of the many expressions used in connexion with the administration of the *tīmār*-estates, *e.g.*, *berāt-i ʿālīshān ičün tedhkere verildi* "the instruction (or warrant) called *tedhkere* given for issuing a high *berāt*", *berāt-i sherifim verilmek fermānım olmaghın* "since my imperial order has been given for issuing a high *berāt*", *tedhkereyi berāt ettirmek* "to exchange the writ called *tedhkere* for a *berāt*", *tedjdīd-i berāt olunmaḳ bābında khaṭṭ-i humāyūn ṣādir olmaghın* "as the sultan's order has been issued for the renewal of the *berāts*" (such procedure was usually ordered

after the sultan's accession to the throne), *eli berātlî* "having a *berat* in hand" (corresponding to this expression is the above quoted *eli emirlü*), *ehl-i berāt* "who has a *berāt*", and in official documents there is often reference to issued *berāts*. The word *berāt*, however, often does not occur in the deeds of grant and it has to be inferred from the contents of the document whether it is at the same time a *berāt* or not.

According to the dimension of the grant, the *berāt* has simpler or more elaborate variants, but the *berāt* is always written in *dīwān* style and the structural elements, as well as their order are usually the same. After the *daʿwet* and *tughra* standing outside the text, the text may begin with two formulas: one is more ceremonial: *nishān-i sherif-i ʿālīshān-i sulṭānī ..... ḥükmü oldur ki* "the high and noble sultan's emblem ... whose order reads as follows", the other is more simple: *sebeb-i taḥrīr-i ḥurūf oldur ki* "the cause of the writing of this document is as follows". In the ceremonial variant the sovereign expresses in a phraseology appropriate to Persian style that owing to his power received from God, he considers it his duty to reward his zealous subjects, and therefore, starting with an exactly fixed day, he charges a certain subject of his (mentioned by name) with a certain office or service or endows him with possessions herewith. If the office or service was connected with the enjoyment of certain estates (and most of the cases were such), then these were enumerated (*dhikr u sharḥ ve beyān olunur*). This enumeration is externally the most prominent part of the text, in *siyāḳat* script, but written with the ordinary Arabic numerals, forming a separate section in the document. This is followed by the proper admonition to the inhabitants concerned, to recognise the person in question as *ṣu-bashî*, *sandjaḳbegi*, etc. and as a conclusion the usual phrase of the sultan's orders: "let everybody acknowledge these and give credence to the imperial emblem, the *tughra*". In some cases the *berāt* has no date, in others it has, in a type of writing different from that of the document, written by another hand, by the so-called *taʾrikhdji ḳalemi*, the recording office called "dating department". At the bottom of the document, in the lower left-hand corner of the paper can be read the place of issue (*bi-maḳām* or, when the Sultan was in the field, *bi-yurt*).

A certain fee had to be paid for drawing up a *berāt* (*resm-i berāt*). The official rate for this is, to the best of our knowledge, not known. According to numerous known instances, with grants of smaller value it varied between 1 and 3 per cent. (see Laszló Velics and Ernő Kammerer, *A magyarországi török kincstári defterek*, Vols. i-ii, Budapest 1886 and 1893).

It can be stated from Persian deeds of grant, of which fewer are known (Makar Khubča, *Persidskoe firiakî i ukazî Muzeya Gruzii*, i, Tiflis 1949; B. S. Puturidze, *Gruzinopersidskie istoričeskie dokumentî*, Tiflis 1955; A. D. Papasiyak, *Persidskie dokumentî Matekadaraka*, i, Erivan 1956) that they consist of the same structural elements and for the most part of much the same phrases as the Turkish *berāt*, but the word *berāt* does not occur in them and, when used in Persian, has not the same meaning as in Turkish [see also BARĀʾA].

(L. Fekete)

BERĀTLÎ, *i.e.*, holder of a *berāt*, a name given in the late 18th and early 19th centuries to certain non-Muslim subjects of the Ottoman Empire, who held *berāts* conferring upon them important commercial and fiscal privileges. These *berāts* were distributed by the European diplomatic missions, in abusive extension of their rights under the capitulations. Originally intended for locally recruited consular officers and agents, they were sold or granted to growing numbers of local merchants, who were thus able to acquire a privileged and protected status. The Ottoman authorities attempted to curb this traffic, and at the end of the century Selim III sought to compete with the European consuls by himself issuing *berāts* to local Christian and Jewish merchants. In return for a fee of 1500 piastres, these *berāts* conferred the right to trade with Europe, together with important legal, fiscal, and commercial privileges and exemptions. These grants, enabling Ottoman *dhimmīs* to compete on more or less equal terms with foreign (*musta'min*) merchants, created a new privileged class, known as the *Awrupa tudjdjārî*. In this class the Greeks, thanks to their maritime skills and opportunities, were able to win a position of preeminence, which was reinforced by the advantages of the neutral Ottoman flag during part of the Napoleonic wars. Early in the 19th century the system was extended to Muslim merchants, who for a fee of 1200 piastres could obtain a *berāt* of membership of the analogous guild of the *Khayriyye Tudjdjārî*. The number who availed themselves of this offer was, however, very limited. Both terms and guilds fell into desuetude after the *Tanẓīmāt*.

BERBER (Barbar): (1) Tribal territory. The name originally signified the territory of the Mīrafāb (Mayrafāb), an Arabic-speaking tribe claiming kinship with the Djaʿliyīn. It extended on both banks of the Nile from the Fifth Cataract (lat. 18° 23′ N.) to the river ʿAṭbarā. The Mīrafāb included both riverain cultivators and semi-nomads. The ruler (*makk*) was a vassal of the Fundj sultan of Sinnār. On the death of a *makk*, the sultan nominated his successor from the ruling family of Timsāḥ. He also levied, at intervals of four or five years, a tribute of gold, horses and camels. Burckhardt (1814) describes the southernmost portion of Mīrafābī territory as forming a small separate kingdom, known as Raʾs al-Wādī, under a member of the Timsāḥ family. Berber was an important trading-centre. A route from Upper Egypt across the Nubian Desert here reached the Nile, and caravans going to

Egypt from Sinnār and Shandī passed through Berber. The trade of Dongola found an outlet through Berber but by the early 19th century the Dongola-Berber route across the Bayūḍa Desert was dangerous and little used. Trade with Suakin and al-Tāka (the region around modern Kasala) was slight owing to the predatory Bedja and Bishārīn tribes. The transit dues levied on Egyptian caravans provided most of the *makk*'s revenues; the Mīrafāb paid him no taxes on land or produce, although they provided the tribute levied by Sinnār. Caravans coming from the south (*i.e.*, Fundj territory) paid no dues, although they made presents to the *makk*. The trading-connections of Berber resulted in the settlement of Danāḳla, ʿAbābda and other strangers. The ʿAbābda served as guides and protectors of caravans crossing the Nubian Desert. The last *makk*, Naṣr al-Dīn, is reported to have sought the assistance of Muḥammad ʿAlī Pasha to regain his throne; certainly he welcomed the arrival of the Turco-Egyptian army on 5 March 1821.

(2) Province. During the Turco-Egyptian period the Mīrafābī territory formed part of the province of Berber, which extended from Hadjar al-ʿAsal (lat. 16° 24′ N.) nothwards to Abū Ḥamad on the right bank and Kurtī on the left bank, and included the adjacent deserts and their nomads. The extension of Muḥammad ʿAlī's rule over the Bedja, resulting in the opening of a permanent trade-route with Suakin, increased the prosperity of the provincial capital. The last khedivial governor was the ʿAbbādī notable, Ḥusayn Pasha Khalīfa, who was endeavouring to repress Mahdist activities when Gordon arrived as governor-general in February 1884. Gordon's attempts to establish friendly relations with the Mahdī and his indiscreet disclosure of the intended evacuation of the Sudan weakened resistance. In April 1884 the Mahdī commissioned Muḥammad al-Khayr ʿAbd Allāh Khūdjalī to lead the *djihād* in Berber, and in May the provincial capital was taken, leaving Gordon isolated in Khartoum.

Mahdist Berber was administered by a military governor and had a provincial garrison and treasury. The decline of commerce irritated the inhabitants but a precarious trade continued with Upper Egypt and Suakin, the customs dues from which formed a source of provincial revenue. The last Mahdist governor, Muḥammad al-Zākī ʿUthmān, after appealing in vain for help against the Anglo-Egyptian advance, evacuated the provincial capital which was occupied by Anglo-Egyptian forces in September 1897. After the reconquest, Berber was reconstituted within narrower boundaries than the pre-Mahdist province and was subsequently combined with Dongola and Ḥalfā to form the present Northern Province.

(3) Town. Berber as the name of a town was apparently unknown before the Turco-Egyptian period. Bruce (1772) speaks of "Gooz" (*i.e.*, Ḳūz al-Fundj) as the capital of Berber. This place was much decayed at the time of Burckhardt's visit (1814), when the capital was a more northerly village called by him "Ankheyre". This may be an error for al-Mikhayrif, ("El Mekheyr" in Cailliaud), a name used for the provincial capital under the Turco-Egyptians. Al-Mikhayrif was abandoned after the Mahdist conquest and the modern town of Berber lies further north, on the site of the Mahdist camp. Since the Reconquest Berber has declined in importance. The provincial head-quarters was transferred in 1905 to al-Dāmir, while the modern railway-town of ʿAṭbarā has superseded it as a centre of communications.

Bibliography: J. L. Burckhardt, *Travels in Nubia*, London 1819, 207-258; N. Shoucair (Shuḳayr), *Taʾrīkh al-Sūdān*, Cairo 1903, i, 87-90; O. G. S. Crawford, *The Fung Kingdom of Sennar*, Gloucester 1951, 53-56, 267-270 (with source-references). A valuable unpublished report by Ḥusayn Pasha Khalīfa on the fall of Berber is in the Sudanese archives in Khartoum, Cairint 1/8, 36.

(P. M. Holt)

BERBERĀ, the port and former capital of the British Somaliland Protectorate, lying in 10°26′ North lat. and 45°02′ long. The *Periplus*, Ptolemy, and Cosmas give the name βαρβαρικὴ ἤπειρος or βαρβαρία to the coast of the Land of Frankincense. The town itself may be Μαλάω ἐμπόριον. The older Arab geographers write of the land of Berberā, the Gulf of ʿAden being *Baḥr Berberā* or *al-Khalīdj al-Berberī*. The inhabitants are known as βάρβαροι, Berbera, or Berābir. They are Somali [*q.v.*] and the people whom Yāḳūt (iv, 602) describes as barbarous negroes, amongst whom Islām had penetrated, living between the Zandj and the Ḥabash. Ibn Saʿīd (died 1286) who seems to be first to mention the town of Berberā, describes them as Muslims, and Ibn Baṭṭūṭa records that they are Shāfiʿī which they are today. The name Sōmāli first occurs in an Ethiopic hymn in the reign of the Negus Yesḥāḳ (1414-29) and frequently in the *Futūḥ al-Ḥabasha* (1540-50).

Berberā's original site is Bandar ʿAbbās now a burial ground to the East of the present town. Amongst its tombs are those of three *sayyids* said to have been concerned with the foundation of Bandar ʿAbbās as other Arabian proselytisers founded Zaylaʿ and Maḳdishū. Traditionally the town was contemporary with ʿAmūd and Aw Barre further to the West. It formed part of the Muslim state of Adal (sometimes based on Zaylaʿ, [*q.v.*]) which, founded in the 9/10th centuries, reached its zenith in the 14th century and rapidly declined after Imām Aḥmad Ibrāhīm al-Ghāzī (1506-43)'s 16th century conquest of Abyssinia. While the Abyssinian armies were recovering their losses with Portugese aid, Berberā was sacked in 1518 by Saldanha. In the 17th century, with Zaylaʿ, it became a dependency of the *sharīfs* of Mukhā. The first British-Sōmāli treaty was signed in 1827, two years after the Mary Ann had been plundered off Berberā. With ʿAli Sharmarke (Sōmāli Habar Yūnis), governor of Zaylaʿ, Britain signed a treaty in 1840 to secure harbouring rights for vessels of the East India Company. He was British Agent at Berberā when Burton was attacked in 1855. Travellers in the 19th century describe Berberā as a poverty-stricken collection of huts with a population, in the hot months, of as little as 8,000. From October to March, however, during the north-east Monsoon, the port was open to vessels from Arabia, the Persian Gulf, and India, bringing imports of dates, cloth, rice, and metals etc., and exporting slaves, livestock, ghee and skins, and the town sometimes contained as many as 40,000 persons.

Berberā was occupied in 1875 by the Egyptians who withdrew nine years later during the Mahdist rebellion in the Sudan when Britain acquired Zaylaʿ and Berberā. Treaties were signed with the Gadabūrsi (1884) and the Habar Awal (1884 and 1886) clans. In 1901 Shaykh Muḥammad ʿAbdīlle Ḥassān [*q.v.*] (the 'Mad Mullah') of the Ṣāliḥiyya *ṭarīḳa* began his *djihād* against the colonial powers. The administration of the interior was abandoned in 1908, and gradually resumed about 1912.

In Burton's time Berberā was dominated by the Habar Awal ʿAyyāl Aḥmad who were still in 1912 receiving a subsidy of 10,000 Rs. annually. With a population today rarely less than 30,000 most of whom are Habar Awal ʿIse Mūse, the town is the headquarters of Berberā District. It is the centre for the Protectorate of the Ḳādiriyya *ṭariḳa* with a *maḳām* for Sayyid ʿAbd Al-Ḳādir al-Djīlānī, and of the Somali Youth League nationalist party. A local Government Council was started in 1953, and the harbour is being developed.

BERBERI, name given to the eastern Hazāra inhabiting the mountainous region of central Afghānistān between Kābul and Harāt; in Īrān, the region of Mashhad, Balūčistān (near Quetta), and in the S.S.R. of Turkmenistān, the oasis of Kushka (district of Maki) [see HAZĀRA]. (Ed.)

BERBERS, the name by which are commonly designated the populations, who, from the Egyptian frontier (Sīwa [*q.v.*]) to the shores of the Atlantic Ocean and the great bend of the Niger, speak—or used to speak before their arabicisation—dialects (or rather local forms) of a single language, Berber. This term is probably an abusive or contemptuous epithet, used in Greek (*Barbaroi*) and in Latin (*Barbari*) as well as in Arabic (*Barbar*, singular *Barbarī*, pl. *Barābir*, *Barābira*), and does not constitute a national name, as some people (cf. P. H. Antichan, *La Tunisie*, 1884, 3) maintain (cf. the toponymics Berber in Nubia and Berberā in Somaliland; see G. S. Colin, *Appellations données par les Arabes aux peuples hétéroglosses*, in *GLECS*, vii, 93-6). The term *amazigh/amahagh* (and var.), pl. *imazighən/imuhagh* (and var.) may be considered as designating the Berbers in general, though they themselves, lacking as they do all sense of community, usually employ their tribal names when referring to themselves or have otherwise more or less willingly accepted foreign designations (Kabyles, Chaouia, etc.). The term *amazigh* has the meaning of "free man" (see however T. Sarnelli, *Sull'origine del nome Imâzîĝen*, in *Mémorial André Basset*, Paris 1957, 131-138) and is still employed over a fairly extensive area. The feminine *tamazight* (*tamazikht*)/*tamahaḳḳ* (and var.) is used there to designate the Berber language.

The only general work on the Berbers is the small but excellent popular account by G. H. Bousquet, *Les Berbères*, Paris 1957.

I. — History

a) Origins

The language is at present the only criterion which will serve to distinguish the Berbers, who, from the anthropological point of view, reveal morphological characteristics which are too varied, indeed too irreconcilably opposed, to permit us to speak of a homogeneous Berber race, whilst, from the political point of view, they have always been too divided to constitute a truly distinct nation. In spite of the relative abundance of prehistoric remains discovered in the immense territory conveniently called "Barbary", in spite of the epigraphic documents and the works of Greek, Latin and Arab authors, a whole portion of the history of this obviously composite people is still unknown to us. It would be useless to deny that the origin of the Berber language—the unity of which, moreover, is a relative matter (see section V below)—remains a mystery for us and that to locate, therefore, the cradle of the men who speak it remains an impossible task. However, on this absorbing subject, bibliography is by no means lacking, and, many hypotheses, sometimes presented as certainties, have been put forward concerning the origins of the Berbers. Classical authors consider them abound variously as autochtonous, oriental or Aegean. The Arabs usually consider them as orientals, Canaanites or Ḥimyarites, and this latter hypothesis has recently been supported by cogent arguments (Helfritz). The Canaanite origin has been revived by some modern authors (Antichan, Daumas, Slouschz), whilst for others the Berbers are autochtonous (Carette), with an admixture of Asian blood, especially Phoenician (Fournel, Mercier); some people, usually amateurs, even go so far as to reconstruct the ancient population of Barbary in all its elements (Rinn, *Les origines berbères*, Algiers 1889; Col. de Lartigue, *Monographie de l'Aurès*, Constantine 1904) and to establish bold relationships with the Celts, Basques and Caucasian peoples (Comm. Cauvet, *Les Origines caucasiennes des Touareg*, in *Bull. Soc. Géog. Alger.* 1925; idem, *La Formation celtique de la nation targuie*, *ibid.*, 1926), or even with the indigenous populations on the other side of the Atlantic (idem, *Les Berbères en Amérique*, Algiers 1930). Anthropology is at a loss and the problem is not simplified by the existence of fair Berbers. The best qualified scholars are reserved in their opinion and generally consider that various elements coming from the south, the east and perhaps the north were added to a basic population rather similar to that which occupied the northern shores of the Mediterranean, but that this occurred at too remote a period for us to be able to date the various migrations. In any event, all these are no more than hypotheses; only linguistic data may perhaps enable us to solve the mystery of Berber origins, which, in the middle of the 20th century, remains complete.

(Ch. Pellat)

b) Before Islam

All that can be said for certain is that the Berbers had been established in Northern Africa from a remote period. The classical historians and geographers refer to them under different names, which have not persisted as they were certainly not used by the peoples concerned: Nasamonians and Psylli occupying Cyrenaica and Tripolitania; Garamantians leading a nomadic existence in the Sahara; Machlyans, Maxyans populating the Tunisian Sahel; Numidians living in the eastern Maghrib; Getulians defending the desert borders and the high plateaux; and lastly Moors, spread over the central Maghrib and the furthest Maghrib. The establishment of foreign colonies, Phoenician, Carthaginian, and Greek, only had a limited influence on all these populations, except perhaps in the immediate vicinity of Carthage. They were divided into numerous rival tribes, which were, however, capable of uniting briefly against the foreigners, though never to the point of forming powerful and lasting states. At the time of the Punic wars, however, whilst anarchy persisted in the East, the beginnings of political organisation (creation of the kingdoms of the Massylae, the Masaesylae and of Mauritania) can be observed in the centre and the west. The genius of Masinissa, bolstered by the support of Rome, permitted this prince to unite the whole of Numidia under his rule and to create, in a few years, a kingdom comprising all the Berber populations from the Moulouya to the Syrtes. But this kingdom had but an ephemeral existence; it disappeared in 46 B.C. and Eastern Numidia became a Roman province. A few years later the kingdom of Numidia was reconstituted and became a simple Roman protectorate. Still shorter was the life of the kingdom of Mauritania, created by Augustus in 17 A.D. in favour of Juba II, and transformed into a Roman province as from the year 42.

Rome's dominion in Africa lasted until the 5th century of the Christian era. In this period of time, the Berbers, whilst assimilated in the Province of Africa and in Numidia, were hardly changed in the mountainous areas, on the high plateaux, on the confines of the Sahara and in Mauritania. For the most part the Romans were content to impose on them the obligation of paying tribute and providing auxiliary troops, leaving the administration of the tribes to the local chieftains (*principes, praefecti, reguli*). The Berber spirit of independence was by no means extinguished; it showed itself at times in risings, led by more or less romanised natives, such as Tacfarinas (17-29 A.D.), and at times in attacks by the desert peoples or by the barely civilised tribes of the interior. Such were the attacks led by the Nasamonians and the Garamantians during the reigns of Augustus and Domitian; the insurrections of the Moors during the reigns of Hadrian, Antoninus and Commodus; of the Getulians during the period of military anarchy; the rising of the Quinquegentians (Kabyles of the Djurdjura) at the end of the 3rd century. As Roman authority progressively declined, there was an increasingly energetic reaction on the part of the Berbers, who affirmed their particularism by the adoption of heterodox doctrines, as for example Donatism, so that the religious quarrels which desolated Africa in the 4th century are, from many points of view, racial wars. The rising of the "Circumcelliones" appears to have been a kind of Berber Jacquerie. Revolts, such as those of Firmus (372-75) and Gildon (398) provide further testimony of the effervescence of the native populations. But, as previously, the Berbers were unable to ally themselves against the common enemy and to take his place. Their hostility to the Romans merely made the Vandal conquest easier. Like the Romans, these Germanic invaders were obliged to take the Berbers into account. Though Gaiseric succeeded in restraining them by enrolling them in his armies, his successors had to maintain a constant struggle against them. Mauritania, Kabylia, the Aurès and Tripolitania retained their independence. The Byzantines who, after defeating the Vandals, remained the masters of North Africa for a century (531-642), were no more fortunate. Indigenous chieftains such as Antalas in Byzacene and Yabdas in the Aurès, offered such resistance to Solomon, the governor sent by Justinian, that he had great difficulty in surmounting it. After the death of this general, killed in an expedition organised against the Levatians (Luwāta [*q.v.*]) of Tripolitania, the situation in Byzantine Africa became very critical. John Troglita was only able to stop the invasion of the Luwāta with the assistance of the Berbers of the Aurès. But Byzantine authority was not recognised by all the indigenous populations. Outside Byzacene, the former Province of Africa (Tunisia) and the northern part of the province of Constantine, the coastal towns and some strongholds in the interior, the Berbers were everywhere independent. At that time they formed three groups: 1—in the East, the Luwāta (Hawwāra, Awrīgha, Nafzāwa, Awraba) extending over Tripolitania, Cyrenaica, the Djarīd, the Aurès; 2—in the West, the Ṣanhādja scattered throughout the central Maghrib and the furthest Maghrib (Kutāma in Little Kabylia, Zwāwa in Great Kabylia, Zanāta on the Algerian littoral between Kabylia and Chelif, Ifren from Chélif to Moulouya, Ghumāra in the Rif, Maṣmūda on the Atlantic coast of Morocco, Gezūla (Djazūla [*b.v.*]) in the High Atlas, Lemṭa in Southern Morocco, Ṣanhādja "with the *lithām*" leading a nomadic existence in the western Sahara); 3—the Zanāta spaced out along the borders of the plateaux, from Tripolitania to the Djabal ʿAmūr, and extending progressively towards the central Maghrib and the furthest Maghrib. (G. Yver*)

c) After Islam

The arrival of the Arabs scarcely changed the previous situation. Their first expeditions were, in reality, no more than raiding expeditions and left no traces other than the havoc wrought by the Muslim bands. It is true that the founding of al-Ḳayrawān (50/670) provided the Arabs with a permanent base of operations, but the expeditions of ʿUḳba b. Nāfiʿ [*q.v.*] across the Maghrib were more like raids than an actual conquest. The towns still occupied by the Byzantines remained inaccessible to the Muslim leader, as did the mountain *massifs*, where he would have been unable to overcome the inhabitants. In fact so little were they under control that one of their leaders, Kusayla [*q.v.*], having surprised and killed ʿUḳba at Tahūdha, expelled the Arabs from Ifrīḳiya and formed a Berber kingdom comprising the Aurès, the Southern part of the present-day Department of Constantine and most of Tunisia (68-71/687-90). However Kusayla was unable to hold his position for long and, in spite of the resistance of the Berbers of the Aurès, symbolised by the legendary personage of the "Kāhina" [*q.v.*], the Muslims finally emerged victorious at the end of the 1st/7th century. The conversion of the Berbers to Islam, initiated by ʿUḳba without great success, took place at the beginning of the following century. This was accomplished less by conviction than by interest, for the Arab generals had the idea that the natives would enrol in their armies in hopes of booty and thus be won over to their religion. The Berbers formed the nucleus of the armies which, under the command of Arab or even Berber leaders like Ṭāriḳ [*q.v.*], in a few years completed the subjugation of the Maghrib and, in less than half a century, brought about the conquest of Spain.

Harmonious relations, however, did not long prevail between Arabs and Berbers. The latter complained of having been poorly rewarded for their services and, in spite of the fact that they were Muslims, of being treated more like inferiors than equals. And so, having first broken away from orthodox Islam and embraced Khāridjī doctrines (see below, section III), they rose against the Arabs. The movement began in the West (122/740), at the instigation of a man of the Maṭghāra, Maysara [*q.v.*], and subsequently, in spite of his death at the hands of his own followers, prevailed throughout the whole Maghrib and even spread into Spain. The Arabs suffered disastrous defeats, like that of Kulthūm b. ʿIyāḍ [*q.v.*] in 123/741; they were expelled from al-Ḳayrawān, which was sacked by the Warfadjdjūma, followers of the Ṣufrite doctrines (139/756); then the Nawwāra (Ibāḍīs), led by Abu 'l-Khaṭṭāb [*q.v.*], defeated the Warfadjdjūma and formed an Ibāḍī state extending over Tripolitania, Tunisia and the eastern part of Algeria. For a while the authority of the ʿAbbāsid Caliph was abolished in Africa. But the Berbers, continuously divided amongst themselves, were incapable of profiting from their success. The destruction of Abu 'l-Khaṭṭāb's army by troops from Syria restored Ifrīḳiya to the Arabs (144/761). Forty years of sanguinary struggles and innumerable engagements (300 according to Ibn Khaldūn) enabled them to re-establish their control over the eastern Maghrib. The rest of the country eluded them. A number of states, governed by chieftains of Arab origin, but inhabited by Berbers, for the most part heretics, not recognising the authority of the ʿAbbāsid Caliph, came into being in various places. Such were the kingdom of Tāhart (144-296/761-908) founded by the Imām Ibn Rustam with the survivors of the Ibāḍites from the East who had taken refuge in the central Maghrib [see RUSTAMIDS]; that of Sidjilmāssa [*q.v.*] where the Banū Midrār reigned (155-366/771-977); that of Tlemcen [*q.v.*] founded by Abū Ḳurra, chief of the Banū Ifren; that of Nakūr [*q.v.*] in the Rif; the state of the Barghawāṭa [*q.v.*] on the Atlantic coast; finally, at the beginning of the 3rd/9th century, the kingdom of Fās, founded by Idrīs I, a descendant of ʿAlī b. Abī Ṭālib, with the help of Berber tribes (Miknāsa, Sadrāta, Zwāgha). Only the semi-independent dynasty of the Aghlabids (184-296/800-909) recognised the sovereignty of the ʿAbbāsids; they found among the Berbers soldiers for the conquest of Sicily, but had to suppress many revolts by the indigenous populations of Tripolitania, southern Tunisia, the Zāb and the Hodna.

Berber opposition to the Arabs remained, in fact, as inveterate as ever; it was even sufficiently strong to ensure the triumph of Shīʿī doctrines in the Maghrib, in spite of the fact that they were radically opposed to the Khāridjī doctrines embraced by the Berbers in the preceeding century. The Kutāma provided the *dāʿī* Abū ʿAbd Allāh al-Shīʿī [*q.v.*] with the soldiers who fought the Aghlabids and founded the Fāṭimid power for the benefit of the *mahdī* ʿUbayd Allāh (297/910). The Fāṭimids, it is true, did not succeed in imposing their rule on the whole of the Berbers. Though they succeeded in suppressing the Imāmate of Tāhart, they were unable to prevent the Idrīsids from maintaining themselves in the furthest Maghrib; they did not obtain the submission of the Maghrāwa and the Zanāta who, out of hatred for the Fāṭimids, had placed themselves under the patronage of the Umayyads of Spain; finally, they had to combat the revolt of the Khāridjīs led by Abū Yazīd [*q.v.*] "the man with the donkey" (332-36/943-47), a revolt which endangered their power and which they only succeeded in suppressing with the help of the Ṣanhādja of the central Maghrib. In addition, at an early date, the Fāṭimids turned their attention towards the East and, once the Caliph al-Muʿizz had established himself in Egypt (362/973), they lost interest in the Maghrib. North Africa was once again disputed between the various Berber tribes, none of which was sufficiently strong to dominate the others. In the East, the Ṣanhādja, taking the place of the Kutāma, upheld the authority of the Zīrids [*q.v.*], governors of Ifrīḳiya and Tripolitania (362-563/973-1167); in the West, following the disappearance of the Idrīsids, power passed into the hands of the Zanāta, at first nothing more than local governors on behalf of the Umayyads of Spain, but later independent princes at Fās until the advent of the Almoravids (455/1063). At the beginning of the 5th/11th century, the Zīrid state disintegrated; in the centre of the Maghrib there was founded the

Ḥammādid kingdom [q.v.], the rulers of which recognised the authority of the Caliph of Baghdād and took as their capital firstly the Ḳalʿa and then Bougie (Bidjāya; 405-547/1014-1152). The anarchy resulting from the internecine Berber struggles was further complicated, in the middle of the century, by the invasion of the Hilālī tribes, which had as an immediate result the devastation of Ifrīḳiya and part of the Maghrib, and which entailed, as a long-term consequence, a profound modification of the ethnography of North Africa.

However, just as the disorder seemed to reach its climax, two Berber dynasties, that of the Almoravids [see AL-MURĀBIṬŪN] and that of the Almohads [see AL-MUWAḤḤIDŪN], both proclaiming reforming religious doctrines, succeeded in establishing their temporary supremacy in North Africa. The triumph of the Almoravids was that of the Lamtūna, who until then had led a nomadic existence between southern Morocco and the banks of the Senegal and the Niger. Converted to Islam in the 3rd/9th century, they had for a long time been only nominal Muslims. They had been instructed in orthodox doctrine and practices by ʿAbd Allāh b. Yāsīn (d. 451/1059) and resolved to carry the faith to the Blacks of the Sudān and to the ignorant populations of southern Morocco. Their conquests speedily passed beyond these limits. Abū Bakr b. ʿUmar founded Marrākush (462/1070) and Yūsuf b. Tāshfīn (Tāshufīn) within a few years subdued the whole of Morocco and the central Maghrib as far as the borders of the Ḥammādid kingdom, halted the progress of the Christians of the Iberian Peninsula by the victory of Zallāḳa [q.v.] (479/1086), dethroned the Andalusian amīrs, and became the sole master of the whole of Muslim Spain. The decline of the Almoravids was as rapid as their success. Exhausted by their own victories and by contact with a higher civilisation, the Berbers of the Sahara rapidly disappeared. To replace them, the Almoravid Caliphs were obliged to have recourse to the use of Christian mercenaries, whilst they themselves, unmindful of Islamic orthodoxy, scandalised strict Muslims by their conduct. Won over to the unitarian doctrine (*muwaḥḥid*) by the preaching of Ibn Tūmart [q.v.], the Maṣmūda of the Atlas rose against them. Under the command of a man of genius, a Berber of the Kūmiyya, ʿAbd al-Muʾmin [q.v.], they overcame the Almoravids without great difficulty (541/1147). The Empire founded by the Almohads was still more extensive than that of their predecessors. Though it is true that ʿAbd al-Muʾmin did not succeed in subduing the whole of Spain, on the other hand he destroyed the Ḥammādid kingdom of Bougie and the Zīrid kingdom of Ifrīḳiya, expelled the Christians from the ports which they had occupied, and made himself master of all the country between Syrte and the Atlantic. Thus a great Berber Empire extended over the whole of North Africa; however it was not long before it began to crumble. The Almohad Caliphs were not more successful than the Almoravids in remaining faithful to orthodoxy; one of them, al-Maʾmūn [q.v.], even went so far as publicly to curse the memory of Ibn Tūmart, and dealt rigorously with the faithful. The rivalries of the various Berber splinter groups was an additional factor which contributed to the disintegration of the empire created by ʿAbd al-Muʾmin. The quarrels of the Maṣmūda and the Kūmiyya led to constant bloodshed at the Moroccan court; the tribes of the central Maghrib supported the enterprises of the Banū Ghāniya [q.v.], or attempted to make themselves independent. A century after the death of ʿAbd al-Muʾmin, the last of his line, Abū Dabbūs, reduced to the rôle of bandit-chief, met his end in obscurity (668/1269). The Maghrib was already divided among new powers, the Marīnids [q.v.] installed at Fās, the ʿAbd al-Wādids [q.v.] at Tlemcen (Tilimsān), the Ḥafṣids [q.v.] at Tunis. Not one of these new dynasties was capable of imposing its supremacy on the others, or even of making its own subjects respect it. In Morocco, the tribes of the mountain regions were in a state of constant revolt against the Marīnids; in the central Maghrib, the Banū Wamānnū of the Ouarsenis, the Zwāwa of the Djurdjura, the Kabyles of the province of Constantine, and the populations of the Zāb and Djarīd, remained outside the authority of the sovereigns of Constantine, Bougie and Tunis; the same was true of the oases of the Jebel Nafūsa and the Aurès. The inability of the Berbers to organise themselves in a large State is conclusively demonstrated. It therefore becomes impossible to follow their history except by making a historical assessment of the rôles of the various tribes. The task, moreover, would be immensely complicated by the changes brought about as the result of the Hilālī invasion. In the plains and on the plateaux, the Berber populations intermingled with the Arabs; gradually they abandoned their language and customs and even lost their ancient name, replacing it by that of some personage from whom they traced their origin: they became arabicised. Other groups escaped this transformation because of the inaccessibility of their habitat, as for example those of the Aurès, Kabylia, the Rif and the Atlas; their ranks were swollen by refugees from many sources who sought asylum among them; finally some were driven back into the Sahara, so that from the 8th/14th century "the Berbers form a cordon on the frontier of the country of the Blacks similar to that formed by the Arabs on the confines of the two Maghribs and of Ifrīḳiya" (Ibn Khaldūn, *al-ʿIbar*, trans. de Slane, ii, 104). This disintegration was accompanied by a recession of Muslim civilisation. It would not be an exaggeration to say that a number of Berber groups reverted in a way to a state of semi-savagery, only retaining a few very rudimentary notions of Islam. In the 9th-10th/15th-16th centuries, their re-islamisation was the work of marabouts, presenting themselves for the most part as natives of southern Morocco, of the legendary Sāḳiyat al-Ḥamrā, which popular imagination pictures as a nursery of missionaries and saints. Such was the influence of these pious men that whole tribes today consider themselves as their descendants. Only a few rare groups avoided their influence. (G. YVER*)

II. — Distribution at present

At the present day, the Berbers, although without doubt constituting the basis of the population of North Africa, no longer form a homogeneous mass and one can at most take into account those of them who have retained the use of the Berber language; they would appear to amount to over 5,000,000 individuals. Many of them are in fact bilingual—even trilingual—but still more numerous are those who have lost—often deliberately—all memory of their origins as well as their customs and language, frequently providing themselves expressly with an Arab genealogy; in contrast, a few elements here and there lay claim to a Berber origin, though they have ceased to speak the language of their ancestors. Generally speaking, Berber has in fact always receded before the advance of Arabic, and recent events or those of the present day have tended to accentuate the narrowing of the area in which the old language is used; the disappearance of various Berber speaking pockets, especially in eastern Barbary, is a contemporary phenomenon, and it seems likely that the political situation in North Africa will continue in the immediate future to favour the extension of the domain of Arabic.

However, several considerable groups have persisted in the mountain *massifs* and in the desert, that is to say in those regions only superficially penetrated by the Arabs. They are linked together by pockets more or less close to one another, which remain as evidence of the older ethnic and linguistic pattern. In general terms, it may be said that the density of Berber groups increases from east to west. They are scattered over a vast area which extends from the Egyptian frontier (with Sīwa and Djarabub) to the Atlantic Ocean, from the cliff of Hombori, south of the Niger, to the Mediterranean.

Libya.—Various groups subsist in the mountains of the country of Barḳa, in the Djabal Ghuryān, Ifren, Nafūsa; they are also to be found in the oases of Awdjila, Soḳna, Timissā and, on the coast, at Zwara; some of the elements of the population of Awdjila and of Urfella, in the neighbourhood of Tripoli, say they are Berbers although they speak Arabic (about 23% of the population in all).

Tunisia.—Six villages in the island of Djerba: Adjim, Guellala, Sedouikech, Elmai, Mahboubin and Sedghiane, to which must be added seven on the mainland: Tmagourt, Sened, Zraoua, Taoudjout, Tamezret, Chnini and Douiret, which are still partly Berber-speaking; these Berbers, many of whom spend a long time in the towns of the North, especially in Tunis, where they occupy positions of trust, are much attached to their dialect, which moreover serves them as a secret language (1% Berber-speaking in all).

Algeria.—Kabylia in the north and the Aurès in the south-east have been the two poles of Berber resistance; these regions are now only separated by a fairly narrow Arabic-speaking zone, up to Sétif. In the Algerian and Oranian Tell country, the groups only reach some importance in the mountain region of Blida and the Chélif (Ouarsenis, Djendel, Benī Menacer, Chenoua); finally, several groups appear along the Algero-Moroccan frontier (Benī Snous, near Tlemcen) (about 30% Berber speaking in all).

Morocco.—The geographical configuration of Morocco has been especially favourable to the survival of the Berber populations; though a number of tribes have relinquished the use of Berber, it nevertheless remains the language of the great groups of the Zanāta, Maṣmūda and Ṣanhādja in the Rif, the Middle, High and Anti-Atlas, as well as in the Sous. R. Montagne, *Vie Sociale*, 17, has estimated that the Arabs constitute from 10 to 15% of the population in Morocco, Arabicised Berbers from 40 to 45%, the remaining 40 to 45% being Berbers who cannot disclaim their origin.

Sahara.—In the Algerian and Moroccan Sahara, the oases of Oued Righ, Ouargla, Ngousa, the seven towns of the Mzab, the "ksours" of the Gourara, the Touat, the Tidikelt, of Figuig, of the Tafilalt, of the Dades; then in a very extensive zone in the shape of a triangle, between Ghadāmes in the North, Tombouctou in the south-west and Zinder in the south-east, including Ghat, Djanet and the Ahaggar, we have the various groups of Touareg [*q.v.*].

Berber is also spoken in Mauritania (Zenaga) by about 25,000 inhabitants (especially the Trārza); the Wada pocket uses Azer, a Soninké dialect mixed with Berber.

Diaspora.—Outside those zones roughly indicated above, attention must be drawn to the influx of the Berbers into the large towns of Morocco (Casablanca) and Algeria (Algiers), where, "detribalised" and lacking the control of their natural social group (see below section IV), they tend to form an impoverished proletariat, ready for anything. Outside Barbary, there are to be found in the Lebanon descendants of the Kutāma who arrived with the Fāṭimids and, in Damascus, Algerian Berbers who emigrated at the beginning of the conquest, or who rejoined the *amīr* ʿAbd al-Ḳādir [*q.v.*] or his descendants. Some elements remained in various European countries after the second world war, and a few are even reported in America, but above all Metropolitan France has the largest number of Berbers; the majority of them are Kabyles, who have temporarily—or in some cases permanently—abandoned the barren soil of their homeland, seeking to find more fruitful means of livelihood abroad; these displaced persons also form a proletariat which finds it difficult to adapt itself to the conditions of life in the Metropolis.

(G. Yver-[Ch. Pellat])

III. — Religion

In ancient times, the religion of the Berbers appears to have been divided into a multitude of local cults, corresponding to the tribal divisions. The objects of this cult, concerning which we only possess scanty and incomplete information, were doubtless natural objects: grottos, rocks, springs, rivers and mountains, to which must be added the celestial bodies, at least the sun, moon and some of the stars. The veneration accorded them still persists in some of the legends, beliefs, rites and religious ceremonies. In spite of their conversion to Islam and their deep feeling of belonging to the Islamic community, the Berbers have in fact retained a host of pagan practices, some of which have more or less been adapted to Islam, whilst others remain in direct opposition to Islamic precepts; these survivals are particularly apparent in agricultural rites and festivals (practices for obtaining rain, harvest rites, lighting bonfires, *ʿanṣra* [*q.v.*]), the concept of *baraka* [*q.v.*], the cult of saints etc.

It cannot be denied that from Punic times, various foreign divinities were not only borrowed, but were in fact assimilated to the national divinities (see H. Basset, *Influences puniques chez les Berbères*, in *RAfr.*, 1921). Judaism also obtained numerous proselytes, and even if it did not play the rôle which some claim for it, it was disseminated over the whole of North Africa; in fact, with the exception of the descendants of Jews expelled from Spain in the 9th/15th century, the majority of indigenous Jews are descended from proselytes pre-dating the appearance of Islam (see Slouschz, *Hebraeo-Phéniciens et Judéo-Berbères*, Paris 1909; M. A. Simon, *Le Judaïsme berbère dans l'Afrique ancienne*, in *Rev. Hist. et Philos. Fac. théol. protestante de Strasbourg*, 1946; L. Voinot, *Pèlerinages judéo-musulmans du Maroc*, Paris 1948; P. Flamand, *Population israélite du Sud marocain*, in *Hesp.*, 1950, 363 ff.; idem, *Un Mellah en pays berbère*: *Demnate*, Paris 1952; idem, *Les Communautés israélites du Sud marocain*, thesis, Sorbonne 1957).

Judaism paved the way for Christianity which prospered in spite of the bitter struggle which it had to conduct against paganism and the internal quarrels which soon beset it; it will be sufficient to note that it afforded the Berbers an opportunity of grouping together against Roman rule and that they enthusiastically embraced heresies (Arianism, Donatism, etc.) opposed to the doctrine of the Church of Rome (see P. S. Mesnage, *Étude sur l'influence du Christianisme sur les Berbères*, Paris 1902; idem, *Le Christianisme en Afrique*, Algiers 1915; E. Albertini, *L'Afrique romaine*, 55 ff.; Dom Leclercq, *L'Afrique chrétienne*, Paris 1904; Monceaux, *Histoire littéraire de l'Afrique chrétienne*, Paris 1900-23).

The same thing happened at the time of the Muslim conquest: it was only the name of their adversaries which had changed. We do not know in detail the history of the conversion of the Berbers to Islam, but tradition has it that they seceded twelve times and Islam only finally triumphed in the 6th/12th century; it was at this date that the last indigenous Christians disappeared, whilst Jewish communities survived down to our own day. At the beginning of the conquest, the converted Berbers professed the orthodox doctrine, the only one known to them; but their spirit of independence soon showed itself by their adoption of Khāridjī doctrines which put forward the most equalitarian ideas (see Ibāḍiyya, Khawāridj and the works of T. Lewicki, especially *Etudes ibāḍites nord-africaines*, Warsaw 1955, and *La répartition géographique des groupements ibāḍites dans l'Afrique du Nord au moyen âge*, in *Rocznik Orientalistyczny*, 1957; see also Chikh Békri, *Le Kharijisme berbère*, in *AIEO, Alger*, 1957, 55-108). The clearest indication that religious doctrine little concerned them fundamentally is given by the fact that one party espoused the cause of the Shīʿīs, not only that of the Idrīsids of Fās, but even of those who had come under the influence of the Persian outlook and saw in the *imām* an incarnation of the Divinity. Thus it came about that alongside the Khāridjīs (Ṣufrīs and Ibāḍīs) there were the Fāṭimids, and that the Kutāma provided the main support for *mahdī* ʿUbayd Allāh. This tendency to turn to extremes was again in evidence when a puritan reaction brought about the triumph of Sunnī doctrines with the Lamtūna (Almoravids) of the Sahara, recently converted in the 5th/10th century; it was further emphasised with the Maṣmūda of the Atlas who founded the Almohad Empire and destroyed the remaining dissidents, Christians or Shīʿīs, with the exception of a few Khāridjī communities who were protected by mountains, the desert or the sea; it again made its appearance with the formation of the small Marabout states which arose in Morocco from the 5th/11th century onwards (see R. Montagne, *Vie sociale*, 22 ff.).

Among reactions against official Islam, two further attempts must be cited which aimed at creating a new religion in Morocco: in the Rif, in the 4th/10th century, the attempt of Ḥā-Mīm al-Muftarī [*q.v.*] and, on the Atlantic coast, that of Ṣāliḥ b. Ṭarīf [*q.v.*].

After having provided a Father of the Church, Saint Augustine, born at Thagaste (Souk-Ahras), the Berbers under Islam only produced theologians who were adept in disputation, but no great intellects. Wherever Sunnī Islam triumphed, it was Mālikism which was adopted, and it continues to prevail in Barbary, though some Khāridjī communities (Ibāḍī) survive in the Djabal Nafūsa, at Djerba, in southern Tunisia and in the Mzab.

Bibliography: On the old religion of the Berbers and its survivals, there is copious bibliography and only the main works can be indicated: R. Basset, *Recherches sur la religion des Berbères*, Paris 1910 (extract from the *RHR*); L. Brunot, *Cultes naturistes à Sefrou*, in *Arch. Berb.*, 1918/2; H. (R. Basset-Ch. Pellat)

IV. — Customs, Social and Political Organisation

Observers have all been struck by the character and usages of the Berbers, which differ in many respects from those of the Arabs, particularly as regards women, who, in general, enjoy a greater degree of freedom (see for example the "courts of love" among the Touareg (*ahal*), H. Lhote, *Touaregs du Hoggar*, 288 ff.) and to a certain extent, greater respect (on women, see M. Gaudry, *La femme chaouia de l'Aurès*, Paris 1929; A. M. Goichon, *La vie féminine au Mzab*, Paris 1927-31; L. Bousquet-Lefèvre, *La femme kabyle*, Paris 1939; on matriarchy: G. Marcy, *Les vestiges de la parenté maternelle en droit coutumier berbère*, in *RAfr.*, 1941/3-4). As a rapid synthesis is made impossible by the great diversity which appears from one group to another, we shall limit ourselves to giving references to the large number of monographs and works of ethnography which have been devoted to North Africa.

The Berbers (except in the Mzab) are basically a rural population, leading a nomadic or sedentary existence. The nomads live in tents, of which the different types have been frequently described (see H. Lhote, *Touaregs du Hoggar*, 221 ff.; E. Laoust, *L'Habitation chez les transhumants du Maroc central*, in *Hesp.*, 1930 ff.); the sedentary population live in houses (see E. Laoust, *op. cit.*; A. Adam, *La Maison et le village dans quelques tribus de l'Anti-Atlas*, in *Hesp.*, 1950, 289 ff.) or even in majestic kasbas (*ḳaṣaba*) which in some respects recall the style of South Arabia (see H. Terrasse, *Kasbas berbères de l'Atlas et des oasis. Les Grandes architectures du Sud marocain*, Paris 1938; A. Paris, *Documents d'architecture berbère*, Paris 1925; K.A.C. Creswell, *A Bibliog. of Muslim Arch. in North Africa*, Paris 1954, *passim*).

One of the peculiarities of Muslim Barbary is the retention of customary law, which continues to be applied, either officially or unofficially [see *ʿāda*], both in Algeria and Morocco (for Tunisia, see G. H. Bousquet, *Note sur la survivance du droit coutumier berbère en Tunisie*, in *Hesp.*, 1952/1-2, 248-9). This custom (*ʿāda, ʿurf, izref, ittifāḳāt*) is essentially oral, but of recent years some tribes have felt the need to record in writing in Arabic and even in French, though rarely in Berber (see below section VI) some *ḳānūns*, simple lists of offences, with the scale of appropriate fines (imprisonment is unknown). Justice, based on custom, is dispensed, in civil and criminal matters, either by a kind of (individual) arbitrator, or by judicial *dj̲amāʿa*s which set themselves up as clandestine tribunals (for example in the Aurès subject to French law) or which in contrast have had a legal existence (as in Morocco since the famous dahir (*ẓahīr*) of May 16th 1930, called the "Berber dahir", which gave rise to numerous protests because it established customary tribunals). Needless to say, this law is not uniform and varies quite considerably from group to group; as a result of its lay origin and oral transmission it is subject to modification (see Hacoun-Campredon, *Etude sur l'évolution des coutumes kabyles*, Algiers 1921).

The social organisation of the Berbers also differs in many respects from that of the Arabs; it is based on the ties of blood, real or fictitious. The smallest social unit is the "hearth", a number of hearths among the sedentary people forming a village, and among the nomads a "douar" (*asun, tigəmmi*, etc.); several villages or "douars" form a division which is a state in miniature; the tribe groups several divisions together, but has less political personality; the tribal confederation only represents a temporary association required by especially grave circumstances, most frequently war.

The idea of relationship within the group has as its corollary the respect for a kind of collective morality, a constant solidarity between its members, who in particular perform a collective corvée, (*tiwizi*), ensure the safety of strangers to whom one of them has accorded his protection, own collective granaries (see agādir), etc.

The fact is, however, that their political organisation paradoxically reveals two diametrically opposed, but not incompatible, systems, which seems a further proof of the diversity of the ethnic elements combined under the name Berber: on the one hand, an aristocratic type, having a warrior nobility, a religious caste, a class of tributaries and finally the serfs; this is the régime prevailing among the Touareg, who are governed by an *aménokal* [*q.v.*], each tribe being placed under the authority of an *amg̲h̲ar* [*q.v.*]; on the other hand, in the rest of Barbary, we find a democratic type, with an elected assembly (*dj̲amāʿa, inflas, ayt arbʿin*) in which all power resides (legislative, judicial and executive); each assembly of a lower group delegates members to higher assemblies, but generally speaking, it is the *dj̲amāʿa* of the division which has most political weight. This democratic system usually results in a *de facto* oligarchy and does not impede the development of personal power, at least in those regions where the internal leagues (*leff* [*q.v.*]) group independent divisions together (and not just villages or parts of villages, as in Kabylia, the *ṣoffs* [*q.v.*]; R. Montagne (*Vie sociale*, 91 ff.) has pertinently analysed the stages in the development of this power of the temporal leaders, who have been called the "Lords of the Atlas".

V. — LANGUAGE

One cannot but envy the assurance with which René Basset, fifty years ago, painted a picture of the Berber language in this *Encyclopaedia*. By an inevitable process, research has produced questions in greater number than answers; some illusions have vanished. However, the balance-sheet of this half century is not negative: a mass of materials has been collected, their classification and analysis has been undertaken and sometimes fairly extensively developed; an attempt at a synthesis has even been made by André Basset, but he is cautious and is at pains to avoid taking hypothesis for established fact.

A. The historical problem

1. — History of the language: Berber is almost exclusively a spoken language, and its history, even in the recent period, is almost unknown owing to the lack of written documents. It is only in the 19th century that the texts collected orally from Berbers by Europeans start to become numerous. Indigenous documents are rare and of limited scope. Southern Morocco has produced manuscripts in Arabic script (cf. section VI) of which we only possess partial and out-of-date editions; moreover, the language of these works of religious edification, in spite of its undeniable interest, seems somewhat artificial. The Berber words and expressions cited by Arab authors have not received a systematic treatment. The best known and also the oldest are the phrases of the 12th century published by E. Lévi-Provençal in his *Documents inédits d'histoire almohade*, Paris 1928 (cf. G. Marcy, in *Hesp.*, 1932, 61-77) and which appear to confirm the relative stability of the language. The Arabic texts have also preserved a number of Berber ethnic names, anthroponymics and toponymics which still remain to be studied.

The remains of Guanche, which was spoken in the Canary Islands up to the 17th century, are generally considered a Berber language. However after a very detailed investigation, J.-D. Wölfel only relates a part of the Guanche forms to Berber.

Further back than the Almohad period, the linguist finds no Berber documents properly so-called. The early centuries after the Arab conquest are even more "obscure" for him than for the historian. Antiquity confronts us with a number of very difficult problems. It has bequeathed us a documentation as mysterious as it is abundant on African dialects:

a) Over a thousand Libyan inscriptions have been published (cf. section VI). The alphabet used is known with fair accuracy, at least for the bilinguals, but the proposed interpretations show serious divergencies and are not convincing: Libyan has not been deciphered.

b) In the east and particularly in Tripolitania, a series of inscriptions in Latin characters has been discovered, whose meaning is unknown. One or two words are Latin, others can be explained by Punic, but the remainder has not been identified.

c) A host of African words, mostly proper names, are to be found scattered throughout the Punic, Greek and especially Latin inscriptions, as well as in the classical authors. Some of these words have been identified as Punic; the majority have only given rise to nebulous explanations.

Thus, little has been made of these old materials. Why is this the case? Very few research workers venture into this field and if they do so, it is generally in the course of other investigations or in the service of a different discipline. Moreover, the unity of the documents, scattered both in space and time, is problematical. The inscriptions of Tripolitania are of an early period. The Libyan ones come from Tunisia, Algeria and Morocco and cover several centuries: the only one which is dated goes back to 139 B.C.; some appear to be contemporary with the Roman Empire; the majority cannot be dated at all. The onomastic material is even more dispersed: provided by texts ranging from Herodotus to the latest antiquity, it concerns the whole territory comprised between Egypt and the Atlantic. Such diverse evidence inevitably represents several stages of linguistic development, or even several languages. Its interpretation assumes that preliminary work has been done in listing and subjecting them to a critical examination; however, a general onomastic index is still awaited. In spite of the extraordinary diversity of this ancient material, the modern Berber dialects are frequently thought of as providing a miraculous key capable of unlocking all doors. Extensive use is made of the glossaries, but only in order to adduce isolated comparisons or erect a superstructure of conjectures, whereas a system of well established correspondences alone could afford proof. A direct connexion is postulated between Libyan and Berber, considered as two stages of the same language. This assumption is based on history, which discovers Berber populations in Africa from ancient times and concludes that the Berber language was already spoken there: but was it the only language? Is it really Berber that is concealed in the Libyan inscriptions? The parallels which are certain are rare; the similarity of the Libyan and Toureg scripts (cf. section VI) does not demonstrate that the languages are related; the difficulties encountered call for criticism. A. Basset has drawn

attention to the fact that the argument taken from history is negative. A. Picard is still more sceptical. This example of caution, little imitated as yet, is thus provided by Berber specialists. A comparative linguist and ethnologist like J. D. Wölfel, whilst grouping Libyan and Berber together, also hesitates to consider them as a single language. J. G. Février asks whether Libyan cannot be considered "as a kind of pre-Berber", but allows himself no reply. Such rational doubt is preferable to the illusion of knowledge; it neither entails relinquishing research nor the denial of any connexion between Libyan and Berber; it merely invites us not to forget that what constitutes a certainty for the historian only provides the linguist with a working hypothesis.

2. — Cognate or neighbouring languages: The comparison of Berber with other languages has still only produced rather slender results. Certain unduly fanciful attempts are no longer worth mentioning. The connexions proposed with Basque and Hausa have remained fragmentary. The opinion advanced by O. Rössler, according to which Berber is a Semitic language close to Akkadian, evokes an interest mixed with caution. The Hamito-Semitic theory, which places Berber in a group including Ancient Egyptian, the Cushitic languages of Abyssinia and the Semitic languages, appears to be the most fruitful. For Marcel Cohen, the name Hamito-Semitic by no means implies the existence of a "Hamitic" branch as opposed to the Semitic. The position occupied by each of the members within the family is still inadequately known. As early as 1844, Berber was considered by T. N. Newmann to be a "Hebreo-African" language. Certain similarities, both in the respective rôles played by consonants and vowels as well as in the nature and function of various morphological elements, justify the continued prosecution of research. Borrowings from other languages and reciprocal influences must be assessed, analogies specified and extended to vocabulary: *l'Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique* published in 1947 by Marcel Cohen gives the impression that the connecting links between Berber and the other languages under consideration are rather strained.

In addition to these attempts at defining relationships, we must refer to the whole field of studies which may be termed "Mediterranean", as they concern the civilisation which flourished on the shores of the Mediterranean prior to the arrival of the Indo-Europeans. Here vocabulary takes precedence over morphology: the aim is to determine a cultural community rather than to establish a linguistic affinity. The toponymics of ancient Africa and Berber, cited as a testimony of this remote period, are often invoked alongside Iberian, Basque etc. Thus it is that they are accorded a more or less important place in works devoted to the "Mediterranean substratum" (C. Battisti, V. Bertoldi etc.), to the non-Indo-European elements in Latin (G. Nencioni), to Sardinian (B. Terracini, M. L. Wagner), to the regions of the Alps and Pyrenees (J. Hubschmid) and more generally to the "Euro-African" civilisation (J. D. Wölfel).

In spite of the inevitable groping, the excesses and mistakes, research into these ticklish problems can no longer be ignored.

An even more urgent problem for North African dialectology is to determine precisely in what respects Berber amd Ma<u>gh</u>ribī Arabic have affected one another. It is a question of substratum or adstratum as the case may be. There is no lack of documents, but we have scarcely passed the stage of noting the most obvious features. The Berber dictionaries summarily indicate certain borrowings from Arabic. Some works by Arabists (L. Brunot, G. S. Colin, Ch. Pellat, Ph. and W. Marçais) give a place to Berber matters.

We do not know what Berber owes to the languages of Tropical Africa: this may well be a great lacuna.

B) Dialects and Language

On the geographical distribution of dialects, cf. section II.

It is the study of present-day dialects which has produced the most positive results during recent decades, especially through the efforts of A. Basset. However, there still remain a few illusions to be shed. None of the classifications proposed for the dialects is really satisfying. Attempts have been made to discover in them the traditional division of the population into Maṣmūda, Ṣanhād<u>j</u>a and Zanāta (cf. I): this is to appeal to a confused story. It would be preferable to start from the linguistic data: but what factors are relevant? A distinction is sometimes made between "occlusive" dialects and "spirant" dialects, yet the Chleuh dialects, which moreover form a distinct group (cf. below), are not in agreement on the production of certain sounds: are they therefore, to be split up into several groups? As A. Picard reminds us, phonetics is only one aspect of living language. A classification based on phonological systems would be more interesting, though equally arbitrary. Linguistic geography demonstrates that every phenomenon occupies an area of its own; A. Basset proved this so convincingly in respect of Berber, that he relinquished the idea of dialect in this field altogether: the language disintegrates directly into four to five thousand local idioms. Nevertheless it would be difficult to avoid taking into account a kind of linguistic harmony which, in such geographically close-knit regions as the Chleuh country, Kabylia, Aurès etc., superimposes itself on the division into local idioms, without effacing it; mutual comprehension is immediate within every such zone and Berber speakers have a feeling for these groupings (cf. A. Roux, in *Hesp.*, 1954, 269). Even in these privileged cases, no common language exists. It is true that the wandering poets of the Middle Atlas of Morocco, referred to by A. Roux (cf. section VI), use a kind of intermediate dialect for their compositions; furthermore, an investigation should be made of the Berber spoken in the large towns where the emigrants collect together. But up till now, political, economic and cultural conditions have militated against a unification which those concerned do not seem to need: when necessary, they use another language, frequently Arabic, to communicate with one another. Any comprehensive description of Berber dialects, therefore, comes up against local factors which persistently impose limits on its applicability. Nevertheless, it is justified by the unity of the language, which remains clear in spite of the diversity.

1. — Phonetics and Phonology. Though the sounds of the numerous dialects have already been ascertained and more or less adequately described in the monographs, we still possess no complete table of their correspondences. Moreover, as yet no dialect has been subjected to a phonological analysis. Comparison, however, enables us to establish the main features of a system of phonemes which appears to be the basis on which the various local

systems rest. Here, only slightly modified, is the table proposed by A. Basset:

Consonants	labials		*b*		*f*			*m*		
	dentals	*t*	*d*	*ḍ*				*n*	*l*	*r*
	sibilants				*s*	*z*	*ẓ*			
	palatal sibilants					*š*	*ž*			
	velars	*k*	*g*							
	uvular					*γ*				
Semi-vowels				*y*		*w*				
Vowels				*i*		*u*				
		[*ə*]								
		a								

The tendency for short occlusives to become spirant in numerous dialects (Rif, Middle Atlas of Morocco, Kabylia, etc.) has already been mentioned. This may lead locally to the introduction of new phonemes and to modification of the phonological system. Almost everywhere this system has been complicated and distorted by large-scale borrowing from Arabic, to which the presence particularly of the pharyngals *ḥ* and *ε* and the laryngal *h* in the majority of dialects appears to be due.

A remarkable fact is the presence in Berber of emphatic consonants. Apart from *ḍ* and *ẓ* there are attested: [ṣ], [ṛ], [ḷ] and even [ṣ̌], [ẓ̌], but they cannot be accorded phonological status *a priori*. Emphasis does not always belong exclusively to the phoneme concerned. On [ṭ], cf. below.

y and *w* are sometimes pronounced as consonants [y], [w], and sometimes as vowels [i]; [u], according to their position; quality varies with syllable pattern, which is not everywhere the same. Furthermore, besides these occurrences of phonetic [i] and [u], morphology suggests the need to recognise separate vowels *i* and *u*: which is not devoid of difficulties.

Each of the three vowels *a*, *i*, *u* comprises a range of gradations conditioned by the articulation of the neighbouring consonants and devoid of phonological value. As regards [ə], it is in principle a purely phonetic element, the occurrence of which is subject to the laws, as yet not very well known, which govern the syllabication and structure of words. Very unstable in central and southern Morocco, it perhaps presents a greater consistency in Kabylia; in spite of certain indications by Foucauld which must be verified and above all, interpreted, it is by no means certain that [ə] has phonemic status in Touareg.

An important rôle is played by the quantitative value of consonants. Every consonant or semi-vowel may be "short" or "long", thus creating a type of opposition widely exploited by the vocabulary and to a still greater extent by the morphology: Chleuh *ils* "tongue"; *ills* "he has soiled"; *ifka-t* "he has given it (masc.)": *ifka-tt* "he has given it (fem.)". The long consonant seems to be less characterised by its duration than by the tenseness of its articulation; lengthening sometimes results in transition from spirant to occlusive and from voiced to voiceless: thus it comes about that the most frequent realisation of *γγ* is [qq], and that of *ḍḍ* [ṭṭ]; *ww* may be represented by [gg^w] (on one occasion even [kk]) or [bb^w], and *yy* by [gg].

Not all vowels always have the same duration; their length, however, is not pertinent, except perhaps in Touareg.

Accentuation of a word, where the accent is one of intensity, is not recognised as fulfilling a distinctive function.

2. — Forms and their functions.

a. — The Berber word. Words are made up of a theme and inflexions. The theme is produced by the combination of a root with a schema. The root is bound to a minimum concept beyond any kind of grammatical categorisation. It is always consonantal, containing one or four, most frequently two or three consonants, being characterised by their number and order. The term schema, borrowed from the Arabists (J. Cantineau), indicates the structure of the theme; the schema gives the word part of its grammatical identity: thus, to a degree which varies with cases, it may indicate the nominal or verbal nature of the word, the number of the noun, the form of the verb, etc. The schema itself is defined by the presence or absence of formative consonants, by short or long quantity of formative consonants or radicals, by the presence or absence, the place and quality of the vowels. The inflexions complete the grammatical description of the word; as prefixes and/or suffixes, they appear fundamentally to be consonants; in certain cases, it is convenient to recognise a zero inflexion. Examples: Touareg *təkras* "she ties" = theme *-əkras-* (root *KRS*, schema 1 2 *a* 3) + inflexion *t-*; *takərrist* "knot" = theme *-akərris-* (root *K R S*, schema *a* 1 22 *i* 3) + inflexion *t--t*. The system on the whole closely resembles that of Arabic, though it is more difficult in Berber to isolate the roots and establish the precise value of the schemas.

Berber distinguishes two genders, masculine and feminine, and two numbers, singular and plural.

b. — The verb. The forms (simple and derived, Verbs appear either in a simple form or a derived form. The simple form is constructed in principle with or without an object and is at times translated by our active voice and at other times by our passive. Derivation is achieved mainly by means of prefixes. There are three primary derived forms, which sometimes combine among themselves. They have frequently been referred to as the causative, passive and reciprocal forms, according to their most apparent significance; these designations do not correspond closely enough to the facts and have nowadays been replaced by those of sibilant-form, dental-form and nasal-form according to the articulation of the prefix. Examples: Touareg *əγbər* "to strike with the foot"; *səγbər* "to cause to strike"; *təγbər* "to be struck"; *nəγbər* "to strike one another". In fact, not all verbs possess the complete series of simple and derived forms. A derivation by the suffix *-t* is well attested in Touareg and has left traces elsewhere.

The themes. For each of the forms, simple or derived, there are three themes or groups of themes: 1) an aorist theme: ex. Chleuh *-ls-* "to put on clothes", *-izwiγγ* "to become red"; 2) an intensive aorist theme: *-lssa-*, *-ttizwiγ-*, which is sometimes accompanied by a negative intensive aorist theme; 3) a preterite theme: *-lsi/a-*, *-zəgg^{w}aγ-*, to which is connected a negative preterite theme: *-lsi-*, *-zəgg^{w}aγ-*. These themes may contrast with one another by alternation of vowels or of consonantal length, or by prefixing *-tt-* (in the intensive aorist only), or again by a combination of two or rarely three of these processes. In principle the two aorists form a group opposed to the preterite, as *-izwiγ/-ttizwiγ-* to *-zəgg^{w}aγ-*. It frequently happens, however, that the themes of the aorist and the preterite coincide. When several verbs adopt precisely the same procedure to differentiate their themes, they are said to belong to the same type: this affords a means of formal classification which is justified by the existence of a relationship, often masked but

sure, between the verbal type thus defined and that of the derived forms, as well as between the verbal type and the schemas of the nouns of action and of the agent. The verbal type itself appears to be more or less bound to the structure of the root.

A careful examination of all the themes obliges us to distinguish a large number of types of verbs. In practice, account is taken above all of the antithesis of the aorist and preterite themes, which enables us to recognise the main groups, particularly the "zero vowel" type (A. Basset) in which the affirmative aorist and preterite are formally identical (Chleuh ***-mgər-*** : ***-mgər-*** "to harvest"), the type with a non-alternating "full vowel" (***-mun-*** : ***-mun-*** "to accompany"), the pre-radical alternating vowel type (***-amẓ-*** : ***-umẓ-*** "to take"), the intra-radical (***-rar-*** : ***-rur-*** "to give back"), the post-radical (***-ls-*** : ***-lsi/a-*** "put on clothes"), different types of complex alternations (***-izwiγ-*** : ***-zəggʷaγ-*** "to become red").

The table of verbal themes lacks symmetry, as there is no intensive preterite given. The latter exists in Touareg, and A. Picard, basing himself on certain Kabyle and Moroccan data, has recently raised the important question of the Pan-Berber character of the intensive preterite (*Mémorial A. Basset*, 107-20).

The inflexions. — A first though incomplete series of suffixed personal inflexions is associated with the aorist and intensive aorist themes to produce the ordinary and intensive imperatives. The inflexion is zero in the 2nd person singular, which is the form of the non-intensive imperative used by grammarians to indicate a verb ("the verb ***mgər***, the verb ***mun***", etc.).

The impersonal inflexions ***y--n*** (on occasion zero-***nin*** in the plural) are added in well defined syntactical conditions (cf. below) to any one of the themes to form what is called the "participle". Survivals of an older stage (in the negative preterite) or disturbances (in the aorist) are to be observed locally.

In addition to these preceding cases, a third series of inflexions, prefixed and/or suffixed, is found with all the themes, indicating person, number and, in the 3rd person sing. and the 2nd and 3rd persons pl., gender. However, a conjugation without prefixes is attested in Kabyle (with identical inflexion for all persons of the plural) and in Touareg for the so-called verbs "of quality", verbs of becoming rather than verbs of state. It is probably the vestige of an ancient opposition between the inflexions of the aorist and those of the preterite.

The working of the verbal system. — It is more difficult to determine the meaning of the forms and themes than to classify them formally. Brief indications have been given above for the simple and derived forms. It remains for us to describe briefly how the choice is made between the different themes of a given form. One fact is certain: the time concept is foreign to the verbal system, and Berber, like the Semitic languages, gives priority to aspect. But it has several mechanisms which are peculiar to it; we must not be deceived by terminology, borrowed from other linguistic fields. There is a fundamental antithesis, indicated already for the morphology, between the respective functions of the aorists and the preterite. Thus it is that certain particles (***a***(***d***), ***i***(***d***), ***ara***, etc.) may be followed by either of the two aorists but not by the preterite: Kabyle ***ad̆-yaf*** ("he will find" : ***ad̆-yəttaf*** "he will find [incessantly]" (but ***ad̆*** + preterite ***yufa*** is impossible). When these particles are not present, the elements of the system are grouped somewhat differently: most frequently the intensive aorist and the preterite alone remain in opposition: ***zəddγən*** "(these populations) dwell" (process envisaged as a series or sometimes as a development): ***əzd̆γən*** "(the members of such and such a family) dwell, have taken up their domicile" (process envisaged from beginning to end, as a whole). With the exception of certain optative formulas, the non-intensive aorist, therefore, only appears in certain syntactical conditions where it may assume the meaning of ***any other verbal theme whatsoever***: in this sense one may, with A. Basset, consider it as the "unmarked" term of the aorist: preterite opposition; this use of the aorist is very frequent in the Moroccan dialects, but is less current elsewhere.

Whatever the theme, the verb assumes the form of the "participle" when it occurs in a relative clause in which the subject and the antecedent are identical: Kabyle ***win yəzd̆γən*** "he (who) dwells".

The satellites of the verb. — The particles of the aorist have been mentioned above. There are other particles (***ar***, ***da***, ***lla***, etc.) which may accompany the intensive aorist or the preterite; the list of them and the conditions in which they are used vary considerably according to the dialect, some dispensing with them altogether. The basic negative particle is ***ur*** (***ul***, ***ud***, ***u***); it always precedes the verbal form which, in different dialects (Kabylia, Aurès, etc.), may then be followed by a second element (***ara***, ***š***(***a***), etc.); ***ur*** is encountered with all the verbal themes, but negative constructions are not everywhere identical.

The verb is frequently accompanied by a particle "of approach" ***d*** and sometimes by a particle "of withdrawal" ***n***(***n***), which indicate the direction of the action. Finally the personal pronouns, direct or indirect objects of the verb (cf. below), are closely welded to it. In the case of simultaneous use, these pronouns and the particles of approach and withdrawal follow one another in a fixed order: indirect object (I), direct object (D), particle (L). After a number of words (particles of the aorist, the intensive aorist, negation, etc.) or in a relative clause, the elements IDL precede the verb; elsewhere they follow it; hence those chains which fluctuate on both sides of the verb: Chleuh ***ad-as-tən-d-awiγ*** "that I may bring them to him": ***iwiγ-as-tən-d*** "I have brought them to him".

c. — The noun. All nouns cannot be reduced to a single morphological type. Some have been borrowed from Arabic (or from other languages) and have not been berberised; they have retained the Arabic article and are characterised by the initial consonant group *lC-* or *CC* (< *lC-* by assimilation): *əlkas* "glass", *əssuq* "market"; this group is considerable in all dialects except Touareg.

The majority of Berber or berberised nouns in principle have an initial ***a-***, ***i-*** or ***u-*** if they are masculine, ***ta-***, ***ti-*** or ***tu-*** if they are feminine; this initial has been related to the demonstrative elements, which is not unlikely; locally in a number of schemas it loses its vowel. The prefixed ***t-*** characterises the feminine; many nouns also have a suffix ***-t*** in the feminine singular: Chleuh ***aγyul*** "ass": ***taγyult*** "she-ass"; ***tigəmmi*** "house". The vowel of the initial syllable participates in both oppositions of number and state (cf. below). The plural is indicated, furthermore, either by a vowel ***a*** preceding or following the last radical consonant, with or without further vowel alternances: ***aγyul*** : ***iγyal***; ***agadir*** "fortified granary" ***igudar***, or by a basic suffix ***-n*** : ***argaz*** "man" : ***irgazən***, or by a combination of both processes : ***itri*** "star" : ***itran***. The concept of state, in spite of the ambiguity of the terminology, is

characteristic of Berber: in certain syntactical conditions, when the noun is closely associated with the word preceding it, the initial vowel lapses, the noun passing from the "free" state to the state of "annexation": *taserdunt, tədda* "the mule, she has gone": *tədda tsərdunt* "the she-mule has gone". In numerous dialects (Morocco, Kabylia, Aures, etc.) the annexed state of the masculine noun also displays a prefixed *w-*, and hence the contrast : *argaz* : *wərgaz* > Chleuh *urgaz* "man". Finally, contrary to the description given, some nouns retain their initial vowel in the annexed state; this "constancy" of the initial vowel may be explained (diachronically) by the disappearance of an old radical or be related (synchronically) to the structure of the schema. The opposition of state appears to be unknown to the Eastern dialects.

A third somewhat heteroclite group is formed by nouns beginning with a short consonant other than the feminine prefix *t-* or the Arabic article; some of them are perhaps historically connected with the previous category or with other strata of vocabulary. The series of "nouns of relationship" must be mentioned, remarkable both for their form and construction.

Adjectives generally show the same morphological characteristics as nouns.

d. — The personal pronouns. — Several series of personal pronouns are distinguished according to form and use. The "isolated" pronouns enjoy more or less independent status in the text and may even constitute a complete utterance. The affixed pronouns of the verbs, of which they are the direct or indirect objects, have already been mentioned. Most prepositions take special personal pronouns, which also appear after the nouns of relationship: *yiwi-s* "the son of him, his son"; after a common noun, the pronoun is generally preceded by an element *n(n)-* which appears to be analogous to the preposition *n-* "of": Chleuh *tigəmmi nn-s* "his house" (but Kabyle *aḫḫam-is*, same meaning); Berber has no possessive adjectives or pronouns. For every person, certain appropriate morphological elements are common to several or all of these pronominal series.

e. — The demonstrative elements. — The demonstrative elements have a vowel base: *a/u* and *i*, which is found acting as a pronoun or acting as a determinative ("adjective"). As a pronoun, this base appears particularly as the second member of the construction called "emphatic anticipation": Kabyle *d-ḳəčč a-ĭ-yəyman* "it is thou who hast dyed it" (Basset-Picard), "it is thou the having dyed it". As a determinative, it follows a noun or a demonstrative pronoun: Chleuh *argaz-a* "this man", *ay-a* "this". This base frequently combines with other elements, especially with *w-* or *t-*, producing oppositions animate/inanimate and masculine/feminine: *wa/ta* : *a* "he/she : it", as well as with the particles of approach and withdrawal: Chleuh *argaz-ad* "this man here" / *argaz-ann* "that man there". The details of the system vary from dialect to dialect.

f. — The Berber sentence. — The Berber sentence in the highest degree reflects all the characteristics of a spoken language. It constantly resorts to expressive procedures and in particular to "anticipation" (A. Basset), which may detach and place any element of the sentence at the beginning, ready to be reiterated as required by a personal pronoun. Of very frequent occurrence is "emphatic anticipation", of which an example has been given above (e). Subordination is relatively little developed and parataxis dominates, though it is not always possible to determine exactly the limits between the two types of construction.

Relative clauses have no formal indication other than — on occasion — the inflexions of the participle or the place of the satellites of the verb (cf. b); there is no relative pronoun; however, a tendency can be observed in many dialects to determine the antecedent by means of a demonstrative element, the use of which in such cases becomes more or less a matter of grammatical usage.

Nominal and verbal clauses are known to Berber. The former are frequently hinged on a particle *d* which may perhaps have some connection with the particle of approach: Kabyle *nəkk ď-afəllaḥ* "I am a peasant" (Basset-Picard). In verbal clauses the verb is normally placed at the beginning and is followed by its subject, except in the case of anticipation.

3. — The vocabulary. Vocabulary is perhaps the aspect of Berber which has roused the most lively curiosity, but produced the least exact studies. We have no statistical evaluation of the vocabulary. The dictionary of Foucauld for Ahaggar Touareg and that of Father Dallet for Kabyle, which may be taken as being very nearly exhaustive, contain respectively 1,400 and 3,500 verbs in the simple form. The vocabulary possesses a stock common to all dialects but, as A. Basset has stressed, the living form of each word should be separately studied. Another striking point, moreover, is the numerical importance of loan words, except in Touareg. We have seen that words furnished by Arabic have opened a breach in phonology and even in morphology. Berber, however, has shown proof of extraordinary powers of assimilation.

Vocabulary is, above all, concrete. Its richness and precision are remarkable wherever a vital activity is concerned (camel breeding among the Touaregs, irrigation in the Great Atlas, etc.). The language of intellectual and religious life is less well equipped and borrows extensively from Arabic. Some examples, however, reveal literary resources which wait only to be exploited.

Bibliography: The fundamental work is that of A. Basset, *La Langue berbère*, in *Handbook of African Languages*, Oxford 1952, 72; we shall limit ourselves here to referring to the methodical bibliography on pages 57 to 72, completed by A. Basset, *Les études linguistiques berbères depuis le Congrès de Paris (1948-1954)*, in *Proceedings of the 23rd Intern. Congress of Orientalists*, Cambridge 1954, 377-8, (for texts, the following should be added: A. Roux, *La vie berbère par les textes*, Paris 1955; Ch. Pellat, *Textes berbères dans le parler des Aït Seghrouchen de la Moulouya*, Paris 1955; A. Picard, *Textes berbères dans le parler des Irjen (Kabylie-Algérie)*, 2 vols, Algiers 1958) and to indicating a small number of generally more recent works. On the publications by A. Basset himself, cf. the bibliography given in *Orbis*, 1956, 575-579. The *Mémorial André Basset* (1895-1956), Paris 1957, 159, groups together fifteen articles concerning various aspects of Berber studies.—On Guanche: J. D. Wölfel, *Le problème des rapports du guanche et du berbère*, in *Hesp.* 1953.—On Libyan, cf. above, vi, and: J. G. Février, *Que savons-nous du libyque?* in *RAfr.*, 1956, 263-273.—On the inscriptions of Tripolitania: *The Inscriptions of Roman Tripolitania*, ed. by J. M. Reynolds and J. B. Ward Perkins, Rome and London 1952, vii 286; J. G. Février, *La prononciation punique des noms*

propres latins en -us et en -ius, in *JA*, 1953, 465-471.—On the relationship of Berber: M. Cohen, *Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique*, Paris 1947, xi and 248; *Comptes rendus du Groupe linguistique d'études chamito-sémitiques*, Paris, from 1931; O. Rössler, *Der semitische Charakter der libyschen Sprache*, in *ZA*, n.s. 16, 121-150.—On the "Mediterranean" problem: J. D. Wölfel, *Eurafrikanische Wortschichten als Kulturschichten*, Salamanca 1955, 189 (*Acta Salmanticensia*).—On the Berber dialects, one should refer to the works on linguistic geography by A. Basset and to the chapters written respectively by E. Laoust, A. Basset, A. Picard in *Initiation au Maroc*, new ed. Paris 1945, 191-219, *Initiation à la Tunisie*, Paris 1950, 220-226, *Initiation à l'Algérie*, Paris 1957, 197-214.—For a comprehensive grammatical description, cf. A. Basset and A. Picard, *Eléments de grammaire berbère* (*Kabylie-Irjen*), Algiers 1948, 328.—On the phonetic problems: L. Galand, *La phonétique en dialectologie berbère*, in *Orbis*, ii, 1953, 225-236; T. F. Mitchell, *Long Consonants in Phonology and Phonetics*, in *Studies in linguistic Analysis*, Oxford 1957, 182-205.—On the verb: A. Basset, *La langue berbère, Morphologie, le verbe, étude de thèmes*, Paris 1929, iii 268.—On the initial vowel in nouns: A. Basset, *Sur la voyelle initiale en berbère*, in *RAfr.*, 1945, 82-88; T. F. Mitchell, *Particle-Noun Complexes in a Berber Dialect* (*Zuara*), in *BSOAS*, 1953, 375-390; W. Vycichl, *Der Umlaut im Berberischen des Djebel Nefusa in Tripolitanien*, in *AIUON*, n.s., 1954, 145-152.—For repressivity: A. Picard, *Étude de linguistique sur le parler berbère des Irjen* (*Kabyle*), Algiers 1959.—For vocabulary; Father de Foucauld, *Dictionnaire touareg-français* (*Dialecte de l'Ahaggar*), 4 vols., Paris 1951-52, xiii + 2028; Father J.-M. Dallet, *Le verbe kabyle* (*Lexique partiel du parler des At-Mangellat*), i, Simple forms (only published), Fort-National 1953, xxviii, 491.

(L. Galand)

VI. — Literature and Art.

As far back as one can go in the past, Barbary, "the land of conquest", has never possessed any other language of civilisation than that of its foreign conquerors; thus, Berber writers have successively utilised, perhaps not Punic but at least Latin (Apuleius, Saint Augustine), Greek (?), Arabic (Ibn Khaldūn and many Moroccan writers) and now, above all, French. Yet there nevertheless exists a "Berber literature", written and oral, which though not appearing in the inscriptions, does so in works of piety inspired by Arabic, in texts and stories set down at the request of European investigators, in the *ḳānūns* (all of which taken together do not amount to much), and finally in folklore and poetry.

The Libyan inscriptions [cf. section V], in spite of the ardour with which their study has been approached, have not as yet delivered up the secret of their decipherment and Berber, as known to us, does not afford a satisfactory means of reading them. However, the Libyan alphabet, which the bilingual inscriptions have enabled us to establish, is relatively close to the only ancient system still in current use among the Berbers, the *tifinagh* (sing. *tafineḳḳ* < *punica*?); this alphabet is used by the Touareg for engraving a few short inscriptions on rocks, bracelets or other objects, as well as for brief exchanges of love letters. This is an alphabetic script, writing only consonants in the body of words, but also vowels finally; no distinction is made between long and short sounds; individual words are not separated and one can write horizontally, vertically, from right to left or from left to right (or in *boustrophedon*), from top to bottom or from bottom to top. In practice, all texts are very short and the long ones appearing in A. Hanoteau, *Essai de grammaire de la langue tamachek'*, Paris 1860, were only written in *tifinagh* at the request of the investigator.

The following is a simplified table, according to Ch. de Foucauld, of the most usual forms of *tifinagh* (for further details and comparisons with the Libyan alphabet, see particularly A. Basset, *Écritures libyque et touarègue*, in *Notices sur les caractères étrangers*, by Ch. Fossey, Paris 1948).

Religious literature inspired by Arabic may be said to be represented by a few dozen works, very few of which have been published. These texts, transcribed in Arabic script with additional diacritical points, are intended for teaching the precepts of Islam and for the edification of the faithful; thus we possess an adaptation of the *Mukhtaṣar* of Khalīl, *al-Ḥawḍ*, edited and translated by Luciani (Algiers 1897), and

its complement, the *Baḥr al-Dumūʿ*, partially published by de Slane in his appendix to the *Histoire des Berbères*, iv, 552-62 (a complete ed.-trans. of this last text by B. H. Stricker is in the press). The "Ḳurʾāns" of Ḥā-Mīm and of Ṣāliḥ b. Ṭarīf are, in a sense, related to these works, but they are, entirely lost, the same being true of the Berber text of three treatises composed in Tashəlḥit by Ibn Tūmart. Of Khāridjī literature, which was probably abundant, there remains the treatise of Ibn Ghānim entitled *al-Mudawwana* (cf. Motylinski, *Le Manuscrit arabo-berbère de Zouagha*, in *Actes du XIVe Congrès des Orient.*, Algiers 1909, ii, 64-78). A proportion of these religious works (particularly the *Ḥawḍ* and some others existing in manuscript form, cf. A. Roux, in *Actes du XXIe Congrès des Orient.*, Paris 1949, 316-7) are in verse so as to be more easily memorised, but unfortunately they include a high proportion of Arabic words. To this type of literature belong religious poems, such as that of Ṣabī, which relates a young man's descent into Hell in search of his parents (R. Basset, *Le poème de Çabi*, Paris 1879, P. Galand-Pernet, in *Mémorial A. Basset*, Paris 1957, 39-49), those of Sīdī Ḥammū (H. Stumme, *Dichtkunst und Gedichte der Schlūḥ*, Leipzig 1895; Johnston, *Faḍma Tagurramt*, in *Actes du XIVe Congrès des Orient.*, ii, 100-1; idem, *The Songs of Sidi Hammou*, London 1907; L. Justinard, *Poésies en dial. du Sous marocain d'après un ms. arabico-berbère*, in *JA*, 1928), the legend of Joseph in verse (Loubignac, *Dial. des Zaian*, Paris 1924-5, 359 sqq.), a story of the ascent of the Prophet and a version of the *Burda* of al-Būṣīrī [*q.v.*]. To these may be added the translations of the Old and New Testaments made by Catholic and Protestant missionaries.

Secular works are rare; apart from Arabo-Berber glossaries and books of popular medicine which have practical interest, such writings as we possess were composed under the guidance of European scholars, as for example the *The Narrative of Sidi Ibrahim* on West Africa in Tashəlḥit (F. W. Newman, in *JRAS*, 1848, 215-60; trans. R. Basset, Paris 1882), or the description of the Djabal Nafūsa by al-Shammākhī, in Nafūsī (ed. trans. Motylinski, Algiers 1885); to these may be added the collection of stories entitled *Kitāb al-Shilḥa* (MS of the B.N. in Paris), which to a large extent appears to be borrowed from the *Bakhtiyār-nāma* [*q.v.*] and the *Hundred Nights* (R. Basset, in *Revue des traditions popul.*, 1891; extracts published by de Slane, de Rochemonteix, R. Basset); to this category belong the ethnographical narratives and texts composed at the request of investigators who subsequently included them in their dialect studies or made independent collections of them, such as the *Textes touareg en prose* by Ch. de Foucauld, Algiers 1922. In this connexion it will not be without interest to note that the *Fichier de documentation berbère*, directed at Fort-National (Kabylia) by the Rev. Father Dallet, has been publishing since 1947 texts and even small plays composed in Berber, in addition to linguistic and ethnological documents.

As for the customary *ḳānūns* in use among certain Berber populations, very few of them have been published in the original language (see above section iv); the following may be mentioned: Ben Sedira, *Cours de langue Kabyle*, 295-355; Boulifa, *Le Kanoun d'Ad'ni*, in *Recueil de mémoires* ... *XIVe Congrès Orient.*, Algiers 1905, 152-78.

Folk-lore is abundant, not to say rich. Marvellous and humorous tales, fables, stories of animals, historical and religious legends are transmitted from generation to generation by the women, who are wont to tell them of an evening. It is this folk-lore that investigators have been able most easily to collect and few are their accounts which do not contain some stories or riddles, without counting collections of folk-lore texts presented also as linguistic documents.

Finally, secular poetry, in spite of its appearance of primitive simplicity, is probably the most original literary production. The songs improvised collectively during the ritual dances (*aḥidus*), lullabies, funeral laments, and ritual chants contain a large share of tradition, but real professional poets also exist among the Berbers, whose inspiration, generally speaking, is restricted to themes of love and war. In Morocco, the *imdyazən* (see A. Roux, *Un chant d'amdyaz, l'aède berbère du groupe linguistique beraber*, in *Mém. H. Basset*, Paris 1928, ii, 237-42) travel about the country and, like the troubadours, celebrate important events, sing the praises of likely patrons and discharge their arrows at those who disappoint them. Some poets, such as the Kabyle Moḥand u Moḥand and the Touareg poetess Dassin, have achieved a certain fame, local it is true and ephemeral, since their works, remaining oral, are soon forgotten in countries where the *ruwāt* do not exist.

Berber art also is of no great account; the rock engravings and paintings are indeed far from lacking in quality, but one may well ask whether the artists who executed them are really the ancestors of the present day Berbers. In spite of the great architectural achievements to which we have referred (above, section iv), there is no real Berber art comparable to Arab and Hispano-Moorish art. The fact is that the Berber is a countryman, indeed a nomad, only seeking to possess articles of current use, which are easily transportable; his art, therefore, is limited to ornamenting articles of everyday life and does not transcend a craftsmanship seeking to provide the comforts of life rather than to delight the eye. Its products, sought at times by a clientèle enamoured with exoticism and simplicity, and supported in North Africa by the efforts of the authorities to maintain and improve traditions and techniques, are restricted to carpets, hangings, mats, silks, embroideries, chinaware, earthenware, cabinet-work, work in gold, brass wares and damascene work; ornamentation is characterised by the almost exclusive use of the straight line (triangles, stripes, lozenges, checker-work). To this may be added very realistic statuettes in wood, which are at variance with the Islamic ban on the representation of the human form.

Bibliography: Fundamental work: H. Basset, *Essai sur la littérature des Berbères*, Algiers 1920, summarised by A. Basset, *Littérature berbère*, in *Hist. des Litt.*, Paris 1955, i, 886-90.—Inscriptions: Abbé Chabot, *Recueil des inscriptions libyques*, Paris 1940; M. (R. BASSET-[CH. PELLAT])

BERGAMA, the ancient Pergamon in Mysia (on which cf. the data and references given in Pauly-Wissowa). Armenians who had fled before the Muslim raids into Asia Minor settled in Byzantine Pergamon during the course of the 7th century. The Byzantine emperor Philippikos (711-713) was of Armenian descent and came from Pergamon. Muslim forces under Maslama b. ʿAbd al-Malik sacked the town in 716, but it was rebuilt and refortified after the Arabs had abandoned their attempt to take Constantinople in 717-718. Pergamon was included, from the reign of Leo III (717-741), in the theme of Thrakesion and, from the reign of Leo VI (886-912), in the theme of Samos. The town suffered during the Turkish raids into western Asia Minor after the battle of Manzikert (1071). It continued, however, to be a prosperous and well fortified centre under the Byzantine emperors of the house of Komnenos and their immediate successors. Pergamon, having been hitherto a suffragan bishopric dependent on Ephesos, was raised to the status of a metropolitan see in the reign of Isaac Angelos (1185-1195). After the fall of Constantinople to the Fourth Crusade in 1204, the town was included in the Greek state of Nicaea. Later, when the Turks overran western Asia Minor in the years around 1300, Bergama came under the control of the Begs of Karasī. The Ottomans, during the reign of their Beg Orkhān, annexed the emirate of Karasī. Bergama became thereafter a *ḳaḍā*ʾ of the *sandjaḳ* of Khudāwendigār in the *eyālet* of Anadolu and later a *ḳaḍā*ʾ of the *sandjaḳ* of Izmir in the *wilāyet* of Aydın. The region of Bergama is fertile and noted for its production of cereals, fruit, vegetables, tobacco and cotton. Greek forces occupied Bergama in the years 1919-1923. As a result of the subsequent exchange of population arranged between the governments at Athens and Ankara, Bergama lost its Greek inhabitants and received in their place Turkish elements brought over from Greece. The population of Bergama was estimated, in 1950, to be approximately 16,500 people.

BERKE, a Mongol prince and ruler of the Golden Horde, grandson of Čingiz-Khan and third son of Djoči. Little is known of his early career. He took no part in the wars in Russia and Eastern Europe in the years 634-639/1237-1242 but was more frequently in Mongolia than Batu, whom he represented at the enthronement of Güyük (644/1246) and that of Möngke (649/1251). His *yurt* of appanage was originally situated, according to Rubruck, in the direction of Darband but by 653/1255 had on Batu's orders been removed to the east of the Volga in order to cut off Berke from contact with his fellow Muslims. His conversion to Islām is mentioned by Rubruck, who says that he did not allow pork to be eaten in his *ordu*. The date of his conversion is unknown. Djūzdjānī's statement that he was brought up from infancy as a Muslim seems hardly credible. On the other hand he seems to have already become a Muslim at the time of Möngke's accession to the Khanate, when, as Djuwaynī tells us, the animals provided for the festivities were slaughtered, for his benefit, in accordance with the Muslim ritual.

Batu died according to Djuwaynī while his son Sartaḳ was on his way to the Court of the Great Khan. Sartaḳ continued his journey and was appointed his father's successor by Möngke but himself died shortly afterwards. He was succeeded by the young prince Ulaghči, his son or brother, Boraḳčin, Batu's widow being appointed regent. According to the Russian annals the camp of "Ulavčii" was visited by Russian princes as late as 1257. It was not until the death of the young Khān, probably in the same year, that the succession passed to Berke.

Like Batu, Berke, during the early years of his reign, seems to have exercised certain sovereign

rights in Mā warā' al-Nahr. According to Djūzdjānī he visited Bukhārā and showed great honour to the learned men of the town; he is also said to have ordered the Christians of Samarkand to be punished and their churches destroyed because of their behaviour towards their Muslim fellow townsmen. When the news of Möngke's death arrived (1259), the *khuṭba* was read in Berke's name not only in Mā warā' al-Nahr but also in Khurāsān.

During the next four years (1260-1264) two brothers of the dead Great Khan, Kubilay and Arīgh Böke, were engaged in a struggle for the throne. As the coins struck in Bulghar show, the unsuccessful claimant Arīgh Böke was recognised by Berke as the rightful heir. Prince Alughu, a grandson of Čaghatay, appeared in Central Asia about the same time, first as a representative of Arīgh Böke and afterwards in open revolt against him; he succeeded in bringing under his sway not only the whole of his grandfather's appanage but also Khwārizm, which had always belonged to the kingdom of Djoči and his successors; the governors and officials appointed by Berke were driven out of the towns. The massacre mentioned by Waṣṣāf (Bombay ed., 51) of a division of Berke's army, 5,000 strong, in Bukhārā must have been carried out, not, as Waṣṣāf himself says, by Kubilay, nor, as d'Ohsson supposes, by Hülegü, but by Alughu. The war between Berke and Alughu was continued until the latter's death; in the last years of his life, after the final defeat of Arigh Böke, Alughu's troops occupied and destroyed the town of Otrar. Berke, whose forces were engaged in the South and West, could do nothing against his enemies in the East, but he did not abandon his claims; Prince Kaydu, a grandson of Ögedey, who had fought under Arīgh Böke, continued the war against Alughu after Arīgh Böke's defeat and was supported by Berke.

The campaigns in the West against the Lithuanians and King Daniel of Galicia were of no great importance and were conducted by the frontier commanders without the personal intervention of Berke. King Daniel fled to Poland and Hungary and his son and brother were forced to dismantle the fortifications of all their main cities.

The war between Berke and his cousin Hülegü, the conqueror of Persia, was more important and less successful. The causes of the war are variously given. Berke is pictured by some authorities as the defender of Islām and is said to have bitterly reproached Hülegü for his devastation of so many Muslim countries and particularly for the execution of the Caliph Mustaʿṣim. Hewever those authorities who say that Djoči's heirs felt their rights endangered by the foundation of a new Mongol kingdom in Persia are probably nearer the truth. Some of the territories incorporated in the new kingdom, such as Arrān and Ādharbāydjān, had already been trodden by "the hoof of Tartar horse" in the reign of Čingiz-Khan and were therefore, according to the Conqueror's directions, part of the appanage of Djoči. The evidence on the war itself is contradictory. Hülegü seems at first to have been victorious, advancing across the Terek (late in 1262), and then to have been defeated by Berke's forces (Berke not being present in person), losing a great part of his army in the retreat; many were drowned in the Terek when the ice gave way under their horses' hoofs.

Even before the outbreak of these hostilities the Egyptian Sulṭān Baybars [*q.v.*] had decided to enter into communication with Berke and form an alliance against their common enemy Hülegü. A message to this effect had been sent from Cairo to Berke as early as 1261; on the 16th November 1262 an embassy was dispatched for the same purpose, and in the following year Berke's ambassadors were received by Baybars. The detention of Mongol and Egyptian envoys in Constantinople led to hostilities between the Golden Horde and Byzantium. Berke dispatched an army under Prince Nokay into Thrace, where they joined forces with the Bulgarians; and the Saldjūk Sultan ʿIzz al-Dīn Kay-Kā'ūs, who had been driven out of Asia Minor and placed in custody in the fortress of Ainos on the Aegean was set free and brought to the Crimea.

In 1265, the year of Hülegü's death, the Kīpčak and Persian Mongols were again at war. The two armies, under Berke and Abaka, for a long time faced each other across the Kur; in search of a crossing Berke proceeded upstream to Tiflis, where he died (1266); and his forces then withdrew.

Berke left no family, so that the throne passed to Batu's grandson Möngke-Temür. During the last years of his reign he was no longer, as Batu had been, second to the Great Khān in the Mongol Empire, but the ruler of an independent state, although this evolution was not completed till the reign of his successor, who was the first of the Kīpčak Khāns to strike coin in his own name. It is difficult to estimate how much Berke did as a Muslim to further the practice of Islam among his subjects. The Egyptian accounts speak of schools in which the youth was instructed in the Kur'ān; not only the Khān himself but each of his wives and Emirs also had an *imām* and a *mu'adhdhin* attached to their establishments; yet we learn from the same sources that all sorts of heathen customs were observed at the court of the Khān with the same strictness as in Mongolia. Not only Berke himself but several of his brothers are said to have adopted Islam; and yet half a century was to elapse after his death before Islam became definitely predominant in his kingdom.

Berke was the founder of New Saray (so called to distinguish it from the Saray founded by Batu), which was situated on the eastern bank of the Upper Akhtuba near the present-day Leninsk, about 30 miles east of Stalingrad.

Bibliography: As in the article on Batu.

(W. Barthold-[J. A. Boyle])

BESERMYANS (or Glazov Tatars), a small ethnic unit akin to the Udmurts (Votyaks) living in North Russia. Differing views are held on the subject of their origin, some considering them as Finns who have come under Turkish influence, others as descendants of the old Kama Bulghars, profoundly influenced by the Udmurt language and culture.

The Soviet census of 1926 listed 10,035 Besermyans, 9,195 of whom were from the districts of Balezino and Yukamenskoe in the autonomous Udmurt SSR and 834 from the neighbourhood of the village of Slobodskoe at the confluence of the rivers Vyatka and Čeptza in the Kirov region. The Besermyans are bilingual, speaking Russian (in the Udmurt ASSR) and Kazan Tatar (in the Kirov region) as well as Udmurt much influenced by Tatar. The were converted officially to Christianity in the 17th century, and until the October revolution were considered fully Orthodox, but in fact they remained Muslims at heart, retaining many customs which are traditionally Islamic. Notably, they would call in the Tatar molla after the Orthodox priest when a death occurred.

After the proclamation of freedom of worship in 1905 the greater part of the Besermyans returned openly to Islam.

(A. Bennigsen)

BESHIKE (Beşike Körfezi, Besika) is a bay on the western coast of Asia Minor opposite the island of Tenedos (Bozdja Ada). It lies about 23 kilometres to the south of Ḳum Ḳalʿe, between the two capes of Ḳum Burnu and Beshik Burnu and, although open to the sea, affords good protection to shipping. Inland from the coast is situated the classical Troas and evidence of ancient remains has been found in the immediate neighbourhood of Beshike itself. The British and French fleets sailed to Beshike in June 1853 during the course of the crisis which led to the outbreak of the Crimean War. Great Britain also sent her fleet to Beshike in 1876 and 1878.

BESHIKṬĀSH [see istanbul].

BESHLIK [see sikka].

BESHPARMAḲ ("five fingers"), a Turkish name given sometimes to mountain ranges in Asia Minor and elsewhere. The best known example is the Beshparmaḳ-dagh in south-west Asia Minor, on the lower reaches of the Büyük-Menderes—a mountain chain rising at its loftiest elevation to a height of 1367 metres. This particular range was known in ancient times as ὁ Λάτμος. The region became, during the Middle Ages, an active centre of Christian religious life, which flourished until the Turks overran western Asia Minor in the 13th-14th centuries.

(V. J. Parry)

BESİKA BAY [see beshike].

BESKESEK-ABAZA (or Beshkesek Abaza), the Russian name for a Muslim people belong to the Abasgo-Circassian (Adīghe) section of the Ibero-Caucasian family. Ethnically they are close to the Kabardians. From the time of the High Middle Ages the Abaza people have been divided into two groups speaking different dialects: the northern or Tapanta group of six tribes, and the southern or Shkarawa group, also of six. In the 1926 census 13,825 Abaza were counted, but Lavrov thinks that the real figure must be considerably larger, perhaps about 20,000 at the present time. The majority of the Abaza (10,993 out of 13,825 in 1926) live in the Circassian Autonomous region, the high valleys of the Great and Little Zelenčuk, the Kuban and the Kama. Here there are thirteen villages, and there are two other Abaza villages near Kislovodsk in the Stavropolʾ *Krai*, as well as a few groups of Abaza in the Circassian and Nogai villages in the Adīghe Autonomous Region.

The Abaza are descended from the multilingual tribes which at the beginning of our era dwelt on the shores of the Black Sea, north-west of present-day Abkhāzia, and which fused together in the course of the centuries to form the Abkhāz national unit.

In the 14th and 15th centuries most of the Abaza left their original home in the coastal region (between Tuapse and Bzīb), crossed the Caucasus, and dislodging the Kabardians settled in the area they now inhabit. From that time onward they had to contend with the hostility of the Circassians, and their history is one of slow but continuous decline. At the end of the 16th century the Abaza tribes which had formerly dominated the region accepted perforce the rule of the Kabardian and Beslenei princes. At this time too (in the reign of Sulṭān Murād III) the Turks extended their protectorate over eastern Caucasia but by the treaty of Belgrade relinquished Kabardia, which was recognised as an independent territory. The Turkish frontier then ran along the Kuban, and the Tapanta who were leading a nomadic existence on both banks of this river became independent, no longer owing any clearly defined allegiance. After the treaty of Küčük-Kaynardja (1774) the Russians occupied Kabardia, and in 1802 the greater part of the territory of the Abaza was combined with that of the Nogai in a special *pristavstvo* administered directly by the Russian authorities. During the Caucasian wars the Abaza were divided in their allegiance, the Tapanta allying themselves with the Russians while the Shkarawa supported the Müridist cause. After the Russian conquest, which took place between 1858 and 1864, the majority of the Shkarawa (the Tam, Kizilbek, Bag, Čegrei and Misīlbai tribes) emigrated to Turkey; 30,000 are officially stated to have left, but this estimate seems too low. After the Caucasian wars only 9,921 Abaza remained in the region (E. Felitsin, *Čislovie dannie o gorskom i pročem musulmanskom naselenii Kubanskoi oblasti*, in *Sbornik Svedenii o Kavkaze*, Tiflis 1885, ix, 87-94).

The conversion to Islam of the Abaza (who had formerly been animists or Christians) began after their migration towards the northern Caucasus, when they came into contact with the Crimean Tatars and the Nogai. They took over the *ʿādāt* and chronological system of these peoples (a twelve-year animal cycle), together with Sunnī Islam of the Ḥanafī school. This conversion was slow, almost all the tribes south of the Kubanʾ being still animist or Christian at the end of the 17th century (Ḥuseyn Hezārfenn, cited by V. D. Smirnov, *Krimskoie Khānstvo pod verkhovenstvom Ottomanskoi Portī do načala XVIII veka*, St. Petersburg 1887, 347). Ewliyā Čelebi affirms that the Biberdraa, one of the most important Maza tribes, are not Muslims. Almost all the Tapanta had accepted Islam by the end of the 18th century, but the Shkawara were still Christians when they were visited by P. S. Pallas, Islam being restricted to the nobility (*Bemerkungen auf einer Reise an die Südlichen Statthalterschaften des Russischen Reichs in den Jahren* 1793 *und* 1794, Leipzig 1799, 365). At the

same period J. Reineggs (*Allgemeine historisch-topographische Beschreibung des Kaukasus*, Gotha-St. Petersburg 1796, 273) states that the Tam, Čegrei, and Barakai tribes of the Shkawara group were "enemies of Islam". In 1807, J. Klaproth (*Reise in den Kaukasus und nach Georgien*, i, Halle-Berlin 1812, 459) found that the Tam were islamised but "ate pork", and this is confirmed by the anonymous author of the article *Gorskie plemena živushčie za Kuban'yu* in *Kavkaz* no. 94, 1850, who describes the Tam as "very lukewarm Muslims", the Čegrei as "setting small store by Islamic ritual, apart from certain of the nobility", the Bag (a tribe of the same group) as "without precise beliefs" and the Barakai as partially converted to Islam. Thus it seems that the final conversion of the Shkawara dates only from the middle of the 19th century, effected by the missionary zeal of Muḥammad Amīn, the *Nā'ib* of Shāmil [*q.v.*] in Circassian territory.

Until the beginning of the 20th century Abaza society retained its very complex feudal structure, which was similar to that of the Circassians. At the bottom of the social scale were the slaves, ***unavl*** (***anawt*** among the Circassians). Then came the serfs, ***llg*** (***grlgʿva*** among the Shkarawa), and the freed serfs, ***azat-llg***, who remained under the obligation to perform certain tasks but could none the less change their master and themselves own ***unavl*** and ***llg***. Above these was the most numerous class, that of the free peasants, ***akavl*** (or ***tl'fakashaw***). Next were the nobles, divided into "small nobles", ***amlsta***, who made up the princes retinues, and the "great nobles", ***amlstadl*** (***tawad*** among the Shkarawa) who could have retainers of their own. At the top of the scale were the "princes" who were heads of clans, ***akha***, and vassals of the Beskenei and Kabardian princes. They took their place not among the Circassian princely class (***pshə***) but in the lower class of ***tlekotesh***. The children of the ***akha*** and women of a lower class made up a special class, ***tuma***.

Until the October revolution and even during the first years of the Soviet regime the Abaza still retained certain patriarchal and feudal customs (clan divisions, vendettas, ***kalym***, ***atalik***, etc.).

Language and literature

The Abaza language belongs to the Abkhāzo-Adlghe division of the Ibero-Caucasian languages. It is so close to Abkhāz that it is sometimes taken as simply a dialect of this tongue, but it shows numerous Kabardian features. There are two dialects: *Ashkara* in the south, with two sub-dialects, that of the Apsua Aul and that of Staro and Novo-Kuvinskoe, and in the north *Tapanta*, comprising likewise the two sub-dialects of Kubina-El'burgan and Pslž-Krasno-Vostočnoe. Abaza was an unwritten language until the October revolution. In 1932 a modified Roman alphabet was devised for it and a page in the language added to *Čerkes K'apshč*, the Čerkes Adlghe daily. In 1939 the Roman alphabet was replaced by Cyrillic, and in this new script the first works by Abaza writers have appeared, from 1940 onwards (collections of poems by Tsekov and Tkhaitsakhov, the short stories and novelettes of Žirov and Tabulov, etc.).

(A. Bennigsen and H. Carrère d'Encausse)

BESLENEY [see čerkes].

BESNI (Behesnī in the Middle Ages), from the Syriac Bet Hesnā, a crossroads settlement at a height of more than 2,900 feet on the important junction of the Malaṭya-Aleppo and (Cilicia)-Marʿash-Diyār Bakr roads. Besni was the hinge between the series of strongholds north of the great bow of the Euphrates on the one hand, which protected the upper valleys of the right bank tributaries of this river from incursion from the plateaux and high ranges of the eastern Taurus, and on the other those towards the south, which dominated the small basins north of ʿAynṭāb. Further it was in the immediate vicinity of a pass which led down towards the north-west to the gorge of the Aḳ-Ṣu, the site of the old strong-hold of Ḥadath the Red. Despite these advantages and the ancient etymology of its name, Besni is not mentioned in texts until after the destruction of Ḥadath, whose place it then took (4th/10th century). Formerly it had been overshadowed by Ḳaysūn, its southern neighbour, which was then more important and was itself linked predominantly with Marʿash. Besni probably owed its rise to an influx of Armenians after the Byzantine conquest. At the end of the 5th/11th century it was part of the principalities of Philaret and Kogh-Vasil, and during the period of the Crusades was one of the most frequently mentioned places in the Franco-Armenian province of Edessa. It was fought for by the Zengid or Ayyūbid princes of Aleppo and the Saldjūḳids of Rūm, who in the 7th/13th century incorporated it into their border province of Marʿash. The Mongols ceded it to the Armenian kingdom of Cilicia, but it was almost at once annexed by the Mamlūk state, with whose fortunes it was linked until the end of the 8th/14th century. It then came within the sphere of operations of the Dhu 'l-ghadīr Turcomans, was pillaged by Tīmūr, passed again at the end of the 15th century into Mamlūk control, and in 922/1516 was occupied by the Ottomans together with Syria. From that time on it has had no more than local importance. The town, in which a fortress largely rebuilt by Ḳā'itbāy is still standing, had a population of 10,500 in 1955.

Bibliography: Besni is mentioned by all the chroniclers of the period of the Crusades, in particular by Matthew of Edessa, Michael the Syrian, and Kamāl al-Dīn b. al-ʿAdīm. The last-mentioned gives a note on it in the geographical section of his *Bughya* (Aya Sofya 3036, i, 333), and likewise ʿIzz al-Dīn b. Shaddād in his *Aʿlāḳ* (= Ibn al-Shiḥna, ed. Cheiko, 171). Of the Mamlūk chroniclers see especially Ibn Kathīr, Ibn Ḥadjar, Maḳrīzī, al-ʿAynī, Ibn Taghrībardī, Ibn Iyās. On the modern period, particularly Ainsworth, *Travels*,

i, 265 and Cuinet, ii, 376; Mukrimin Halil, *Maraş Emirleri* in *TTEM*, years xiv-xv; Cl. Cahen, *La Syrie du Nord*, 120-121; additional references in Besim Darkot, *Besni*, in *IA*, s.v. (CL. CAHEN)

BESSARABIA [see BUČAK].

BETELGEUZE [see NUDJŪM].

BETHLEHEM [see BAYT LAḤM].

BEY [see BEG].

BEYATLĪ, YAḤYĀ KEMĀL [see YAHYA KEMAL BEYATLI].

BEYLIK, (BEGLIK), a term formed by joining the adjectival and relative suffix *lik* to *bey* (*beg*, *beg*) which was an old Turkish title [see BEG]. The word *bey* is said to correspond to the Arabic *amīr*, and *beylik* to *imāra*. The term *beylik* thus denotes both the title and post (or function) of a *Bey*, and the territory (domain) under the rule of a *Bey*. Later, by extension, it came to mean also "state, government", and, at the same time, a political and administrative entity sometimes possessing a certain autonomy. When the Ottoman Empire was established, ʿOthmān Bey, the founder of the dynasty, was referred to as *Bey* by the sovereign of the Saldjūḳid Empire; in the same way, the territories which he had taken from the Byzantine Empire were granted to him as a *beylik*, *imāra*. At the beginning of the 8th/14th century, the other Turkish principalities in Asia Minor (of the *Ṭawāʾif Mulūku*) were also generally referred to as *Beylik*. Later, as the Ottoman Empire increased in size, the country was divided into *Sandjaḳ-beyliks*—the most important and fundamental military and administrative unit, and these in turn were grouped, regionally, under the authority of the *beylerbeys*. From the 9th/15th century, those Balkan countries which acknowledged the political and military suzerainty of the Ottoman Empire but enjoyed complete internal autonomy, were referred to as *Beyliks*: *e.g.*, *Beylik* of the Danube, *Beylik* of Eflak, *Beylik* of Bogdan, *Beylik* of Erdel. Later still, countries which had obtained some privileges from the Ottoman Empire and had succeeded in achieving a measure of autonomy, were also considered as *Beyliks*: *e.g.*, *Beylik* of Sisam (Samos), *Beylik* of Bulghāristān (Bulgaria). This term in turn extended its meaning still further, and began to be used as an adjective to denote places and things belonging to the Government; *e.g.*, *Beylik arāḍī* (*mīrī arāḍī*), "the lands (domain) of the *Beylik*", *Beylik ḳishla*, "the winter quarters of the *Beylik*", *Beylik česhme* "the fountain of the *Beylik*" *Beylik ākhīr*, "the stable of the *Beylik*", *Beylik gemi* "the ship of the *Beylik*", etc. There are also some Turkish proverbs in which this word occurs, *e.g.*, "A *Beylik* of one day is a *Beylik*" (*Bir günün beylighi beylikdir*). The name of an official in the central organisation of the Empire was derived from this term: *Beylikdji* (*Beglikdji*), who was the president of one department of the *Dīwān-i Humāyūn* [*q.v.*]. (M. TAYYIB GÖKBILGIN)

ii. — In North Africa, the term is used in the former Ottoman possessions in the Maghrib, but not in Morocco or in the Sahara, where Turkish administrative influence was never felt. Like the word *makhzen* in Morocco it refers to government and administrative authority at every stage. It may date from the beginning of the Ottoman occupation and the rule of the *beylerbeys*, or possibly from a later period. In this latter case it no doubt commemorates the influence of the local Algerian beys, of Constantine, the Titeri and the west, at least as much as that of the chief Bey in Algiers; he, moreover, was replaced by a Dey from 1671 onwards. Our information is too scanty for us to draw any conclusions.

In Tripolitania, Tunisia and Algeria the regime denoted by the word *beylik* is substantially the same, except that in Tunisia offices of government tended very soon to become hereditary. This was not the case elsewhere.

The forms of government were everywhere Ottoman, and remained unmodified or almost so, while in the majority of cases the words used to denote them were also part of the Ottoman vocabulary. But these institutions did not strike deep roots in the countries of North Africa, and had no acceptance below the provincial level. The central government was in effect entirely Turkish, and the same held for the provincial government in so far as each province was under the authority of a Turkish governor or integrated within the Turkish regime, and all important towns, *i.e.*, garrison towns, were administered by an official appointed by the central or provincial government. The authority of the *beylik* went no further; small ungarrisoned towns, villages and tribes were administered by their own officials, who were recognised by the central or provincial government and served as intermediary agents and points of contact between the *beylik* and the people.

The *beylik* as the central authority inspired a variety of feelings in the people: fear and suspicion, productive of a general ill-will, but also unbounded confidence in times of disaster and personal trouble. The *beylik* at such times, if it so desired, could deputise for Providence.

Bibliography: There is no work dealing specifically with this subject, but information on various aspects of the institutions of the *beylik* can be found in several works. The following are cited by way of example:

BEYOGHLU [see ISTANBUL].

BEYSHEHIR (Beyshehri), now the centre of a *ḳaḍāʾ* in the province of Konya, lies on the south-eastern shore of a lake (*göl*) bearing the same name. This lake was known to the Ancients as Karalis (a village called Kirili is still found close to the north-eastern shore). The town of Karalleia in Pamphylia was situated near the lake in ancient times. Beyshehir itself is believed to have been founded in the time of the Saldjūḳ sultan of Rūm ʿAlāʾ al-Dīn I (616-634/1219-1237). When the Turks overran western Asia Minor in the years around 1300, Beyshehir came into the possession of the Begs of Ḥamīd, who had at various times to defend it against the neighbouring Begs of Ḳarāmān. The Ottoman sultan Murād I purchased Beyshehir and certain other towns from Kemāl al-Dīn Ḥusayn, the Beg of Ḥamīd, in 783/1381. After the battle of Ankara (804/1402) Beyshehir fell under the control of Ḳarāmān. The Ottomans regained the town in the reign of Sulṭān Meḥemmed I (816-824/1413-1421), but their possession of Beyshehir did not become definitive until 847/1443. The present Beyshehir is a small town which had, in 1935, 2620 inhabitants.

BHAKKAR, a fortress situated on a limestone rock in the middle of the river Indus (27° 43′ N and 68° 56′ E), which is identified with the Sogdi of Alexander. The island is connected with Rōhrī and Sukkur by a cantilever bridge. With the decline of Arōr, the ancient Hindū capital of Sind, about the middle of 2nd/8th century, when the river Indus changed its course, Bhakkar soon attained the highest strategic importance. The island must have been fortified and garrisoned at a very early date as a certain Abū Turāb, an Arab, who died in 171/787 is reported to have reduced it. At the time of the conquest of Sind by Muḥammad b. Ḳāsim al-Thaḳafī in 92/710-711 the place was known as Bahrūr. (Abu 'l-Faḍl erroneously identifies it with the ancient Arab citadel of al-Manṣūra). The name Bhakkar appears for the first time when ʿAbd al-Razzāḳ, *wazīr* of Maḥmūd of Ghazna conquered it in 417/1026. Nāṣir al-Dīn Ḳubādja the governor of Učh was besieged in this fort in 614/1227 by the armies of Shams al-Dīn Iletmish and while trying to escape in a boat was drowned in the Indus. In 697/1297 it was invaded by the Mongols who were repulsed by the troops of the governor, Nuṣrat Khān, appointed by ʿAlāʾ al-Dīn Muḥammad Khaldjī [694/1294-716/1316]. The fort figures frequently during the Sind campaigns of Muḥ. b. Tughluḳ and his nephew Fīrūz Tughluḳ as well as in the later history of Sind. It changed hands several times, being considered the key to the conquest of lower Sind.

During his flight through the desert of Sind, Humāyūn [*q.v.*] encamped here. Shāh Bēg Arghūn, a ruler of Thatta, appointed Mīr Maḥmūd Kokaltāsh its governor; he held it for fifty years, having been confirmed in 982/1574 in his appointment by Akbar. The fort was strengthened by the local *sayyids*, against the impending attack of Dharīdja tribesmen in 975/1567. Soon afterwards it was visited by Shāh Bēg himself; he drove out the *sayyids* and parcelled out the ground into building-sites for his chiefs, who plundered bricks from the ruined town of Arōr and some Turkish and Samma buildings in the vicinity of Bhakkar, for constructing their own houses. The fort was the scene of a fierce battle in 962/1554 between Maḥmūd Kokaltāsh and Mīrzā ʿĪsā Khān Tarkhān, ruler of Thatta. It was captured by Nūr Muḥammad Kalhōrā in 1149/1736, from whose descendants it was seized by the Afghāns who were dispossessed in their turn by Mīr Rustam Khān of Khayrpūr. It came into British possession in 1839 with the conquest of Sind by Charles Napier.

Near the fort flourished the town of Bhakkar, now known as Purānā (old) Sukkur. In Akbar's time it had luxuriant orchards; in the 11th/17th century it was famous for its sword-blades. The town was peopled mainly by *sayyids* and was a great seat of learning, especially in the 10th/16th century. Amongst its prominent *ʿulamāʾ* and scholars were: Mīr Maʿṣūm Nāmī [*q.v.*] author of the *Taʾrīkh-i Maʿṣūmī*, a history of Sind (Poona 1938); Shaykh Farīd, who compiled the *Dhakhīrat al-Khawānīn*, an excellent biographical dictionary still in MS., and Ḳāḍī Ẓahīr al-Dīn, grammarian, legist and philologist.

BHARATPŪR, formerly a princely State in India, now forming a part of Rādjastʿhān, lying between 26° 43′ and 27° 50′ N. and 76° 53′ and 77° 46′ E. with an area of 1,982 sq. miles. The chief city is Bharatpūr, situated in 27° 13′ N. and 77° 30′ E., 34 miles from Agra, with a population of 37,321 in 1951. Paharsar, 14 miles from Bharatpūr, was first conquered in the 5th/11th century by the troops of Maḥmūd of Ghazna, under the Sayyid brothers, Djalāl al-Dīn and ʿAlāʾ al-Dīn, who claimed descent from Imām Djaʿfar al-Ṣādiḳ, in about 3 hours, as the local tradition goes, whence the place derives its name *pahar* (3 hrs.) *sar* (conquered). At the close of the 6th/12th century it passed into the hands of Muʿizz al-Dīn b. Sām also known as Shihāb al-Dīn Muḥammad Ghūrī, and remained under the rule of different dynasties till it was conquered by Bābur, who had sent an ulti-

matum, in verse, to the Mīr of Bayānā, 34 miles from Bharatpūr, beginning ***bā Turk satīzah makun ay Mīr-i Bayānā***. It remained thereafter under the Mug͟hals. An attempt by Brid͟j, the founder of the State of Bharatpūr, at independence towards the close of the reign of Awrangzīb was thwarted by the Imperial army killing Brid͟j in action. During the reign of Farruk͟hsiyar (1125-31/1713-18) Čūrāman D͟jāt ravaged the area and closed the roads to Delhi and Agra. In 1132/1718 a strong expeditionary force under Sawā'i D͟jay Singh, the chief of D͟jaypūr, was sent to punish him but the Sayyid king-makers who were opposed to Muḥammad S͟hāh, king of Delhi, made peace with the D͟jāts directly. In 1135/1722 Badan Singh, the successor of Čūrāman, was proclaimed full Rād͟jā of Bharatpūr on the condition of paying tribute to the Emperor. In 1167/1753 his son, Sūrad͟j Mal, gained so much strength as to attack the Imperial capital and indulge in pillage and plunder. S͟hāh ʿAbd al-ʿAzīz al-Dihlawī [*q.v.*] has, in several of his letters, lamented the atrocities committed by the D͟jāts on the residents of Delhi.

The present city and the mud-fort of Bharatpūr are said to have been founded about 1146/1733. The British, under Lord Lake, made an unsuccessful attack on this fort in 1220/1805; it was, however, captured by Lord Combermere in 1242/1826.

BHAROČ. A district in Gud͟jarāt [*q.v.*] in the present Bombay State, India, of about 1450 sq.m. and with a population of some 300,000; the Islamic population was about 20% of the total prior to partition in 1947, but much of this has since moved to Sind in Pakistān. The principal class of Muslims was Bohrā [see Bohorās]. Baroč is also the name of the principal town of that district, Lat. 21° 42′ N., Long. 73° 2′ E. It is first known as a town within the Mawrya dominions, and later (c. 150 A.D.) to have been in the hands of Parthian Sāhas; from the Middle Indian form *bharugaccha-* of the Sanskrit *bhṛgukṣetra-* it was known to the Greeks as βαρυγαζα, a seaport from which the Red Sea commerce was carried on (Ptolemy, *Geog.* VII, i, 63; VIII, xxvi, 12), and as the head of an important trade-route into India (*Periplus*, §§ 47-8). Held by Rād͟jputs and Gurd͟jaras, probably as tributaries of the Čālukyas, it suffered Arab invasions in 15/636, 99/717, and 154/770. It was held by Rāśtrakutas in the 3rd/9th and 4th/10th centuries until reconquered by the Čālukyas; from them it was taken in 698/1298 by Ulug͟h K͟hān, brother of the Sulṭān ʿAlā' al-Dīn K͟halḏjī, by whom Hindu and D͟jayn temples were destroyed (Briggs, *Ferishta*, i, 327). It was under a succession of Muslim governors representing the Delhi *sulṭāns* until 798/1396, when Muḥammad Ẓafar K͟hān (governor from 793/1391) assumed his independence. From then it continued subject to the Aḥmad S͟hāhī kings [*q.v.*] until annexed by Akbar in 980/1572. In 1149/1736 ʿAbd Allāh Beg received from Niẓām al-Mulk (independent in the Deccan from 1135/1722, who previously as governor of Gud͟jarāt had made Baroč part of his private estate) the title of Nīk ʿĀlam K͟hān, and was the founder of the line of Nawwābs of Bharoč. In 1186/1772 Bharoč was captured by the British—whence its Anglo-Indian name of Broach.

Buildings.—The old fortifications were rebuilt by Bahādur S͟hāh (932-43/1526-37). In 1071/1660 they were partially razed by Awrangzīb, but rebuilt on his orders in 1097/1685 as a protection against the Mahrattas. They are now in a very dilapidated condition. The D͟jāmiʿ Masd͟jid, c. 701/1302, is of great significance in the development of Islamic architecture in Gud͟jarāt: the earliest buildings at Patań were mere adaptations of existing Hindū and D͟jayn structures, whereas here an original and conventionally planned mosque is composed of former temple materials, the enclosure walls, of temple stones specially recut, being thus the earliest examples of independent Islamic masonry in Gud͟jarāt. The *līwān* is an open colonnade, the three compartments of which are three temple *mańḍapas* re-erected intact, except for the removal of the Hindū animal figures, with 48 elaborately carved pillars; the three *miḥrāb*s are intact temple niches with pointed arches added under the lintels. The *līwān* roof, with three large and 10 small domes, houses elaborate coffered ceilings removed from temples; the designs of these, though Hindū, were conventional in character, and were perpetuated in later Gud͟jarāt Islamic buildings. It appears that the whole production was the work of local Hindū artisans working under the direction of Muslim overseers.

Bibliography: For the history see article Gud͟jarāt; *Bombay Gazetteer*, ii, 1877, 337-569. For a full description of the D͟jāmiʿ Masd͟jid, J. Burgess, *On the Muhammadan architecture of Bharoch . . . in Gujarat*, *ASWI* VI (= *ASI*, *NIS* XXIII), London 1896. (J. Burton-Page)

BHAṬṬI, the Pand͟jāb form of the Rad͟jput word Bhāti, the name of a widely distributed Rad͟jpūt tribe associated with the area stretching from Jaisalmer to the western tract of the Pand͟jāb between Fatḥābād and Bhatnair. Large numbers of those settled in the Pand͟jāb accepted Islam. According to one of their traditions the Jādons of Jaisalmer were driven from Zābulistān to the Pand͟jāb and Rād͟jputāna, the branch settling in Rād͟jputāna being named Bhāti. The references in the *Čač-nama* to the Bhaṭṭi king of Ramal in the Thar desert confirm the legends preserved in Tod's *Annals and antiquities of Rajast'han* . . . ., [2], Madras 1873. They are also mentioned in ʿAfīf's *Ta'rīk͟h-i Fīrūz S͟hāhī* (*Bib. Indica*, 36-39). The widespread nature of their settlements is recorded in the *Ā'īn* where Abu 'l-Faḍl reserves the form Bhaṭṭi for those settled in Sirhind, Multān and Pand͟jāb.

Bibliography: MS. Eur. D. 164, India Office Library, *History of the Rāthors and Bhattis of Rājputana*. (C. Collin Davies)

BHATTINDA, head-quarters of the Govindgarh *taḥṣīl* of the former Patiala State, now merged with the Pand͟jāb State of the Indian Union, situated in 30° 13′ N. and 75° E. Population (1951) was 34,991. An ancient town, seat of the Bhātiyā or Bhattī Rād͟jpūts, it commanded the strategic routes from Multān to Rād͟jasthān and the Gangetic valley, including such historic places as Pānīpat and farther on Indrāpat (Delhi), for invaders from the north-west of the Indian sub-continent. In ancient times it stood on an affluent of the Ghaggar rivulet which still flows past Ambālā [*q.v.*] and the surrounding

country was practically uninhabited. Known as Vikramgarh in the pre-Islamic period, it figures in early Indo-Muslim chronicles like the *Ṭabaḳāt-i Nāṣirī* and the *Tādj al-Ma'āthir* of Ḥasan Niẓāmī (Pandjāb Univ. Lib. MS.) as Tabarhinda (تبرهنده), a corrupt form of the correct name B(h)attrinda (بترنده) due apparently to the transposition of the dots of the letters *bā* and *tā*. Murtaḍā al-Zabīdī is nearer the truth when he says that (البترنده) *al-Bitranda* (*Tādj al-ʿArūs*, ix, 212) is "a city in India". Bhattrinda is composed of the words *Bhattī* and *rinda* (a jungle, a haunt), meaning a place which "abounded" in Bhattīs, as Sihrind, is of *sih* (a porcupine) and *rind* (a jungle), again corrupted by Muslim historians of non-Indian origin into Sirhind. This place-name is generally found written as سهرند in all earlier Persian chronicles and hagiological works (*e.g.*, *Bābur-nāma*, Eng. translation by A. S. Beveridge, i, 383). In the *Ṭabaḳāt-i Nāṣirī* (ed. ʿAbd al-Ḥayy Ḥabībī, Quetta 1949, i, 537) Bhattinda is wrongly called Sirhind because no hills exist in the vicinity of this town. The existence of a dense jungle, thirty miles from Bhattinda, in the direction of Sirhind, is, however, proved by a statement in the *Malfūẓāt-i Tīmūrī* (Elliot and Dowson, iii, 427). This jungle served as the favourite leopard hunting-ground for Akbar (*Ā'īn-i Akbarī*, Eng. transl. Blochmann, i, 286). As to the predominance of Bhattīs in and around Bhattinda, there is more than ample evidence (*Imp. Gazetteer of India*, n. ed. viii, 91). Cunningham's etymology of the name Bhattinda (see *Bibl.*) based on mere conjecture is erroneous and wide of the mark.

It was conquered by Maḥmūd of Ghazna in 395/1045 when the Rādjā of Bhattinda (Bahāṭiya), Bidjay Rāy, unable to resist the besiegers, fled from the fort, and committed suicide. There has been some controversy as to the identification of Bahāṭiya (Bhāṭiya) mentioned by al-ʿUtbī (*Ta'rīkh-i Yamīnī*, Lahore 1300/1882, 209 ff.). Muḥammad Nāẓim positively asserts (*The Life and Times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 197-203) that it was Bhattinda and no other town. But a little-known place, called Hāṭiya, still exists in the neighbourhood of Rāwalpindī, which also answers the description, given by al-ʿUtbī, to some extent. Unless, however, more conclusive evidence is forthcoming Muḥammad Nāẓim's view must prevail. al-ʿUtbī (p. 209) gives vivid a description of the lofty city-wall and the fortifications of Bhattinda as they existed in the time of Maḥmūd. The victory of Sulṭān Maḥmūd also incidentally marks the introduction of Islam in Bhattīānā and the Sāmāna-Ambāla-Ḥiṣār region of India.

It was conquered by Muʿizz al-Dīn Muhammad b. Sām, also known as Shihāb al-Dīn Muḥammad Ghūrī, in 587/1191. After the withdrawal of Muḥammad Ghūrī to Ghazna, his commandant at Bhattinda, Malik Ḍiyā al-Dīn Tūlakī, was attacked by Rāy Pithorā (Prithvirādjā), who laid a siege to the fort and continued it for 13 months. Ultimately the Muslim commandant made peace with the enemy and surrendered the fort. It was captured by Nāṣir al-Dīn Ḳabāča after the death of Ḳutb al-Dīn Aybak in 607/1210. Thereafter, it remained in the possession of the Slave kings. In 637/1239 Malik Ikhtiyār al-Dīn Altūniya, the commandant of Bhattinda, rose in revolt, killed Yāḳūt the Abyssinian and took Raḍḍiya Sulṭāna [*q.v.*] a prisoner, who was lodged in the fort where he married her. They were, however, killed by the Hindus while on their way to Delhi from Bhattinda. The fort was captured by Nāsir al-Dīn Maḥmūd in 651/1253 and Malik Shīr Khān was appointed its commandant.

Very little is heard of the town thereafter. It must have decayed and lost its importance, although its fort has, throughout, been famous both for strength and impregnability. Strangely enough it finds no mention in the Memoirs of Bābur. Akbar, as already stated, used to hunt leopards in the *pargana* of Bhattinda. His guardian Bayram Khān [*q.v.*], after his disgrace, lodged his family in this fort before proceeding to Djullundur [*q.v.*] where, in a decisive action with the Imperial troops, he suffered an ignominious defeat. It then completely fades out of history and only reappears in 1168/1754 when it was conquered by Āla Singh, the Patiālā chieftain, whose descendants held it till the merger of their territory with the Indian Union in 1956. The modern fort is 118 ft. high, with 36 bastions. It dominates the town, a thriving centre of trade and commerce, and is visible for several miles around. In the time of Sulṭān Maḥmūd, it had a deep and wide moat, which that great conqueror ordered to be filled up with stones and trees before storming the fort. The ditch still exists partly filled up with the refuse and debris of the town, which is dumped here. The fort is now mouldering rapidly and serious cracks have also appeared in the arches of the main gate. Its two massive minarets collapsed in 1958.

Bābā Ḥādjdjī Ratan [see RATAN], said to have been born in the pre-Islamic era and to have later visited the Prophet, was a native of this place.

BHITĀ'Ī, SHĀH ʿABD AL-LAṬĪF (1689-1752), a Sindhi poet belonging to a priestly family of Matiari Sayyids. He lived for a large part of his life at Bhit ("sandhill"), a small hamlet near Hala in the district of Ḥaydarābād in Sind. He is the national poet of Sind. His poetry is Ṣūfī in nature, as the poet, though not a man of great learning or education, was deeply impressed by the mystical thought of Djalāl al-Dīn Rūmī, whose influence is evident in many of his poems. These poems were gathered together after his death by his followers and made into a collection which is called the *Risalo*. They are

written in a pure form of eighteenth century Sindhi and are remarkable for the manner in which philosophic and religious use is made of the folk tales of the Sind countryside. The poems deal with the longings of unrequited love and the need for trust in the power, wisdom and compassion of Allah. Their deeply mystical character has endeared them to the simple rural folk of Sind. It is noteworthy that their appeal has been as much to the Hindus of Sind as to the Muslims. The reason is perhaps due to the fact that the bulk of the indigenous Sindhi population is Hindu in origin, as many of the personal names testify, and the poet himself was deeply interested in the mystical contemplation of faḳīrs, sanyasis and yogis, which in turn found an echo in the Sikh religion followed by most of the caste Hindus living in Sind till the partition of India in 1947 resulted in their precipitate flight therefrom. The poems of the *Risalo* which are lyrical in type are sung to well-known Indian music and many of them, such as the *Sur Asa* and the *Sur Bilawal*, proclaim a sublime form of devotion. The folk stories on the other hand make direct appeal to the childlike simplicity common to unsophisticated people. The love tales of Sasui and Punhun, of Suhini and Mehar, and of Lilan and Chanesar are sung at the cradles of Sindhi children today. A vast literature in Sindhi on the poet and his message has been evoked by the poet's achievement and the *rawḍa* of S̲h̲āh ʿAbd al-Laṭīf is the scene of regular pilgrimages of devotees who listen today to the recitation and singing of his verses. There have been learned studies of S̲h̲āh ʿAbd al-Laṭīf's life and work by three Sindhi scholars of distinction, namely the late S̲h̲ams al-ʿUlamā' Mīrzā Kalich Beg, the late Professor H. M. Gurbuxani and the late S̲h̲ams al-ʿUlamā' U. M. Daudpota, whose works may be consulted by those interested. (H. T. Sorley)

BHŌPĀL, formerly a princely State in India, lying between 22° 29′ and 23° 54′ N. and 76° 28′ and 78° 51′ E. with an area of 6,878 sq. miles, with a population of 838,474 in 1951. It was the second most important Muslim State, next to Ḥaydarābād [*q.v*].

Bhōpāl was founded by a military adventurer, Dōst Muḥammad K̲h̲ān, a native of Tīrāh (in the tribal area of present-day Pakistan) who belonged to the Mirza'ī K̲h̲ēl tribe of the Āfrīdī Pathans. In 1120/1708 he went to Delhi, at the age of 34, in search of employment, and succeeded in obtaining from Bahādur S̲h̲āh I [*q.v.*], emperor of Delhi, the lease of Bērāsia *pargana*, partly in recognition of his military services and partly through his own efforts. A man of exceptional courage and outstanding military skill, he soon extended his sway over a large area and founded the town of Bhōpāl with its citadel, which he named Fatḥgarh. Taking advantage of the enfeeblement of the central Mug̲h̲al authority, he broke loose and assumed the title of Nawwāb. He died in 1153/1740 and was succeeded by his minor son Muḥammad K̲h̲ān, who was soon afterwards ousted by Yār Muḥammad K̲h̲ān, a natural son of Dōst Muḥammad K̲h̲ān. The latter died in 1168/1754 without ever being formally installed Nawwāb and was succeeded by Fayḍ Muḥammad K̲h̲ān, a pious man and almost a recluse, whose weakness as a ruler, combined with the political chicanery of his Hindū minister, resulted in half of the Bhopāl territory being lost to the Pēs̲h̲wā, Bād̲j̲ī Rāō I. On his death in 1192/1777 he was succeeded by his brother, Ḥayāt Muḥammad K̲h̲ān who, strangely enough, adopted four Hindū boys as his *čēlā*s, two of whom, Fūlād K̲h̲ān and Čhōṭē K̲h̲ān, later became ministers. Rivalry between Wazīr Muḥammad K̲h̲ān, a cousin of the ruler and Murīd Muḥammad K̲h̲ān, his minister, was respnsible for surrendering the fort of Fatḥgarh to Amīr K̲h̲ān Pindārī (the founder of the former Tōnk [*q.v.*] State (who was then in the service of the Sindhīā of Gwāliōr. Wāzīr Muḥammad K̲h̲ān had to leave Bhōpāl but on Sindhīā's repairing to Gwāliōr, where disturbances had broken out, he returned with a sizable force and expelled the Marathas, under Amīr K̲h̲ān, from the fort and after sometime also drove out the Pindārīs. In 1223/1807 Ḥayāt Muḥammad died and Wazīr Muḥammad, who had proved his capability as a ruler, succeeded him to the principality, setting aside the claim of G̲h̲awt̲h̲ Muḥammad K̲h̲ān, son of the deceased ruler. In 1229/1813 the combined forces of Nāgpūr and Gwāliōr marched on Bhōpāl, which resisted the invaders heroically for eight long months and the unsuccessful siege had to be lifted.

On the death of Wazīr Muḥammad K̲h̲ān in 1232/1816, his son and the son-in-law of G̲h̲awt̲h̲ Muḥammad K̲h̲ān, Nad̲h̲r Muḥammad, succeeded him. He entered into a treaty with the British, the obligations of which he faithfully observed. This treaty guaranteed to him and his descendants the territories of Bhōpāl, while the British were assured the services of native troops for exterminating the Pindārīs, who were then over-running Central India and were no more than organised bandits. Nad̲h̲r Muḥammad was married to Ḳudsiyya Bēgam, a daughter of G̲h̲awt̲h̲ Muḥammad, who assumed the reins of power after the death of her husband in 1236/1820, as regent on behalf of her minor daughter, Sikandar Bēgam, whose formal accession took place 25 years later in 1261/1845. From this lady begins the long and illustrious chain of the Bēgams of Bhōpāl, which ended up with the voluntary abdication of Sulṭān D̲j̲ahān Bēgam in 1345/1926, in favour of her son, Ḥamīd Allāh K̲h̲ān (the last feudatory ruler of Bhōpāl) and her subsequent death in 1348/1930.

Sikandar Bēgam, owing to the delaying tactics of her mother, who wanted to retain power in her own hands, was married very late in 1251/1835 to D̲j̲ahāngīr Muḥammad K̲h̲ān, a nephew of Nad̲h̲r Muḥammad K̲h̲ān. Ḳudsiyya Bēgam, still reluctant to part with power, instigated a civil war in which Nad̲h̲r Muḥammad was defeated by the combined troops of the Dowager-Bēgam and his own wife. In 1253/1837 the authorities of the East India Company interfered and restored the administration of the State to D̲j̲ahāngīr Muḥammad K̲h̲ān. Ḳudsiyya Bēgam, baulked of her wishes, had to retire on pension. She lived long thereafter but was scrupulously kept out of the picture by her successors, Sikandar Bēgam and her daughter S̲h̲āhd̲j̲ahān Bēgam, whose husband Ṣiddīḳ Ḥasan K̲h̲ān, for personal and public reasons, did not allow the old Bēgam even to attend social functions held by the ruling family. She died in 1299/1881 and held a *d̲j̲āgīr* of Rs. 498,682 since her retirement from political life until her death. The rule of Sikandar Bēgam is remarkable for a number of military reforms which forged the irregular Bhōpāl troops into a fine well-knit force. The State remained loyal to the suzerain British power during the upheaval of 1857 in spite of the refractory conduct of a few of the nobles. She also introduced agricultural, economic, administrative and legal reforms. Although the head of a Muslim State, she was bold enough to do away with the *pardah* and appear in public attired in military accoutrements. At the same time

she was of a religious bent of mind and performed the Ḥadjdj in 1280/1863-4. After a rule of 23 years, she died in 1285/1868 and was succeeded by her minor daughter Shāhdjahān Bēgam, under the regency of Fawdjdār Muḥammad Khān, an uncle of Sikandar Bēgam. In 1263/1847 he had to resign, chiefly because of the machinations of Ḳudsiyya Bēgam, and Sikandar Bēgam was appointed regent. In 1272/1855 Shāhdjahān Bēgam married Bakhshī Bāḳī Muḥammad Khān, who did not belong to the ruling house. He, therefore, as subsequently all the husbands of the Bēgams of Bhōpāl, enjoyed only the status of a Nawwāb-Consort and had nothing effective to do with the administration of the State, the entire power having been delegated to Sikandar Bēgam, a woman jealous of her status and dignity. She strongly objected to the recognition of her minor daughter as ruler and could only be appeased by Shāhdjahān Bēgam's voluntarily giving up all claim to rule during the life-time of her mother; an act of filial attachment rather than of expediency or political sagacity.

In 1285/1868, her husband having died a year earlier, Shāhdjahān Bēgam was formally installed as the ruler. Three years later she remarried, taking a *mawlawī* of Ḳannawdj, Sayyid Ṣiddīḳ Ḥasan [*q.v.*], once a petty official of the State, as her husband. Through the efforts of the Bēgam the honorary title of Nawwāb and other insignia of office were conferred on Ṣiddīḳ Ḥasan Khān as the consort of the ruler. She had discarded the *pardah* after the death of her first husband but again retired on her marriage with the *mawlawī*, whose learning and ability always over-awed her. Her second marriage met with a mixed reception, the entire ruling family strongly disapproving it. The heir-apparent Sulṭān Djahān Bēgam, was full of bitterness and her memoirs depict Ṣiddīḳ Ḥasan Khān as an unscrupulous upstart, a tyrant who robbed her and her mother of all happiness, threatening the latter with divorce, a great stigma for a lady of high birth, if she went against his wishes. She also holds him responsible for the estrangement between her and her mother and the grand old lady Ḳudsiyya Bēgam. His disgrace in 1303/1885, due to his objectionable writings, came as a shock to the Bēgam but she had to bow before the decision of the British Government. Ṣiddīḳ Ḥasan Khān died in 1308/1890, to the great relief of Sulṭān Djahān Bēgam and others, but the relations between the ruler and the heir-apparent showed no improvement. The real cause, it appears, of the estrangement between mother and daughter was the latter's husband, Aḥmad ʿAlī Khān Sulṭān Dulhā, with whom the ruler, for unknown reasons, was never entirely happy, although it was she who had selected him as her son-in-law out of some twelve suitors.

In 1319/1901 Shāhdjahān Bēgam died of cancer and, in accordance with the *sanad* issued in 1279/1862 by Lord Canning, Governor-General and Viceroy of India, was succeeded by Sulṭān Djahān Bēgam, her only child by her first husband. She had no issue from Ṣiddīḳ Ḥasan Khān. Sulṭān Djahān, during 25 years of rule, personally directed the administration of the State and carried out a number of reforms. She paid two visits to England, first in 1329/1911 to take part in the coronation ceremonies of King George V (1911-1936), and then in 1344/1925 to get the succession of her youngest and surviving son, al-Ḥādjdj Ḥamīd Allāh Khān, recognised by the British Government. Her two other sons, Muḥammad Naṣr Allāh Khān (b. 1293/1876) and Ḥāfiẓ ʿUbayd Allāh Khān (b. 1294/1877) both died, in quick succession, in 1343/1924. It was suspected that they had been poisoned, but the political sagacity of Sulṭān Djahān averted a crisis. The late Āghā Khān also played an important part in securing the rulership of Bhōpāl for Ḥamīd Allāh Khān, who thus superseded the sons of his two dead brothers. Born in 1312/1894 Ḥamīd Allāh Khān was educated at ʿAlīgarh and took an active part in politics insofar as the native princes were concerned. On two occasions (1931-2, 1944-7) he was elected Chancellor of the Chamber of Princes and in that capacity rendered yeoman service to the cause of his brother-princes. In 1366/1946 he played a memorable rôle in Indian politics, acting as an intermediary between the Indian National Congress and the Muslim League, led by Muḥammad ʿAlī Djinnāḥ [*q.v.*], when he was able to secure a *carte blanche* from the Congress in favour of the Muslim League. This was, however, later repudiated by M. K. Gāndhī, the undisputed leader of the Congress.

On the lapse of British paramountcy in 1947, when India and Pakistan became two independent States, Bhōpāl was first treated as a centrally-administered area but in 1949 was merged with the Indian Union. It had an elected legislature and a ministry with a Chief Commissioner as the constitutional head of the administration. The ex-Nawwāb, now no more than an ordinary citizen, has since been pensioned off and is entitled to a privy purse of 1,100,000 rupees a year of which 100,000 rupees was allocated to the heir-apparent, Gawhar-i Tādj ʿĀbida Sulṭān who has since migrated to Pakistan and settled permanently there.

BHŌPĀL (City), Capital of the Indian province of Madhya Pradesh, situated in 23° 16′ N. and 77° 25′ E. on a sandstone ridge and on the edge of two

beautiful lakes, the Pu<u>kh</u>tah-Pul Talāō and the Baṛā Talāō, famed throughout India for natural charm and picturesque surroundings, was founded by Dōst Muḥammad <u>Kh</u>ān, an Orakzaʾī Āfrīdī in 1141/1728 when he built the Fatḥgaṛh fort, named after his Indian wife, Fatḥ Bībī, and connected it by a wall to the old dilapidated fort, ascribed by tradition to the legendary Rā<u>dj</u>ā Bhō<u>dj</u>, after whom a quarter of the city is still called Bhō<u>dj</u>pūra. The population in 1951 was 120,333. The city is divided into two parts, the *<u>Sh</u>ahr-i <u>Kh</u>āṣṣ*, enclosed by a wall built by Dōst Muḥammad, and the modern quarters and suburbs, <u>Dj</u>ahāngīrābād and Aḥmadābād, added by the succeeding rulers to perpetuate the memory of <u>Dj</u>ahāngīr Muḥammad <u>Kh</u>ān, husband of Sikandar Bēgam, and of Aḥmad ʿAlī <u>Kh</u>ān, husband of Sulṭān <u>Dj</u>ahān Bēgam, rulers of Bhopal. The city was made the capital of the State by Nawwāb Fayḍ Muḥammad <u>Kh</u>ān (1168/1754-1191/1777) whose predecessors' seat of Government was Islāmnagar (23° 22′ N. and 77° 25′ E.).

In 1227/1812-3 the town, outside the wall, was devastated by the combined forces of Nāgpūr and Gwāliōr, which had attacked Bhōpāl. Na<u>dh</u>r Muḥammad <u>Kh</u>ān (1233/1816—1234/1818), during his short rule began to restore the town, which process was continued for decades thereafter. Many civic amenities, like roads and street-lighting, were introduced by Sikandar Bēgam followed by <u>Sh</u>āh<u>dj</u>ahān and Sulṭān <u>Dj</u>ahān Bēgams; the former particularly added some grand buildings of which the Tā<u>dj</u> Maḥall palace and the Tā<u>dj</u> al-Masā<u>dj</u>id deserve mention.

The two lakes, on whose banks a string of palaces has been raised by almost all the rulers, are connected by an aqueduct and provide drinking water to the citizens. Above them rises the city, tier on tier of irregular houses, with spacious gardens here and there, dominated by the congregational mosque of Ḳudsiyya Bēgam, built of purple-red sandstone, with high minarets, from which the *naḳḳāra* [*q.v.*] was beaten during Ramaḍān both at the *saḥr* and *ifṭār* times.

BIʿA [see Kanīsa].

BĪBĀN, the gates; passes across a chain of the Tellian Atlas Mountains—parallel to the <u>Dj</u>ur<u>dj</u>ura, south of the depression of the Wādī Sahel. The French have retained the Turkish name for these passes, *Damir Ḳapu*, Iron Gates. The road and railway track from Algiers to Constantine both pass through the Great Gate, *al-Bāb al-Kabīr*, hollowed out by the Wādi Chebba. The Little Gate, *al-Bāb al-Ṣa<u>gh</u>īr*, 3.5 km. to the east, is crossed by the Wādī Būktūn. It is the narrower of the two. These "gates", which were not included in the network of Roman roads and the Arab routes, were used from the sixteenth century onwards by Turkish troops travelling between Algiers and Constantine; but these troops were forced to pay the rough local inhabitants to let them pass through the area unmolested. On October 28th, 1839, a French column of 8000 men, commanded by Marshal Valée, Governor-general of Algeria, and accompanied by the Duke of Orleans, crossed the Pass of the Little Gate without hindrance, for the mountain tribesmen of the locality had obtained the customary tribute through the good offices of Mokrānī, *ba<u>sh</u>-agha* of Me<u>dj</u><u>dj</u>āna, won over to the French cause.

This expedition, known as that of the Iron Gates, was acclaimed as a brilliant feat of arms, but it led to the final rupture between the French and ʿAbd al-Ḳadir who regarded it as a violation of the Treaty of Tafna.

Geographers have extended the name Bībān to the whole of the anticlinal chain of mountains which cuts across the Iron Gates and which stretches at a height of 1000 to over 1400 metres from Aumale to the Guergour (Lafayette), separating the depression of the Wādī Sahel and the tributary valleys of the lower Bou Sellam from the structurally complex mountains of the Ouennougha, the Mzita and the Metnen and of the basin of the Bordj bou Arreridj. These mountains with their limestone, marle and schistose clay soil are not very fertile. The Biban chain is partly wooded with Aleppo pines. Populated by Arab tribes in the west, Kabyle Berbers in the centre, it forms, in the east, the southern boundary of the Kabyle Berber dialect area (see ʿAbd al-Ḳādir, Algeria, Atlas, Kabylia).

(G. Yver-[J. Despois])

BĪBĪ, a word of East Turkish origin, with the meaning of "little old mother", "grandmother", "woman of high rank", "lady". It is noted, with the sense of "woman of consequence", "lady", in the Ottoman-Turkish dictionary *Lu<u>gh</u>at-i De<u>sh</u>ī<u>sh</u>ī*, composed in 988/1580-1581. Bībī also means, in Anatolian Turkish, "paternal aunt". Taken over into Persian at an early date, with the sense of "woman of the house", "lady", the word can be found in a verse of Anwarī (12th cent. A.D.) cited in the *Farhang-i Nāṣirī*. It was used in <u>Kh</u>urāsān during the 13th century as a title for women of distinction, as in the case of the mother of the author who wrote the history of the Sal<u>dj</u>ūḳs in Asia Minor, al-Ḥusayn b. Muḥammad b. ʿAlī al-<u>Dj</u>aʿfarī al-Ru<u>gh</u>adī, better known under the name Ibn Bībī [*q.v.*] al-Muna<u>dj</u><u>dj</u>ima (son of the distinguished lady, the woman astrologer). One of the two wives of <u>Sh</u>ay<u>kh</u> Ṣafī (cf. Ṣafī al-Dīn) was called Bībī Fāṭima. The mausoleum, situated near Tehrān, of the daughter of the last Sāsānid, Yazdigird III, is known under the name Bībī <u>Sh</u>ahrbānū.

Bibliography: <u>Sh</u>ay<u>kh</u> Sulaymān Bu<u>kh</u>ārī, *Lu<u>gh</u>at-i <u>Dj</u>a<u>gh</u>atāy ve Türkī-i ʿO<u>th</u>mānī*, Istanbul 1298, 88; *Tanıklariyle Tarama Sözlüğü*, iii, Ankara 1954, x and 90; *Tarama Dergisi*, Istanbul 1934, ii, 909; *Burhān-i Ḳāṭiʿ*, s.v.; H. BIBLE [see Tawrāt, Zabūr, In<u>dj</u>īl].

BIBLIOGRAPHY. In the present article the word is used in the sense of a systematically arranged list of books, compiled for the benefit of those who need to know what has been written on a particular subject.

The outstanding achievement in Islamic bibliography to appear before the adoption of printing in Islamic territories is the *Fihrist*. Its author, Ibn al-Nadīm [*q.v.*], a bookseller (*warrāḳ*) in Ba<u>gh</u>dād, compiled the work in 377/987-8 in the form of a bibliographical history of literature, arranged in ten books, the first six being concerned with the "Islamic writings" (Ḳurʾān, grammar, history and belles-lettres, poetry, scholastic philosophy, and law), the remaining four with philosophy and science, legends and fables, sects and creeds, and alchemy. In each book there is to be found an account of the rise and development of the study of the subject dealt with, a list of all available writings on it and bibliographical details of their authors, from the earliest times.

The other great monument of Islamic bibliography is the *Kashf al-Ẓunūn ʿan Asāmī al-Kutub wa 'l-Funūn*, a work for which the Ottoman polyhistor, Ḥādjdjī Khalīfa, spent some twenty years collecting materials. The first volume was completed in 1064/1653-4, some 650 years after the *Fihrist*. After an introduction relating at great length the nature, value, divisions and history of the various sciences, the author lists in one alphabetical sequence the titles of all the works written in Arabic, Persian and Turkish which he had personally seen or of which he knew the title. For each work he gives details of author, date of compilation, particulars of its division into sections and chapters, and the various commentaries, glosses, refutations and criticisms that the work has attracted to itself; he gives *incipits* of all works seen by him in order to facilitate the identification of unknown works. Several supplements to the work were compiled by his successors, the latest by Bağdatlı Ismāʿīl Pasha (d. 1920) containing some 18,000 titles.

Little needs to be said about the remaining bibliographical works which have survived. Ibn Khayr al-Ishbīlī (A.H. 502-572, [*q.v.*]), who spent the greater part of his life as a peripatetic student in Andalusia, compiled a *Fihrist* (ed. Codera and Ribera, *BAH* IX, X, Saragossa 1894) in which he enumerates the titles of some 1400 books in Arabic of both Spanish and Oriental origin which he had read or heard, with chains of transmission going back to their original authors. Lists of works of individual writers exist, such as those for Rāzī (compiled by al-Bīrūnī, ed. by P. Kraus, Paris 1936), Galen translations (by Ḥusayn b. Isḥāḳ, ed. Bergsträsser, Leipzig 1925, and 1932) and Suyūṭī's autobibliography (Brockelmann II 145; S II 179). The Shīʿīs have been assiduous in the compilation of bibliographies of writings of their own adherents; the earliest, by Muḥammad b. al-Ḥasan al-Ṭūsī (d. A.H. 460), has been edited by Sprenger, ʿAbd al-Ḥaḳḳ, and Ghulām Ḳādir for the Bibliotheca Indica. In the preface to this edition three similar works on bibliography are described. More recently, Iʿdjāz Ḥusayn's (A.H. 1240-1286) *Kashf al-Ḥudjūb wa 'l-Astār ʿan Asmāʾ al-Kutub wa 'l-Asfār* contains notices of 3414 Shīʿī books arranged alphabetically, and the *al-Dharīʿa ilā Taṣānīf al-Shīʿa* of Āghā Buzurg al-Ṭihrānī (1936-, in progress) has already run to ten volumes.

The publications of Western scholars and students of Islam were recorded for the first time by Schnurrer, the second edition of whose *Bibliotheca Arabica* published in 1811 lists in an arrangement by subject the printed works on the subject from the earliest times until the year 1810 with a chronological index. Zenker's *Bibliotheca Orientalis* (Leipzig 1840; 2nd ed., ib., 1846, 1861) which purported to give the titles of all Arabic, Persian and Turkish books from the invention of printing, is disappointing. Chauvin continued the work of Schnurrer in a much more expert fashion, providing incidentally an author index to the *Bibliotheca Arabica*. Of his *Bibliographie des ouvrages arabes ou relatifs aux Arabes publiés dans l'Europe chrétienne de* 1810 *à* 1885 twelve volumes in all were published during the years 1892-1922; the materials for the remaining part of this work are still preserved in manuscript in the library of the University of Liège. It was his intention to bridge the gap between Schnurrer and the *Orientalische Bibliographie* which began publication in 1887 and provided a most adequate record of all publications in the Islamic field, as well as in all other branches of Oriental studies, until 1911.

Had Chauvin's work been published in its entirety there would now be in existence a substantially complete record of all Western publications on Islamic subjects from the beginnings down to 1911 readily to hand in the three bibliographies, Schnurrer, Chauvin, *Orientalische Bibliographie*. The ever-increasing volume of work done on Islamic studies and consequent publication since that date made it even more difficult to comprehend the total of publications over a period within the confines of a single work. For publications since 1911, therefore, the scholar must make recourse to a large number of bibliographies of all kinds which cannot here be listed in detail. (Pfannmüller in his *Handbuch der Islamliteratur* (Berlin and Leipzig 1923) provided a useful introduction and guide to the literature of the subject, but had no intention of compiling a complete Islam bibliography). The principal periodicals in the field have striven to cope with the problem: it is only necessary to mention the '*Kritische Bibliographie*' published in *Der Islam* at intervals from 1913 to 1933 and '*Abstracta Islamica*' which, since 1937, has been a regular feature of the *Revue des études islamiques*. In *Index Islamicus* (Cambridge 1958), Pearson has attempted to list the periodical and *Festschrift* articles of the fifty years from 1906 to 1955.

The Ibn al-Nadīm—Ḥādjdjī Khalīfa tradition of bibliographical literary histories has been carried on in our own times in the monumental works of Brockelmann and Storey on Arabic and Persian literature respectively. Each of these writers gives, in addition to biographical data, a list as complete as it is possible to make of surviving manuscripts, cumulating the printed catalogues of collections in all libraries, as well as notes on the principal editions, translations and works of history or criticism of the individual writers. Brockelmann handles his material on a chronological basis, Storey arranges his by subject; both are quite indispensable for all students of these literatures, as well as to all who have occasion to catalogue Arabic and Persian books and manuscripts. A similar work with more limited scope was compiled by Babinger, *Geschichtsschreiber der Osmanen* (Leipzig 1927). Christian and Jewish literature in Arabic form the subject of separate treatments by G. Graf, *Gesch. d. christlichen arab. Lit.*, 5 vols., Vatican City 1944-53, and M. Steinschneider, *Arab. Lit. der Juden*, Frankfurt 1902.

In recent years Islamic countries themselves have been making great contributions to their bibliography. In 1918 Yūsuf Ilyān Sarkīs published his *Muʿdjam al-Maṭbūʿāt al-ʿArabiyya wa 'l-Muʿarraba* containing the titles of all Arabic printed books from the beginnings of printing to the year 1919 inclusive, arranged in alphabetical sequence according to the most commonly used form of the author's name, whether this be *ism*, *laḳab*, *kunya* or *nisba*. The work is provided with an index of the titles of works. Egypt has issued a number of volumes of what is to all intents and purposes a national bibliography in *Al-sidjill al-thaḳāfī*. A Persian national bibliography by Dr. Iradj Afshār has appeared in the *Farhang-i Īrān-zamīn* since 1954 and the first volume of a catalogue of Persian printed books by Khānbābā Mushār was published in 1337 solar/1956. The *ʿOthmānlı muʾellifleri* of Bursalı Meḥmed Ṭāhir is a bio-bibliographical dictionary of Ottoman writers in the style of the *tedhkeres* and is of great value to all students of Turkish culture, even though it is

not marked by accuracy of bibliographical detail and, as Babinger puts it, finding a name in the index is often a matter of luck or demanding of great patience. *Türk bibliyografyası* has recorded all publications in Turkey since 1928 and the National Library has announced plans for the publication of a catalogue of Turkish printed books from the date of the adoption of printing in that country in the 18th century. *Türkiye makaleler bibliyografyası*, an index to articles in Turkish periodicals, has been issued regularly since 1952.

Bibliography: The *Fihrist* of Ibn al-Nadīm was edited by Flügel and published after his death by J. Roediger and A. Mueller (2 vols., Leipzig 1871-2, reprinted Cairo, 1348). A new edition by J. Fück is in preparation. Its contents were analysed in detail by Flügel in *ZDMG* xiii, 559-650 and set out in tabular form in Browne, i, 383-7. See also references in Pearson, *Index Islamicus*, nos. 23281-7, 733 (except 23285). For Hādjdjī Khalīfa, see Babinger, *G.O.*, 195-203. The *Kashf al-Zunūn* was edited by Flügel (Oriental Translation Fund, 7 vols., Leipzig 1835-58; also Būlāḳ 1858, Istanbul 1310-11, and 1941-3). The *Keşf el-Zunun Zeyli* of Bağdatlı İsmail Pasha was published in Istanbul 1945-7. On astronomy: Nallino, *ʿIlm al-Falak*, 74- and Italian version, *Storia dell, astronomia presso gli Arabi* in *Raccolta dei scritti*, v, 144-150. On Shīʿī bibliography see Browne, iv, chap. 8, esp. 355-8.

G. Gabrieli, *Manuale di bibliografia musulmana* (Rome 1916) is the only work of its kind and is invaluable for its lists of general bibliographical works. (Regrettably only the first part was ever published). For the works of Schnurrer and Zenker see the preface to Chauvin, *Bibliographie des ouvrages arabes*, esp. xx-xxx; for the unpublished portions of Chauvin's *Bibliographie* see J. Gobeaux-Thoret, *Notes from the Liège Library on Victor Chauvin and on Ibn Butlān* in *Unity and variety in Muslim civilisation* (ed. Grunebaum, 1955), 363-4; the index to Schnurrer occupies xli-cxvii; Brockelmann, *Geschichte der arabischen Literatur* was originally published at Weimar and Berlin, 2 vols., 1898-1902; Supplementbände I-III, Leiden 1937-1942; 2.den Supplementbänden angepasste Aufl., 2 vols. Leiden 1943, 1949. Storey, *Persian literature*, London 1927-, in progress.

(J. D. Pearson)

BIDʿA, innovation, a belief or practice for which there is no precedent in the time of the Prophet. It is the opposite of *sunna* and is a synonym of *muḥdath* or *ḥadath*. While some Muslims felt that every innovation must necessarily be wrong, some allowance obviously had to be made for changing circumstances. Thus a distinction came to be made between a *bidʿa* which was 'good' (*ḥasana*) or praiseworthy (*maḥmūda*), and one which was 'bad' (*sayyiʾa*) or blameworthy (*madhmūma*). Al-Shāfiʿī laid down the principle that any innovation which runs contrary to the Ḳurʾān, the *sunna*, *idjmāʿ*, or *athar* (a tradition traced only to a Companion or a Follower) is an erring innovation, whereas any good thing introduced which does not run counter to any of these sources is praiseworthy. On this basis innovations have been classified according to the five categories (*aḥkām*) of Muslim law. Under duties incumbent on the community (*farḍ kifāya*) are included such *bidʿa*s as the study of grammar, rhetoric, etc. on which an understanding of the Ḳurʾān and the *sunna* is based, investigation of the reliability of men whose authority is quoted for traditions (*al-djarḥ wa 'l-taʿdīl* [*q.v.*]), distinguishing sound and weak traditions, codifying law, and the refutation of heretical sects. Prohibited (*muḥarrama*) innovations include the doctrines of those who oppose the followers of the *sunna* and the accepted beliefs of the community. Among those which are recommended (*mandūba*) is the establishment of such institutions as hospices and schools. Innovations which are disapproved (*makrūha*) include the decoration of mosques and the ornamentation of copies of the Ḳurʾān. Among those which are permitted (*mubāḥa*), i.e. towards which the law is indifferent, is the free use of pleasant foods, drinks and clothing.

Bidʿa is to be distinguished from heresy. When it includes matters which have been introduced in disagreement with what has come down from the Prophet, it is said that this is not due to any purpose of rebelling against him, but has arisen through some kind of confusion. Innovators are called *Ahl al-bidaʿ* and *Ahl al-ahwāʾ*. The implication is that the innovator (*mubtadiʿ*) is one who introduces something on an arbitrary principle without having any basis in the recognised foundations of Islām. The objection to *bidʿa* has led some Muslims in more recent times to denounce the use of tobacco and coffee, and even of modern scientific inventions; but among the Wahhābīs, the strictest body within modern Islām, scientific inventions are freely used. Indeed, the economy of the present state of Saʿūdī Arabia is mainly dependent on oil whose production could not be accomplished without modern inventions.

Bidʿa may be treated on the level of *ḳiyās* [*q.v.*]. Just as what is *ḳiyās* in one generation may be included in what a later generation considers *idjmāʿ*, so may it be with *bidʿa*. The distinction between 'good' and 'bad' innovations was therefore a necessary principle. Only people of an ultra-conservative nature who live in an unreal world of their own ideas could insist that the practice of the Prophet and his Companions in al-Madīna may alone be followed, and that no allowance may be made for the development of knowledge and differing circumstances. But a number of traditions condemning innovations are found in the collections of *Ḥadīth* as statements of the Prophet.

(J. Robson)

BĪDAR, a district in south-central India (the 'Deccan', [*q.v.*]), and the headquarters town of that district, lat. 17° 55′ N., long. 77° 32′ E., population over 15,000, 82 miles north-west of Ḥaydarābād from which it is easily accessible by road and rail.

The identification of Bīdar with the ancient Vidarbha (Briggs's *Ferishta*, ii, 411) is now discounted, cf. G. Yazdani, *Bidar: its history and monuments*, Oxford 1947, 3. Bīdar was included in the Čālukya kingdom of Kalyāṅ, 4th-6th/10th-12th centuries, but was in the hands of the Kākatīyās of Warangal when conquered by Ulugh Khān (later Muḥammad b. Tughlaḳ, [*q.v.*]) in 722/1322 (details of siege and men-

tion of fortifications, Ḍiyā' al-Dīn Baranī, *Ta'rīkh-i Fīrūz Shāhī*, Bibl. Ind., 449), from whose governor it was taken after a fierce battle in 748/1347 by a *Amīr-i Ṣadah* (Commander of a *Ṣadī* or subdivision of approximately 100 villages; Baranī, 495; *Riḥla*, Cairo ed., ii, 75), Ẓafar Khān. The latter, on his acceptance as first king of the Bahmanī dynasty [*q.v.*] as ʿAlā' al-Dīn Ḥasan Bahman Shāh, divided his dominion into four provinces, of which Bīdar was one. The town was important strategically (Bahmanī dynasty, monuments, [*q.v.*]), and as a fortress held the seventh Bahmanī king Shams al-Dīn (799/1397) in internment; Muḥammad II (780-99/1378-97) established orphanage schools in Bīdar and elsewhere, cf. Briggs's *Ferishta*, ii, 349-50. An assault by the eighth king, Fīrūz Shāh, against his brother Aḥmad in 825/1422 was repulsed at Bīdar, leading to Aḥmad's succession, shortly after which he transferred his capital to Bīdar from Gulbarga (Sayyid ʿAlī Ṭabaṭabā, *Burhān-i Ma'āthir*, Ḥaydarābād edn., 49-50), rebuilt the fortifications and renamed it Muḥammadābād; the natural position of Bīdar on a healthy plateau with abundant water, and its central position in the kingdom, offered advantages not possessed by Aḥsanābād-Gulbarga. Bīdar was attacked in 866/1462 by Sulṭān Maḥmūd Khaldjī of Mālwā, who destroyed some of its buildings, but was repulsed with the aid of Sulṭān Maḥmūd Shāh of Gudjarāt. Bīdar's heyday under the Bahmanīs was during the able ministry of Maḥmūd Gāwān [*q.v.*], c. 866-886/1462-81; but after his murder the Bahmanī power declined, to the advantage of the minister Ḳāsim Barīd (founder of the Barīdī dynasty, [*q.v.*]) and his family. The Bahmanīs remained as puppet kings under the Barīdī ministers until at least 952/1545; Amīr Barīd was *de facto* ruler until 949/1542, and his son ʿAlī Barīd adopted the royal title, presumably after the death of the last Bahmanī king, Kalīm Allāh (for coins in whose name, dated 952 [= 1545 A.D.], see *Proc. VII All-India Oriental Conf.*, 740). Bīdar fell to Ibrāhīm ʿĀdil Shāh of Bīdjāpur in 1028/1619, was annexed to the Mughal empire by Awrangzīb in 1066/1656, and passed to Niẓām al-Mulk Āṣaf Djāh in 1137/1724.

Monuments. Buildings particularly associated with the Bahmanī and Barīdī dynasties are described under those headings; those of the post-Barīdī period are unimportant and are not described. Page references in the following account are to Yazdani, *op. cit.*

The city and fort are both fully walled, and in their present area date from the time of Aḥmad Shāh Walī Bahmanī, who incorporated the old Hindū fort in the west of the present area into his buildings of 832-5/1429-32; Persian and Turkish engineers and architects are known to have been employed. The ground on the north and east of the perimeter falls sharply away; on the other sides the walls are within a triple moat hewn out of the laterite outcrop by local Hindū masons (p. 29). Much of the defences was destroyed in Maḥmūd Khaldjī's invasion (vide above) and restored by Niẓām Shāh; but their character was changed in the time of Muḥammad Shāh Bahmanī, c. 875/1470, after the introduction of gunpowder. Minor improvements were made by Maḥmūd Shāh (inscriptions, *EIM* 1925-6, 17-8), and more extensive ones, including the mounting of large guns, by ʿAlī Barīd Shāh, 949-87/1542-79. The description of the defences in the reign of Shāhdjahān by Muḥammad Ṣāliḥ Kambō (*ʿAmal-i Ṣāliḥ*, Bibl. Ind. iii, 249-50) indicates that little subsequent changes were made. In the perimeter of 4 km. there are 37 bastions, mostly massive, many with gun emplacements, and 7 gates as well as the three successive gates between town and fort. The first gateway serves as a barbican for the second, the Sharza Darwāza—so called from the figures of two tigers carved on the façade, a common feature of Dakhnī forts (32). The third gate, Gunbad Darwāza, is massive, with battered walls, hemispherical dome and corner *guldasta*s recalling the contemporary Delhī architecture, but with an outer arch of wide span stilted above the haunch, the shape of much Persian-inspired architecture in the Deccan and characteristic of the Bahmanī buildings in particular (34). The town walls are said to be the work of ʿAlī Barīd (Muḥammad Sulṭān, *Ā'ina-i Bīdar*, 17-18) in 962-5/1555-8, but doubtless superseded Bahmanī work. Again there are 37 bastions, adapted for long-range guns, and five gateways (83-90).

Within the fort are the Solah Khambā ('sixteen pillar', so called from a period of its decay when 16 pillars were screened off in the *līwān*) Masdjid, the earliest Muslim building at Bīdar and the original Djāmiʿ Masdjid, having been established before the transfer of the capital (inscription giving date 827 [= 1423-4 A.D.], *EIM* 1931-2, 26-7); the style is heavy and monotonous, particularly in the 91-metre façade, and the inner circular piers are over-massive; the central dome rests on a hexadecagonal collar pierced with traceried windows, to form a clerestory (54-6); the Takht Maḥall, the modern name for what was probably Aḥmad Shāh Walī Bahmanī's palace described in the *Burhān-i Ma'āthir*, 70-1, and referred to as *Dār al-Imāra* by Firishta, i, 627. The arches have the typical Bahmanī stilt at the apex, and the fine encaustic tile-work, probably imported from Kāshān, includes the emblem of the tiger and rising sun (66-77); the Bahmanī Dīwān-i ʿĀmm, with fine tile-work in floral, geometric and calligraphic (Kūfic) designs, generally Persian with some *chinoiserie* (62-6); the Gagan = [Skt. 'sky'], Tarkash and Rangīn Maḥalls, all begun in Bahmanī times and rebuilt by the Barīd Shāhīs: typical Barīdī chain-and-pendant motif in Tarkash Maḥall, ʿAlī Barīd's rebuilding of Rangīn Maḥall with inlay mother-of-pearl work and woodcarving in Hindū as well as Muslim patterns, with some cusping of wooden arches, the best of Barīdī work but on too small a scale to be fully effective (60-2, 57-9, 44-9 respectively); a group of underground rooms, Hazār Kotthṛī, with an emergency escape passage leading outside the walls (77-8); the Shāhī Ḥammām, late Bahmanī or early Barīdī, with a fine vaulted ceiling, 51-2; and minor buildings.

Within the town walls are the Čawbāra, a massive tower at a cross-roads probably built by Aḥmad Shāh as an observation post (90); the great Madrasa of Maḥmūd Gāwān, built 877/1472, whose Persian prototype was the *madrasa* of Khargird in Khurāsān (cf. E. Diez, *Churasanische Baudenkmäler*, i, 72-6); its remaining *minār* (the other, with the south-east corner, destroyed by a gunpowder explosion in 1107/1696), 40 m. high, in three stages. Much of the former tile-work has perished from the *minārs* and façades, but the proportions, the silhouette, and the interplay of light and shade due to the rows of deeply recessed arches on all faces are very pleasing to the eye. The most imposing monument of the Bahmanī period, it has no parallel elsewhere in India (91-100); the Takht-i Kirmānī, a gateway containing a room in which is a couch associated with the saint Khalīl Allāh, with fine cut-plaster medallions, etc., of

late Bahmanī design, and a trefoil parapet which, originating in the Bahmanī period, is found in Barīdī buildings also (100-2); the Dj̲āmiʿ Masdj̲id of the town, plain but elegant, with a high lantern-vaulted *līwān* under its double dome, late Bahmanī work restored in the Barīdī period (chain-and-pendant motif in spandrels of façade), 103-4; the Baṛī K̲h̲ānḳāh of Maḥbūb Subḥānī, whose mosque parapet shows the overlapping arches of the Bahmanī period, 111. Outside the town walls are (besides the tomb buildings of the Bahmanīs and Barīd S̲h̲āhīs, [*q.v.*]) the fine Čawkhandī of Ḥaḍrat K̲h̲alīl Allāh, similar in style to the tomb of ʿAlāʾ al-Dīn Bahmanī and one of the best Bahmanī buildings (141-6); the tombs of the Abyssinian nobles in the Ḥabs̲h̲ī Kot, 180; the Kālī ('black') Masdj̲id, probably early Barīdī, whose *miḥrāb*, projecting out from the *līwān*, forms a high square chimney-like base for a dome supported on each side by an open arch, resembling an aerial Barīdī tomb (196-7); and numerous other buildings.

Mention must be made of the local Bīdrī ware, a class of damascened metalwork in which engraved and inlaid silver designs are made on an alloy (mainly zinc with some copper, lead and occasionally tin) base, which is afterwards blackened and highly polished; the blackening is carried out by rubbing a locally-obtained earth, containing alkali nitrates, mixed with ammonium chloride, on the fresh surface of the alloy.

Bibliography: Yazdani, *op. cit.*, supersedes all previous work on the monuments: full references, extensive plates, drawings, plans, inscriptions, etc. See also J. Burgess, *Antiquities in Bīdar and Aurangabad Districts*, *ASWI* iii (= *NIS* iii), 1878; *ASI Annual Report*, 1928-9, 5-11; *Hyderabad Arch. Dept. Reports*, passim; Sir J. Marshall, *The monuments of Muslim India*, Chap. xxiii in *Cambridge History of India*, 1928; Percy Brown, *Indian Architecture* (*Islamic period*), Chap. xiii. For Bīdar as a fortified city, full description with measured drawings of fortifications in S. Toy, *The strongholds of India*, London 1957. For the history of Bīdar see *Gazetteer of the Bīdar district*; Sherwani, *Maḥmūd Gawan, the Great Bahmani Wazir*, and *The Bahmanis of the Deccan, an Objective study*.

For Bīdrī ware, full references in T. R. Gairola, *Bīdrī Ware*, in *Ancient India*, XII, 1956, 116-8, which supersedes all previous technical work.

(H. K. Sherwani and J. Burton-Page)

BĪDIL, Mīrzā ʿAbd al-Ḳādir b. ʿAbd al-K̲h̲āliḳ Arlās (or Barlās), of Buk̲h̲āran origin, was born at ʿAẓīmābād (Patna) in 1054/1644, where his family had settled. He lost his father in 1059/1649 and was brought up by his uncle Mīrzā Ḳalandar (d. 1076/1665) and maternal uncle Mīrzā Ẓarīf (d. 1075/1664), who was well-versed in *ḥadīt̲h̲* literature and *fiḳh*. In 1070/1659 he visited a number of places in Bengal along with Mīrzā Ḳalandar. In 1071/1660 he went to Cuttack (Orissa) where he stayed for three years. It was here in Orissa that Mīrzā Ẓarīf, who also had strong mystic leanings introduced him to S̲h̲āh Ḳāsim Huwaʾllāhī with whom he soon after contracted his *bayʿa*. In 1076/1665 he went to Delhi, where he met S̲h̲āh Kābulī, a *madj̲d̲h̲ūb*, to whom he devotes a lengthy chapter in *Čahār ʿUnṣur*. For two years thereafter he wandered about the woods of Bindrāban and the streets of Muttra, Aʿẓamābād and Agra in search of S̲h̲āh Kābulī, who had disappeared suddenly. While at Agra, Bīdil experienced hardship and starvation. In 1079/1668 he married, and entered the service of Prince Muḥammad Aʿẓam b. Awrangzīb, whom he served for a number of years. The Prince once requested him to compose a *ḳaṣīda* in his praise; Bīdil refused to do so, and resigned his position. K̲h̲ʷus̲h̲gō's statement (as reproduced in *Fayḍ-i Ḳuds*, 80) that Bīdil remained in the service of the Prince for twenty years is not supported by other writers. Soon after his resignation he again took to wandering; this time visiting several places in the Pandj̲āb including Lahore and Ḥasan Abdāl. His wanderings, however, ended in 1096/1685 when he finally settled at Delhi. He was offered a high post by Āṣaf Dj̲āh I, the Niẓām of Ḥaydarābād, who was one of his pupils in poetry; although grateful for the offer, Bīdil refused to accept it. He died in 1133/1721 and was buried in the courtyard of his house in Old Delhi. The exact location of his grave in the ruined city has been a matter of great controversy. The present grave, with an inscribed head-stone, is spurious.

Essentially a mystic poet, said to have composed over ninety thousand verses, Bīdil is very popular in Afg̲h̲ānistān and parts of Chinese Turkistān. In poetry he has been compared with Saʿdī and Rūmī, in prose with al-Anṣārī al-Harawī and al-G̲h̲azālī (*qq.v.*).

He is the author of: (i) *Čahār ʿUnṣur*, written in 1116/1704, a mainly biographical work interspersed with supernatural anecdotes (Cawnpore 1292/1875); (ii) *Nikāt*, a philosophical treatise dealing with certain abstruse problems like *waḥy*, *ilhām*, *nubuwwa* etc., profusely interspersed with *g̲h̲azals*, *ḳaṭaʿāt* and *rubāʿiyyāt*, (Cawnpore 1292/1875); (iii) *Muḥīṭ-i Aʿẓam*, a *mat̲h̲nawī* on the lines of Ẓuhūrī's *Sāḳīnāma*, published as a part of *Kulliyāt-i Bīdil* (Bombay 1299/1881); (iv) *ʿIrfān*, another *mat̲h̲nawī*, written in 1124/1712 and comprising 11,000 verses, deals with metaphysical problems as the author understood them (Bombay 1299/1881); (v) *Ṭūr-i Maʿrifat*, another *mat̲h̲nawī* comprising 6,000 verses, still unpublished (MS. Punjab Univ. Lib.), deals with natural phenomena; (vi) *Ṭilism-i Ḥayrat*, also a *mat̲h̲nawī* of the same length as *Ṭūr-i Maʿrifat* (Bombay 1299/1881); (vii) *Dīwān*; no complete edition has been published so far; an incomplete edition, however, up to *radīfdāl* only was published at Kābul (1334/1915), and another edition at Cawnpore (Nawalkishore: 1292/1875); (viii) *Ruḳaʿāt*, a fine specimen of Persian letter-writing, containing useful information about the numerous pupils of the poet and some of his benefactors (Cawnpore 1292/1875); select works of Bīdil have also been published at Tashkent, as he is very popular in the republics of Tādj̲īkistān and Uzbekistān in the U.S.S.R.

Bibliography: K̲h̲alīl Allāh K̲h̲ān "K̲h̲alīlī", *Fayḍ-i Ḳuds*, Kābul 1334 (Shamsi)/1956, (this work contains extracts on Bīdil from all the known published and unpublished sources); ʿIbād Allāh Ak̲h̲tar, *Bēdil*, Lahore 1952, (extensively reviews all the works by Bīdil except his *dīwān*); ʿAbd al-G̲h̲anī, *Tad̲h̲kira-i Bēdil* (in Oriental College Mag: Lahore, August 1956); ʿAbd al-G̲h̲afūr "Nassāk̲h̲", *Suk̲h̲an-i S̲h̲uʿarāʾ*, Lucknow 1291/1874, 75; ʿAbd al-Ḥayy, Nadwī, *Nuzhat al-K̲h̲awāṭir*, Haydarābād (Dn.) 1376/1957, vi, 157; Ḳudrat Allāh "Ḳāsim", *Madj̲mūʿa-i Nag̲h̲z*, Lahore 1933, i 115-17; *Maʿārif* (Aʿẓamgarh) 33/i 1934, May and July 1942, 58/ii 1946; Ṣiddīḳ Ḥasan K̲h̲ān, *S̲h̲amʿ-i Andj̲uman*, Bhopal 1292/1876, 82-4; Mīr Ḥusayn Dōst Sambhalī, *Tad̲h̲kira-i Ḥusaynī*, Lucknow 1292/1876, 74-7;

BĪDJĀN, Aḥmed, son of Ṣalāḥ al-Dīn 'al-Kātib' (and hence known as Yazīdjī-oghlu Aḥmed) and younger brother of the famous Yazīdjl-oghlu Meḥmed, Turkish mystic writer and 'popular educator' who flourished in the middle of the 9th/15th century. The brothers, after studying under Ḥādjdjī Bayram [*q.v.*] of Ankara, lived a retired life together at Gelibolu, Aḥmed practising such austerities and becoming so emaciated that he was called—and calls himself in his books—'Bī-djān', *i.e.*, 'The Lifeless'. To judge from the date of the *Muntahā* (see below), Aḥmed must have lived until after 870/1465-6. He was buried beside his brother at Gelibolu, where their *türbe* was a popular resort of pilgrims (cf. Ewliyā, v, 320 and iii, 401, where E. also records a tradition that Aḥmed lived for some time at Sofia).

His works are: (1) *Anwār al-ʿĀshiḳīn* (Ḥ. Kh. [Flügel] no. 1411), a Turkish prose translation of his brother's Arabic *Maghārib al-Zamān* (Ḥ. Kh. no. 12462), completed in Muḥ. 855/Feb. 1451: this book, a standard mystical work (contents described by Hammer in *S. B. Ak. Wien, Phil.-Hist. Kl.*, iii, 129 ff.), has enjoyed great popularity, 12 printed editions being recorded in Fehmi Karatay's *Ist. Ün. Küt. Türkče Basmalar*, 1956; (2) *Durr-i Maknūn* (Ḥ. Kh. no. 4873), a cosmographical work written to display God's power and also based on the *Maghārib al-Zamān*; (3) *ʿAdjāʾib al-Makhlūḳāt* (Ḥ. Kh. no. 8070), an abridgement of Ḳazwīnī's work (cf. Rieu, *CTM*, 106) made in 857/1453 (edition: Kazan, 1888). Numerous MSS of these three works exist. (4) *Muntahā*, a 'Summa' of faith and practice, with interpretations of Koranic texts, stories of the prophets, sayings of holy men, etc. (MS in Ist. Un. Lib. [Khāliṣ Ef.], TY 3324), composed at Gelibolu in 870/1465-6 (f. 2v). All his books are written in a simple didactic style and a tone of humble and sincere piety.

The still popular *Aḥmadiyya*, sometimes attributed to Aḥmed Bīdjān, is in fact the work of Aḥmed Mürshidī (for whom see *ʿOM*, I, 33).

Bibliography: Laṭīfī, 54; Saʿd al-Dīn, ii, 460; ʿĀlī, *Künh*, v, 237; *Shaḳāʾiḳ* (Medjdī), 128; Hammer-Purgstall, i, 497, 601; idem, *GOD*, I, 127 ff.; Rieu, *CTM*, 17b, 105b, 106a and references there given; Gibb, Ottoman Poetry, i, 389 ff.; *ʿOM*, I, 16 and 194-6; *EI*¹, arts. Bīdjān (unsigned, = Ahmed Bican in *İA*) and Yazīdjī-Oghlu (Fr. Babinger); Fr. Taeschner, *Die geog. Lit. der Osmanen*, in *ZDMG* 73 (1923), 36 ff.; E. BIDJANAGAR [see vidjayanagara].

BĪDJĀPŪR, town and head-quarters of the district of the same name in Bombay State (India), situated in 16° 49′ N. and 75° 43′ E., 350 miles south of Bombay. Population in 1951 was 65,734. It was the seat of the Yādavā kings for over a century from 586/1190 to 694/1294 when it was conquered by ʿAlāʾ al-Dīn Khaldjī for his uncle Djalāl al-Dīn Khaldjī [*q.v.*], king of Delhi. In 890/1485-6 Yūsuf, an alleged son of the Ottoman Sulṭān, Murād II who, on the accession of his brother Meḥemmed II to the throne, was said to have escaped certain death through a stratagem of his mother, founded the Muslim kingdom of Bīdjāpūr and built the citadel. This story seems to be unknown to the Ottoman historians (cf. Khalīl Edhem, *Düwel-i Islâmiyye*, 495); the Ottoman historian Munadjdjim Bashī, who includes an account of the ʿĀdilshāhids in his *Djāmiʿ al-Duwal*, describes Yūsuf as of Turcoman origin. For a discussion of this question see further Ismail Hikmet Ertaylan, *Adilşâhîler*, Istanbul 1953, 3 ff). He also captured Goa and included it in his dominions. He assumed the title of ʿĀdil Shāh which became the royal surname and the dynasty came to be known as the ʿĀdil Shāhs of Bīdjāpūr. He was succeeded by three incapable or profligate rulers. In 965/1557 ʿAlī ʿĀdil Shāh came to the throne; he built the city wall of Bīdjāpūr, the Djāmiʿ Masdjid, aqueducts and other public utility works. In 973/1565 the combined troops of Bīdjāpūr, Aḥmadnagar and Golconda defeated the Vidjayānagar forces at the battle of Tālīkōta. ʿAlī ʿĀdil Shāh died in 987/1579 and was succeeded by his minor nephew Ibrāhīm ʿĀdil Shāh, under the regency of the famous Čānd Bībī. He died in 1036/1626 after an independent rule of 47 years and was succeeded by Muḥammad ʿĀdil Shāh, during whose reign, Sīvādjī, the Mahratta leader rose to power. His father Shāhdjī Bhōnslē was a petty officer of the Bīdjāpūr Sulṭān. Having been bred and brought up on Bīdjāpūr 'salt', Sīvādjī repaid the debt of gratitude by attacking Bīdjāpūr territory and between 1056/1646-1058/1648 he seized many forts of importance. In 1067/1656-7 Awrangzīb, while still a prince, attacked and beseiged Bīdjāpūr but on hearing of the serious illness of Shāhdjahān had to lift the seige and leave for Āgrā. Thirty years later (1097/1686) Awrangzīb succeeded in subduing Bīdjāpūr during the reign of Sikandar ʿAdīl Shāh (1083/1672-1097/1686), the last of the ʿAdīl Shāhs. Sikandar ʿĀdil Shāh was imprisoned and allowed a pension by Awrangzīb. He died in 1111/1699-1700. In 1100/1688 Bīdjāpūr was visited by a virulent type of bubonic plague which claimed 150,000 persons, including Awrangābādī Maḥall, a queen of Awrangzīb while Ghāzī al-Dīn Firūz Djang, a high noble, lost an eye. Towards the close of his reign Awrangzīb appointed his youngest son, Kām Bakhsh, to the government of Bīdjāpūr. On Awrangzīb's death Kām Bakhsh proclaimed himself Emperor at Bīdjāpūr, assuming the title of *Dīn-Panāh*. In 1137/1724 Bīdjāpūr was included in the dominions of the Niẓām of Ḥaydarābād. It was, however, transferred to the Marātʿhās in 1174/1760 for a sum of 6,000,000 rupees. On the overthrow of the Pēshwā in 1234/1818

the British occupied Bīdjāpūr and assigned it to the Rādjā of Satārā in whose possession it remained till 1266/1848 when, on the lapse of the State, it formed part of British Indian territory. In 1281/1864 Bīdjāpūr was made a separate district and in many of the old palaces were housed Government offices which were, however, later shifted elsewhere.

The ʿĀdil Shāhs were great patrons of art and literature. Malik Ḳummī, the poet and Ẓuhūrī, the celebrated author of the two Persian classics, *Sih Nat̲h̲r* and *Mīnā Bazār*, adorned for a considerable time the Court of Ibrāhīm ʿĀdil Shāh, himself a poet, who composed in Dakhanī Urdu.

Bīdjāpūr, apart from the plague epidemic of 1100/1688 also suffered from two terrible famines. The first occurred in 1130/1718 and continued for six long years decimating the population of the city. It is still remembered as the Skull Famine, the ground being covered with the skulls of the unburied dead. The second occurred in 1234/1818-19 reducing the once flourishing city to a mere township, of a few thousand souls, which has since then remained a city of desolate palaces and historical ruins. Other periods of severe drought were those of 1240/1824-5, 1248/1832-3, 1270/1853-4, 1280/1863-4 and 1283/1866-7.

(A. S. Bazmee Ansari)

Monuments.—The ʿĀdil Shāhīs developed the building art above all others, and their architecture is the most satisfactory of all the Deccan styles, both structurally and aesthetically; hence their capital, Bīdjāpur shows a more profuse display of excellent and significant buildings than any other city in India except Delhī alone. The Bīdjāpur style is coherent within itself, and there is a gradual progression between its two main phases. Most worthy of note are the doming system with its striking treatment of pendentives; profuse employment of minarets and *guldastas* as ornamental features, especially in the earlier phase; elaborate cornices; reliance on mortar of great strength and durability. The materials employed are either rubble-and-plaster or masonry; the stone used in masonry work is local, a very brittle trap. There is evidence to show that architects were imported from North India, and that use was freely made of local Hindu craftsmanship.

Pre-ʿĀdil Shāhī works are few: the rough *minārs*, (Ar. *manār*) with wooden galleries, in the walling of the Makka Masdjid; Karīm al-Dīn's mosque, inscr. 720/1320, from pillars of old Hindū temples, trabeate, with elevated central portion as clerestory, recalling the mosques of Gudjarāt [*q.v.*]; the Bahmanī *wazīr* Khwādja Djahān's mosque, c. 890/1485, similar but without clerestory.

No ʿĀdil Shāhī building can be certainly assigned to the reign of Yūsuf. The earliest dated structure, referred to as Yūsuf's Djāmiʿ Masdjid, strikingly foreshadows the style to come with single hemispherical dome on tall circular drum with the base surrounded by a ring of vertical foliations so that the whole dome resembles a bud surrounded by petals, and façade arches struck from two centres, the curves stopping some way from the crown and continued to the apex by tangents to the curve; inscr. 918/1512-3 records erection by Khʷādja Sanbal in the reign of Sulṭān Maḥmūd Shāh, son of Muḥammad Shāh Bahmanī, indicating that Bahmanī suzerainty was still acknowledged some time after the ʿĀdil Shāhī defection. Of Ibrāhīm's reign are also the massive Dakhnī ʿĪdgāh (within the present city walls) and several small mosques, on one of which (Īkhlāṣ Khān's) the arch spandrels are filled with medallions supported by a bracket-shaped device, later a very common ornament. Only one mosque of this period (Ibrāhīmpur, 932/1526) is domed.

The long reign of ʿĀlī I saw much building activity: the city walls, uneven in quality since each noble was responsible for a section, completed 973/1565, with five main gates flanked by bastions and machicolated, approached by drawbridges across a moat, beyond which is a revetted counterscarp and covert way (many bastions modified to take heavy guns; inscriptions of Muḥammad and ʿĀlī II); the Gagan ("sky") Maḥall, an assembly hall with much work in carved wood; a mosque in memory of *sayyid* ʿAlī Shahīd Pīr, small (10.8 m. square) but superbly decorated with cut-plaster, with a steep wagon-vaulted roof parallel to the façade, a tall narrow chimney-like vault over the *miḥrāb* which has a door leading outside; the Shāhpur suburbs; outside Bīdjāpur, the forts of Shāhdrug (966/1558), Dhārwār (975/1567), Shāhanur and Bankapur (981/1573); ʿĀlī's own severely plain tomb; and his Djāmiʿ Masdjid, generally ascribed to 985/1576, a fine large (137.2 by 82.3 m.) building, not fully completed (only buttresses where tall *minārs* were to be added, no *kanguras* over façade), sparingly ornamented (only the central arch of seven in the *līwān* facade is cusped and decorated with medallion-and-bracket spandrels), with the great hemispherical dome, standing on a square triforium, capped by the crescent, a symbol used by the ʿĀdil Shāhīs alone among the Dakhnī dynasties. The cornice is an improvement on earlier works by showing deeper brackets over each pier instead of a row of uniform size. The vaulting system of the dome depends on cross-arching: two intersecting squares of arches run across the hall between the piers under the dome, meeting to form an octagonal space over which the dome rests; the pendentives thus overhang the hall and counteract any side-thrust of the dome. The exterior walls are relieved by a ground-floor course of blind arches over which is a loggia of open arches.

In Ibrāhīm II's reign fine sculptured stonework replaces the earlier rubble-and-plaster. The palace complex dates from about 990/1582 (Sāt Manzil, 'Granary', Čīnī Maḥall); the first building in elaborate sculptured stone is Malika Djahān's mosque (994/1586-7), which introduces a new shape by the dome forming three quarters of a sphere above its band of foliation. The Bukhārī mosque and three others on the Shāhpur suburb are very similar, and fine

stonework occurs also in perhaps the greatest work of the ʿĀdil Shāhīs, the mausoleum of Ibrāhīm II and his family known as the Ibrāhīm Rawḍa: within a garden enclosure 137.2 m. square stand a tomb and mosque on a common plinth; the tomb (shown by inscriptions to have been intended for the queen Tādj Sulṭāna only) has uneven spacing of the columns and other features, and the cenotaph chamber is covered with geometric and calligraphic designs, reputedly the entire text of the Ḳurʾān. The mosque columns are regular. The whole composition is in perfect balance and was minutely planned before building. An inscription gives the date of completion, by *abdjad*, as 1036/1626. Palaces of this reign include the Ānand Maḥall, built for entertainments (*Basātīn al-Salāṭīn*), and the Āthār Maḥall (1000/1591) with fine painted wood decoration including some fresco figure-paintings thought to be the work of Italian artists. The Andā ("egg") Masdjid, 1017/1608, has the mosque (presumably for the use of women) on the upper storey, with a *sarāʾī* below; the masonry is polished and finely jointed, and above is a ribbed dome. In 1008/1599 Ibrāhīm proposed moving his seat of government some 5 km. west of Bīdjāpur where the water supply was better; but the new town, Nawraspur, was sacked in 1034/1624, before its completion, by Malik ʿAnbar, and little remains. Other work includes the mosque known as the Naw Gunbadh, the only Bīdjāpur building with multiple doming; the fine but incomplete mausoleum of the brother *pīrs* Ḥamīd and Laṭīf Allāh Ḳādirī (ob. 1011/1602, 1021/1612); and, the supreme example of the later work of this reign, the Mihtar-i Maḥall, really a gateway to the inner courtyard of a mosque in the city, with a narrow facade based on a vertical double square, richly covered with stone diaper patterns and with a balcony supported by long struts of carved stone, their decoration resembling, and really more appropriate to, woodwork patterns; fine panelled ceilings within; superb cornices and elaborate *mīnārs* outside, all richly carved.

Works of Muḥammad's reign are of uncertain chronology owing to lack of inscriptions and historical records. Muṣṭafā Khān's mosque is plain with a façade in which the central arch is much wider than the flanking ones, following the pattern of many of the older palaces; his Sarāʾī (insc. 1050/1640-1); a *Maḥall* at ʿAynāpur; tombs of the *wazīr* Nawāz Khān (ob. 1058/1647) and of several *pīrs* showing a decadence in style with a second storey and dome too attenuated for the size of the buildings; Afḍal Khān's mausoleum and mosque, where the second storey is of insufficient height—the mosque being the only two-storeyed one in Bīdjāpur, the upper *līwān* being the duplicate of the lower except for the absence of a *minbar*, hence presumably for Afḍal Khān's *zanāna*, 63 members of which have their reputed graves 1 km. to the south: insc. in mausoleum 1064/1653; and the major building work, one of the supreme structural triumphs of Muslim building anywhere, Muḥammad's own mausoleum, the Gol Gunbadh. The tomb building, standing within a mausoleum complex, is formally simple: a hemispherical dome, of 43.9 m. external diameter, is supported on an almost cubical mass 47.4 m. square (external), with a staged octagonal turret at each angle. The floor area covered, about 1693 sq. m., is the largest in the world covered by a single dome. External decoration is simple, confined to the great cornice 3.5 m. wide supported by four courses of brackets, the openings on the pagoda-like corner turrets, and the merlons and *mīnārs* of the skyline. The dome is supported internally by arches in intersecting squares as in the Djāmiʿ Masdjid; inscription over the S. door gives the date of Muḥammad's death by *abdjad* as 1067/1656 at which time work on the building presumably stopped, the plastering being incomplete. Unfinished also is the tomb of his queen Djahān Bēgam at ʿAynāpur: foundations, piers and octagon turrets to the identical scale of the Gol Gunbadh, but the dome was intended to be carried across a central chamber.

Of ʿAlī II's reign the pavilion called Pānī Maḥall on the citadel wall, and the Makka Masdjid, both with fine masonry and exquisite surface carving; the tomb-complex of Yāḳūt Dābulī, unusual by having the mosque larger than the tomb; and ʿAlī's own unfinished mausoleum, with arches struck from four centres instead of the usual Bīdjāpur arch. Later buildings are insignificant, except for Awrangzīb's eastern gate to the Djāmiʿ Masdjid; the tomb of the last monarch, the minor Sikandar, closes the ʿĀdil Shāhī effort with a simple grave in the open air.

BIDJĀYA (Bougie), maritime Algerian town situated about 175 km. east of Algiers. Built on the lowest slopes of the Djabal Gurāya, the city overlooks a spacious and remarkably sheltered bay. Doubtless Roman and Carthaginian shipping anchored off Saldae, the old town. At the beginning of the Christian era, it formed part of the domain of Juba, king of Cherchel. The emperor Augustus founded a colony there and settled it with veterans. An inscription dating from the second century extols Saldae as "civitas splendidissima". Nevertheless, it played no significant part until the Muslim era. In the 5th/11th century, al-Bakrī refers to it as a very ancient city, a pleasant winter resort, populated with Andalusians. From this period, the Spanish Muslims were strongly represented side by side with the Berber element, the Bidjāya tribe, to which the town owes its name.

The event which made Bougie historically famous took place in 460/1067. The facts are briefly as follows. The mid-5th/11th century witnessed the rupture between the Zīrids of al-Ḳayrawān and the Fāṭimid Caliph of Cairo, and the reprisals which followed: the Hilālian invasion, the arrival of nomad Arabs sent from Egypt to take possession of the rebel kingdom. These reprisals were terrible. The nomads pillaged the countryside of Ifrīḳiya. The sacked inland towns were partly evacuated. The kingdom of the Ḥammādids first took advantage of this free-for-all. The end of the eleventh century was the

golden era of their Ḳalʿa. At the same time the Arabs were not slow to spread westward and offered a serious menace to the Ḳalʿa of the Banū Hammād. These decided to look about for a less exposed capital. Just as the Zīrids had left al-Ḳayrawān and betaken themselves to the maritime town of Mahdiyya, the masters of the Ḳalʿa withdrew to the coast. In 1067, the Ḥammādid al-Nāṣir occupied the land of the Bidjaya and set up his capital at Bougie which he wished to call al-Nāṣiriyya. Though he continued to spend part of his time at the Ḳalʿa, he gave priority to the expansion of his new capital, put himself out to attract settlers and built there the splendid Castle of the Pearl (*Ḳaṣr al-Luʾluʾ*). The son of al-Nāṣir, al-Manṣūr (483-498/1090-1104) left the Ḳalʿa (which, however, he had embellished with new buildings) in his turn. He abandoned the Ḳalʿa permanently and installed himself in Bougie with his troops and his court. Here he built the great mosque, planted gardens and erected the palaces of Amimūn and the Sta (*Ḳaṣr-al-Kawkab*) and supplied the city with water, carried by aqueduct from the Djabal Tudja. The town is reputed to have been divided into twenty-one quarters and to have contained seventy-two mosques. Doubtless this is something of a exaggeration but it is certain that the first half of the 6th/12th century was the golden age of Bougie. The second capital of the Ḥammādids had inherited from the first. It had welcomed the intellectual *élite*, the wealthy bourgeoisie, the sages and artists of the fallen Ḳalʿa. Life in Bougie was easy and free from austerity. The luxurious costume worn by the citizens, from the studied elegance of their turbans to their shoes, tied on with gilded ribbons, shocked Ibn Tūmart, the future founder of the Almohad sect, who, about 1118, spent some time in Bougie and made an attempt to reform the manners and customs of the town. Like this visit of Ibn Tūmart, that of the great Andalusian mystic Sīdī Bū Madyan and his teaching during that stay is sufficient to indicate the importance of Bougie as a centre of religious studies.

Through the seaport of Bougie, commercial and cultural relations were established with countries overseas, so that it became the centre from which the civilisation and art of eastern Barbary radiated outwards to Christian Europe, especially Sicily and Italy.

For al-Idrīsī, geographer to King Roger II, Bougie was "the chief city, the eye of the Ḥammādid state". There is every reason to believe that the royal residences of Palermo were inspired by the Palaces of Bougie, which were so enthusiastically described by the Sicilian poet, Ibn Ḥamdīs. There is also the letter, most cordial in tone, written by Pope Gregory VII to al-Nāṣir, "King of Mauretania and the Province of Setif" (Mas Latrie, *Traités de paix et de commerce*, 22-23).

Very little remains in Bougie of its past as a capital city. We can, however, identify with some certainty the sites of the palaces built by the Ḥammādids. The castle of Amimūn must have stood not far from the tomb of Sīdī Tuāti; Fort Barral has supplanted the Palace of the Star. The Castle of the Pearl stood on the site of the Bridja barracks. Some reservoirs, and part of the city walls (the eastern face, where the wall, four metres thick, is flanked by lopsided towers) can be attributed to the twelfth century rulers, as can the gate known as the Saracen Gate, that great arch through which ships could enter the inner harbour.

The city of the Ḥammādids must have been appreciably more spread out than the modern town, especially in the hilly section where the Plateau of the Ruins is situated. The names of seven or eight gates have come down to us. Some of these can be located: Bāb Amsīwan to the east, on the road leading to the Valley of Monkeys, Bāb al-Bunūd, on the site of the Fouka Gate, Bāb al-Lawz, in the same position, but lower down than the Bāb al-Bunūd. Outside the town, on both banks of the Soummam, stretched the famous gardens, planted in the twelfth century and restored in the thirteenth, the Badīʿ, on the west bank, the Rafīʿ on the east.

In 546/1152, Bougie was captured by ʿAbd al-Muʾmin and the last of the Ḥammādids set sail for Sicily. The ancient royal city became the chief town of an Almohad province subordinate to Marrākesh. Its downfall must have been painfully felt by its citizens. It is believed that the Almoḥads failed to win their affection, and one is tempted to attribute to this unpopularity of the new masters the choice of Bougie by the Banū Ghāniya, who landed there in the middle of the twelfth century in an attempt to restore the empire of the Almoravids.

Bougie was for the Banū Ghāniya merely an operational base. The Almoḥads were not slow to reconquer it and it remained under their rule thereafter until the collapse of the Muʾminid dynasty. From that time, Bougie and the region surrounding it became part of the kingdom of the Ḥafṣids of Tunis. The remote position of this province seems to explain its rôle in Barbary from the thirteenth to the fifteenth centuries. This governorship, far from the capital, would have been bestowed by tradition on the heir to the throne, and, in spite of the distance, the army of Bougie on more than one occasion marched to Tunis to press the claims of a Crown Prince anxious to succeed to the throne without further delay. By virtue of its position as a frontier province, Bougie was coveted by the ʿAbd al-Wādid sultans of Tlemcen, who attempted several times, though without success, to conquer it.

At the same time, Bougie remained an opulent mercantile town, into which Venetians, Pisans, Genoese, Marseillais and Catalans imported merchandise made in Europe and from which they exported local products, especially candied peel, wax, alum, lead and raisins. Meanwhile to the profits of trading were added the sometimes richer prizes of privateering. According to a famous work by Ibn Khaldūn (*Hist. des Berbères*, i, 619, trans., iii, 117), piracy from the year 761/1360 was carried out according to a well-tried method and with remarkable success.

The attack on the town and its capture by Pedro of Navarre in 916/1510 were entirely in the nature of reprisals. Bougie, now a Spanish town, remained so until 962/1555. During these forty-five years, its new masters went through hard times, encamped on the seaboard of the 'land of the infidels' without normal contact with the hinterland, threatened by the Berber mountain tribes and at the same time dreading the Barbary Corsairs who were blockading the coast. After a heroic stand, Don Luis de Peralta had to surrender the area, which had become terribly impoverished.

Bougie, subjected to the mistrustful authority of the Algerian Turks who kept in their own hands the practice and profits of privateering, was unable to recover from this decline. The region retained some little importance by virtue of the *karasta*, the exploitation of timber for ship-building, which the masters of the Regency had supervised by

a local religious chieftain of the Amokrān family. But the town profited little from this activity. "In Bougie", wrote the traveller Peysonnel, "everything is falling into ruins, for the Turks keep nothing in repair". In 1833, when the French troops, commanded by General Trezel, entered the town, it was nothing more than a rather sorry city of barely two thousand inhabitants guarded by a hundred and fifty janissaries.

BIDJNAWR (Bijnor), a town and district in the Rohilkhand division of the Indian State of Uttar Pradesh. The district has an area of 1,867 square miles with a population of 984,196, of which 36% are Muslims. The town has a population of 30,646 (1951 Census). Little is known of the district's early history. In 1399 it was ravaged by Tīmūr. Under Akbar it formed part of the *sarkār* of Sambhal in the *ṣūba* of Dihlī. During the decline of Mughal power it was overrun by Rohillas under ʿAlī Muḥammad. It contains the town of Nadjībābād founded about 1750 by Nadjīb al-Dawla who became *wazīr* of Dihlī and whose son was the Rohilla leader Zābita Khān. After the defeat of the Rohillas in 1774 Bidjnawr was incorporated in Awadh. It was ceded to the British in 1801. During the 1857 insurrections Mahmūd Khān, a grandson of Zābita Khān, was one of the most formidable opponents of the British.

(C. Collin Davies)

BIDLĪS (Bitlis), chief city of the *wilāyet* of the same name, in eastern Anatolia. It stands on the river Bitlis, 25 km. south-west of the westernmost point of lake Van (38° 20′ N., 42° 5′ E.), at a height above sea-level variously estimated between 1,400 and 1,585 metres. Known to the Armenians as Bagesh (Pagish) and to the Arabs as Badlīs, it is referred to as Bīdlīs in old Turkish works. The city is in a relatively wide part of the deep and narrow valley cut in the eastern Taurus by the river Bitlis before it descends to the upper Djazīra. The narrow and straggling streets, with their stone-built, earthen-roofed houses, are ranged one above the other from the valley floor, covered with poplars and fruit-trees, to the bare slopes of the hills. The quarters of the city are separated one from another by the main valley and its intersections, crossed by stone bridges. Although the picturesque aspect of the city has always been admired by travellers, its location gives it a harsh climate: summer days are excessively hot, winter is rigorous and long, with heavy snowfalls. Rainfall is also heavy (about 1 metre annually), particularly in spring, whereas drought is common in summer.

The valley in which Bitlis stands affords the only route across the Taurus from the Van basin to the plateau of Diyārbakr and the plains of the Djazīra. By this road, from time immemorial, caravans have made their way from the south to Erzurum and thence to the Black Sea; this was the route taken by Xenophon and his Ten Thousand. Throughout history the rulers of Bitlis levied toll on passing travellers and took care to maintain control of the plain of Mush, which supplied the food they could not find in their own barren mountains.

When and by whom the city was founded is not known. An ancient legend tells that it was Alexander the Great who entrusted to one of his commanders, a man called Līs, the task of building here an impregnable citadel. When the building was finished, Līs refused Alexander admission. Alexander besieged the citadel but failed to force an entrance. Līs then explained to him how he had carried out his orders to the letter. He was pardoned, and the city commemorates his name. The city played an important part in Armenian history, and is frequently mentioned in the old Armenian sources (Gelzer, *Geogr. Cypr.*, Leipzig 1890, 168), which are however silent about the date of its conquest by the Muslims, recording only that the region of Daron (Mush) was taken by them in 641. Streck (*EI*[1], *s.v.* Bidlīs) mentions Arabic inscriptions on the walls of the citadel, but according to Lynch these were destroyed without ever being copied. Muslim historians relate that ʿIyāḍ b. Ghanm, ʿUmar's commander in the Djazīra, after securing the surrender of Arzan went on to Bitlis and thence to Akhlāṭ (Ahlat). The Patriarch of Ahlat accepted peace terms, and on ʿIyāḍ's return the Patriarch of Bitlis agreed to pay tribute on the same scale as Ahlat (al-Balādhurī, *Futūḥ*, Cairo 1901, 184; al-Wāḳidī, *K. al-futūḥ*, Cairo 1302, ii, 152-154). It was not long however before the region reverted to Byzantine rule. Muʿāwiya subjugated it again, but after his death it was once more lost to the Muslims till the reign of ʿAbd al-Malik, whose brother Muḥammad attached it to the province of al-Djazīra. In the ʿAbbāsid period it fell under the successive Shaykhid, Ḥamdānid and Marwānid dynasties of Diyārbakr. In the time of the two last-named dynasties, when Byzantium recovered the Euphrates basin, the Armenian King of Vasporakan (Basfürdjan, the Van basin) threw off Muslim sovereignty and gave his allegiance to Constantinople, whereupon Bitlis, like Ahlat, became a frontier-city. The Muslim onslaught brought some branches of the tribes of Bakr b. Wāʾil and Taghlib to the region, and under Marwānid rule various Kurdish tribes spread over these parts, notably the Ḥumaydī, to which the Marwānids belonged. Nāṣir-i Khusraw, who visited the region in 1046, the year before the great Turkish invasion, states (*Safar-nāma*, Berlin 1841, 8 foll.) that Arabic, Persian and Armenian were spoken at Ahlat, and we may suppose that the same situation obtained at Bitlis. Fakhr al-Dawla Muḥammad b. Djuhayr, whom the Saldjūḳs appointed to govern Diyarbakr in 1084, destroyed Marwānid rule and distributed their lands and fortresses to Turks. Bitlis was given to Muḥammad b. Dīlmač or Dīmlač, whose descendants continued to rule it until 588/1192, when it was seized by the amīr of Ahlat. In 1207 both cities fell to the Ayyūbids, who settled large numbers of Kurds in the region. Though Ahlat was devastated by Djalāl al-Dīn Khwārizmshāh in 1229, the cities

of Van and Bitlis began a period of prosperity, Bitlis in particular becoming an important centre of learning until the Mongol invasion. After the fall of the Īlkhānids, the Ruzhekī tribe of Kurds established a dynasty at Bitlis, which managed to maintain itself, despite many vicissitudes, till the mid-19th century, having acknowledged in its time the suzerainty of Tīmūrids, Ḳara Ḳoyunlus, Aḳ Ḳoyunlus, Ṣafawids and Ottomans. Sharaf Khān, a 16th-century member of this house (whose *Sharaf-nāma*, completed in 1596, is a principal source for Kurdish history) claimed descent from the Ayyūbids, while his grandson ʿAbdāl (ʿAbd Allāh) Khan told Ewliyā Čelebi that he was descended from the ʿAbbāsids. Ewliyā's visit was in 1655. His observations include the following. The *bādj* exacted from caravans passing through the city went to the Khān. The *kharādj* of the plain of Mush had been bestowed by Murād IV on the Khān for life; out of it he paid the warden and garrison of the citadel. On the other hand, the *djizya* paid by the Jacobite and Arab *raʿāyā* of the city was reserved to the *ḳol* (administrative division) of Van, and was collected by an *agha* who came from Van at the beginning of every year. Some 70 tribes were subject to the Khān. Within the citadel there were 300 houses, but half the area was covered by the ruler's palace. In the 17 city-quarters were 5,000 houses. In the environs were thousands of orchards, all containing summer-houses. Of the mosques, with a total of 110 *miḥrāb*s, the most important was the Sharafiyya, built by Sharaf Khān. Tavernier, whose visit was at the same period, writes that the Bey of Bitlis recognised neither Shāh nor Pādishāh, and could put into the field a force of 20-25,000 cavalry. At that time the population was largely Kurdish and Armenian. The *Djihānnumā* states that the latter were in the majority. According to the Jesuits who visited the city in 1683, the nominal vassalage of the Bey to the Ottomans was preserved only in that he sent them tribute on his accession (Fleurian, *Estat présent de l'Arménie*, Paris 1694). The power of the Kurdish princes was not broken by the Turks till 1847, though the city remained a Kurdish political and religious (Naḳshbandī) centre during the turbulences of the 19th century.

On the establishment of full Ottoman sovereignty, Bitlis formed a *ḳaḍāʾ* belonging to the *sandjaḳ* of Mush within the great *wilāyet* of Erzurum, but after the Russo-Turkish war of 1877-78 it was made into a *wilāyet* to emphasise the dependence of the region on the central government. The area of the *wilāyet*, which was divided into 4 *sandjaḳs*—Bitlis, Siirt, Mush and Genč—was almost 30,000 square kms., with an estimated population of 400,000. According to Cuinet, the central *sandjaḳ*, with an area of 5,500 square kms., had a population of some 108,000: 70,000 Muslims, 33,000 Armenians, 4,000 Syrian Jacobites and 1,000 Yazīdīs. The *sālnāme* for the year 1310/1892-93 shows the population of this *sandjaḳ* as 77,000: 46,000 Muslims, the remainder Armenian. Lynch, who quotes this total, says it ought to be increased by 13 per cent to compensate for deficiencies in the registration. For the population of the city itself in the 19th century no reliable figures exist. Lynch estimated it at 30,000 at the time of his visit (1898): 10,000 Armenians, 200 Syrians, the rest Kurds. A Russian source of the beginning of the 20th century gives the number of houses in the city as 5,100: 550 belonging to Turks, 3,000 to Kurds, 1,500 to Armenians.

The staple industry of Bitlis in the 19th century was weaving, with its ancillary craft of dyeing. Other exports of the city and the surrounding country included gall-nuts, gum tragacanth, madder, tobacco, honey and livestock.

Till the troubles of the end of the 19th century, Turks, Kurds, Armenians and Jacobites had lived side by side in Bitlis. The Jesuits who founded a mission there in 1683 had been well received by the Bey. In the 18th century an Italian priest, Maurizio Garzoni, lived and worked among the Kurds for 18 years. An American Protestant mission was founded in 1858. The insurrection of the Armenians, the measures taken to suppress it, and the Russian occupation during the First World War all contributed to a grave reduction in the population and to the disappearance of industry. The population of the city in 1927 was 9,050, in 1950 11,152.

Early in the Republican period each of the 4 *sandjaḳ*s comprising Bitlis *wilāyet* became a separate *wilāyet*. In 1929 Bitlis was attached as a *ḳaḍāʾ* to the *wilāyet* of Mush, nearly 70 per cent of the population of which were Kurds according to the 1935 census. Bitlis was restored to *wilāyet* status in 1936, and is now divided into 5 *ḳaḍā*'s: Bitlis, Tatvan, Ahlat, Mutki and Hizan, with an area of 5,482 square kms, and a population (1950) of 88,422.

(G. L. Lewis)

BIDLĪSĪ, Idrīs, Mewlānā Ḥakīm al-Dīn Idrīs b. Mewlānā Ḥusām al-Dīn ʿAlī al-Bidlīsī, historian of the Ottomans, was probably of Kurdish origin. He became *nishāndji* at the Aḳ Ḳoyunlu court, and in the name of Yaʿḳūb Beg wrote a letter of congratulation to Bāyezīd II in 890/1485 which was much admired (Hammer-Purgstall, ii, 290). In consequence of the growing power of Shāh Ismaʿīl he fled to Turkey in 907/1501-2, where he was welcomed by Bāyezīd and commissioned to write the history of the Ottoman House in Persian. His work was criticised as being over-lenient to the Persians, and he failed to receive the payments he had been promised. He asked for permission to go on the Pilgrimage, but this was granted only after the death of the Grand Vizier Khādim ʿAlī Pasha (who seems to have been his chief enemy) in Rabīʿ II 917/July 1511. From Mecca he wrote to the Ottoman court a letter in which he threatened that if his wrongs were not righted he would expose in the *dībādje* and *khātime* of his history (which were not yet written) the ingratitude shown to him. Selīm I invited him back to Istanbul shortly after his accession and the completed history was presented to him. Idrīs accompanied Selīm on the Čāldirān campaign of 920/1514, and afterwards rendered invaluable service to the Ottomans by winning over the Sunnī Kurdish princes to their side; the *fermān* quoted by Saʿd al-Dīn (ii, 322) shows that he was given a free hand in organising the Kurdish territories. He also accompanied Selīm to Egypt, where he is said to have protested against the misdeeds of the Ottoman officials (Hammer-Purgstall, ii, 518).

He died in Istanbul, soon after Selīm, in Dhu 'l-Ḥidjdja 926/Nov.-Dec. 1520, and was buried at Eyyūb beside the mosque founded by his wife, Zeyneb Khatun.

His great history, the *Hasht Bihisht* (Ḥādjdjī Khalīfa, ed. Flügel, no. 2131, and cf. nos. 2152 and 14406), the 'Eight Paradises', *i.e.* the reigns of the eight sultans from ʿOthmān to Bāyezīd II, is written in the most elaborate style of Persian *inshāʾ*, avowedly on the models of the histories of Djuwaynī, Waṣṣāf, Muʿīn al-Dīn Yazdī and Sharaf al-Dīn Yazdī. Though it was highly esteemed both by Saʿd al-Dīn, who frequently refers to it (cf. especially i 159), and by Hammer-Purgstall (cf. i XXXIV), it is still unpublished. It was begun in 908/1502-3 and finished in thirty months; the last political event described in detail is the relief of Midilli in 907, but the latest date recorded is 912. The long *Khātime*, entirely in verse, which was written in Mecca (cf. Rieu, *CPM* 219a), describes the civil war at the end of Bāyezīd's reign; it concludes with a *Shikāyet-nāme*, in which Idrīs relates his misfortunes.

A continuation (*dhayl*) to Idrīs's history, covering the reign of Selīm I, was written by his son Abu 'l-Faḍl (on whom see Babinger, 95 ff.). A Turkish translation of the *Hasht Bihisht* was made by a certain ʿAbd al-Bāḳī Saʿdī in 1146/1733-4 at the command of Maḥmūd I; it is not altogether reliable (cf. M. Şükrü in *Isl.* XIX [1931] 138). The history of Kemāl Pashazāde [*q.v.*], sometimes referred to as a 'translation' of the *Hasht Bihisht*, was written as a *naẓire* to it, but is an entirely independant work.

Idrīs also wrote a *Selīm-nāme* in prose and verse, which was left unfinished at his death and edited later by Abu 'l-Faḍl (a quite distinct work from Abu 'l-Faḍl's *dhayl*, cf. F. Tauer in *ArO* IV [1932] 103). He was a poet and a calligrapher (cf. Mustaḳīm-zāde, *Tuḥfat-i Khaṭṭāṭīn*, Ist. 1928, 110), and wrote a number of treatises on various subjects including: (1) *al-Ibāʾ ʿan mawāḳiʿi 'l-wabāʾ* (Ḥ.Kh. no. 5930 [? and 6218], Brockelmann II 302 and cf. S II 325); (2) two Persian translations of the 'Forty Ḥadīths' (Ḥ.Kh. no. 7507, and cf. A. Karahan, *Islâm-Türk Edebiyatında Kırk Hadis*, Istanbul 1954, 111-3); (3) a *sharḥ* to the *Fuṣūṣ al-ḥikam* (Ḥ.Kh. no. 9073); (4) a *sharḥ* to Shabistarī's *Gulshan-i Rāz* (Ḥ. Kh. no. 10839); (5) a *sharḥ*, entitled *Ḥaḳḳ al-Mubin*, to Shabistarī's *Ḥaḳḳ al-Yaḳīn*; (6) a *sharḥ* to the *Khamriyye* of Ibn al-Fāriḍ (Br. S I 464); (7) *Risāla fi 'l-Nafs* (Br. S II 325); (8) a *ḥāshiye* to Bayḍāwī's *Tafsīr* (cf. Rieu, *CPM* 216b); (9) a Persian translation of Damīrī's *Ḥayāt al-Ḥayawān* (cf. Hammer-Purgstall, ii, 518 and *ʿOthmanlî Müellifleri* iii 7, where an autograph MS is recorded). Bursalî Meḥmed Ṭāhir also records five other works, which he had presumably seen.

Bibliography: Babinger, 45 ff. and the references there given, especially Rieu, *CPM*, 216-9; Hammer-Purgstall, ii, 432 ff., for Idrīs's activities in Kurdistān (mainly following Abu 'l-Faḍl's *dhayl*); *Sheref-nāme*, ed. Véliaminof-Zernof 342 ff. = Charmoy's translation ii/1 208 ff. (where however the *Hasht Bihisht*, perhaps through confusion with the *Selīm-nāme*, is described as a poem of 80,000 verses: this error was reproduced by C. Huart in the article *Bidlīsī* in EI[1] = *Idris Bitlisi* in *İA*); M. Şükrü, *Das Hešt Bihišt des Idris Bitlisi*, in *Isl.* XIX (1931) 131-157 (survey of the MSS in Istanbul, including autographs dated 919, and analysis of contents to the death of Orkhān); Storey, ii/2 412-6 (the latest and fullest survey of the MSS). A passage from ʿAbd al-Bāḳī's translation is quoted by F. Babinger in *Isl.* XI (1921) 42 ff., and several passages of the Persian text are quoted by F. Giese in *Die Verschiedenen Textrezensionen des ʿĀšiqpašāde*, Abh. Pr. Ak. W. 1936, Phil.-Hist. Kl. no. 4. Some passages from the *Selīm-nāme* are given in translation by H. Massé in *Sélim Ier en Syrie, d'après le Sélim-namè*, in *Mélanges Syriens offerts à M. René Dussaud*, Paris 1939, ii, 779-782. In the archives of the Topkapı Sarayı are preserved Idrīs's letter asking for permission to go on the Pilgrimage (E 3156) and the letter he sent from Mecca (E 5675, reproduced, with Turkish synopsis, by F. R. Unat in *Bell.* VII [1943], 198). A letter sent by Idrīs to Suleymān I and Idrīs's seal are reproduced in I. H. Uzunçarşılı, *Osmanlı Tarihi* ii, Ankara 1949, Pl. xxi.

(V. L. Ménage)

BIDLĪSĪ, Sharaf al-Dīn Khān, commonly known as Sharaf Khān, Persian historian of Kurdish extraction, the elder brother of the Amīr of Bidlīs, Shams al-Dīn Khān, born at Karah-rūd near Ḳumm on 20 Dhu 'l-Ḳaʿda 949/20 February 1543, during the exile of his father. His family was taken under the protection of Shāh Ṭahmāsp the Ṣafawid (930-984/1524-1576), and he was brought up at the court of that ruler with the latter's children, and received his education there. At the age of twelve, he was raised to the rank of *amīr* of the Kurds, and held this position for three years. In Djumādā II 975/January 1568 he took part in a campaign in Gīlān against the last prince of the Kīyāʾī dynasty, Khān Aḥmad Khān (943-1020/1536-1611), who on several occasions rebelled against the Ṣafawids. This campaign having ended with the capture of the prince, he returned to court, and Shāh Ismāʿīl II, on his accession to the throne in 984/1576, conferred upon him the governorship of the province of Nakhčiwān and Shīrwān, with the title of *amīr al-umarāʾ* of the Kurds. At the time of the invasions of these regions by the Turks under Murād III in 986/1578, he joined the army of the victorious Khusraw Pasha and in this way was placed on the throne of his ancestors at Bidlīs. In 1005/1596-7, he abdicated in favour of his son Shams al-Dīn Khān, and commenced the task of writing a history of the Kurds in Persian, under the title of *Sharaf-nāma*, a work in 15 chapters, the first of which are devoted to the Kurdish tribes and princes and the last (part 2) to the Persian and Turkish rulers of his time. This work was translated into Turkish first by Muḥammad Bey b. Aḥmad Bey Mīrzā in 1078/1667-8, and later by Shamʿī in 1095/1684 (autograph MS. in the Bodleian). The Persian text was published by Veliaminof-Zernof (*Scheref-Nameh*, or history of the Kurds, by Scheref, prince of Bidlīs, published, ... translated and annotated ..., 2 vols., St. Petersburg 1860-2), and a reprint of the first part appeared in Cairo in 1931. F. B. Charmoy has translated it into French (*Cheref-Nāmeh* or history of the Kurdish nation, by Cheref-ou'ddine ... translated with a commentary ..., 2 vols. (4 books), St. Petersburg 1868-75).

BIDPAY [see kalīla wa-dimna].

BĪGHA (the Greek Πηγαί), a town in north-western Asia Minor and now the centre of a *ḳaḍā'* in the province of Çanāḳ-Ḳalʿe, is situated on the Ḳodja Çāy, *i.e.*, the ancient Granicus, about 15 miles from the Sea of Marmara. At the mouth of the Ḳodja Çāy stands Ḳara Bīgha (the Πρίαπος of classical times), which is the port ("iskele") of Bīgha. Bīgha, under Ottoman rule, was at different times a *sandjaḳ* of the *eyālet-i Baḥr-i Sefīd* (the province of the Ḳapudān Pāshā or High Admiral of the Ottoman fleet), a *sandjaḳ* of the *wilāyet* of Khudāwendigār (Brusa), and still later a *ḳaḍā'* in the Muteṣarriflik of Bīgha (the administrative centre of which was, however, not Bīgha itself, but Ḳalʿe-i Sulṭāniyye, *i.e.*, Çanāḳ-Ḳalʿe). The town had in 1945 about 8150 inhabitants.

BĪGHA [see misāḥa].

BIH'ĀFRĪD B. FARWARDĪN, an Iranian religious agitator who, in the later period of Umayyad rule —about 129/747—set himself up as a new prophet at Khawāf in the district of Nīshāpūr. He gathered about him a large following and was put to death with his disciples on the orders of Abū Muslim in 131/749. Before this he is believed to have lived in China for seven years and on his return, to have revealed himself to certain people as resurrected and descended from heaven. Legend also has it that he pretended to be dead and remained for a year in the tomb which he had had built for himself. Enunciating his doctrine in a Persian scripture and claiming that he was in essence a Zoroastrian, he nevertheless adopted certain practices and prohibitions which seem to be inspired by Islam. Among these were the prohibition of wine, animals not ritually bled, and consanguinary marriages, the abolition of the *zamzama* [*q.v.*], the prescription of seven daily prayers to be offered up facing the sun, and obligatory almsgiving.

Doubtless, he intended by this compromise to give a new lease of life to his old religion. But Abū Muslim, incited to turn against him by the Mōbadhs who did not approve of this reform and realising moreover the danger which this movement represented for the new converts, forced Bih'āfrīd to rally to Islam and to support the ʿAbbāsid cause. As, in spite of this, the reformer continued his preaching, he was later executed. Adherents of his doctrine, awaiting the return to earth of their master, were still to be found in the 4th/10th century.

(D. Sourdel)

BIHĀR, a province of India lying between 23° 48′ and 27° 31′ N. and 83° 20′ and 88° 32′ E., bounded by Uttar Pradesh on the west, Nepāl on the north, Bengal and East Pakistan on the east and Orissa on the south; area, with Čhotā Nāgpur, 67,164 sq.m., population 38,784,000. The dialects of the predominantly Hindū population, Bihjpurī, Maithilī and Māgahī, are referred to as Bihārī, and are more akin to Bengali than to Hindī; the latter is, however, the official language of administration and education. The region is now of major economic importance on account of its coalfields and heavy iron industries.

Bihār—which takes its name from the now unimportant town of Bihār, surrounded by Buddhist monasteries (Skt. *vihāra*)—was in the British period from 1765 within the Lieutenant-Governorship of Bengal, later joined administratively with the now independent Orissa [*q.v.*]. This lack of independence reflects the position of the region—whose boundaries have only been formally defined in recent years—from the earliest days of Islamic supremacy in India, and its history is one of individual governors and towns rather than of dynasties and regions. Monghyr (Mungīr), for example, was taken during Ikhtiyār al-Dīn Muḥammad b. Bakhtiyār Khaldjī's raids on Bihār in 589/1193 and held by him under the Delhi sultan Ḳuṭb al-Dīn Aybak; it was annexed to Delhi by Muḥammad b. Tughluḳ in 730/1330, belonged to Djawnpur (Jaunpur) from 799/1397, reverted to Delhi when overrun by Sikandar Lōdī in 893/1488, and was later held by the kings of Bengal before becoming subject to the Mughals. Parts of Bihār did form a separate administrative unit in the 7th/13th centuries (Shams al-Dīn Iletmish established a governor in Bihār in 622/1225); under Akbar in 990/1582 it formed a *sūba* of eight *sarkārs*, subordinate to the *sūba* of Bengal. The capital remained at the town of Bihār until transferred to Paṭnā by Shēr Shāh Sūrī in the 9th/15th century. The importance of the region was as a buffer between Awadh and Bengal until the Mughal period, when the emphasis was as a line of communication between them, as many fine bridges of the Mughal viceroys testify.

2. Monuments: There is no particular 'Bihārī' style of Indo-Islamic architecture. The finest group of buildings is at Sahsarām, including the justly famous mausoleum of Shēr Shāh (inscription of 952/1545) standing 50 m. high in a large artificial lake; its architect, Aliwāl Khān, had been a master-builder under the Delhi Lōdīs, but his treatment of

the octagonal mausoleum transcends any of the Lōdī conceptions. Shēr Shāh obtained the fort of Rohtāsgaṛh from its Hindū Rādjā in 946/1539, and to him is attributed the Djāmiʿ Masdjid; the reconstructed fortifications, the palaces, Habash Khān's tomb and mosque, etc., date from the viceregency (988-1008/1580-1600) of Rādjā Mān Singh under Akbar; to Mān Singh is attributed the mosque at Hadaf, near Rādjmaḥal: the long barrel-vault traversing the central bay of the *liwān* of this early Mughal structure recalls the style of Djwanpur [*q.v.*]. Monghyr has been mentioned above: the fort is reputed to have been built by early Bengal kings, but the style appears Mughal; Rādjā Todar Mall is known to have repaired the fortifications in 988/1580. The two forts of Palamaw, built by local Čero Rādjās in the 11th/17th century, were taken by the Mughal governor Dāʾūd Khān Ķurayshī, who erected a mosque (1070/1660) and other structures; the Nayā Ķilʿa boasts the splendid Nāgpurī Darwāzā in the Djahāngīrī style. The tomb of Makhdūm Shāh Dawlat (Čhoṭī Dargāh) at Maner erected by the governor Ibrāhīm Khān in 1017-26/1608-16 is of some merit. For other buildings see M. Ḥ. Ķuraishī, cited below.

Bibliography: There are no primary sources specifically dealing with Bihār; for the various historical incidents involving Bihār see *Cambridge History of India*, Vols iii (1928) and iv (1937) (full bibliographies); also *Imperial Gazetteer of India*, Vol. viii, Oxford 1908, and, for local histories, relevant volumes of the *Bihar and Orissa District Gazetteers*, Patna *c.* 1930; some are revised versions of the former *Bengal District Gazetteer.*

For the monuments of Shēr Shāh Sūrī, see A. Cunningham, *ASI Report*, xi, 1880; Percy Brown, *Indian Architecture* (*Islamic Period*), Bombay n.d., Chap. xvi; H. Goetz, *The mausoleum of Sher Shah at Sasaram*, in *Ars Islamica*, v, i, 97; for other monuments also, *ASI Annual Report* 1922-3, 34-41, and (most important, with full descriptions and histories of monuments) Maulvī Muḥammad Ḥamīd Ķuraishī, *List of Ancient Monuments ... in Bihar and Orissa, ASI, NIS* Vol. li, Calcutta 1931, 54-66, 139-141, 146-191, 197-202, 207-219. (J. Burton-Page)

BIHĀR-I DĀNISH [see ʿināyat allāh ķanbū].

al-**BIHĀRĪ**, Muḥibb Allāh b. ʿAbd al-Shakūr al-ʿUthmānī al-Ṣiddīķī al-Ḥanafī was born at Karā, a village near Muḥibb ʿAlīpūr in the province of Bihār (India). He belonged to the Malik community, of exotic origin, still unidentified. He received his early education from Ķuṭb al-Dīn al-Anṣārī al-Sihālwī and read some books with Ķuṭb al-Dīn al-Ḥusaynī al-Shamsābādī. After completing his studies he went to the Deccan where Awrangzīb was at the time engaged in military operations against the local rulers. The emperor, impressed by his erudition, especially his high proficiency in jurisprudence, appointed him *ķāḍī* of Lucknow. After some years he was posted to Ḥaydarābād on the defeat of Abū 'l-Ḥasan Tānā Shāh, the ruler of Golconda, in 1097/1686-7 at the hands of Awrangzīb. He was later appointed tutor to Prince Rafīʿ al-Ķadr, a son of Shāh ʿĀlam b. Awrangzīb. He went to Kābul in 1109/1697 along with his ward when Shāh ʿĀlam was appointed governor of that province. On his accession to the throne in 1118/1706-7 Shāh ʿĀlam Bahādur Shāh I appointed him the chief justice of the realm and conferred on him the title of "Fāḍil Khān". He died soon after in 1119/1707.

He is the author of: (i) *Sullam al-ʿUlūm*, a famous text on logic; (ii) *Musallam al-Thubūt*, a standard work on *uṣūl al-fiķh*; (iii) *Djawhar al-Fard*, a dissertation on the indivisible atom. All these three books are prescribed as courses of study in Indo-Pakistan religious institutions and have been the subject of commentaries, glosses and super-glosses. (iv) *Risāla fī 'l-mughālaṭāt al-ʿāmmat al-wurūd*; and (v) *Risāla fī ithbāt anna madhhab al-Ḥanafiyya abʿad ʿan al-raʾy min madhhab al-Shāfiʿiyya.*

Bazmee Ansari), Karachi 1956, 48-53. (A. S. Bazmee Ansari)

BIHĀRISTĀN [see djāmī].

BIHISHT [see djanna].

BIHISHTĪ, *takhalluṣ* of an Ottoman poet and historian, whose personal name was Aḥmed. He was born in about 871/1466-7, the son of a certain Suleymān Bey. At the age of 13 he entered the service of Bāyezīd as a page, but was banished from court for some offence and is reported to have fled to Harāt. He was pardoned but not received back into favour. He was writing his History in the last year of Bāyezīd's reign (917/1511-2) and probably died in that year.

Bihishtī is said to have written the first Khamsa [*q.v.*] in Ottoman Turkish; of his *methnewīs* survive: *Leylā we Medjnūn*, *Makhzen al-Esrār*, *Mihr ü Müshteri*, *İskender-nāme* and *Heft Peyker*. His History, written in a somewhat turgid style, probably consisted originally of eight 'books', one for each of the sultans from ʿOthmān to Bāyezīd II. Add. 7869 in the British Museum and Revan Köşkü 1270, two portions of the same MS, cover the years 791-908; Add. 24,995 in the British Museum, a later compilation mainly based on Bihishtī's history, probably contains material from the first three 'books', which are not known in the full version. The history, which follows closely the *Hasht Bihisht* of Idrīs Bidlīsī [*q.v.*], is neither so early nor so important as was once believed.

Bibliography: Babinger, 43, and sources noted there, especially Rieu, *CTM*, 44 and 47; S. Nüzhet Ergun, *Türk Şairleri*, s.v.; R. İlter, *Bihişti ve Leylî vü Mecnun'u*, unpublished thesis, no. 386 in the Türkiyat Enstitüsü library (a study of Turkish MS 5591 in the library of Istanbul University); a MS. at Ushaw College, Durham, contains the five poems named above. (V. L. Ménage)

BIHĶUBĀDH, in ʿAbbāsid times the name (adopted, with the organisation, from the Sāsānid Persians) of three districts (*Astān*, Arabic *Kūra*) of the province of ʿIrāķ, all situated on the eastern branch (modern Ḥilla branch) of the Euphrates. The name means "the Goodness (or good lands?) of

Ḳubādh", a Sāsānid king who reigned in the 5th century A.D. The districts bordered, to the south, on that of Kūfa, and on the Great Swamp of the Lower Euphrates. The three districts, sometimes referred to jointly as the Bihḳubādhāt, were those of Upper, Middle, and Lower Bihḳubādh. The Upper district contained six sub-districts (*ṭassūdj*), those of the village and ruins of Bābil (Babylon), Khuṭarniya, Upper and Lower al-Talludja, ʿAyn al-Tamr, and another. Middle Bihḳubādh contained four subdivisions, those of the Badāt Canal, of Sūrā and Barbīsamā, of Bārūsamā, and of Nahr al-Malik. Lower Bihḳubādh had five subdivisions, including those of Furāt Badaḥlā and Nistar.

Bibliography: *BGA*, *passim*, particularly iii, 133; vi. 7,236; Yāḳūt, i, 770; *Marāṣid al-Iṭṭilāʿ*, *Lexic. geogr.* (ed. Juynboll), i. 57, 183; iv. 98, 412 ff.; Balādhurī, Futūḥ, 271, 464; M. Streck, *Babylonien nach den arab. Geographen*, i. (1900), 16, 20; J. Marquart, *Ērānšahr* = *Abh. G. W. Gött.*, New Series, Vol. iii, no. 2 (1901), 142, 163 ff.; Le Strange, 70, 81. (M. STRECK-[S. H. LONGRIGG])

BIHRŪZ (AMĪR), son of Amīr Rustam and, like him, chief of the Donbolī. A loyal ally of the Ṣafawids, he took part in the war between Shāh Ṭahmāsp and Sulṭān Sulaymān al-Ḳānūnī in 945/1538. He died in 985/1577, at the age of 90, after having been in power for 50 years. His *laḳab* was Sulaymān Khalīfa. (B. NIKITINE)

BIHRŪZ KHĀN, son of Shah Bandar Khān, *amīr* of the Donbolī. He was known under the name of Sulaymān Khān al-Thānī. At the time of Sulṭān Murād's attack on Ādharbāydjān, he distinguished himself in the army of Shāh Ṣafī. He died in 1041/1631-2.

Bibliography: M. E. Zaki, *Mashāhir al-Kurd wa-Kurdistān*, 144; *Taʾrīkh al-Duwal wa 'l-Imārat al-Kurdiyya*, 386, 387. (B. NIKITINE)

BIHZĀD, KAMĀL AL-DĪN, USTĀD, the most famous Persian miniature-painter. The main sources for his life are: 1. Khwāndamīr, *Ḥabīb al-Siyar*, Bombay 1857, iii, 350 (T. W. Arnold, *Painting in Islam*, Oxford 1928, 140) and two documents from his *Nāma-i Nāmī* (Bibl. Nat., MS. Suppl. Pers. 1842), a preface to an album of calligraphy and miniatures compiled by Bihzād and the document appointing him head of the royal Kitāb-Khāna (Muḥammad Ḳazwīnī-L. Bouvat, *Deux documents inédits relatifs à Behzad*, in *RMM*, xxvi, 1914, 146-161); 2. *Bābur-nāma*, ed. Beveridge, London 1921, 272, 291, 329; 3. Mīrzā Muḥammad Ḥaydar Dughlāt, *Taʾrīkh-i Rashīdī* (T. W. Arnold, in *BSOS*, v, 1930, 672-673); 4. Dūst Muḥammad b. Sulaymān of Harāt, *Account of past and present printers of the year 951 (1544)* in the Bahrām Mīrzā Album, Top-kapu Serai Libr., Istanbul (Binyon-Wilkinson-Gray, *Persian Miniature Painting*, Oxford 1933, 186); 5. Muṣṭafā ʿĀlī, *Menāḳib-i Hünerwerān* (995/1587), Istanbul 1926, 37, 63-65, 67; 6. Ḳāḍī Aḥmad b. Mīr-Munshī, *Gulistān-i Hunar* (1015/1606), (*Calligraphers and painters . . . .*, tr. by V. Minorsky, Washington, 1959, 159, 179-80, 183); 7. Iskandar Munshī, *Taʾrīkh-i ʿĀlam-ārā-yi ʿAbbāsī* (T. W. Arnold, *Painting in Islam*, 141).

On the basis of the existing work of Bihzād, one can assume that he was born during the decade 1450-60. Mīrzā Muḥammad Ḥaydar Dughlāt, Dūst Muḥammad, and Ḳāḍī Aḥmad describe him as a pupil of Amīr Rūḥ Allāh, known as Mīrak Naḳḳāsh of Harāt, the librarian of Sulṭān Ḥusayn Bāyḳarā, who brought up the young orphan; the Turkish art historian ʿĀlī states, however, that his teacher was Pīr Sayyid Aḥmad of Tabrīz; lastly Djahāngīr mentions Khalīl Mīrzā as an artist whose style Bihzād continued (*Tūzuk-i Djahāngīrī*, trs. Roger and Beveridge, ii, 116). He became recognised very quickly, and received great artistic opportunities through his first patron Mīr ʿAlī Shīr Nawāʾī and, from some time before 893/1488 on, through the Tīmūrid Ḥusayn Bāyḳarā, at whose court in Harāt gathered the intellectual *élite* of the time with Nawāʾī, Djāmī and Khwāndamīr at their head. Bihzād remained in Harāt after the dynasty was overthrown by Muḥammad Khān Shaybānī (1507). Bābur says that this prince had the presumption to correct Bihzād's miniatures. He moved, however, to Tabrīz, the Ṣafawid capital, with the latter's conqueror, Shāh Ismāʿīl. The favour which he enjoyed with the latter is evident from the story told by ʿĀlī of Ismāʿīl's anxiety about Bihzād during the campaign against Sulṭān Selīm I, in 1514. The distinction in which he was held became even more evident from the fact that on 27th Djumādā I 928/1522 he was appointed head of the royal library and placed in charge of all the librarians, calligraphers, painters, gilders, marginal draughtsmen, gold mixers, gold beaters and lapis-lazuli washers. This document disproves the statement of Ḳāḍī Aḥmad that Bihzād remained in Harāt until the beginning of the reign of Shāh Ṭahmāsp (930/1524). Under Shāh Ṭahmāsp, Bihzād also received numerous marks of honour and was engaged along with Sulṭān Muḥammad and Aḳā Mīrak in the royal library. In the *Laṭāʾif-nāma* of Fakhrī Sulṭān Muḥammad (c. 927/1520; Brit. Mus. Add. 7,669, fol. 98) is a story which illustrates the aged Bihzād's manner of working: he took a Turkish assistant, Darwīsh Muḥammad Naḳḳāsh of Khurāsān, a colour-preparer, as his pupil and finally entrusted him with his own works. As other pupils are mentioned by Ḥaydar Mīrzā: the portrait painter Ḳāsim ʿAlī, Maḳṣūd and Mullā Yūsuf; by ʿĀlī: Shaykhzāda of Khurāsān and Āḳā Mīrak; by Ḳādī Aḥmad: Dūst-i Dīwāna and the father of the painter Muẓaffar ʿAlī; he also called Bihzād a contemporary of Yārī Mudhahhib of Harāt which is borne out by the fact that they jointly worked on the *Būstān* of 893 H. in Cairo (see below). Ḳāḍī Aḥmad places Darwīsh and Ḳāsim ʿAlī into a slightly earlier period than Bihzād, which would make the master-student relationship doubtful. Finally Iskandar Munshī states that Muẓaffar ʿAlī was one of his pupils. According to a chronogram given by Dūst Muḥammad, Bihzād died in 942/1536-1537 and was buried in Tabrīz beside the poet Shaykh Kamāl of Khudjand; according to another tradition, he died earlier, in 1533-1534. Still another tradition preserved by Ḳāḍī Aḥmad has it that he died in Harāt and that he was buried in the neighbourhood of Kūh-i Mukhtār within an enclosure full of paintings and ornaments. In the Yildiz Library in Istanbul is an alleged portrait miniature which shows the aged Bihzād as an unassuming, apparently shy man in Ṣafawid costume (A. Sakisian, *La miniature persane*, Paris-Brussels 1929, fig. 130).

The older sources yield little information for our knowledge of Bihzād as an artist, however much they praise him as the greatest of his age. Khwāndamīr's extravagant language seems to emphasise his great refinement, minute perfection and power of lifelike representation. Ḥaydar Mīrzā compares him with his teacher Mīrak, whose art is riper although not so finished; also with Shāh Muẓaffar who seems to have been held in almost equal esteem, whom

Bihzād surpassed, however, in control of the brush, in drawing and in figure composition, without attaining his delicacy. Ḳāḍī Aḥmad stresses his sense of proportion and he mentions the excellence of his bird images and that he was fluent in his charcoal drawings. Bābur praises his art as very delicate, especially emphasising the fact that he drew bearded figures admirably, while his beardless figures were not so good, and adds that he exaggerated the length of the double chin. Bābur's successors on the Mug͟hal throne were also among his admirers, eagerly endeavoured to get his works for their libraries and frequently mention the prices they paid (c. 3-5,000 rupees). His works had, however, already previously been collected, as some of his paintings formed part of an album of the Ṣafawid prince Sulṭan Ibrāhīm Mīrzā (d. 984/1517. D̲j̲ahāngīr is one of the first to mention the tradition, also recorded elsewhere, that Bihzād was specially distinguished for his drawing of battle-scenes. As a result of the general esteem in which he was held Bihzād's name finally became proverbial. According to K̲h̲ʷāndamīr he should be put alongside of Mānī, the other traditional creator of incomparable masterpieces, while in typically Persian hyperbole, Ḳāḍī Aḥmad exaggerates this further by stating that Mānī would have imitated him had he known of him. ʿAlī, however, hints that Bihzād's success was to some extent due to the influence of his patrons. This presupposes intrigues and jealousies which may account for the fact that Bihzād is not properly listed in the account of Persian painters and calligraphers given by the Ṣafawid Prince Sām Mīrzā in his *Tuḥfa-yi Sāmī* (M. Mahfuz-ul Haq, *Persian Painters, illuminators and calligraphers, etc. in the 16th century, A.D.*, in *Journal & Proceedings, Asiatic Society of Bengal, New Series*, vol. 38, 1932, 239-42).

Modern research has been mainly concerned with identifying Bihzād's original works. It has been to some extent successful, especially since the London Exhibition of Persian Art in 1931 at which a large number of pictures ascribed to Bihzād were brought together. It is, however, not yet possible to isolate him completely from others in his artistic development and characteristic qualities, as a sufficiently large number of works have not yet been definitely attributed to his predecessors and contemporaries. The problem is greatly complicated by the fact that as a result of Bihzād's fame his signature has been wrongly added to miniatures for centuries, be it for financial profit or to provide a collector with a page by the celebrated painter; or his works have been copied, including the signatures, either *in toto* or in parts, or they have been finished or restored after his death.

The basis for our actual knowledge of Bihzād's work is provided by the paintings in the *Būstān* MS. finished in Rad̲j̲ab 893/June 1488 in Harāt, in the Egyptian National Library, Cairo. It was written for Sulṭān Ḥusayn Bāyḳarā by Sulṭān ʿAlī al-Kātib, illuminated by Yārī, and it has one double frontispiece miniature (with a now defaced signature) and four single-page paintings, dated 893 and 894. Two of the latter have Bihzād's name in the architectural decoration, so that they could not possibly be a later addition, and 2 other signatures are so inconspicuously placed and modest in tone that they too seem to be genuine. As all paintings are in the same style and of the same quality, they have been accepted nearly universally as authentic works of the master. They prove to be the fulfilment of the Tīmūrid style which is shown to perfection. These paintings are most skilfully and harmoniously composed, also in relation to the inserted text units. Within the pictorial space which is treated according to the concepts of the period the none-too-large figures are well distributed in their proper numbers. The rich pigments are of a wide range and applied with a highly developed colour sense. They reveal that, on the whole, Bihzād seems to have preferred cool colours, such as blues and greens, particularly in interior scenes, but they are always balanced by complementary warm colours, especially a bright orange. All the units of the design fit into a decoratively conceived all-over picture which is perfectly executed. The branches of trees in bloom, the richly decorated tile patterns, and the designs on the carpets reveal in particular the artist's decorative sense and the delicacy of his work. Its realism distinguishes it, however, from the paintings of the previous period. This is apparent in the iconography which is no longer purely of courtly nature and primarily devoted to the manly deeds and loves of kings; it brings in addition and on the same level everyday events (*e.g.*, the odd behaviour of a drunken prince, the *wuḍūʾ* at a mosque, mares nursing foals in a stud farm, etc.) and shows also a concern for the activities of persons of lower social standing (a *bawwāb* chastising an intruder, servants bringing food, peasants at work, etc.). Furthermore the figures are no longer mere types, puppets with mask-like faces, but are individualised and often shown full of spontaneous movement or with a sense for the dramatic. Even when they are shown in repose, their attitude is natural.

Since none of the other works connected with Bihzād have a safe signature, though some of them carry attributions dating from the first half of the 16th century, only their stylistic aspect—the perfectly executed combination of the decorative and the realistic—can serve as guide to other true Bihzādian paintings. Some additional help is provided by the custom of the period to work with stencils, so that individual figures known from a well established Bihzād painting can be traced in other, more uncertain works, although such a procedure could also have been done by a student. Unfortunately, our present ignorance of Bihzād's paintings prior to 1485 and after 1500 leaves us in doubt about the master's activities in his youth and old age. In view of so many uncertainties, it is natural that scholars have disagreed about certain attributions, but even if not all of the following works are by the master himself, they are at least from his school.

1. Mīr ʿAlī S̲h̲īr Nawāʾī, *K̲h̲amsa*, dated 890/1485 and written for Badīʿ al-Zamān son of Sulṭān Ḥusayn Bāyḳarā. 4 vols. in Bodleian Library (MSS. Elliot 287, 408, 317, 339) and 1 vol. in John Rylands Library, Manchester (Turk. MS. 3). At least 1 miniature (Elliot 287, fol. 71r°: "Muḥammad and his Companions" very close to Bihzād while another, Elliot 339, 95v°: "Mystics in Landscape", shows strong influence of his style.

2. Amīr K̲h̲usraw Dihlawī, *K̲h̲amsa*, written in 890/1485 by Muḥammad b. Aẓhar. Four miniatures close to Bihzād (F. R. Martin, *Les miniatures de Behzad dans un manuscrit persan daté* 1485, Munich, 1912, pls. 9, 16, 18 and 21).

3. *Gulistān* written by Sulṭān ʿAlī Kātib, Muḥarram 891/Jan. 1486. M. de Rothschild Collection, Paris. One miniature ("Saʿdī and the youth of Kās̲h̲g̲h̲ar") most likely by Bihzād. The paintings

of these 3 MSS. of 1485-86, if they are indeed by Bihzād, whould represent the work of his youth, which has not yet quite reached the quality of the Cairo *Būstān* MS.

4. Double miniature "Sulṭān Ḥusayn Bāyḳarā with his Ḥarīm and Retinue in a Garden", ca. 1490-1495. Tehran, Gulistān Palace Library. Very close to Bihzād's style, goes at least in part back to him.

5. Niẓāmī, *Khamsa*, text dated 846/1442, British Museum, Add. 25,900. 19 miniatures of later date, one dated 898/1493 which is the approximate date for 4 miniatures in Bihzādian style. Three paintings have small attributions probably genuine (fols. 121v°, 161r°, 231v°), a fourth, unsigned on fol. 114r°, ("Madjnūn before the Kaʿba") of such high quality that it could also be by Bihzād.

6. Niẓāmī, *Khamsa*, written for Amīr ʿAlī Fārsī Barlās, one painting dated 900/1494-95. British Museum Or. 6810. 16 miniatures attributed to Bihzād by Djahāngīr and most likely either by him (fols. 37v°, 135v°, 190r°, 214r°, 225v, 233v°) or by his students (fols. 27v°, 72v°, 93r°, 106v, 128v°, 137r°, 144v°, 154v°, 157r°, 175r°).

7. Sharaf al-Dīn ʿAlī Yazdī, *Ẓafar-nama*, probably written for Sulṭān Ḥusayn Bāyḳarā; according to a later colophon finished in 872/1467 by Shīr ʿAlī, but six double-page paintings date from 1490s. Johns Hopkins University Library, Baltimore (R. Garrett Coll.). 8 (*sic*) miniatures attributed by Djahāngīr to the early period of Bihzād. All paintings most likely by Bihzād, though in parts, possibly in collaboration with students; several show later retouches, probably Mughal.

8. Circular miniature "Pīr and Youth in Landscape" in an Anthology dated 930/1524 written for Wazīr Khᵛādja Malik Aḥmad. Washington, Freer Gallery of Art, no. 44, 48. The painting which may be earlier than the MS. closely paraphrases a miniature in no. 2. According to the introduction, the owner, a high official of the Ṣafawid court, regarded it as a genuine work at a time when Bihzād was alive and connected with the royal library. It seems therefore to be a work of the master's old age which would explain its weaker and repetitive character; alternatively, it may be a copy by a student, supervised by Bihzād and therefore regarded as his own work.

9. Single painting "Two Fighting Camels with Attendants", Tehran, Gulistān Palace Library. According to its inscription this is a work by Bihzād when he was 70 years old. In 1017/1608 Djahāngīr took it to be an authentic picture. A mid-15th century version of the same theme shows that this is much weaker than its prototype (R. Ettinghausen, *Some paintings in four Istanbul albums*, in *Ars Orientalis i*, 1954, 102, figs. 3 and 63). Nos. 8 and 9 would therefore have to be regarded as possible works of Bihzād's declining years.

Works mentioned in literature but not now known are: a *Khamsa* of Niẓāmī written by Mawlānā Maḥmūd Nīshāpūrī for Shāh Ṭahmāsp, a *Tīmūr-nāma* written by Sulṭān ʿAlī Mashhadī, and the paintings in the album of miniatures for which Khᵛāndamīr wrote the preface and in the one owned by Sulṭān Ibrāhīm Mīrzā.

Bihzād's influence is first seen in his pupils, of whom some, like Ḳāsim ʿAlī and Āḳā Mīrak, almost attained their master's level. In spite of the fact that another change in style took place very soon under the Ṣafawids, there was in the first three decades of the 10th/16th century a transitional style which shows many features of Bihzād's work; a characteristic example is an ʿAlī Shīr Nawāʾī MS. of 1526 (Bibl. Nat., Suppl. turc, 316). Harāt painters carried Bihzād's style to Bukhārā where it became established at the Shaybānid court. A MS. of ʿAṣṣār's *Mihr-u Mushtarī*, copied in Bukhārā in 929/1523 is a good example of how much more faithful the Bihzādian style was preserved there than in Tabrīz (Freer Gallery of Art, nos. 32,5-32.8). Here the tradition of Bihzād and the Harāt school survived till beyond the middle of the 16th century. By the migration of artists from centres still under Bihzād's influence, the Harāt style and Bihzādian tradition were brought also to India.

Independently of the general development of style we find Bihzād's miniatures and motives more or less faithfully copied down to the 17th century. "Dārā's Meeting with the Horseherd" in the Cairo *Būstān* is found in *Būstān* MSS. of 1535 (Paris, Cartier collection) and 1556 (Bibl. Nat., Suppl. pers. 1187), and others. The "Fighting Camels" recur in many Indian and Persian miniatures, on a Persian carpet with animal designs of the 17th century (Berlin, formerly Schloss-Museum) and on a green glazed faience bottle of about 1600 (London, Victoria and Albert Museum), while as late as 1028/1619 and 1035/1626 Riḍā-i ʿAbbāsī reproduces designs thought to be by Bihzād (Paris, Vignier collection and Gulistān Palace Library).

al-**BIḲĀʿ**, plural of al-Baḳʿa, the proper name of the elongated plain commonly called the Bekaa, which, at a mean altitude of 1,000 metres, lies between the mountains of Lebanon and Anti-Lebanon. The ancients had clearly defined it by the term Coele Syria (Hollow Syria) of which the application was subsequently extended. It is a depression of tectonic origin filled in by sediment, and is an extension of the Jordan rift along the north-south axis which forms one of the basic features of the structure of the Near East. Two rivers, the Līṭānī and the Orontes, which have their sources on either side of the Baʿlabakk watershed, drain it rather inadequately before cutting their way, the one through the rugged highlands of the south, the other through gorges opening on to the basalt plateau of Ḥimṣ. Its continental climate makes it a semi-arid steppe land, which nevertheless is studded with oases and depressions, for long marshy, which justify al-Ḳalḳashandī in mentioning the lake of al-Biḳāʿ in his day.

The complementary works of drainage and irrigation, among which those of Tankiz, viceroy of Syria at the beginning of the Mamlūk epoch, have remained famous, contributed to its development. But today it remains still scantily populated (38 inhabitants per sq. km.) and is traditionally devoted to the production of cereals, which is maintained by a system of communal ownership or of big estates. The majority of its population is Muslim, with Shīʿīs predominating in the north, and lives in large villages situated for preference on the foothills, where caves have long attracted those inclined to the monastic life. Among the localities in this high valley, in ancient times a region of sedentary population and a much-used trade route which then became from the time of the Arab conquest one of the richest districts in the province of Damascus, one may mention, besides many sites renowned for their ancient ruins and cave carvings, the Umayyad residence of ʿAyn al-Djarr [*q.v.*], the straggling village of Karak Nūḥ, which was the Mamlūk capital, and the little prosperous villages of today such as Zaḥla. The most important centre has always been Baʿlabakk [*q.v.*] although in Mamlūk times the authority of this citadel, which had for a long time commanded the whole of the country, had been considerably curtailed, and the neighbouring countryside, divided into two districts, had been entrusted to an independent governor. From that time, alongside the *niyāba* of Baʿlabakk there were two *wilāyas*, the Biḳāʿ al-Baʿlabakkī and the Biḳāʿ al-ʿAzīzī.

The last name is to be connected according to Arab historians with that of a son of Ṣalāḥ al-Dīn, al-ʿAzīz [*q.v.*], and according to certain modern scholars with that of the ancient local divinity *Azizos*. Perhaps one can also see traces of ancient cults in the numerous popular dedications to which toponymy and monuments bear witness, and which evoke above all either the story of Noah and the memories of the flood, or the figure of Ilyās, a hermit *par excellence* and despiser of the cult of Baʿal.

BIKBĀSHĪ [see binbashi].

BILĀD-I THALĀTHA, the three towns, a term employed in Ottoman legal and administrative usage for Eyyūb, Galata, and Üsküdar, *i.e.*, the three separate urban areas attached to Istanbul. Each had its own ḳāḍī, independent of the ḳāḍī of Istanbul, though of lower rank. Every Wednesday the ḳāḍīs of the 'three towns' joined the ḳāḍī of Istanbul in attending the Grand Vezir. This judicial autonomy of the three towns goes back to early Ottoman times, probably even to the conquest. The three towns also enjoyed some autonomy in police matters, being subject not to the police jurisdiction of the Agha of the Janissaries, like Istanbul proper, but of other military officers.

BILĀL b. ABĪ BURDA [see abū burda].

BILĀL b. DJARĪR al-MUḤAMMADĪ, Abū 'l-Nadā, Zurayʿid [*q.v.*] vizier and governor of ʿAdan. He was appointed governor of the city by the Zurayʿid prince Sabāʾ b. Abī 'l-Suʿūd at the time of his war against his cousin and co-ruler of ʿAdan, the Masʿūdid ʿAlī b. Abī 'l-Gharāt, 531-32/1136-38. With the death of Sabāʾ in 533/1138-39 his son and successor, al-Aʿazz, intensely jealous of Bilāl, intended to have him put to death, but died himself in 534/1139-40 before this could be achieved. At his sudden demise Bilāl had a younger son of Sabāʾ, Muḥammad, brought from Taʿizz, where he had gone into concealment from the hatred of his brother, placed him on the throne over the young

Figure A: "Entertainment at the Court of Ḥusayn Bayḳarā". Left part of double frontispiece by Bihzād in a manuscript of Saʿdī's *Būstān*, written in 893/1488. Cairo, Egyptian National Library.
(Courtesy, Egyptian National Library)

Figure B: "King Dārā and the Horseherd". Miniature by Bihzād in a manuscript of Sa'dī's *Būstān*, written in 893/1488.
Cairo, Egyptian National Library.
(Courtesy, Egyptian National Library)

Figure C: "Mosque Scene". Miniature by Bihzād in a manuscript of Saʿdī's *Būstān*, written in 893/1488. Cairo, Egyptian National Library. (Courtesy, Egyptian National Library)

Figure D: "Battle Scene". Miniature by Bihzād in a manuscript of Niẓāmī's *Khamsa*, painted at the end of the XVth century. British Museum, Add. 25900, fol. 231v°. (Copyright British Museum)

Figure E: "Iskandar and the Seven Sages". Miniature probably by Bihzād in a manuscript of Niẓāmī's *Khamsa*, of 900/1494-95. British Museum, Or. 6810, fol. 214r°.
(Copyright British Museum)

sons of al-Aʿazz, and married him to his daughter. As a reward for his loyalty Bilāl was appointed vizier of the now unified city, a post which he retained until his death in 546-47/1151-53. Following the accession of Muḥammad b. Sabāʾ Bilāl was accorded the honorific titles of *al-Shaykh al-Saʿīd al-Muwaffaḳ al-Sadīd* by the Fāṭimid caliph al-Ḥāfiẓ. He is reported to have amassed a considerable fortune while in office, all of which reverted to the ruler upon his death. Two sons of Bilāl followed him in the office of vizier until the fall of the dynasty with the Ayyūbid conquest of South Arabia (569/1173).

BILĀL B. RABĀḤ, sometimes described as Ibn Ḥamāma, after his mother, was a companion of the Prophet and is best known as his *Muʾadhdhin*. Of Ethiopian (African?) stock, he was born in slavery in Mecca among the clan of Jumaḥ, or in the Sarāt. His master is sometimes given as Umayya b. Khalaf [*q.v.*] but also as an unnamed man or woman of the same clan. He was an early convert—some sources credit him with having been the second adult after Abū Bakr to accept Islam. Owing to his status he suffered heavy punishment and torture, especially, it is stated, at the hands of Umayya b. Khalaf, but he bore it with fortitude and would not recant. Finally, he was rescued and manumitted by Abū Bakr who bought him, or exchanged for an able-bodied slave of his own who had not accepted Islam. Henceforth, although a freedman of Abū Bakr, Bilāl seems to have been in constant attendance on the Prophet.

He emigrated to Medīna, where at first he suffered from fever along with Abū Bakr and a number of Meccan Muslims. The Prophet established a tie of brotherhood between him and Abū Ruwayḥa of Khathʿam, whom Bilāl later named as his representative for receiving his pension when he himself decided to campaign in Syria. As a result of this tie of brotherhood, ʿUmar attached the list of African pensioners to that of the tribe of Khathʿam, and Ibn Isḥāḳ records that that was the case in Syria in his own days.

Bilāl became "official" *muʾadhdhin* when the call to prayer was first instituted in the first year of the *Hidjra*. He accompanied the Prophet on all military expeditions. At Badr he caused the deaths of Umayya b. Khalaf and his son, both of whom had already surrendered, but their captor was completely powerless to defend them against the determined attack led by Bilāl.

Although best known as his *muʾadhdhin*, Bilāl was also the Prophet's "mace-bearer" [see *ʿAnaza*], his steward (*Khāzin*), his personal servant, and on occasions, his "adjutant". The climax of his career as a *muʾadhdhin* came when Mecca fell to the Muslims and Bilāl called the faithful to prayer for the first time from the roof of the Kaʿba.

After the death of the Prophet, Bilāl agreed to act as *muʾadhdhin* to Abū Bakr but refused a similar request from ʿUmar, and joined the campaigns in Syria, where he spent the rest of his life. Some sources say that he refused to act in that capacity after the Prophet's death and called publicly to prayer on only two occasions afterwards—when ʿUmar visited al-Djābiya, and when Bilāl himself paid a return visit to Medina and was requested to call the *adhān* by al-Ḥasan and al-Ḥusayn. Both were moving occasions.

Bilāl seemed to have attained high prestige during his lifetime. An Arab tribe accepted his brother as a suitor in spite of his bad character, and (according to Ṭabarī, i, 2527) when ʿUmar sent a representative to Syria to investigate the source of certain donations made by Khālid b. al-Walīd, Bilāl lent support to both the diffident commander Abū ʿUbayda and the Caliph's representative, by himself removing Khālid's turban and demanding an answer. When a satisfactory explanation was given, Bilāl restored Khālid's turban with full respect and honour.

He is described as being tall and thin with a stoop, of dark complexion, with a thin face and thick hair strongly tinged with grey. The date of his death is given variously as 17, 18, 20, or 21 (638, 639, 641, or 642) and his place of burial is stated as Aleppo or, more probably, Damascus or Darayyā.

BILAWHAR WA-YŪDĀSAF, heroes of the *Kitāb Bilawhar wa-Yūdāsaf* (*Būdhāsaf*), an Arabic work deriving ultimately from the traditional biography of Gautama Buddha, and subsequently providing the prototype for the Christian legend of Barlaam and Josaphat.

Contents of story. To the long childless king Janaysar, a pagan ruler of Sūlābaṭ (*i.e.*, Kapilavastu) in India, a son is born by miraculous means. The king names him Yūdāsaf (better: Būdhāsaf = Bodhisattva). An astrologer predicts that the prince's greatness will not be of this world; the king therefore confines the child in a city set apart, to keep him from knowledge of human misery. Growing up, Yūdāsaf frets at his confinement and insists on being allowed out. Riding forth, he sees two infirm men and later, a decrepit old man, and learns of human frailty and death. The holy hermit Bilawhar of Sarandīb (Ceylon) then appears in disguise and preaches to Yūdāsaf in parables, convincing him of the vanity of human existence and the superiority of the ascetic way. Bilawhar spurns renown and riches, indulgence in food and drink, sexual pleasure and all fleshly delights; a vague theism coupled with belief in immortality is preached, but no specifically Islamic dogma advanced.

King Janaysar is hostile to Bilawhar and opposes Yūdāsaf's conversion. In spite of the efforts of the astrologer Rākis and the pagan ascetic al-Bahwan, Janaysar is overcome in a mock debate on the faith and is himself won over. Yūdāsaf renounces his royal estate and embarks on missionary journeys: after various adventures, he reaches Kashmīr (*i.e.*, Kusinārā), where he entrusts the future of his religion to his disciple Abābid (*i.e.*, Ānanda) and dies.

The accompanying table shows the occurrence of the principal parables and fables in the three surviving Arabic versions and in the Georgian and Greek Christian recensions stemming therefrom.

Sources. The *Kitāb Bilawhar wa-Yūdāsaf* is not a direct translation from any Indian Buddhist work, but a syncretic compilation built round episodes in the legendary life of Buddha; it embodies parables of extraneous provenance, including the New Testament parable of the Sower. The narrative framework contains sections reminiscent of such works as the *Buddha-carita*, the *Mahāvastu*, the *Lalita-vistara* and the *Jātaka Tales*. Note that in the authentic tradition, the Buddha had no teacher, however, the ascetic preacher Bilawhar figures in embryo in the Fourth Omen, where the Buddha-elect encounters in Kapilavastu one who had become a wanderer "for the sake of winning self-control, calm, and utter release".

Early clues to the story's transmission to the West are provided by Central Asian Buddhist-Soghdian texts, where *Bodhisattva* is shortened into the form *Pwtysβ*, *i.e.*, *Bōdīsaf*, and by the Manichaean fragments recovered from Turfan in Chinese Turkestan. Le Coq published (*SBPr. Ak. W.*, 1909, 1202-18) a Manichaean Turkish fragment containing the encounter of the Bōdīsaf prince with the decrepit old man; the same scholar published (*Türkische Manichaica aus Chotscho*, I, 5-7, in *Abh. Pr. Ak. W.*, 1911, Anhang) and Radlov and Oldenburg (*Izv. Imp. Akad. Nauk*, 6th ser., VI, 1912, 751-3, 779-82) elucidated another, containing the story of a drunken prince who mistakes a corpse for a maiden, later incorporated in the Ibn Bābūya version. Of particular importance is the discovery, communicated in 1957 by W. B. Henning to the 24th International Congress of Orientalists, Munich, of a fragment in the Berlin Turfan collection comprising portions of 27 couplets of an early Persian metrical rendering, in which the heroes' names occur in the forms *Bylwhr* and *Bwdysf*. This fragment, containing part of Bilawhar's exhortation to Bōdīsaf and of the dialogue concerning Bilawhar's age, is part of a manuscript written not later than the first half of the 10th century A.D. The occurrence of the Iranian name-form *Bwdysf*, as opposed to the Arabic *Būḏhāsaf* with -*ā*- in the second syllable, shows that this version belongs to the earliest line of transmission; it has been tentatively attributed to Rūdakī [*q.v.*] or his school. These indications, pointing to a Central Asian environment and a Middle-Iranian language medium for the early development of the Bilawhar and Yūdāsaf romance, are supported by Yūdāsaf's inclusion, together with Mānī, Bardayṣān, Mazdak and others, in a list of false prophets condemned in ʿAbd al-Ḳāhir b. Ṭāhir al-Baghdādī's treatise *Al-farḳ bayn al-firaḳ* (ed. Muḥammad Badr, Cairo 1328, 333; pt. II, trans. A. S. Halkin, Tel-Aviv, 1935, 200-1). Authorities such as al-Bīrūnī (*Chronology of Ancient Nations*, trans. Sachau, 186-9) connect Būḏhāsaf with the Sabaeans, who were supposed to identify him with both Enoch and Hermes Trismegistus; Būḏhāsaf was also represented as having invented the Iranian alphabet.

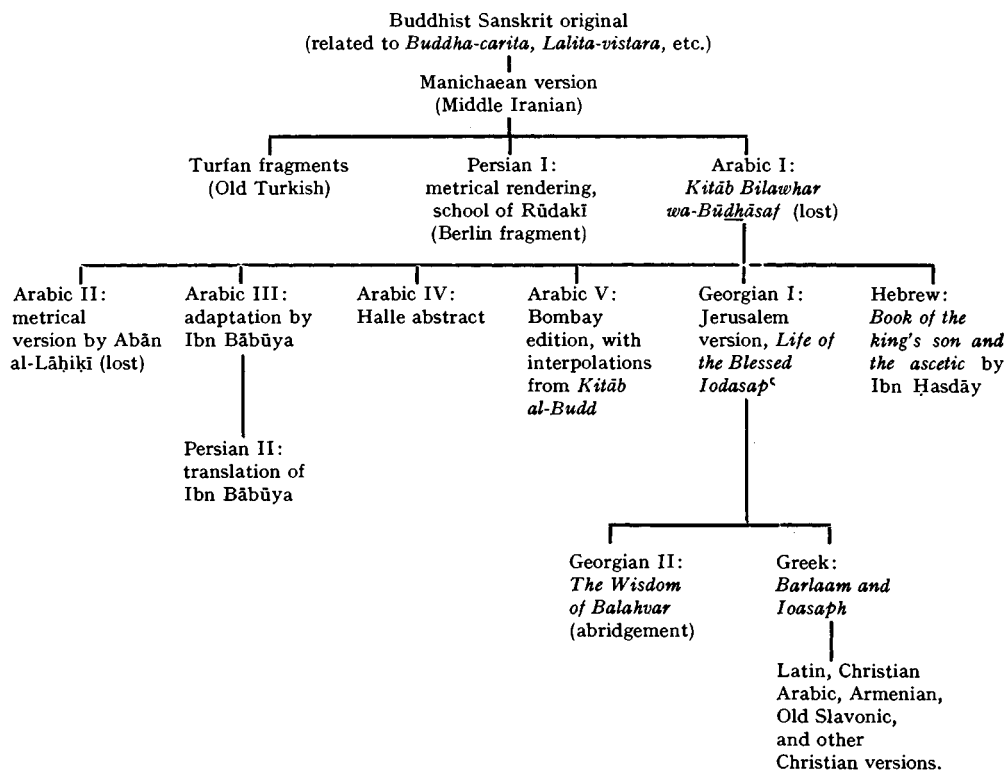
Versions of the work. Among the books translated in early ʿAbbāsid times from Pehlevi into Arabic by Ibn al-Muḳaffaʿ [*q.v.*] and his school, the *Fihrist* lists (305) the *Kitāb al-Budd*, the *Kitāb Bilawhar wa-Yūdāsaf* (*Būḏhāsaf*) and the *Kitāb Būḏhāsaf mufrad*. The last-named book survives as a chapter of the *Nihāyat al-Irab fī Akhbār al-Furs wa 'l-ʿArab* (Browne in *JRAS*, 1900, 216-7; Rosen in *Zap. Vost. Otd. Imp. Russk. Arkh. Obshčestva*, 1901-2, 77-118). The first two are amalgamated in the *Kitāb Bilawhar wa-Būḏhāsaf* published at Bombay in 1306/1888-9 (Russian trans. by Rosen, edit. by Kračkovskiy: *Povest' o Varlaame pustînnike i Iosafe tsareviče indiyskom*, Moscow, 1947). This Bombay edition is the fullest version extant: episodes introduced from the *Kitāb al-Budd* having been distinguished from the remainder, the original Bilawhar and Būḏhāsaf (Yūdāsaf) story may be largely reconstituted, reference being made to the Halle abstract (edit. by Hommel in *Verh. des VII. Int. Orient.-Cong., Semit. Sect.*, Vienna 1888, 115-65; trans. Rehatsek, *JRAS*, 1890, 119-55), the adaptation incorporated in the Shīʿī *Kitāb ikmāl al-dīn wa'itmām al-niʿma* by Ibn Bābūya [*q.v.*], the longer Georgian Christianised version discovered in Jerusalem (Greek Patriarchal Library, Ms. Georgian 140: edit. Abuladze, *Balavarianis k'art'uli redak'tsiebi*, Tiflis, 1957), as well as to the early 13th century Hebrew paraphrase by Abraham b. Ḥasday or Chisdai (see Steinschneider, *Die hebr. Übersetzungen des Mittelalters*, 863-7). The longish fragment of the *Kitāb Bilawhar wa-Yūdāsaf* in the Taymūriyya collection, *Akhlāḳ* section (Brockelmann, I, 158) has been identified by Stern as belonging to the same redaction as the Halle abstract; it supplies some of the text missing in the defective unique Ms. of this recension (notes supplied by S. M. Stern). The metrical version stated in the *Fihrist* (119) to have been composed by Abān al-Lāḥiḳī [*q.v.*] has perished.

Note that in the Mss., the name of Yūdāsaf is written in many different ways; the original *Būḏhāsaf* or *Būdāsaf* has been corrupted by addition of a diacritical point into *Yūḏhāsaf* (whence *Yūzāsaf*) or *Yūdāsaf*, and thence Georgian *Iodasapʿ*, from which comes Greek *Ioasaph*, then Latin *Josaphat*.

Diffusion of the story. With its companion works, the *Kalīla wa-Dimna* and the romance of Sindbād, the book of Bilawhar and Yūdāsaf was widely diffused in early Arabic literature. Note for instance the allusion in the *Rasā'il Ikhwān al-Ṣafā'* (Cairo ed., iv, 120, 223) to Bilawhar's fable of the King, the just Wazīr and the Happy Poor Couple, in connexion with belief in immortality.

The Western Barlaam and Ioasaph (Josaphat) legend derives from the *Kitāb Bilawhar wa-Yūdāsaf* via the longer Georgian (Jerusalem) redaction, wherein the heroes' names appear as Balahvar and

TABLE 2

Transmission of the Book of Bilawhar and Yūdāsaf


Iodasapʿ; the Georgian was adapted and rendered into Greek by St. Euthymius the Athonite and his school about A.D. 1000. The mediaeval attribution of the Greek Barlaam to St. John Damascene, revived by F. Dölger (*Der griechische Barlaam-Roman, ein Werk des H. Johannes von Damaskos,* Ettal 1953), fails to take account of the textual evidence and is to be discounted.

Also to be rejected is the Aḥmadī doctrine which identifies with Jesus Christ the holy Yūz Āsaf whose shrine is venerated at Srīnagar in Kashmīr. Many of the legends concerning the Yūz Āsaf of the Aḥmadīs are simply extracts borrowed from the *Kitāb Bilawhar wa-Yūdāsaf,* with "Kashmīr" substituted for "Kusinārā", the traditional place where the Buddha died.

(D. M. Lang)

BILBĀS, a confederation consisting, according to C. J. Edmonds (220-222), of five tribes: Mangūr, Māmish (I have rather heard it pronounced Māmash), Pīrān, Sinn and Rāmk. The Mangūr of the mountains are an important tribe who live in Persia on both sides of the Lāwēn (the upper reaches of the Little Zāb in Persia). The Mangūr of the plain live in Irak where they consist of two branches: Māngur Zūdī and Māngur-a-Ruta (the naked Mangūr). The Mangūr of the plain recognise the authority of the chief family of the mountain Mangūr, whose head appoints each year one or two persons (not of his own family) to govern the sections in the plain. The Māmash are another important tribe who live in Persia east of the Lāwēn and to the north of the Mangūr. They have also a section in ʿIrāḳ, the Māmash-a-Reshka (the black Māmash). The Pīrān have also one mountain branch in Persia to the north of the Mangūr, west of the Lāwēn, and another in ʿIrāḳ. The Sinn and the Rāmk who had formerly distinguished themselves in the cavalry of Nādir Shāh (*ibid.,* 145), were afterwards expelled from Shahrizūr (*ibid.,* 142-143) by Salīm Bābān (1743-1757) and, fallen from their ancient glory, now occupy five poor villages in Bitwēn near the Zāb. The Rāmk are subdivided into Kečel-u-Klhaw Spiy (bald and white hats) and Faḳē Waysi. Sometimes classed among the Bilbās are the Udjāḳ who live in

Irak above the Mangûr Zūdī, in 8 villages on the frontier. Minorsky counts the Odjāḳ Kā Khiḍrī among the Bilbās but does not include the Sinn and the Rāmk. See M. A. Zakī (*Khulāṣa*, 391, 407, 447), on the subdivisions of the Bilbās tribes. In Wagner (ii, 116, 228) who had formerly (1852) visited the Bilbās, but who refers chiefly to Niebuhr (1766), Rich (1836-7) and Ker Porter (1822), some fuller information is to be found. He points out that when there is discussion on the affairs of the tribe, all its members enjoy equal rights of vote and veto. The blood-money if a man is killed, is 22 oxen. Adultery is punished by death. The girls are never allowed to marry men of another tribe, but the effects of inbreeding are diminished by the regular practice of abduction. C. J. Edmonds draws attention to the romantic character of the Bilbās girls but emphasises the real risk of abduction (225). The Bilbās chiefs bear the name of *mazin* (great), spelt *muzzin* by Wagner. The succession passes to the son or brother of the chief recognised as the bravest.

BILBAYS, a town in Egypt which, because of its site, was of considerable importance in the middle ages. Its name comes from the Coptic Phelbès and Arab authors, doubtful of its pronunciation, called it Bulbays or Bilbīs as well.

Situated on the natural invasion route, it was always the town's fate to be besieged by the armies which came to conquer Egypt. First, in the year 19/640, it was by the Arabs who were halted here for a month; at the time of the Crusades it was by Amalric in the course of fights between the Ayyūbid princes. Its fortifications therefore used to be kept in good repair. In the same way Bilbays was the first stop on the route of troops leaving the capital for Palestine, and armies often camped there; al-Dimashḳī called it the 'gate of Syria'. It was, in fact, in the course of a formidable mobilisation against the Byzantines that the Fāṭimid Caliph, al-ʿAzīz, fell ill and died there, and his son, al-Ḥākim, was invested with the Caliphate in the same place.

Bilbays used to be on the route of the mail couriers and to have a centre for carrier pigeons. Up to modern times it was the capital of the Sharḳiyya province, but was supplanted in the 19th century by Zaḳāzīḳ.

In the year 109/727 the financial administrator of Egypt installed part of the tribe of Ḳays in the region of Bilbays. These, about 3,000 in number, helped commercial traffic as camel-drivers and formed a troop which could be mobilised. The choice had fallan on Bilbays because the town was sparsely populated; the existing inhabitants were not harmed, and the tax receipts were not likely to decrease.

BILEDJIK (the Βηλόκωμα of Byzantine times) is a small town in north-western Asia Minor on the Ḳara Ṣū, an affluent of the Saḳāryā. It is thought that the site of the ancient Agrilion (Agrillum, in the Peutinger Tables) lies not far from Biledjik. The Ottomans seized Biledjik from the Byzantines in the reign of ʿOthmān Beg. Biledjik, under Ottoman rule, was included in the *eyālet* of Anadolu, but later became the administrative centre of the *sandjaḳ* of Erṭoghrul in the *wilāyet* of Khudāvendigār (Brusa). It is now the centre of the present province of Biledjik (Bilecik). The town, long noted for the weaving of silk, suffered much during the events which followed the Great War of 1914-1918. It was occupied by Greek forces in 1921 and was not recovered finally by the Turks until the autumn of the next year. The population of Biledjik amounted, in 1950, to a little less than 4900 inhabitants.

BILGRĀM, a very ancient town in the district of Hardōī (India), situated in 27° 10′ N. and 80° 2′ E., with a population (1951) of 9,565. It has produced a remarkable number of great men. Abu 'l-Faḍl speaks of the inhabitants as being for the most part intelligent and connoisseurs of music.

In early times it was peopled by coppersmiths (as recent discoveries have established), who were turned out by invading Rādjpūts from nearby Ḳannawdj. During the Mughal rule also Bilgrām was a *pargana* in the *sarkār* of Ḳannawdj (*Ā'īn-i Akbarī*, tr. Blochmann, i, 434).

The town was conquered by Ḳāḍī Muḥammad Yūsuf al-ʿUthmānī al-Madanī al-Kāzarūnī in 409/1018 for Sulṭān Maḥmūd of Ghazna during his Indian campaigns. During the anarchy that followed the enfeeblement of Ghaznawid rule in India, it appears that the local Hindus drove out the Muslim ruler of Bilgrām and reoccupied the town. However, during the reign of Sulṭān Shams al-Dīn Iletmish [*q.v.*], Sayyid Muḥammad Ṣughrā, a lineal descendant of Sayyid Abu 'l-Faraḥ of Wāsiṭ, attacked Bilgrām in 614/1217 at the head of a strong contingent of Imperial troops, and defeated Rādjā Srī, after whom the town had come to be known as Srīnagar, and the Muslims reoccupied the town.

In 948/1541 a fierce engagement took place here between the forces of Humāyūn and Shīr Shāh Sūr, resulting in the complete rout of the former. In 1002/1593 Akbar issued a *farmān* prohibiting the public sale of wine and other intoxicants there.

The Sayyids of Bilgrām, who outpaced their

rivals, the ʿUthmānī and Farshawrī *shaykhs* in almost all walks of life, attained fame in history as writers, scholars, poets and administrators. Prominent among them were: ʿAbd al-Wāḥid Bilgrāmī, author of *Sab Sanābil*, ʿAbd al-Djalīl Bilgrāmī [see BILGRĀMĪ]; his son Muḥammad, whose *takhalluṣ* was "Shāʿir"; Ghulām ʿAlī Āzād [*q.v.*]; Amīr Ḥaydar, a grandson of Āzād Bilgrāmī and author of *Sawāniḥ-i Akbarī*; Sayyid ʿAlī Bilgrāmī and his elder brother ʿImād al-Mulk Sayyid Ḥusayn Bilgrāmī, who was the first Indian Muslim to be nominated (1907) a member of the Council of the Secretary of State for India. Sayyid Murtaḍā al-Zabīdī, author of the *Tādj al-ʿArūs*, was also a native of Bilgrām. Awrangzīb is reported to have likened the Sayyids of Bilgrām to the wood used in the Masdjid al-Ḥarām, which could neither be sold nor used as fuel.

Although the *shaykhs* of Bilgrām did not produce many men of distinction (except Rūḥ al-Amīn Khān al-ʿUthmānī, governor of 22 *maḥālls* in the province of the Pandjāb and for some time deputy governor of Awadh under Burhān al-Mulk [*q.v.*], and Murtaḍā Ḥusayn *alias* Allāh Yār Thānī, author of *Ḥadīḳat al-Aḳālīm*), the office of *ḳāḍī* of Bilgrām invariably remained with them. It was mainly to vindicate this claim that Ghulām Ḥusayn Farshawrī and others of his tribe wrote their respective works (see Bibl.).

Bibliography: Ghulām ʿAlī "Azād", *Maʾāthir al-Kirām fi Taʾrīkh-i Bilgrām*, i Agra 1328/1910, ii (*Sarw-i Āzād*) Lahore 1331/1913; Ghulām Ḥusayn "Thamīn" Farshawrī, *Sharāʾif-i ʿUthmānī* (MS Āṣafiyya 202); Aḥmad Allāh Bilgrāmī, *Musadjdjalāt fi Taʾrīkh al-Ḳuḍāt* (MS); Waṣī al-Ḥasan, *Rawḍat al-Kirām Shadjara-i Sādāt-i Bilgrām*, Gorakhpūr 1920; Muḥammad Maḥmūd Ḥamd, *Tanḳīḥ al-Kalām fi Taʾrīkh al-Bilgrām*, Aligarh 1930; Sayyid Djunayd Ṣughrawī Bilgrāmī, *Djunaydiyya* (on the genealogy of the *sayyids* of Bilgrām and Bārha); Sayyid Muḥammad "Shāʿir", *Tabṣirat al-Nāẓirīn* (MS); Sayyid Muḥammad b. Gaz. of Ind.*, VIII 234-5; Āzād Bilgrāmī, *Shadjara-i Ṭayyiba* (MS Aṣafiyya, ii no. 114); Storey i/2, 1183.

(A. S. BAZMEE ANSARI)

BILGRĀMĪ, (i) ʿABD AL-DJALĪL B. SAYYID AḤMAD AL-ḤUSAYNĪ AL-WĀSIṬĪ was born on 13 Shawwāl 1071/10 Nov. 1660 at Bilgrām. He received his education first at his home-town from Saʿd Allāh Bilgrāmī and later at Agra from Faḍāʾil Khān, one of the secretaries of Awrangzīb. When Shāh Ḥusayn Khān was appointed *dīwān* of the *sarkār* of Lucknow he accompanied him there and remained with him for 5 years. It was here that he attended the lectures of Ghulām Naḳshband Lakhnawī (d. 1126/1714). He attained a high degree of proficiency in various branches of learning especially Arabic philology and literature.

He visited Deccan twice, first in 1104/1692 and later in 1111/1699 when he was appointed *bakhshī* and *waḳāʾiʿ-nigār* of Gudjarāt (Shāh Dawla). He held this job till his removal in 1116/1704. The same year he was, however, reinstated but transferred to Bhakkar [*q.v.*] with headquarters at Sīwistān (modern Sēhwān). In 1126/1714 he was dismissed, having made a curious entry in the official journal. It related to the raining of sugar-globules in the *pargana* of Djatōī. He returned to Delhi where he attached himself to Sayyid Ḥusayn ʿAlī Khān Bārha. He died at Delhi in 1138/1725 but his dead body was carried to Bilgrām for burial.

He was the maternal grandfather of Āzād Bilgrāmī [*q.v.*] who devotes lengthy chapters to him in his various works. A poet, primarily in Arabic and Persian, he also composed verses in Turkish and Hindi.

(ii) SAYYID ʿALĪ B. SAYYID ZAYN AL-DĪN ḤUSAYN was born in 1268/1851 at Patna. In 1291/1874 he graduated from Patna College with distinction in Sanskrit. In 1292/1875 he successfully competed for the Native (later Indian) Civil Service standing first in the whole of Bihār. Soon after he joined the London University for higher studies in geology, cartography, mineralogy and biology. On completion of his education he extensively toured the Continent. A polyglot, Sayyid ʿAlī was well-versed in Latin, German, French, Arabic, Persian, Sanskrit, Bengālī, Marāthī, Telugū, Gudjarātī, English and his mother-tongue Urdū. For a number of years he was examiner in Sanskrit in the Madras University. In 1311/1893 he was awarded the title of *Shams al-ʿUlamāʾ* by the Government of India. In 1320/1902 he joined Cambridge University as Reader in Marāthī. The same year he was commissioned to prepare a hand-list of the Arabic and Persian MSS, known as the Delhi collection, in the India Office Library. For several years he held various high offices in the former Ḥaydarābād State. In 1909 Calcutta University conferred on him the degree of LL.D. *honoris causa*. His fame chiefly rests on his Urdū translations of French and English works, notably: (i) *Tamaddun-i ʿArab*, a translation of Gustave Le Bon's work *La civilisation des arabes* (Agra, 1316/1898); (ii) *Tamaddun-i Hind* (Agra 1913), a translation of another work of Le Bon: *La civilisation de l'Inde*. He is also the author of *Risāla dar taḥḳīḳ kitāb Kalīla wa-Dimna* in which he critically examines the sources, editions, characteristics etc. of the original Sanskrit work. It was through his efforts that the Ḥaydarābād codex of the *Bābur-nāma* was published. He died suddenly at Hardōī in 1329/May 2, 1911.

BILḲĪS is the name by which the Queen of Sheba is known in Arabic literature. The story of the Queen's visit to King Solomon (based on I Kings X, 1-10, 13) has undergone extensive Arabian, Ethiopian, and Jewish elaborations and has become the

subject of one of the most wide-spread and fertile cycles of legends in the Orient.

The name Bilḳīs does not appear in the Ḳurʾān but is current with Muslim commentators. Sūra XXVII, 15-45 reflects some of the principal elements of the Sheba legend and describes the sun-worship of the Queen, how a hoopoe (*hudhud*) carries a letter to her from Solomon, the Queen's consultation with her nobles, and the despatch of presents to Solomon. When these are not well received by the King, the Queen of Sheba comes herself and, by a ruse (mistaking the polished floor for a pool of water), is made to uncover her legs. Eventually, she surrenders (together with Solomon) to Allāh, *i.e.* she becomes a Muslim.

Muslim commentators (Ṭabarī, Zamak̲h̲s̲h̲arī, Bayḍāwī) supplement the story at various points: the Queen's name is given as Bilḳīs; the demons at Solomon's Court, afraid that the King may marry Bilḳīs, spread the rumour that the Queen has hairy legs and the foot of an ass. Hence Solomon's ruse of constructing a glass floor which the Queen mistakes for water thus causing her to lift her skirts. Solomon then commands his demons to prepare a special depilatory to remove the disfiguring hair. According to some he then married the Queen, while other traditions assert that he gave her in marriage to one of the *Tubba*ʿs of the tribe of Hamdān.

In Jewish sources the combined narrative of Ḳurʾān and Muslim commentators can first be traced in the 8th (?) century *Targum S̲h̲eni* to Esther where we find a most elaborate version of this story. This is further embellished in the 11th (?) century *Alphabet of Ben Sira* which avers that Nebuchadnezzar was the fruit of the union between Solomon and the Queen of Sheba. The fullest and most significant version of the legend appears in the *Kebra Nagast* ('Glory of the Kings'), the Ethiopian national saga. Here Menelik I is the child of Solomon and Makeda (the Ethiopic name of Bilḳīs) from whom the Ethiopian dynasty claims descent to the present day. While the Abyssinian story offers much greater detail, it omits any mention of the Queen's hairy legs or any other element that might reflect on her unfavourably.

Although the Ḳurʾān and its commentators have preserved the earliest literary reflection of the complete Bilḳīs legend, there is little doubt that the narrative is derived from a Jewish Midrash. This judgement is based not only on intrinsic probability and our knowledge of the general influence of the Midrashic genre on early Islam, but is also supported by: (a) the curiously abrupt version of the story in the Ḳurʾān which clearly presupposes prior development; (b) Talmudic insistence (*Baba Batra* 15b) that it was not a woman but a kingdom of Sheba (based on varying interpretations of Hebrew *mlkt*) that came to Jerusalem (obviously intended to discredit existing stories about the relations between Solomon and the Queen); (c) the Ethiopic loanword *ṣarḥ* in Sūra xxvii, 44 (cf. Nöldeke, *NB*, 51); (d) the probable derivation of Bilḳīs from παλλακίς or the Hebraised *pileges̲h̲* 'concubine'.

In Persian art Bilḳīs may often be seen standing in water before Solomon. The same scene is depicted on a window in King's College Chapel, Cambridge.

(E. ULLENDORFF)

BILLAWR, BALLŪR—whether from the Greek βήρυλλος is a disputed point, cf. Dozy, *Supplément*, i, 110—rock-crystal. According to the *Petrology* of Aristotle the stone is a kind of glass but harder and more compact. It is the finest, purest and most translucent of natural glasses, and also occurs among the colours of the *yāḳūt*; by the dust-coloured rock-crystal is meant the smoky topaz. It may also be artificially coloured; it concentrates the sun's rays so that a black rag or piece of cotton or wool may be set on fire by it; valuable vessels for kings are made of rock-crystal. A commoner kind which is harder and looks like salt—i.e. quartz—gives out sparks when struck by steel and is used for striking fire by kings' servants. No account of its crystalline formation, which Pliny gives, is given by the Arab writers, nor is the general distribution of quartz known. Al-Tīfās̲h̲ī says that at 13 days' journey from Kās̲h̲g̲h̲ar are two mountains the interiors of which consist entirely of beautiful rock-crystal; it is worked at night, as the reflection of the sun's rays renders work by day impossible. Al-Akfānī (in *al-Machriq*, 1908) gives the fullest account of the places in which it is found; according to him it comes from East Africa (Zand̲j̲), Badak̲h̲s̲h̲ān, Armenia, Ceylon, the land of the Franks and Mag̲h̲rib al-Aḳṣā.

According to al-Bīrūnī (d. 430/1038), rock crystal of very high quality from the Zand̲j̲ Islands, near East Africa, and from the Dībad̲j̲āt Islands, west of India, was brought to al-Baṣra, where it was worked into vessels and other objects. The organisation of the manufacture is described in some detail. Such defects as might have been found even in this rock crystal, said to be superior to that mined in Kas̲h̲mīr, were concealed by ornaments and inscriptions.

Nāṣir-i Khusraw, who visited Egypt twice between the years 439/1047 and 441/1050, praises the objects of rock crystal that were sold in the bazaars of Old Cairo (Miṣr). The raw material had up to that time been brought from the Mag̲h̲rib, but he was told that Red Sea rock crystal had recently been received which was even more beautiful and transparent than that brought from the Mag̲h̲rib. Judging from al-G̲h̲uzūlī and al-Maḳrīzī, who drew on earlier sources, the manufacture of rock crystal objects in Egypt must have reached its highest level during the earlier part of the Fāṭimid period. The dispersal of al-Mustanṣir's treasures in the years 453/1061-461/1069 must have been a severe blow to that industry as it brought innumerable objects on the market, some of which are described. These objects were either *mad̲j̲rūd*, plain or faceted, or *manḳūs̲h̲*, ornamented, and it is obvious from what we have heard from al-Bīrūnī that the latter were then held in higher esteem than the former.

Apart from pieces of Ṣafawid, Mug̲h̲al or other post-mediaeval origin, something like 165 objects of rock crystal are known to exist which are indisputably of Islamic origin. In the majority of cases they have been preserved in the treasures of European churches, where most of them have served as reliquaries. In such cases the mounting may offer a

terminus ante quem for the dating of the rock crystal object, the earliest of such *termini* falling within the years 973 and 982 A.D. Not a single one out of these 165 odd specimens—which include many chess pieces and other minor objects—bears a date, but two of them have inscriptions containing the name of a ruler, in both cases a Fāṭimid Caliph: a ewer in the Treasure of St. Mark's in Venice made for al-ʿAzīz (365/975-386/996), and a crescent-shaped object in Nuremburg, perhaps the head-gear of a harness, made for his grandson al-Ẓāhir (411/1021-427/1036). A ewer in Florence must have been made for al-Ḥusayn b. Djawhar between 390/1000 and 401/1011, during the reign of al-Ḥākim.

All these works in rock crystal are often spoken of as "Fāṭimid", but quite a number of them must be of pre-Fāṭimid origin, and some of them may have been made at al-Baṣra.

The entire number of specimens referred to belong to the category described as *manḳūsh*; on the other hand we hardly possess any example of *madjrūd* work, unless we accept as such some of the faceted ewers that some scholars regard as Fāṭimid, while others think they were made in Europe (Burgundy, Bohemia, Sicily, or Spain).

(J. RUSKA-[C. J. LAMM])

BILLITON, corrupted form of Belitung, island in Indonesia at about 108° eastern Long. and 3° southern Lat., a little larger than 1800 square miles. It owes its fame to its tin-mines, and it is probably for this reason that it is mentioned in Indonesian documents of about 900 A.D. A part of the indigenous population—less than 100,000 souls—was converted to Islam in the 19th century.

BILLŪR KÖSHK, "The Crystal Palace"; this is the title of a Turkish folk tale which gave its name to the oldest Turkish collection of such tales. Variations of this one can be found in Naki Tezel, *Istanbul masalları* (publications of the Eminönü Halkevi, no. x), Istanbul 1938, 202 ff.; W. Radloff, *Proben der Volksliteratur der türkischen Stämme*, St. Petersburg 1885 ff., viii (texts collected by I. Kúnos, 1899), part III, no. 19; Ignácz Kúnos, *Materialien zur Kenntnis des rumelischen Türkisch*, part I, *Volksmärchen aus Adakale*, Leipzig and New York 1907, 255-261, no. 50; 8 MSS of the tale of Billūr Köshk, or, more specifically, of its variant *Incili Çadır*, can be found in the Folklore Archives of the Dil ve Tarih-Coğrafya Fakültesi in Ankara.

This collection usually contains 13 tales, including the title story Billūr Köshk (in the edition by I. Kúnos, cf. *Türkische Volksmärchen*, V, note 2, there is a further tale, *Khırsız ile Yemenidji*) and the farce *Hırsız ile Yankesici*, ("The thief and the pick-pocket"). All of these have an oral tradition, and have only recently been somewhat modernised and brought out in book form. They have, however, lost nothing of their popular flavour in spite of their literary style. Numerous editions of this collection of folk tales have circulated in Turkey during the past hundred years, and since the writing reform in 1928, there have also been some in Latin script.

Editions: *Billūr Köshk Ḥikâyesi*, ed. Emniyet Kütübkhānesi, Istanbul 1339; *Billūr Köşk Hikâyesi*, Istanbul 1928; Selâmi Münir Yurdatap, *Resimli Billûr Köşk Hikâyesi*, Istanbul 1940.

Translations: T. Menzel, *Türkische Märchen* I: *Billur Köschk*. 14 Turkish tales, translated into German for the first time, from the two Istanbul editions of the collection. (*Beiträge zur Märchenkunde des Morgenlandes*, edited by G. Jacob and T. Menzel, ii), Hannover 1923.

Boratav, *Billûr Köşk*, in *IA*, ii (1944), 613; W. Eberhard and P. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953.

(H. W. DUDA)

BILMA, (Ar.) (in Tedaga: Togei or Tzigei), chief centre of the Kawar, a group of oases situated mid-way between Fezzan and Chad, on the main route from the Mediterranean to the Sudan. The palm groves extend for 90 kilometres from north to south, from Anay to Bilma. At no point are they more than 2 kilometres wide. Bilma is situated at the foot of a cliff which faces west; its base is formed by the marine layers of Upper Cretaceous, and its summit by the sandstone of the Continental terminal.

Although conquered by the Arabs in the 1st/7th century (expedition of ʿUḳba b. Nāfiʿ reported by Ibn ʿAbd al-Ḥakam), the Kawar was still partly pagan at the beginning of the 19th century. The population, numbering about 1500, consists of a settled negro race, the Kanuri, and the Guezebida, hybrids from Kanuri and Teda. These settlers have always been subject to the nomads who inhabit the neighbouring regions, first to the Touareg of the Aïr, then to the Teda. They cultivate palm-trees whose dates are sent to the Tibesti and to the Hausa countries; but their chief means of livelihood lies in the exploitation of the salt-works situated at 2 kilometres to the north-west of Bilma, at Kalala.

These salt works are made up of about a thousand pits spread over some 15 hectares. The salt is mainly extracted in the hot season, from April to November, because of evaporation.

The pits are dug down to the underground water level (2 m.), the water is left to evaporate, a crust is formed which is broken with palm sticks, and the salt is deposited at the bottom. There are two main types of salt: *beza*, in the form of crystals which is

not treated in any way and is used for human consumption, and the *kantu*, moulded into loaves in hollowed out palm-trunks and used chiefly for the feeding of animals. The salt-works belonged first to the Koyom, a Kanuri tribe, who were driven back to the south-east of Kawar, between Kouka and Gouré; then, from the sixteenth century, to a Touareg tribe, the Kel Gress. Since the arrival of the French, they have belonged to the people of Bilma. The apply for authority to dig to the village chief who is master of the land, and exploit the works themselves, without paying royalties to anyone. All commercial activity is carred on during the *azalay* [*q.v.*] in the autumn and spring, when the Touareg caravans bring in the millet, butter, dried meat, fabrics and kola nuts which are bartered for the salt. These great caravans comprising several thousand camels, with growing security have been replaced by smaller individual caravans, which are tending to get smaller still, following the infiltration into Nigeria of sea-water salt and European salt, but the family bartering system remains unchanged; only the rate of exchange varies from year to year.

BILMEDJE, the name given as a rule to popular riddles among the Ottoman Turks. Northern and eastern Turks use instead various words from the root *tap-* ('to find'), such as *tabïshmak*, *tapmadja*, *tapkïsh*, *tabïshkak*, *tabushturmak*.

The true riddles of the people can generally be distinguished from artificial riddles such as the *lughaz* or *muʿammā* by their obviously simple form, their puns or double meanings, and their appearance of unreason or illogicality. This last characteristic of riddles, their irrationality, is manifested in this way: when speaking of various objects and happenings, certain traditional expressions are employed which have only a vague connexion with the ordinary natural way of looking at things, and which must be known before the meaning can be grasped. That is to say, it is not generally possible to find the solution to a riddle by using one's logical judgement. To solve a riddle, one must first comprehend the sense of the peculiar terminology, which has something of the quality of a hieroglyph. None of these features is peculiar to popular Turkish riddles. The riddles of any given people differ from those of any other only in details, usually of form. The specially Turkish character of the *bilmedje* is primarily bound up with geographical location and Turkish popular life. Broadly speaking, the Islamic stamp is secondary and unimportant.

At the present time, riddles chiefly constitute the branch of Turkish popular literature that is peculiar to children. Nevertheless, we have evidence suggesting that once upon a time they were regarded very seriously and formed a part of popular philosophy: we find stories in which riddling contests occur, with one man quoting a hemistich and his opponent capping it with another, sometimes with serious consequences for the defeated party. So too the existence of riddles relating to cosmology and sex shows clearly that these were not originally invented for children. With the change in their social rôle, riddles underwent considerable modification and took on new meanings. Indeed the solution of riddles is usually a shifting and fluid element in them.

Riddles are mostly in the form of a short proposition: consider for example this riddle, known to have existed as early as the 14th century and still widespread today: *yer altïnda yaghlï kayïsh* ('oily sliding underground') = 'snake'. Most of the popular riddles consist of two parts which are assonant or half-rhyming because of the syntactical balance between them: *Allah yapar yapïsïnï—bičak ačar kapïsïnï* ('God builds its structure, the knife opens its door') = 'water-melon'. Riddles of this pattern are often extended into regular quatrains (*mānī*), a chacteristic form of Turkish popular verse. Paronomasia and onomatopoeia abound.

A comparative examination of material so far collected shows that the various groups into which riddles may be classified are all variants of certain primitive types. In fact, because of the alterations incidental to the process of being passed orally from one person to another, and because they are consciously adjusted to suit new solutions, riddles are subject to constant change. This entails a well-nigh infinite increase in the number of variants. Nevertheless there are some riddles which have changed neither their form nor their solution for centuries.

As early as Maḥmūd Kāshgharī's *Diwān Lughāt al-Turk* (11th century) we find riddles, under the names *tabuzghu neng*, *tabuzghuk* and *tabzugh*. But the oldest known examples of Turkish popular riddles are found in the Codex Cumanicus and have formed the subject of numerous publications (G. Kuun, *Codex Cumanicus*, Budapest 1880, 143-157, 236 foll.; W. Radloff, *Das Türkische Sprachmaterial des C. C.* (*Mém. de l'Acad. de St. Petersburg*, 1887, xxxv, 2 foll., no. 6); W. Bang, *Über die Rätsel des C. C.* (*SBPr. Ak. W.*, 1912, xxi, 334-353); J. Németh, *Die Rätsel des C. C.* (*ZDMG*, 1913, lxvii, 577-608); S. E. Malov, *K istorii i kritike C. C.* (Izv. Akad. Nauk SSSR, literary section, 1930, 348-375); J. Németh, *Zu den Rätseln des C. C.* (*KCA*, ii, 366 foll.).

There are also a good many collections of riddles recorded by contemporary scholars, but these are far from having exhausted the rich store existing among the Turkish peoples.

Bibliography: A. N. Samoylovich, *Zagadki zakaspiyskikh Turkmenov* (Zivaya Starina, 1909), 28-32. He has published a bibliography of studies of riddles of the Turkish peoples till 1932. This (*RO*, iv, 4 f.; till 1926) has been completed by Malov. For bibliography of Ottoman riddles see Kowalski's article *Türkische Volksrätsel aus Nordbulgarien* (*Festschrift für G. Jacob*), 130 ff. (till 1932). Important collections of Turkish riddles: I. Kúnos, *Oszmanlörök népköltési gyujtemény*, Budapest 1889, ii, 141-177; T. Kowalski, *Zagadki ludowe tureckie*, Krakow 1919; Saʿd al-Dīn Nüzhet and Aḥmed Ferīd, *Ḳonya wilāyeti khalḳiyāt we harthiyatï*, Ḳonya 1926, 225-233; Hammamī-zāde Ihsan, *Bilmeceler* (articles on Turkish folklore), iii, Istanbul 1930; T. Kowalski, *Türkische Volksrätsel aus Kleinasien*, (*ArO* 1932, iv, 295-324). (T. KOWALSKI*)

BĪMĀRISTĀN, often contracted to *māristān*, from Persian *bīmār* 'sick' + the suffix *-istān* denoting place, a hospital. In modern usage *bīmāristān* is applied especially to a lunatic asylum.

i. *Early period and Muslim East.*

According to the Arabs themselves (cf. Maḳrīzī, *Khiṭaṭ*, ii, 405), the first hospital was founded either by Manāḳyūs, a mythical king of Egypt, or by Hippocrates, the latter of whom is said to have made for the sick in a garden near his house a *xenodokeion*, literally 'lodging for strangers'. The authority for this statement is given by Ibn Abī Uṣaybiʿa (ʿ*Uyūn*, ed. Müller, i, 26-27) as Book 3 of Galen's *Fī akhlāḳ al-nafs* (*Peri Êthōn*), a work which has not survived in Greek. Since hospitals were not a feature of life in classical antiquity, the question of origin is not solved by these indications. Al-Walīd I (Caliph 86-96/705-715) is credited with having been the first to build a *māristān* in Islam, placing in it doctors and assigning them stipends (Maḳrīzī, *loc. cit.*), but although this is stated in similar terms ('hospitals for the sick') by so early a writer as Ibn al-Faḳīh *circa* 289/902 (106-107), the fact is open to doubt. According to al-Ṭabarī (ii, 1196), al-Walīd restrained the lepers from going out among the people and assigned them stipends, — a bare statement somewhat amplified in another passage (ii, 1271), where al-Ṭabarī mentions that al-Walīd 'gave donations to the lepers, telling them not to beg from the people and assigned to every cripple a servant and to every blind person a guide'. Ibn al-Athīr (*sub anno* 88/707) has a short notice to the same effect, and al-Dhahabī adds that the servants and guides were slaves (*Taʾrīkh al-Islām*, iv, 67). It would seem that we have to do here with measures of segregation, somewhat as in Muslim Spain later, where a whole quarter at Ḳurṭuba (Cordova) was known as Rabaḍ al-Marḍā, 'Suburb of the Sick' (cf. E. Lévi-Provençal, *Hist. Esp. mus.*, iii, 381-382, 434).

The establishment of the first real hospital in Islam depended on the continuing influence of the medical school and hospital at Djundaysābūr (Djundīshāpūr) in Khūzistān. Founded under the Sāsānids, this institution maintained its Syro-Persian and Indian, ultimately Greek, traditions, into the Arab period and from the time of the transference of the capital to al-ʿIrāḳ exercised a profound effect on the development of Arabic medicine. As far as hospitals are concerned, contact with Djundaysābūr bore fruit in the reign of Hārūn al-Rashīd (170/786-193/809), who charged Djibrāʾīl b. Bakhtīshūʿ, a Christian doctor of that school, with the creation of a *bīmāristān* in Baghdād. At the same time a skilled dispenser in the *bīmāristān* at Djundaysābūr was sent to Baghdād. This man's son, Yūḥannā (Yaḥyā) b. Māsawayh, afterwards became head of the new *bīmāristān* (Ibn al-Ḳifṭī, *Taʾrīkh al-Ḥukamāʾ*, ed. Lippert, 383-384; Ibn Abī Uṣaybiʿa, i, 174-175). The original Baghdād hospital was situated in the S.W. suburb on the Karkhāyā Canal. It was here that, following the catholic traditions of Djundaysābūr, the Indian Manka at the request of Yaḥyā b. Khālid al-Barmakī translated the Sanskrit medical work *Suśruta-saṃhitā* into Persian (*Fihrist*, 303) and al-Rāzī (Rhazes) lectured, according to some.

How long the *bīmāristān* of Hārūn continued to function alone is not clear. From the beginning of the 4th/10th century or somewhat earlier we hear of a spate of new foundations in Baghdād: the *bīmāristān* founded by Badr al-Muʿtaḍidī, the *ghulām*, 'page', of al-Muʿtaḍid (279/892-289/902) in the Mukharrim quarter on the E. bank of the Tigris (Ibn Abī Uṣaybiʿa, i, 221, cf. 214); a *bīmāristān* in the Ḥarbiyya quarter, N. of the City of al-Manṣūr, endowed in 302/914 by the 'good *wazīr*' ʿAlī b. ʿĪsā, who gave the direction of it together with 'the rest of the hospitals in Baghdād, Makka and al-Madīna' to the learned Abū ʿUthmān Saʿīd b. Yaʿḳūb al-Dimishḳī, otherwise known as a translator (Ibn Abī Uṣaybiʿa, i, 234); the Bīmāristān al-Sayyida on the E. bank, opened in al-Muḥarram, 306/June, 918 by Sinān b. Thābit, who appears to have succeeded Abū ʿUthmān al-Dimishḳī as general intendant of hospitals in Baghdād and elsewhere (Ibn Abī Uṣaybiʿa, i, 221-222); the Bīmāristān al-Muḳtadirī at the Bāb al-Shām, built about the same time (Ibn Abī Uṣaybiʿa, i, 222); and the *bīmāristān* of Ibn al-Furāt in Darb al-Mufaḍḍal, over which Thābit b. Sinān is said to have been given the charge in 313/925 (Ibn Abī Uṣaybiʿa, i, 224). These hospitals derived their revenues from endowments (*waḳf*) made by powerful and wealthy individuals. The funds were in the hands of trustees, who were not always very attentive to their responsibilities (Ibn Abī Uṣaybiʿa, i, 221). An idea of the size of the hospitals may be gained from their monthly expenditure: at the Muḳtadirī 200 *dīnārs* a month; at the Bīmāristān al-Sayyida, 600 *dīnārs* a month (*ibid.*). Some comfort for the patients was secured by the provision of blankets and charcoal in cold weather (Ibn Abī Uṣaybiʿa, i, 222). Efforts in this direction sometimes went much farther (see below).

We know less about hospitals in the provinces, but some certainly existed before the 4th/10th century. The *bīmāristān* of al-Rayy, over which al-Rāzī presided before coming to Baghdād, where he died as head of a hospital about 320/932 (Ibn al-Ḳifṭī, 272), was a large institution (cf. Ibn al-Ḳifṭī, 273; Ibn Abī Uṣaybiʿa, i, 310-311) and had probably been in existence for some time. A lunatic asylum at Dayr Hiziḳil between Wāsiṭ and Baghdād was visited by al-Mubarrad in the Caliphate of al-Mutawakkil, *i.e.*, between 232/847 and 247/861 (Masʿūdī, *Murūdj*, vii, 197 ff.).

In the time of Sinān b. Thābit, who died in 331/942 (*Fihrist*, 302), on instructions from ʿAlī b. ʿĪsā already mentioned the prisons were daily visited by doctors, medicines and potions were provided for sick prisoners, and female visitors were also admitted, evidently in the capacity of nurses (Ibn Abī Uṣaybiʿa, i, 221). At the same period medical practitioners and a travelling dispensary (*khizāna li 'l-adwiya wa 'l-ashriba*) were sent round the villages of the Sawād (*i.e.*, lower ʿIrāḳ). From correspondence between Sinān and the *wazīr* concerning this mobile medical unit it appears that at this time non-Muslims as well as Muslims were treated at the *bīmāristāns* (Ibn Abī Uṣaybiʿa, *ibid.*).

At least some of the Baghdād hospitals which have been listed were probably still in existence when the great ʿAḍudī *bīmāristān* was founded at the bend of the Tigris in W. Baghdād by the Buwayhid ʿAḍud al-Dawla Al-Rāzī is repeatedly mentioned in connexion with this hospital, which from the time of its opening in 372/982, shortly before the death of ʿAḍud al-Dawla (Dhahabī, *Duwal al-Islām*, i, 167), was the most celebrated of the hospitals of Baghdād. It is said that al-Rāzī chose the site by causing a piece of meat to be suspended in every part of the city, and discovering where there was least putrefaction, and also that ʿAḍud al-Dawla selected him from more than a hundred doctors as first chief (the word is *sāʿūr*, from Syriac) of the new foundation (Ibn Abī Uṣaybiʿa, i, 309-310). But al-Rāzī had died 50 years earlier. The explanation of the anachronism,

already noted by Ibn Abī Uṣaybiʿa (*ibid.*), may be the similarity in the script of the Bīmāristān al-ʿAḍudī and that founded in al-Rāzī's lifetime by al-Muʿtaḍidī (see above).

When first founded, the ʿAḍudī hospital had twenty-four doctors (Ibn al-Ḳifṭī 235-236). Several classes of specialists are mentioned: 'physiologists' (*ṭabāʾiʿiyyun*), oculists (*kaḥḥālūn*), surgeons (*dj̲arāʾiḥiyyūn*) and bonesetters (*mudj̲abbirūn*) (Ibn Abī Uṣaybiʿa, i, 310). The salary of Dj̲ibrāʾīl b. ʿUbayd Allāh, whose turn of duty at the *bīmāristān* was two days and two nights per week, is given as 300 *dirhams*, *i.e.*, monthly (Ibn al-Ḳifṭī, 148). Lectures were given at the ʿAḍudī hospital (Ibn Abī Uṣaybiʿa, i, 239, 244), and we know some of the works which were read in this way, *e.g.*, the *Aḳrābādh̲īn* (Antidotarium) of Sābūr b. Sahl of Dj̲undaysābūr (*Fihrist*, 297, cf. Brockelmann, I, 232), eventually superseded by another work of the same title by Ibn al-Tilmīdh̲, a later dean (*sāʿūr*, see above) of the ʿAḍudī hospital (Ibn Abī Uṣaybiʿa, i, 161, 259). When Ibn Dj̲ubayr visited Bag̲h̲dād in 580/1184 the place was like a great castle, with a water-supply from the Tigris, and all the appurtenances of royal palaces (*Riḥla*, ed. De Goeje, 225-226).

Another of the great hospitals of mediaeval Islam was founded in Damascus by Nūr al-Dīn b. Zangī (541/1146-569/1175). The Nūrī hospital is said to have been built from the ransom of an unnamed king of the Franks (Maḳrīzī, *K̲h̲iṭaṭ*, ii, 408). Ibn Dj̲ubayr (*Riḥla*, 283) describes how the staff kept lists of the patients' names and the amounts of medicines and food which each required. A typical day in the life of a leading doctor at the Nūrī hospital included going the rounds of the sick and writing down prescriptions of medicine and treatment, visiting private patients, then returning to the hospital in the evening to lecture for three hours on medical subjects (Ibn Abī Uṣaybiʿa, ii, 155). There was also a Nūrī hospital at Ḥalab (Aleppo) (Rāg̲h̲ib al-Ṭabbākh̲, *Taʾrīkh̲ Ḥalab*, ii, 77).

In Egypt no *bīmāristān* existed till Aḥmad b. Ṭūlūn constructed one in 259/872-261/874 (Maḳrīzī, *K̲h̲iṭaṭ*, ii, 405). Here the rule was that no soldier or slave should be admitted for treatment. The institution was richly endowed, with facilities for men and women. The Nāṣirī hospital was founded by Salāḥ al-Dīn, but the great creation of al-Manṣūr Ḳalāʾūn, completed in 11 months in 683/1284, was the most splendid of its kind in Egypt, and perhaps the most elaborate which had yet been seen in Islam. The endowment is said to have amounted to nearly one million *dirhams* in a year (Maḳrīzī, *K̲h̲iṭaṭ*, ii, 406). Men and women were admitted. None was turned away, nor was the period of treatment limited. Formerly a Fāṭimid palace with accomodation for 8,000 persons, the Manṣūrī hospital possessed wards where fevers, ophthalmia, surgical cases, dysentery, etc., were separately treated, a pharmacy, a dispensary, store-rooms, attendants of both sexes, a large administrative staff, lecture arrangements, a chapel, a library, in fact all that the best experience of the time could suggest for the healing of the sick. The account of these matters given by al-Makrizi (*K̲h̲iṭaṭ*, ii, 406-408) is an impressive tribute to the hospital science of mediaeval Islam.

Books were written about hospitals, *e.g.*, the *Kitāb fī ṣifāt al-bīmāristān* of al-Rāzī (Ibn Abī Uṣaybiʿa, i, 310), the *Bīmāristānī* par excellence (cf. Ibn al-Ḳifṭī, 272 = Ibn Dj̲uldj̲ul, ed. Fuʾād Sayyid, 77), which, like the *Kitāb al-bīmāristānāt* of Zāhid al-ʿUlamāʾ al-Fāriḳī, head of a flourishing hospital in Mesopotamia in the 5th/11th century (Ibn Abī Uṣaybiʿa, i, 253), is now lost. Somewhat different are the *Maḳāla Amīniyya fī 'l-adwiya al-bīmāristāniyya* of Ibn al-Tilmīdh̲ and the *Dastūr al-bīmāristānī* of Ibn Abi 'l-Bayyān, both works on pharmacopoeia mentioned by Paul Sbath (*Al-Fihrist*, Cairo 1938, i, 10, 75), who gave an edition of the latter (*Bulletin de l'Institut d'Égypte*, xv, 1932-1933, 13-78).

ii. *Muslim West.*

The first large hospital in North Africa for which there is any evidence was founded at Marrākus̲h̲ by the Almohad sultan Yaʿḳūb al-Manṣūr (580-95/1184-99) about a hundred years before the establishment of the famous hospital at Cairo. The sultan was a great builder and, after attracting to his court the most celebrated Spanish doctors of his time: Ibn Ṭufayl, Ibn Rus̲h̲d, Ibn Zuhr al-Ḥafīd and his son, he built in his capital, for sick foreigners both rich and poor, a magnificent hospital of which there is a description by ʿAbd al-Wāḥid al-Marrākus̲h̲ī (cf. *al-Muʿdj̲ib*, ed. Mohammed El-Fassi, 1938, 176-177). The same sultan also founded, in various parts of the empire, hospitals for the insane, for lepers and for the blind (cf. *al-Ḳirṭās*, ed. Fās 1305, 154; trans. Beaumier, 306).

The great Marīnid Sultans [*q.v.*], Abū Yūsuf Yaʿḳūb, Abu 'l-Ḥasan and Abū ʿInān, kept up these establishments and added many others (cf. *al-Ḳirṭās*, ed. Fās, 1305, 214; *al-Dh̲akh̲īra al-Saniyya*, ed. Ben Cheneb, 100; Ibn Marzūḳ, *al-Musnad*, ed. Lévi-Provençal, in *Hesperis* v (1925), 36; Ibn Baṭṭūṭa, *Riḥla*, ed. Defrémery and Sanguinetti, iv, 347). At a later date, the ruling sultans appropriated the revenues intended for these hospitals, which consequently fell into decline or disappeared.

At the beginning of the 10th/16th century, Leo Africanus described the hospital at Fez as being in total decline and used primarily as a prison for dangerous lunatics. This is still its function, and it is also used as a prison for women (cf. Leo Africanus, *Description de l'Afrique*, trans. Schefer, ii, 78, trans. Épaulard i, 188; Le Tourneau, *Fes*, 255-257).

The famous Almohad hospital at Marrākus̲h̲ seems to have disappeared without leaving any traces, and the hospital founded there by the Saʿdid sultan ʿAbd Allāh al-G̲h̲ālib bi-llāh (965-81/1557-74) became a prison for women (cf. al-Nāṣirī, *Kitāb al-Istiḳṣāʾ*, trans. v, 63).

In 1247/1831-32, the ʿAlawid sultan Mawlāy ʿAbd al-Raḥmān built at Salé a hospital attached to the

sanctuary of Sayyidī Ibn ʿĀs̲h̲ir. This hospital, which is still in use, dispensed with doctors; instead, the sick relied for their cure upon the *baraka* of the saint. The memory of old hospitals which have disappeared or fallen into disuse is preserved in some towns of Morocco, for example in Rabat and El-Ḳṣar (cf. L. Brunot, *Textes arabes de Rabat*, ii: Glossary, 753), and also in Tangiers.

Lepers (plural *d̲j̲ad̲h̲mā*, or, euphemistically, *marḍā*) were usually placed in a special quarter, called *al-ḥāra*, outside the towns. At Fez, they were originally settled outside Bāb al-K̲h̲awk̲h̲a, on the Tlemcen road. During the first half of the thirteenth century they were removed to caves outside Bāb al-S̲h̲arīʿa. Then, in 658/1260, they were installed in other caves outside Bāb al-Gīsa. At the beginning of the 10th/16th century they lived in a town near the Sūḳ al-K̲h̲amīs (cf. *al-Ḳirṭās*, ed. Rabat 1936, i, 53-54; Leo Africanus, *Description de l'Afrique*, trans. Épaulard, i, 229). At Marrākus̲h̲, the *ḥāra* was originally outside Bāb Āg̲h̲māt, until, at the end of the 10th/16th century, the Saʿdid sultan al-Manṣūr removed it to outside Bāb Dukkāla.

At Tunis, the Ḥafṣid Sultan, Abū Fāris, founded the first hospital "for poor, foreign or infirm Muslims", completed in 823/1420 (cf. al-Zarkas̲h̲ī, *Taʾrīk̲h̲ al-Dawlatayn*, ed. Tunis 1289, 102). At Granada, the Naṣrid sultan Muḥammad V, built a splendid hospital "for sick and poor Muslims", completed in 768/1367. The foundation inscription reads that "never, since the beginning of Islamic influence in these parts, has such an establishment been founded". Perhaps this is an exaggeration, for there were others, and in Granada itself. And, from the 7th/13th century onwards, the Valencia *Vocabulista* translates *hospitale* by dialectal and, therefore, living terms: *marastān* and *malastān* (cf. Ibn al-Khaṭib, *al-Iḥāṭa*, ed. Cairo 1319, ii, 29; Lévi-Provençal, *Inscriptions arabes d'Espagne*, 164; L. Seco de Lucena, *Plano de Granada arabe*, 53).

A distinction must be made between "hospitals" intended for the sick and "hospices" or "night lodgings" (*manzil*) intended for travellers. In the Muslim West, such hospices were established outside the gates of the big towns by most of the sovereigns who founded hospitals. They received the name *zāwiya* [*q.v.*] (cf. G. S. Colin, *La zaouya mérinite d'Anemli, à Taza*, in *Hespéris*, 1953, ii, 1). Al-K̲h̲afād̲j̲ī appears to have repeated an earlier error in stating that the first *bīmāristān* was set up by Hippocrates who gave it the name *ik̲h̲s̲h̲inudūkiyun* (ξενοδοχεῖον), "hostelry for foreigners" (cf. *S̲h̲ifāʾ al-G̲h̲alīl*, ed. Cairo 1282, 56) [cf. above i].

The Moroccan author of the *Muʿd̲j̲ib* (cf. supra), writing in Bag̲h̲dād in 621/1224, is the only Western author to use the correct etymological form: *bīmāristān*. All the others use a form, *māristān*, which has lost the Persian preposition. Very soon, the word appears with the first *ā* shortened. In the Spanish dialects, the *r* was followed by the vowel *a* (*Vocabulista*: *marastān* and *malastan*; P. de Alcalá: *marastēn*), and this vocalisation is attested for Egypt in the 11th/17th century by Al-K̲h̲afād̲j̲ī (cf. *S̲h̲ifāʾ* ed. Cairo 1282, 206). In present-day Cairo the word is pronounced *murustān*.

In the modern dialects of the Mag̲h̲rib, some velarisation has taken place in the word: *morṣṭān*, the reason for the sound-change being perhaps affective. In Tetuan it is pronounced *merṣṭrān*, and everywhere the meaning of the word is "prison for dangerous lunatics" (cf. W. Marçais, *Textes arabes de Tanger*, 465). (G. S. Colin)

iii. *Turkey.*

The first Sald̲j̲ūḳid *Dār al-S̲h̲ifāʾ* (Hospital) and *Madrasa* were established in Kayseri in 602/1206. This was followed by the building of other hospitals in Sivas, Divriıi, Čankiri, Kastamonu, Konya, Tokat, Erzurum, Erzincan, Mardin and Amasya. The Anatolian hospitals were named then, as now, *Bīmāristān, Māristān, Tīmārhāne, Dār al-S̲h̲ifāʾ or Dār al-ʿĀfiya*. They were general hospitals in that they accepted all kinds of patients, and their staffs included surgeons, physicians, pharmacists and oculists. They were supported by independent funds, and were organised according to the size, importance and specific needs of the locality.

The first Ottoman *Bīmāristān* in Anatolia was the *Dār al-S̲h̲ifāʾ* of Yıldırım in Bursa. When Bursa was conquered by the Ottomans in 726/1306, it had no hospital. The first Ottoman sultans (Sulṭān Ork̲h̲ān, Murād I, Yıldırım Bāyazīd) enlarged the city and built some institutions, among which was the *Dār al-S̲h̲ifāʾ* of Yıldırım, opened in 802/1399. This institution, which was a section of *Yıldırım ʿImāreti* (a special centre including hospital, bath, rest house for travellers etc.) was repaired many times before it was abandoned in the middle of the 19th century in favour of the Aḥmed Wefīḳ Pas̲h̲a hospital. It is in ruins now.

The leprosery which was built at Edirne in the time of Murād II (824-855/1421-51) operated for approximately two centuries. Before this leprosery, the Turks had built others in Sivas, Kastamonu and Kayseri in Anatolia.

The *Dār al-S̲h̲ifāʾ* of Fātiḥ which was opened in 875/1470, was built by Mehemmed II, the Conqueror (855-886/1451-81), and was a part of his *Külliye*. Although it is now in ruins as a result of many large fires, the hospital buildings served until the last century. The *Waḳfiyye* shows that there was a large medical student body in addition to the medical staff. This was the traditional method of training medical students in Islamic hospitals.

In the same century Bāyazīd II (886-918/1481-1512) established another *ʿimāret* at Edirne, on the banks of the Tund̲j̲a river. A part of this institution was a hospital which was named after him. The buildings were begun in 891/1486 and completed in eight years, but the *Waḳfiyye* was not established until 898/1493. Although the institution is now in ruins, its large staff served the public well until the beginning of this century. According to Ewliya Čelebi, it had a staff of ten musicians who played for the patients from time to time. There are many mistakes in the plans of the institution, which were prepared very hurriedly by C. Gurlitt; cf. C. Gurlitt, *Die Baukunst Konstantinopels*, Berlin 1872, 2 vols.

During the 16th century three great hospitals were established in Istanbul and one in Manisa. The *Bīmārk̲h̲āne* of K̲h̲asseki was built in 946/1539 in Istanbul for K̲h̲ürrem Sulṭān, wife of Sulṭān Süleymān the Magnificent; and the *Dār al-S̲h̲ifāʾ* of Süleymān and his *Madrasa* of Medicine were built in 963/1555 in Istanbul in the Sultan's name. The *Dār al-S̲h̲ifāʾ* of Ḥāfiẓe Sultan was built in 946/1539 in Manisa in honour of the Sultan's mother. The *Bīmārk̲h̲āne* of K̲h̲asseki, though it was partially ruined by earthquakes and fires, is restored and is now used as a health centre. The *Bīmārhāne* of Manisa served until the end of the first world war and is now deserted.

The fourth hospital, the *Bīmārk̲h̲āne* of Toptaşı, was built in 991/1583 in Istanbul for Nūrbānū

Sulṭān, mother of Murād III (982 1003/1574-95). This institution served as a hospital until 1927 when it became a tobacco warehouse.

In the 17th century, Aḥmed I (1012-26/1603-17) had a large hospital erected behind the old Byzantine Hippodrome near his famous mosque. The hospital was opened in 1025/1616 and has only recently been demolished to make room for a new school.

There was a recession in the establishment of Ottoman health and social aid institutions during the 18th century; but in the 19th century military service, styles of clothing, education etc. were modernised in the Ottoman Empire. In 1253/1837 the Ghurabā hospital was established in Istanbul at Edirnekapi in the *Madrasa* of Mihrimāh Sulṭān. While this hospital was being modernised by Bezm-i ʿĀlem Wālide Sultan, mother of Sulṭān ʿAbd al-Madjīd, new modern military hospitals and a modern medical school were established. These institutions were to meet the medical needs of the new army. A new school of medicine and surgery established in Istanbul in 1243/1827, by Sulṭān Maḥmūd II (1223-1255/1808-39), began its teaching in Italian but switched to French with the coming of some good medical teachers from Austria in 1839. This medical school was enlarged by sultans ʿAbd al-Madjīd, ʿAbd al-ʿAzīz and ʿAbd al-Ḥamīd II, and eventually included a rabies institute, a bacteriological institute and an inoculation centre. A number of physicians having knowledge of European languages and modern medical methods graduated from this school. They went to Anatolia and founded modern hospitals there. Immunisations against rabies and smallpox were started here nearly at the same time as they were begun in Europe. The Ottoman Government was one of those which helped to establish the Pasteur Institute.

Shishli children's hospital, which is one of the largest hospitals in Istanbul, was established by Sulṭān ʿAbd al-Ḥamīd II, in 1316/1898.

These hospitals were the most important of the Ottoman Empire and although there are many others to be found throughout Turkey, space does not permit their inclusion. In five centuries the Turks established nearly seventy hospitals in Istanbul alone. (BEDI N. ŞEHSUVAROĞLU)

BINĀ', building, the art of the builder or mason. Building techniques depend partly on the materials used. In the Islamic countries we find very widely differing materials employed, from rammed earth to ashlar, with unbaked and baked brick, rubble and rough-hewn stone as intermediary stages. The choice of one of these materials depends of course on the resources of a given country, or the lack of them, but as well as this on local traditions or traditions brought in by foreign builders, which may for a time supplant local ones. Thus Syria, where the art of stone-cutting had long been known, reproduces in stone the complicated forms of the *mukarnas* (= stalactites) which were borrowed from Persia and probably derive from brick architecture. And on the other hand Egypt, whose quarries had yielded such fine free-stone, uses brick at the time of the Ṭūlūnids, they are taking their models and no doubt their chief architects from ʿIrāḳ, where brick was the normal material. Apart from such considerations Muslim builders seem comparatively indifferent as to choice of material, except in some countries such as Syria which cling to their preference for fine work. Of the three great Hispano-Moorish towers of the 6th/12th century, which—no doubt wrongly—are attributed to the same architect, the Giralda at Seville is built of brick, the Ḥassān tower at Rabat of ashlar and the minaret of the Kutubiyya at Marrakech of rubble. This indifference on the part of the builder as to material and the carelessness of craftsmen in its use are seen more clearly in palaces than in religious buildings, especially in the West from the 7th/13th century. There are several reasons for this: speed of construction, the need being to satisfy a master's whim the shortest delay; the use of unskilled slave labour capable of nothing more complicated than ramming concrete between two boards; and finally the general use of facings (coverings of plain or sculpted plaster, inlaid-work of enamelled clay or earthenware titles) which completely conceal the body of the walls.

It is remarkable that the technique of cobwork (*ṭābya*) should have been described in detail by Ibn Khaldūn in his *Muḳaddima*, and leads us to assume that he thought it a characteristically Muslim practice. Earth with which chalk and crushed baked earth or broken stones are often mixed is rammed between two boards kept parallel by beams. The wall is plastered over, often in such a way as to simulate joints of heavy bond-work beneath. When this plaster falls, the regularly spaced holes left by the beams become visible. In the Muslim West cobwork became general in the 5th/11th and 6th/12th centuries, especially in military building. In the Maghrib it seems to have been an importation from Andalusia, where it had long been known.

Unbaked brick (*ṭawb*), which sometimes serves as a facing for cobwork, is made of earth and cut straw rammed together in a wooden former. It is still in common use in Sahara towns, and was employed very early in arid regions, especially in Mesopotamia and Arabia. The walls of the Prophet's dwelling in Medina were probably built of this material, as are those of the ʿAbbasid mosques of Sāmarrā. We find it employed at about the same time in Ifrīḳiya. The excavations at ʿAbbāsiyya, the seat of the Aghlabids of al-Ḳayrawān, have brought to light carefully moulded specimens of *ṭawb* 42 cm. long by half that measurement in width, and a quarter in thickness, which suggests that the cubit used by the builders was 42 cm.

Baked brick (*ādjurr*), used so commonly in the Iranian world and by the Romans also, notably in the public baths, is to be found in all the Islamic countries, but was always *par excellence* the building material of Persia. It is of varying dimensions, and is sometimes cut on an angle or partly rounded off. It is used alone or with rubble in parts of a building where accuracy of line is important (pillars, pedestals, stairways, arches, vaults, etc.). It functions as horizontal tying material alternating with courses of rubble, or vertical tying, to maintain regularity of construction, especially at corners (A). Brick is as a rule covered over with plaster, but it may remain visible and add an element of colour, either the pink of baked earth or that of some enamel applied to its edge.

Rubble or rough-hewn stone was used in Sāsānid building and is still used in Muslim Mesopotamia, as in the stronghold of Ukhaydir (mid 2nd/8th century). In the 5th/11th century it seems to have been the material most familiar to the Berber builders of North Africa. It is used above all for the ramparts of towns before the introduction of cobwork (cob walls will often have a foundation of rubble), and also in waterworks. The cementing mortar and protecting plaster are of chalk, sand, crushed fragments of tile, and wood charcoal. An analysis of their

composition reveals a pattern of evolution which has been studied by M. Solignac (*Recherches sur les installations hydrauliques de Kairouan* .... in *AIEO Algiers*, 1952-3), and allows us to date the works.

The use of ashlar continues a Roman and Byzantine tradition. Its homeland is in Syria, where ashlar has remained a common building material until our time. It was temporarily replaced by brick in Egypt, but came into use again in the Fāṭimid period (4th-6th/10th-12th century) especially in the fortifications of the Armenian Badr al-Djamālī. In Ifrīḳiya it is used for the religious and military buildings of the 3rd/9th century and from the 7th/13th century was popular again with the Tunisian architects. In Spain it is the regular material in the Umayyad foundations; local tradition was there reinforced by Syrian influence. The Maghrīb takes it over in the 6th/12th century in the Almohad buildings.

As in the Byzantine period, walls built of rubble-work are frequently faced with ashlar. The bond-work, not as massive as the Roman, shows combinations of tiles and headers, whose chronology Velazquez Bosco has contrived to establish, for Cordova (Velazquez Bosco, *Medina Azzahra y Alamiriya*, Madrid 1912) (B, B′, B″). Almohad bond-work is of alternate thick and thin courses, which from Morocco pass into Tunisia.

To these materials we should add wood: longitudinal beams are sometimes sunk in walls; at al-Ḳayrawān heavy planks form architraves above the capitals; small beams form ceilings and sometimes lintels, a practice not without risk to the solidity of the building concerned.

Walls, the composition of which we have just indicated, are often flanked by buttresses. Projecting semi-cylindrical abutments of the old Mesopotamian type were added to the stone outer walls of the Syrian Umayyad strongholds, and the brick ones of the mosques at Sāmarrā. The great mosque at Tunis (3rd/9th century) has at its four corners rounded buttresses of apparently the same origin, and they are found again in a building of the Ḳalʿa of the Banū Ḥammād (5th-6th/11th-12th century). The great mosque at al-Ḳayrawān was given massive rectangular buttresses, partly later than the original construction. The mosque at Cordova has similar buttresses at regular intervals around its periphery.

Among the supporting members found principally in the halls of mosques, columns deserve first mention. In early centuries in such regions as Syria, Egypt, Ifrīḳiya and Spain they were taken from nearby pagan or Christian buildings. When these quarries of shafts and capitals were exhausted Muslim sculptors made their own. Columns are generally cylindrical and not entatic. In the 10th/16th century and after they were imported from Italy to North Africa.

The re-employment of columns of limited size in a hypostyle hall intended to produce an impressive effect led to these supporting members being prolonged upwards. It was doubtless from Egypt (ʿAmr mosque) that the builders of al-Ḳayrawān borrowed the technique of superimposing, as in the classical entablature, the support (= architrave), the impost (= frieze) and the cornice, with wooden ties bedded in the impost (C). The architects of the mosque of Cordova were perhaps inspired by the Roman aqueducts to superpose two rows of arches linking the masses of masonry raised above the columns (D).

The Almohad mosque of Ḥassān at Rabat (6th/12th century) shows a rare example of columns formed of superinposed tambours.

The pillar, a masonry support of square, rectangular, cruciform, or divided plan or flanked by false columns, is in general use in Persian architecture. From the 6th/12th century it replaces columns in prayer-halls in the Maghrib. Tunisian mosques retain columns. The situation is found in the inner courtyards of houses.

Apart from the straight lintel formed by a single stone or oblique arch-stones surmounted by a relieving arch (Egypt, Syria), arches assume very varied forms (semi-circular, horseshoe, Persian arch with rectilinear divisions, etc.). These forms are not dictated by constructional requirements, but serve as ornamentation according to the architect's caprice. The arch-stones they contain are often purely decorative in function.

To cover prayer-halls Syria, the Spain of the Umayyad period, and, no doubt in imitation of the latter, the Maghrib regions, had recourse to timber-work protected by tiled saddle-back roofs. Square buildings had pavilion-shaped roofs, *i.e.*, with four slopes. Egypt and Ifrīḳiya retained terraces, which were preferred also by the Turkish masters of Algiers in the towns along the Algerian coast. The scarcity of timbers of the necessary dimensions led architects to bring closer together the walls carrying them, and to give narrow, long proportions to enclosures with ceilings (naves, rooms, etc.). The use of waggon-vaults or small domes placed together answers the same need.

The problem of vault and dome was solved in different ways within the Sāsānid and Byzantine traditions, but Iranian genius was to add noteworthy variations.

The question alluded to above of suitable timbers or rather of their scarcity is the determining factor in building the vault, whether semi-cylindrical or elliptical. Setting up a stone arch or vault demands the use of a wooden former on which the arch-stones are successively placed. The use of bricks, their lightness and the fact that they can be mortared together, allows another method which dispenses with the former: the construction of the "edge vault". This is frequent in Sāsānid architecture and finds its most logical use in the specifically Iranian type, the *īwān* (the *īwān* so constantly used in Muslim Persia is a three-walled room open on the fourth side, like a large niche with a flat back surface). The builder cements a first row of bricks on the rear wall, tracing out the curve of the vault; a second row is then cemented to the first, a third to the second, so that row by row the vault advances across the space to be covered (G).

Apart from the waggon-vault Muslim architecture uses the groined vault so familiar to Roman and Byzantine builders (two semi-cylinders intersecting at right angles [E]), and more rarely the cloister-arch vault (in which the four walls curve in above the space to be covered) (F) which occasionally serves as the end and culmination of the waggon-vault.

As for the dome, the fine examples constructed in the Byzantine era were the prototypes of the Turkish domes, but this feature also was the subject of variations which Muslim art owes to Persia.

As is known, there are two main types of solution to the problem of how to place a semi-circular or eight-sided vault on a square base: the pendentive (H), the customary practice in the Byzantine world (cf. St. Sophia at Istanbul), and the more specifically Iranian squinch (I). This squinch, a quarter sphere the head-arc of which projects over the corner of the square cupporting it, sometimes assumes with its

radiating flutings and indented edge the grace of a marine shell (J). In the Grand Mosque at Damascus and that at Cordova it takes the form of a small niche. North-African and Sicilian architecture knew the squinch as a half groined vault (a groined vault cut diagonally) (K). Finally Persia contrived the super-position of several ranks of cell-like niches, the probable origin of the *muḳarnas* (= stalactites) (L).

Above this zone where square and circle are brought into union there frequently rises a circular zone pierced with windows to allow the entry of light, and surmounted by the dome proper.

Persian architects, profiting from the advantages offered by brick, showed great ingenuity in erecting widely differing domes. Such is the ribbed dome, of light arches crossing above the space to be covered, and supporting counter-arches which fill the intermediary gaps. This type of dome, which was known from the time of the Sāsānids (A. Godard, *Voûtes iraniennes*, in *Āthār-e Īrān*, 1949), passed from Persia to Spain (3rd/9th century), then from Cordova and Toledo became known in the 6th/12th century in the Maghrib and about the same time throughout south-west France. (G. Marçais)

BIÑBASHĪ, 'head of a thousand', a Turkish military rank. The word appears at an early date among the Western Turks, and is already used in connexion with the military reorganisation said to have been made by Orkhān in 729/1328-9 (*e.g.*, Saʿd al-Dīn, *Tādj al-Tawārīkh*, i, 40—'*onbashīs*, *yüzbashīs*, and *biñbashīs* were appointed to them . . .'). In the form *miñbashī* the term also occurs among the Eastern Turks, and is used, for example, of a rank in the Ṣafawid forces in Persia (V. Minorsky, *Tadhkirat al-Mulūk*, London 1943, 36, 74, 155). The title *miñ-begi*, with a similar meaning, also appears in the memoirs of Bābur. The term *biñbashī* does not seem to have been much used in the regular Ottoman forces of the classical period. It reappears, however, in the 18th century, and is used to designate the officers of the newly raised *mīrī ʿaskerīs*, a treasury-paid force of infantry and cavalry. In the campaign of 1769 there were already ninety seven regiments of *mīrī ʿaskerīs*, each commanded by a *biñbashī*. The *biñbashī* received 2000 piastres of pay for the campaign, plus a tenth of the pay of his men. (D'Ohsson, *Tableau général de l'Empire Othoman*, vii, Paris 1824, 381-2; cf. Resmī Efendi, *Khulāṣat al-Iʿtibār*, Istanbul 1286, 12 ff.). From the end of the 18th century, (Djewdet, *Ta'rīkh*, vi, 367), *biñbashī* became a regular rank in the new, European-style armies, given to battalion-commanders. After the accession of ʿAbd al-ʿAzīz, the pay of a *biñbashī* was fixed at 1,500 piastres a month, or 4,140 francs a year (Ubicini, *Lettres sur la Turquie*, no. 19). In Egypt the title *biñbashī*, along with other Turkish military terms and commands, was used in the army of Muḥammad ʿAlī Pasha, and remained current under subsequent régimes. In the Arab countries it is sometimes pronounced bikbashī, presumably through a distortion of the Turkish *saghīr nūn* (ñ = ڭ). (B. Lewis)

BINGÖL, name of a town in ancient Turkish Armenia, previously called Čapakčur, capital of a *vilāyet* partly filled by the mountain range of Bingöl Dagh. It is situated on the Gönük Su, a tributary of the Aracani-Arsanas-Murād Su, and on the road joining Elazig with Mush via Palu. (M. Canard)

BINGÖL DAGH, name of a mountain massif, a raised but not volcanic plateau, which stretches south of Erzurum across the *vilāyets* of Erzurum, Mush and Bingöl (Čapakčur). Its highest peak in the east is Demir or Timur Kale or Ḳalʿa (Fortress of Iron), over whose height there is some disagreement among different writers: 3690 ms. according to H. and R. Kiepert, *Formae orbis antiqui*, pl. V, 1910, Abos Mons, cf. above, 655; 3650 ms. according to the Erzurum sheet of the Harta Genel Direktörlüğü, 1936; 3250 ms. according to the road-map of the Karayolları Genel Müdürlüğü, 1951; 3700 ms. according to Banse; 2977 ms. according to Blanchard. It dominates the high plain of Varto (formerly Gümgüm). The western peak, Bingöl or Toprak Kale (Fortress of Earth) is almost as high. The northern part of the mountain is cut of by two circular depressions separated by a sharp ridge.

Bingöl Dagh is a true water-shed. It contains numerous little lakes from which it gets its name of mountain (*dagh*) of a thousand (*bin*) lakes (*göl*). The Araxes (Aras, al-Rass) in the north, the Tuzla Su, a tributary of the northern Euphrates, and the Bingöl Su in the west, the Gönük Su in the south-west, the Čarbughar Ṣu in the south, and the Khinis Ṣu, the four last tributaries of the Murād Ṣu, in the east and north-east, all rise here. Armenian legend makes it the site of the earthly paradise. In classical geography it is called Abos Mons. The Armenian name is Srmancʿ (Greek Σερμάντου). Arab geographers and historians de not refer to it, although there is some mention in the wars between the Ḥamdānids and the Byzantines in the 4th/10th century of the place Hafdjīdj (Arm. Havčičʿ) situated to the south of Ḳālīḳalā-Erzurum and in the Bingöl Dagh at the source of the Araxes. Tavernier is the first among European travellers to give the name of Bingöl Dagh. The Ḳīzīl-Bāsh [*q.v.*] lived in this region.

BINYĀMĪN, the Benjamin of the Bible. In its narration of the history of Joseph (Yūsuf, [*q.v.*]), the Ḳur'ān gives a place to the latter's uterine brother (xii, 8, 59-79), without ever mentioning him by name. Tradition embellishes without any great variation the biblical story concerning him (it is aware notably that his birth cost his mother her life) and receives also Aggadic additions (summarised notably in the *Encyclopaedia Judaica*, iv, 112-14), such as the etymological connexion of the names of his sons with the lost elder brother. In Muslim mysticism, the pair Yūsuf-Binyāmīn symbolises the primordial relationship between God and the sinner.

(A. J. Wensinck-[G. Vajda])

BIʾR (in modern, also some ancient, dialects pron. *bīr*; plur. *biʾār, abʾur, ābār*) is the most comprehensive Arabic word for the **well**; very often it appears as the *genus proximum* of its numerous synonyms (like *ḳalīb, rakiyya* etc.), and the number of its various epithets is considerable.

The word is of common Semitic origin (Accad. *bêru*, Hebr. *beʾēr*, Aram. *bērā*) and, as in the other Semitic languages, of feminine gender (for exceptions in modern Ar. dialects see Fleischer, *Kl. Schriften*, i, 265; Bräunlich, *Well* 321[2]). In general, however, *biʾr* embraces a much wider conception than what is understood by our 'well'; it could mean also a cistern or water-reservoir (cf. Hebr. *bōr*), and even any hole or cavity dug in the ground, whether containing water or not. So, *e.g.*, Ibn Hishām 97,7 a cavity for collecting gifts for the Kaʿba in pre-islamic times is called *biʾr*; in *Aghānī*[1], iv, 94, 4 and ʿArīb, *Ṭabarī contin.* (ed. De Goeje) 5, 6 it designates a large pit for burying corpses; A. von Kremer, *Beitr. zur arab. Lexikogr.*, I (1883), 192 mentions it in the meaning of a hole in which meat is roasted. Here only the particular meaning of "well" is taken into consideration.

i. Ancient arabia.

Since Arabia is not blessed with large perennial rivers nor with large permanent lakes, its inhabitants, especially the Bedouins, are dependent on the subterranean water-stores of the Peninsula. These, according to the geological conditions, are to be found already a few feet below the upper sandy stratum or else in great depths up to 70 m. and more. To get access to them, the diggers have to hollow out the ground in the shape of a funnel or, mostly, of a cylindrical shaft (*ḳaṣaba, djirāb*) the sides of which usually are strengthened by a casing of loam or field-stones called *ṭayy* (cf. Bukhārī i 284, 17 = ii 442, 5, where Hell is described as *maṭwiyyatun ka-ṭayyi l-biʾri*). The water collects at the bottom of the cavity, and also trickles down from the walls of the shaft. To the top of the well (*fam* or *raʾs al-biʾr*) the water is lifted by means of rather voluminous leather buckets (*gharb, dalw*) which are said to be made mostly from two—apparently young—camels' hides (in this case the bucket may be called *ibn adīmayn*). The ropes used for drawing up the bucket (*arshiya*, sing. *rishāʾ*, or *ashṭān*, sing. *shaṭan*) originally consisted only of thin leather thongs twisted together which, however, easily decayed in the water (cf. Labīd (ed. Khālidī), 139 v. 4 Schol.). Therefore pieces of more durable stuff, mostly of palm fibre (*khulb*), were attached at least to the lower parts of the rope. To facilitate the tiring work of drawing up the mighty buckets, usually a more or less primitive draught apparatus (*ʿalaḳ*) is erected over the *fam al-biʾr*. This apparatus which, like buckets and ropes, has to be carried along with the caravans (otherwise it would be stolen), mainly consists of either a simple crossbeam (*naʿāma*) or, in a more developed form, of a wooden axis (*miḥwar*) inserted into a hollowed roller (*maḥāla, bakra*, also *ḳāma*) over which the rope glides in a groove (*maḥazz, ḳabb*). The whole rests on two supports of loam and stone or of wood (*ḳarnān, zurnūḳān*; *diʿāmatān, ʿamūdān*) or else on one single forked pole (*ḳāma*, plur. *ḳiyām*, cf. Akhṭal (ed. Ṣālḥānī), 17, 3; Yāḳūt iv 21, 12). Then the bucket is drawn up by hand; this hard work may be done also by animals, mostly camels (*sawānin*, sing. *sāniya*), accompanied by a driver (*sāʾiḳ*) and moving from and to the well in wearing course (cf. *Arabum Proverbia* ed. Freytag, I, 624, nr. 64: *sayru s-sawānī safarun lā yanḳaṭiʿ*). For the cattle the water is poured into drinking troughs or cisterns next to the well (*ḥiḍān* etc., sing. *ḥawḍ*) the fallen-in remains of which are often described in poetry (see Nöldeke on Zuhayr *Muʿall.* 5).—Water-wheels set in motion by means of a crank and more complicated hydraulic machines were not known in ancient times; the use of "double buckets" ascending and descending at the same time (to which in *Ḥamāsa* (ed. Freytag), 439 v. 5 the two stirrups of a rider seem to be compared) was not indigenous and must have been very rare.

Numerous quotations of the well and its several designations or epithets, of its appurtenances, the various sounds produced by the roller, the rope, the bucket etc. (see Bräunlich, *Well*, Index, 519-26) illustrate the vital importance of *biʾr* and its belongings for life throughout Arabia. Still more instructive are the frequent similes, proverbial and metaphorical sayings referring to the parts and functions of the well. So, for example, the lances are often compared with tightly stretched well-ropes (cf. Nöldeke to ʿAntara, *Muʿall.* 66 and *Delectus* 45, 6; 70, 2); a rider shooting forth is described as resembling labourers suddenly flying forward when the rope which they are drawing breaks (*Dīwān Hudhayl* (ed. Kosegarten), 93, 36); the dead body is let down to the grave like the bucket to the well (Abū Dhuʾayb, 24, 11 f.; *Ḥamāsa*, 439 v. 4; Ḥuṭayʾa, 35, 3); *ḳaliḳat maḥāwiruhū* "his well-axles wobble" means "his affair became unsettled" (Lane, 667a); finally, a man keeping his word and incessantly striving towards his goal is praised in a *marthiya* as "one who, whenever he spoke a word, (like a well-digger) caused water to gush forth from the earth" (*Ḥamāsa* 386 v. 2).

Bibliography: E. Bräunlich, *The Well in Ancient Arabia*, in *Islamica*, i, 1924-25, 41-76, 288-343, 454-528 (an exhaustive study, based on all the available lexicographical and literary references, to which the present article is greatly indebted); E. Wiedemann, *Beiträge zur Geschichte der Naturwissenschaften*, x, Erlangen 1906, 315, 335-337 (details from medieval times); H. Guthe, *Kurzes Bibelwörterbuch*, 1903, 286, s.v. Jakobsbrunnen and J. J. Hess, in *Der Islam* 4, 1913, 317 f. (informative figures; see also the books of European travellers like Doughty, Euting, Musil etc.).—A *Kitāb al-Biʾr*, composed by the famous philologist Ibn al-Aʿrābī (died 231/844), but apparently not mentioned by the Arab bibliographers, is reported to be preserved in Cairo (see Brockelmann, S. I, 180).

(J. Kraemer)

ii. Modern arabia

The eastern Arab lands, with few rivers or none at all, place great reliance on springs and wells. The location and nature of watering places (*mawrid* or simply *māʾ*, pl. *miyāh*; with various colloquial forms such as *mī* in southern Arabia) go far towards determining whether life is settled or nomadic. The flowing water of springs (*ʿayn*, pl. *ʿuyūn*) is usually

abundant enough to sustain communities in oases of groves and fields. Water from wells (*bi'r*, colloq. *bīr*, with the pl. *abyār* prevailing in Arabia; or *ḳalīb*, pl. *ḳulbān*), which must be lifted out, may supplement the supply from springs, while in other instances it suffices to support large towns (until recently al-Riyāḍ, the capital of Saudi Arabia, drew almost all its water from wells). In still other instances, water comes from wells scattered throughout desert tracts. Even when desert wells endure much longer than ephemeral sources such as moisture-laden sands or catchments for rain in the rocks, there is rarely enough water for irrigation, and the wells are frequented by nomads and other travellers rather than permanent settlers.

In the oases private ownership of wells tends to be the rule; a landowner or husbandman nurtures his crops with water belonging to the one or the other. Large wells, however, may be communally or jointly owned; Philby, for example, estimates the ownership of the remarkable well of al-Haddādj in Taymā' as divided into about thirty shares, with each share holding about three pulleys for drawiug by camels.

In the desert the nomad's first concern is the presence of water, next its accessibility, and then its potability. Doughty has described the skilled well-sinkers of the towns. The Bedouins are perforce both water-finders and well-sinkers, gifted with amazing shrewdness in ferreting out sources where the uninitiate would never suspect them. The site may be eutirely new (such a well is often called a *badʿ*, pl. *budūʿ*, or *badīʿ*, pl. *badā'iʿ*), or it may be an old well buried (*mundafina*) or dead (*mayyita*). The water may be close to the surface or deep in the earth. The Bedouins occasionally dig to depths of a hundred metres or more, the depth being measured in terms of the Arabian fathom (*bāʿ*, the spread of a man's outstretched arms, or *ḳāma*, his height, *i.e.*, about five feet six inches; a well of many fathoms is called *ṭawīla*, pl. *ṭiwāl*, rather than *ʿamīḳa*). Mechanical drills now reach greater depths in even the most arid regions, such as al-Rubʿ al-Khālī (such wells are called *ḳalama*, coll. *ḳalam*). Much-used wells or those with sides likely to cave in are strengthened with casings of stone or other materials (a cased well is called a *maṭwiyya*, and one cased with stone a *marṣūṣa*). The proportion of minerals in the aquifer determines whether the water is sweet (*ḥalw*) or salty (*māliḥ*). Although the Bedouins tolerate a much higher mineral content than an outlander does, even they can not drink from certain desert wells (*khawr*, pl. *khīrān*). In such cases their constant companion the camel swallows the brine and produces milk with the salt filtered out.

Wholly private ownership of desert wells is uncommon. If a man's name is associated with a well, such as Bi'r Hādī in al-Rubʿ al-Khālī (named after the late Hādī b. Sulṭān of Āl Murra), the eponym is usually the digger or redigger, who may as a consequence hold a title of sorts to the well. Wells falling within the *dīra* of a tribe may be considered its property, but the water is still free to nomads from other tribes not at war with the possessors. Water in the wilderness is too precious to be made an article of commerce.

In summer, when the desert pastures offer no vegetation to slake the thirst of the herds, the nomads camp for weeks or months at their favourite wells, sometimes with hundreds of tents pitched together. As places of assembly in hot weather and to a less degree in winter, wells have often been the scene of surprise attacks and battles in tribal warfare.

Bibliography: C. Doughty, *Arabia Deserta*, New York n.d.; H. Philby, *The Land of Midian*, London 1957. Most travellers' accounts in Arabic and the Western languages contain material on wells. E. Bräunlich, *The Well in Ancient Arabia*, Leipzig 1925, gives references to modern as well as ancient data. (G. RENTZ)

iii. THE MAGHRIB.

Bi'r is the common name given to various types of well, usually but not invariably to lined wells (rarely faced with stoue but more often with dry stones or, in certain regions of the Sahara, with palm stems, for which reason they are sometimes cut on a square plan). It can designate also an unlined well, the type which is most common in the Sahara, where the earth is merely loosened and hollowed out into a basin at the bottom of which the water-level appears (Fezzān). But other terms besides *bi'r* are used. *Ḥāsī* (pl. *ḥasyān*) is often the only term used in this sense in the Sahara for wells which are mostly unlined and without lips, whilst elsewhere it means a simple hole dug in the bed of a *wādī* (*Tunisian* and Tripolitanian steppes). The word ʿogla (*ʿuḳla*) usually a temporary pool stretching along the bed of a *wādī* in the Sahara, and in this meaning synonymous with *ghadīr*, in the Tunisian steppes can also mean a well several metres deep without facing or lips, dug at the bottom of a hollow where the underground water-level is near the surface; the same are sometimes to be found in the Sahara (Tindouf) where *oglas* exist in the beds of the *wādī*s.

In fact the wells of the Maghrib and the Sahara at least west of Egypt, can be grouped into 3 principal types: (1) wells meant for the use of men and for watering animals. Lined or not, sometimes adjoined by a watering trough, they have no superstructure or at the most 3 branches meant to carry a pulley of wood or iron. The water is drawn by hand in a water-skin or a leather bucket hung on the end of a rope. (2) Wells which have some sort of elevating mechanism and are used for irrigating gardens and palm groves; these are varied enough. (3) Artesian wells, situated within very narrow geographical limits, especially in the past, and used essentially for irrigation; since they are gushing they need no superstructure.

Among the wells with an elevating mechanism, the most common are those which use animal traction and a puley; they are sometimes called *sānya*. The water is drawn in a *dalw* (bucket) holding 15 to 35 litres, made of ox or goat hide, which has a flexible pipe at the bottom; this, which is folded back during the drawing of the water, is straightened when it comes to emptying the *dalw* into the little basin which feeds the *sāgya*s (*sāḳiya* = runnel). The uprights which carry the axis of the pulley are sometimes made of stone or clay but more often of wood or palm stems. The pulling is done by an ox or a donkey and sometimes by a camel (Tunisia), but only very occasionally by a mule (Tunisian Sahel); the animal is guided and helped in its journeys up and down an inclined path by a man or child who at the same time works the string which folds back or straightens the pipe which empties the *dalw*. The wells and their superstructures may be held in common by several owners, but each one draws water with his own *dalw* (with its ropes and strings) and by means of his own animal. These wells worked by animal traction can be found anywhere from India to the

Atlantic and art encountered especially in eastern Tunisia from Bizerta to D̲j̲erba, on the coast of Tripoli, in the Hawz of Marrakesh, in the north-west Sahara (Tafilalet, mzāb), in the Touareg country, in the oases of southern Cyrenaïca, in part of the southern Sahara, especially Lower Mauretania, and on the borders of western Sudan.

Wells with a balancing-beam, like the Egyptian *s̲h̲adūf*, have various names: *k̲h̲oṭṭāra* (pl. *k̲h̲eṭāṭir*) in the Fezzān and the Souf, *g̲h̲arg̲h̲az* in the regions of Zibān and Gourara. The balancing-beam, made of a thin pole pivoting on a little wall or on a wooden cross-bar resting on two uprights, has a counter-weight at its base, and at its other end some sort of receptacle for drawing the water (*hekma* in the Fezzan, *genino* at Gourara), which only holds between 5 and 10 litres of water. It works more quickly than a *dalw* but it is not usually capable of irrigating more than a few hundred square metres, for it is used where the underground water-level is not very deep (a few metres) and has a small yield. It is primarily the poor man's well; one man can dig it, set it up and work it, and it needs neither an aninal nor an expensive *dalw*. Well-known not only in Europe but as far afield as China, this type of well is very rare in the Mag̲h̲rib and on the coast of Libya. It is found in the Sahara the Lower Dra (Morocco) and in the region of Saoura at Tindouf, and in southern Mauretania, in the regions of Touat and Gourara, at Ouargla El Goléa and at Ghadamès, both in the north and the south of the Fezzan, in the oases of Cyrenaïca at Koufra, in the regions of Aïr, Tibesti and Borku.

The noria or Persian well, chain-pump (*nāʿūra* and sometimes *sānya*) is an apparatus with buckets fixed onto a revolving chain, worked by an animal-driven wheel drawn by a horse, mule or camel. The traditional type is made of wood (most commonly olive-wood) with earthenware buckets fixed by means of ropes. It is being more and more replaced by a cast-iron apparatus with metal chain and buckets worked by an oil or electric motor, at least on the coastal plains of Morocco, Algeria and northern Tunisia, where it is sometimes used by European market-gardeners of Mediterranean origin who were accustomed to using it in their native country. It has to compete there with various types of pumps. In the Sahara it is only to be found in northern areas such as Tafilalet, Oued Righ and Tripolitania. In Morocco, large hoisting wheels with well-base rims, worked by river-power, are also called norias. They are only used in the neighbourhood of Fez.

As for artesian wells, they were only to be found at one time in the region of Oued Righ (282 of them were active in 1856), and in small numbers in the eastern parts of the S̲h̲āti (Fezzān) where they are called *ʿayūn* (sing. *ʿayn*); they were dug by specialists and were very fragile. They have increased in number, but are nowadays drilled and harnessed according to modern techniques, throughout the Lower Sahara from El Golea and Ouargla to Zibān, and from the Hodna to the D̲j̲erīd and Nefzāwa; some have been drilled in Tripolitania and in the Fezzān.

BIʾR MAʿŪNA, a well on the Mecca-Medina road, between the territories of ʿĀmir b. Ṣaʿṣaʿa and Sulaym, where a group of Muslims was killed in Ṣafar 4/625. The traditional account is that the chief of ʿĀmir, Abū Barāʾ (or Abū 'l-Barāʾ), invited Muḥammad to send a missionary group to his tribe, promising his personal protection for them. So a group of "Ḳurʾān-readers" (*ḳurrāʾ*) was sent from Medina. When they reached Biʾr Maʿūna, they were massacred by clans of Sulaym, led by ʿĀmir b. al-Ṭufayl, who had failed to induce his own tribe of ʿĀmir to violate their protection for the Muslims. The Prophet grieved over the slain, and cursed the Sulamīs daily until Ḳurʾān, iii, 169/163 was revealed.

This account has been interpreted to give a military failure the aura of religious martyrdom. The sources number the *ḳurrāʾ* variously as 70, 40 and 29, but Wāḳidī names only 16. A large number cannot yet have existed, and was unnecessary for a religious mission. It was, indeed, an actual campaign, described as a raid (*sariyya, g̲h̲azwa*) in the sources; one specifically says its leader was sent "as a spy among the Nad̲j̲d folk". Muḥammad had apparently been invited to intervene in an internal dispute of Sulaym, but the incident is also mixed up with the quarrel within ʿĀmir between Abū Barā, and ʿĀmir b. al-Ṭufayl. The latter cannot have led the attack, and may merely have encouraged the Sulamīs from the background, since Muḥammad did not curse him, unhesitatingly paid him the wergilds for two ʿĀmirites slain, on the way home, by the sole survivor of Biʾr Maʿūna, and did not seek wergilds from him for the slain Muslims.

BIʾR MAYMŪN, a well in the environs of Mecca. Although the well was famous in early Islamic times, the name no longer occurs in the Meccan area. Available sources fail to show whether Biʾr Maymūn has been abandoned or is still in use under another name. The location of the ancient well is also uncertain. Much of the evidence places it between the Great Mosque and Minā, somewhat closer to the latter. The account given by al-Ṭabarī, iii, 456, of the death of the Caliph al-Manṣūr at Biʾr Maymūn in 158/775 indicates that the well lay inside the Sacred Zone (*al-Ḥaram*) and suggests that it was on the main road for pilgrims from Iraq (another version has the death of al-Manṣūr take place at the hill of al-Ḥad̲j̲ūn, not at Biʾr Maymūn—see Wüstenfeld, *Gesch. der Stadt Mekka*, Leipzig 1861, 160). Other evidence situates Biʾr Maymūn farther north of Mecca near Marr al-Ẓahrān (now called Wādī Fāṭima). According to al-Hamdānī, i, 128, Biʾr Maymūn was one of the two oldest wells in the world; according to al-Bakrī, *Muʿd̲j̲am*, Cairo 1945-51, iv, 1285, it was much older than Zamzam. If it was of any such antiquity, it must have been

dug originally by someone earlier than Maymūn the brother of al-ʿAlāʾ b. al-Hadramī, one of several Maymūns named as the digger. The history of Mecca by al-Ḳuṭubī, *al-Iʿlām*, Mecca n.d., 282, states that Biʾr Maymūn was connected to the main water system for Mecca, first constructed by Queen Zubayda. Biʾr Maymūn has been identified by some commentators as the water mentioned in the final verse of Sūra lxvii of the Ḳurʾān.

BĪR AL-SABʿ, the Arabic name of Beersheba, in southern Palestine. At this place were the springs which Abraham is said to have dug with his own hands; many legends are current about them. The place was uninhabited from the 8th/14th century, but was rebuilt by the Turks in 1319/1901 as an administrative centre for the south. This step was no doubt influenced by the dispute with Britain over the Egyptian-Palestinian frontier and by the need for closer surveillance of the southern tribes. In October 1917 a decisive battle was fought in the neighbourhood of Beersheba between the British and Turkish armies. Under the British mandate the Beersheba sub-district contained about half the area of Palestine, with a nomadic population estimated at 75,000-100,000. The population of the town was put in 1940 at 3,000, many of them semi-nomads.

AL-BĪRA, the name of several places, generally in districts where Aramaic was once spoken, for al-Bīra is a translation of the Aramaic *bīrthā* = "fortress", "citadel". The best known is al-Bīra on the east bank of the Euphrates in North-west Mesopotamia, the modern Bīredjik [*q.v.*]: on other places, bearing the name Bīra, cf. Yāḳūt, *Muʿdjam* (ed. Wüstenfeld), i, 787; Nöldeke in the *Nachr. der Götting. Ges. der Wiss.*, 1876, 11-12 and in De Goeje, *BGA*, iv, (gloss.), 441; Le Strange, *Palestine under the Moslems* (1890), 423. (M. STRECK)

BĪRDJAND. District and town in the IXth *ustān* of Persia. The town is situated at 59° 13′ E. (Greenwich) and 32° 52′ N. It is on the northern side of an arid valley and is built on two low hills between which is a torrent-bed. The altitude is 1490 metres.

The early Arab geographers made no reference to Bīrdjand, and Yāḳūt (i, 783) is apparently the first to mention it (ca. 623/1226). He described it as one of the finest towns of Ḳūhistān, which was then part of the great province of Khurāsān. Ḥamd Allāh Mustawfī, writing ca. 740-1/1340, stated (*Nuzha*, 143) that Bīrdjand was a provincial town, round which much saffron and some corn were grown; in the villages around grapes and other fruit were produced. Like the town of Ḳāʾin [*q.v.*], which lies 90 km. to the north, Bīrdjand was for some time under the control of the Assassins. It was the birthplace of the poet Nizārī, who, as his name indicates, was an Ismāʿīlī; he died about 719-20/1320.

Bīrdjand was for long eclipsed by Ḳāʾin, but in the 19th century it took the place of the latter as the chief town in Ḳūhistān. It is now administrative centre of the districts (*shahristānhā*) of Bīrdjand and Ḳāʾin, under a *farmāndār* or governor. In 1946 the population was 23,488, but is now lower, due to the migration of some of the inhabitants to Mashhad and elsewhere. The town has a piped water supply, the water being obtained partly from *ḳanāt*s from the Kūh-i Bakrān to the south, and partly from a deep well in the town itself.

As in former times, the country round produces much saffron, and nuts of all kinds are also grown. The district has long been famous for the quality of its carpets and rugs, most of which are made in the village of Darakhsh, 80 km. to the north-east: it is also renowned for its *barak*s (garments made of camel's hair). Bīrdjand enjoys some prosperity due to its being on the main road between Mashhad and Zāhidān; it is also connected by road with Kirmān.

LOCKHART)

BĪREDJIK, a town in Mesopotamia, on the left bank of the Euphrates. The name Bīredjik (amongst the local population, Beledjik; also, according to Sachau, Bārādjīk in the Ḥalabī (Aleppo) dialect) means "little Bīra", *i.e.*, "small fortress" (Arabic *bīra*, with the Turkish diminutive suffix). The Arabic name "al-Bīra" ([*q.v.*]; Bīreh in the later Syriac writers) derives from the Aramaic "Bīrthā" = "fortress". Bīredjik, known to the Romans as "Birtha", is to be identified (according to Cumont) with a certain Makedonopolis mentioned in some of the Byzantine sources. The town is called "Bile" in the Latin chronicles relating to the Crusades.

At Bīredjik one of the main routes from northern Syria into Mesopotamia crosses the Euphrates. The river here flows out of the mountains into the Syrian-Mesopotamian plain. It is here, too, that the Euphrates first becomes navigable, after leaving behind the cataracts formed where it breaks through the Taurus range. An isolated cone of calcareous rock, which rises sheer out of the river at Bīredjik, has been fortified from remote times as a protection for this important passage of the Euphrates. A bridge of boats existed here in Seleucid times, running from Zeugma on the right bank of the river to Apamea (= Bīrthā) on the left bank (the Seleucid name Apamea was perhaps never in current use and disappeared in favour of the Aramaic "Bīrthā". Apamea, at first a suburb of Zeugma, came in due course, owing to its possession of the fortress, to be far more important than Zeugma, which faded out of existence). There is evidence (cf. Khalīl al-Ẓahirī) that a bridge was still to be found at the river passage of Bīredjik in the second half of the 15th century.

The older geographical works in Arabic make no mention of al-Bīra. This name first appears in such treatises about the middle of the 13th century, *e.g.*, in al-Dimishḳī and Abu ʾl-Fidāʾ. References to al-Bīra in historical literature make their appearance, it

would seem, at the time of the Crusades. The Latin Counts of Edessa held the town from 492/1098-99 until 545/1150, when the Christians, unable to maintain it after the loss of Edessa to the Muslims in 539/1144, surrendered it to the Byzantines, who soon lost it, however, to the Urtuḳid lord of Māridīn. During the Mongol invasions of the 13th century al-Bīra, with its almost impregnable fortress, was a notable stronghold in the Muslim defences. The Mamlūks of Syria and Egypt, in the reign of Sulṭān Ḳāʾit Bāy, had to defend al-Bīra against the Aḳ-Ḳoyunlu Turcomans under Uzun Ḥasan. Ḳāʾit Bāy inspected the fortresses along the Euphrates in 882/1477-78 and later strengthened and repaired the defences of al-Bīra in 887/1482. The fortifications of al-Bīra contain six Arabic inscriptions, the oldest dating from the time of the Mamlūk sultan Baraka Khān (676-678/1277-1279) and the most recent from the years 887-888/1482-1483 in the reign of Sulṭān Ḳāʾit Bāy. As a result of the campaigns of Sulṭān Selīm I in 920-923/1514-1517, al-Bīra came under Ottoman rule and was included in the *sandjaḳ* of Urfa which formed part of the *eyālet* of Ḥaleb (Aleppo). The Ottomans maintained at Bīredjik a small naval arsenal to meet the needs of their river flotilla on the Euphrates. Not far from Bīredjik, the Egyptian forces under Ibrāhīm Pasha won a decisive battle against the Ottomans at Nisib on 11 Rabīʿ II 1255/24 June 1839. Bīredjik, where the ruins of the ancient fortress are still to be seen, lies now within the territories of the present Turkish Republic. The town had, in 1945, a population of approximately 10,800 inhabitants.

BIRGE (Birgi, sometimes also Bergi or Birki), a small town in western Asia Minor situated in the valley of the Küçük Menderes, is the centre of a *nāḥiye* belonging to the *ḳaḍāʾ* of Ödemish in the province of İzmir (Smyrna). Here stood the ancient Διὸς Ἱερόν in Lydia. The town was known in Byzantine times as Χριστούπολις and also as Πυργίον. It was raised to the status of a metropolitan see between 1193 and 1199, being thus freed from the ecclesiastical control of Ephesos, but it became once more a suffragan bishopric of Ephesos in 1387. The Catalans under Roger de Flor drove the Turks from the town in 1304 and at the same time plundered it. Birge passed thereafter into the hands of the Turkish Begs of Aydīn. Monuments dating from the period of their rule—notably the Ulū Djāmiʿ—are still to be seen in the town. Birge came under the control of the Ottomans in 793/1391 and remained in their possession thereafter, save for a brief interval during which princes of the house of Aydīn, restored to power by Tīmūr Beg, held the land once more (1402-1425). The town suffered considerable damage in the years 1920-1922 during the course of the war which was then being waged between the Greeks and the Turks in western Asia Minor. Birge had, in 1945, about 2150 inhabitants.

BIRGEWĪ (Birgiwī, Birgili), Meḥmed b. Pīr ʿAlī, a Turkish scholar whose fame still lives among the common people. Born at Balïkesir in 928/1522 (or 926/1520 if Kātib Čelebi is correct in saying that he died at the age of 55), he began his education at home, but soon distinguished himself among his coevals and went to Istanbul, where he attached himself first to Akhī-zāde Meḥmed Efendi and then to the *ḳāḍī-i ʿaskar* ʿAbd al-Raḥmān Efendi. Having completed his education he taught in the *medreses* of Istanbul, and during this time was initiated into the Bayramiyya by Shaykh ʿAbd al-Raḥmān Ḳaramānī. Through the influence of his master ʿAbd al-Raḥmān Efendi he obtained the post of *ḳassām* to the army at Edirne, but soon afterwards desired to withdraw both from this office and from teaching. His shaykh however would not consent to his totally abandoning teaching and preaching, and when his fellow-townsman ʿAṭā' Allāh Efendi, the tutor of Selīm II, offered him the position of *muderris* in the *medrese* he had built at Birgi, he accepted. His career of teaching, writing and preaching at Birgi, (whence his appellation of Birgewī) came to an end in 981/1573, when he died of the plague.

Like Ibn Taymiyya, he set himself firmly against all innovation in order to protect the sacred law, and no considerations of rank would cause him to connive at any non-observance of the faith. Towards the end of his life he even made the journey from Birgi to Istanbul to advise the grand vizier Meḥmed Pasha about the rectification of some irregularities which he had observed. Birgewī, an utter fanatic in religious matters, would not abide the slightest deviation from the *sharīʿa*. The *risāla*s which he devoted to the theme that it was *ḥarām* to teach the Ḳur'ān for money, or to accept payment for any act of worship, brought him into a controversy with the scholars of the day which gave rise to much gossip. One of the most famous *ḳāḍīs* of the time, Bilāl-zāde, emerged as his chief opponent and wrote *risālas* in which he endeavoured to refute his opinions. The Shaykh al-Islām Abu 'l-Suʿūd Efendi also took a hand in the dispute and, seeing that the *awḳāf* would suffer loss if Birgewī's views prevailed (in particular, his view of the illegality of making a *waḳf* of coined money or other movable property), pronounced a *fatwā* against him. Thereupon Bilāl-zāde went to far as to claim that Birgewī had been acting hypocritically.

Of Birgewī's works, the one which keeps his fame alive to this day is his Turkish manual of the rudiments of theology, entitled *Waṣiyyet-nāme*, which still fills the needs of the common people in questions of religion. Commentaries on it were written by Ḳāḍī-zāde Aḥmed Efendi and Shaykh ʿAlī Efendi of Ḳonya, the latter being in turn the subject of a commentary by the *muftī* of Osmanpazarï, Ismāʿīl Niyazī. Often printed, the *Waṣiyyet-nāme* was also translated into northern Turkish by Toktamïsh-oghlu (ed. Kazan 1802 and 1806: see Zenker, *Bibliotheca orientalis*, i, 1463 f., ii, 1192 f.; *JA*, 1843, ii, 32, 55, 1859, i, 524; Dieterici, *Chrestomathie Ottomane*, 38 f.; for translations see especially the French version by Garcin de Tassy, *L'Islamisme d'après le Coran* ... (1874)). Two grammatical works of his, the *Iẓhār* and the *ʿAwāmil* were used in *medreses* for many years and considerably facilitated the study of Arabic, by the period. His *al-Ṭarīḳa al-Muḥammadiyya*, containing his sermons and homilies, in Arabic, was highly esteemed by the learned. ʿAlī al-Ḳārī wrote a long *ḳaṣīda* in which he made clear Birgewī's position among the scholars of Islām. Commentaries were written on *al-Ṭarīḳa al-Muḥammadiyya* by Khādimli Meḥmed Efendi and ʿAbd al-Ghanī al-Nābulusī. Emīn Efendi adopted it as his guide to conduct, and was consequently dubbed 'Ṭarīḳatčī'; after him there even came into being a *ṭarīḳat* of the same name.

Bibliography: ʿAṭā'ī, *Ḥadīḳat al-ḥaḳā'iḳ* 1268), i, 179; ʿAlī b. Bālī, *al-ʿIḳd al-manẓūm* (in the margins of Ibn Khallikān, Cairo 1310, ii, 430); Kātib Čelebi, *Mīzān al-ḥaḳḳ* = G. L. Lewis, *The Balance of Truth*, London 1957, chap. 20; *Sidjill-i ʿOthmānī*; *ʿOthmanlï mü'ellifleri*, i, 255; Shems el-Dīn Sāmī, *Ḳāmūs al-aʿlām*; Brockelmann, II, 440 f.; A. G. BIRR (Ḳur'ānic term), "pious goodness" (R. Blachère's translation; see Ḳur'ān, ii, 189). In the analysis of the spiritual states (*aḥwāl*) and the attitude of the soul towards God, it must at the same time be compared with and distinguished from *taḳwā* [*q.v*]. (L. Gardet)

BIRS, also called Birs Nimrūd, in the older literature Burs, a ruined site 9 miles S.W. of the town of Ḥilla on the Euphrates, about 12 miles S.S.W. of Babylon on the eastern shore of the Lake of Hindiyya.

The place is the ancient Borsippa, the sister town of Babylon. Its immense ruins, the largest that have survived from the Babylonian period, were thought by the Arabs to be the palace of Nimrūd b. Kanʿān (*ṣarḥ Nimrūd*, Yāḳūt, i, 136) or of Bukhtnaṣṣar (Yāḳūt, i, 165). Even in modern times they were thought to be the ruins of the Tower of Babel and this erroneous view used to crop up even after H. Rawlinson had proved from inscriptions that they were the ruins of the tower of the Temple of Nebo of Borsippa. Whether there was still a town on the ancient site in the early Islāmic period is not quite clear. Balādhurī only speaks of the *ʿAdjamat Burs* (Assyr. *agammē*), the land around the marshy lakes of Burs which were taken possession of by ʿAlī. Upper and Lower Burs appear in Ḳudāma and are called al-Sibayn and al-Wuḳūf by Ibn Khurradādhbih in the lists of taxes, as districts (*ṭassūdj*) of the circle (*astān*) of central Bihḳubādh.

Even in ancient times the district of Babylonia and in particular Borsippa was famous for its textile industry (*e.g.*, Strabo, xvii, 1, 7). This in-

dustry survived into the Arab period. The garments made in the district of Burs were, according to Masʿūdī (*Murūdj*, vi, 59) called Bursiyya or also Khutarniyya, after the district between Burs, Bābil and Ḥilla (following G. Hoffmann's emendation). In Yāḳūt, iv, 773, Narsiyya should therefore be emended to Bursiyya.

Bibliography: Ibn Khurradādhbih, ii; Balādhurī, index; Ḳudāma (ed. de Goeje), 238; Masʿūdī, *Murūdj*, vi, 59; Bakrī, 149; Yāḳūt, i, 136, 565, iv, 773; M. Hoffmann, *Syrische Akten Persischer Märtyrer*, 26, note 206; H. Rawlinson, *On the Birs Nimrūd or the Great Temple of Borsippa*, in *JRAS* xvii (1860); H. V. Hilprecht, *Explorations in Bible Lands*, 182 ff.

(E. HERZFELD)

BĪRŪN, in Persian 'outside', the name given to the outer departments and services of the Ottoman Imperial Household, in contrast to the inner departments known as the *Enderūn* [*q.v.*]. The *Bīrūn* was thus the meeting-point of the court and the state, and besides palace functionaries included a number of high officers and dignitaries concerned with the administrative, military, and religious affairs of the Empire.

(B. LEWIS)

AL-**BĪRŪNĪ** (BĒRŪNĪ) ABU 'L-RAYḤĀN MUḤAMMAD B. AḤMAD, also sometimes called by the *nisba* AL-KHWĀRIZMĪ by certain Arabic authors (*e.g.*, Yāḳūt) and also, at the risk of a confusion of names, by some modern Orientalists (see AL-KHWĀRIZMĪ), was one of the greatest scholars of mediaeval Islam, and certainly the most original and profound. He was equally well versed in the mathematical, astronomic, physical and natural sciences and also distinguished himself as a geographer and historian, chronologist and linguist and as an impartial observer of customs and creeds. He is known as *al-Ustādh*, "the Master". He was born of an Iranian family in 362/973 (according to al-Ghaḍanfar, on 3 Dhu'l-Ḥidjdja/4 September — see E. Sachau, *Chronology*, xiv-xvi), in the suburb (*bīrūn*) of Kāth, capital of Khwārizm (the region of the Amū-Daryā delta, now the autonomous republic of Ḳaraḳalpaḳistan on the southern shores of the Aral Sea). He spent the first twenty-five years of his life in his homeland, where he received his scientific training from masters such as Abū Naṣr Manṣūr b. ʿAlī b. ʿIrāḳ Djīlānī, the mathematician. Here he published a few early works and entered into correspondence with Ibn Sīnā, the young prodigy of Būkhārā, his junior by seven years. It would appear that he went in person to see the Sāmānid sultan Manṣūr II b. Nūḥ (387-389/997-999), whom he praised as his first benefactor. Next, he went for a long stay to Djurdjān, south-east of the Caspian Sea, apparently in 388/998 when the Ziyārid sultan Abu 'l-Ḥasan Ḳābūs b. Washmgīr Shams al-Maʿālī returned from exile; from there he was able to go as far as Rayy (near Tehran). It was at the Court of Djurdjān that he wrote his first great work, on the subject of calendars and eras, and important mathematical, astronomical, meteorological and other problems. This was dedicated to Ḳābūs, probably about 390/1000, without prejudice to much later emendations and alterations; the *K. al-Āthār al-Bāḳiya ʿan al-Ḳurūn al-Khāliya* (*Chronologie orientalischer Völker*, published by Edward Sachau, Leipzig 1878, reprinted by helioplan, Leipzig 1923; English translation entitled *The Chronology of Ancient Nations*, London 1879). Brought up in the Iranian dialect of Khwārizm, al-Bīrūnī spoke Persian, but deliberately chose to use the Arabic language in his scientific writings, though some later works may have been written in Persian or in Arabic and Persian simultaneously. Having returned to his own country before 399/1008, and having been received by Prince Abu 'l-Ḥasan ʿAlī b. Maʾmūn, he was able to give his services for seven years to the brother of this prince, the Khwarizmshāh Abu 'l-ʿAbbās Maʾmūn b. Maʾmūn, and was entrusted, because of his "golden and silver tongue", with delicate political missions.

After the assassination in 407/1016-17 of the Khwārizmshāh by his rebellious troops and the conquest of the country by the powerful Ghaznawid sultan Maḥmūd b. Subuktakīn, many prisoners were led away to Ghazna in Sidjistān (Afghānistān) in the spring of 408/1017, including learned and wise men among whom were al-Bīrūnī, Abū Naṣr already mentioned, and the physician Abu 'l-Khayr al-Ḥusayn b. Bābā al-Khammār al-Baghdādī. Ibn Sīnā must have left Djurdjāniyya for Djurdjān of his own free will in 398/1008 together with the Christian physician, Abū Sahl ʿĪsā b. Yaḥyā al-Masīḥī al-Djurdjānī. This physician had collaborated closely with al-Bīrūnī, even to the point of writing a series of works in his name, as did also Abū Naṣr (see below). Al-Bīrūnī, henceforth retained at the Court of Ghazna, possibly as official astrologer, accompanied Sultan Maḥmūd on seveal of his military expeditions to north-west India. Here he taught the Greek sciences and received in exchange, with his initiation into Sanskrit and various dialects, the incalculable sum of knowledge which he put into his *Description of India*, completed in 421/1030 short y after the death of Maḥmūd: the *K. Taʾrīkh al-Hind* (*Al-Beruni's India*, ed. E. Sachau, London 1887; English translation, 2 vols., London 1888, 2 1910). The previous year, al-Bīrūnī had written an abstract of geometry, arithmetic, astronomy and astrology: the *K. al-Tafhīm li-Awāʾil Ṣināʿat al-Tandjīm*, English translation facing the text by R. Ramsay Wright, London 1934.

It was to Sulṭān Masʿūd b. Maḥmūd (421-432/1030-41) that the Master dedicated this third principal work in 421/1030, reserving the right to add the finishing touches later: the *K. al-Ḳanūn al-Masʿūdī fi 'l-Hayʾa wa 'l-Nudjūm* (Canon Masudicus, Ḥaydarābād (Dn) 1954-56, 3 vols.). According to Yāḳūt, Maʿsūd offered the author an elephant-load of silver pieces for this work, but al-Bīrūnī refused the gift. In spite of this, he was provided with the means of carrying out his scientific and literary work to the end of his life. The treatise on mineralogy which he wrote during the reign of Sulṭān Mawdūd b. Masʿūd (432-441/1041-49) has come down to us; it is the *K. al-Djamāhir fī Maʿrifat al-Djawāhir*, ed. F. Krenkow, Ḥaydarābād, (Dn) 1936. In a last important work, still unpublished, the *K. al-Ṣaydala fi 'l-Ṭibb* on medicinal drugs, (see H. Beveridge, *An Unknown Work of Albiruni*, in *JRAS* 1902, 333-5; M. Meyerhof, *Das Vorwort zur Drogenkunde des Bērūnī* (ed. and trans.), Berlin 1932) the Master declared himself to be over 80 (lunar) years old. The date of his death, usually fixed in 440/1048, according to al-Ghaḍanfar, must therefore be put back a little. Al-Bīrūnī must have died after 442/ 1050, probably at Ghazna.

The total number of his works is considerable. In his *Risāla fī Fihrist kutub Muḥammad b. Zakariyya al-Rāzī*, ed. P. Kraus, Paris 1936) he includes (in 427) the *Fihrist* of his own writings, of which 103 are completed, 10 unfinished (among which are the *Chronology* and the *Canon Masʿūdicus*), 12 have been written in his name by Abū Naṣr, 12 by Abū Sahl and 1 by Abū ʿAlī al-Ḥasan b. ʿAlī al-Djīlī; making a total of 138.

Taking into account works written after the *Fihrist*, and also certain omissions in this list, the total number of works is 180, differing widely from one another in length, from brief treatises on specialised matters to major works embracing vast fields of knowledge. Apart from the edited texts referred to above, 4 mathematical and astronomical treatises have been published in Ḥaydarābād (1948) in a single volume entitled *Rasāʾil al-Bīrūnī*: 1. *K. fī Ifrād al-Maḳāl fī amr al-ẓlāl*; 2. *Fī Rāshīkāt al-Hind* (cf. E. Wiedemann, *Über die Lehre von den Proportionen nach al-Bīrūnī*, in *SBPMS Erlg.*, *Beiträge*, 48, 1-6, 1916); 3. *Tamhīd al-Mustaḳarr li-Taḥḳīḳ maʿnā al-mamarr*; 4. *Maḳāla fī Istikhrādj al-awtār fī 'l-Dāʾira bi-Khawāṣṣ al-Khaṭṭ al-Munḥanī fī-hā* (translation and commentary by H. Suter in *Bibliotheca Mathematica*, iii, folio XI, 11-78, Leipzig 1910-11). A volume entitled *Rasāʾil Abī Naṣr ilā 'l-Bīrūnī* was published separately in Ḥaydarābād in 1948. This includes 15 mathematical and astronomical treatises by Abū Naṣr among which are most of these written in the name of al-Bīrūnī. Manuscripts, some partially edited, others unedited, of about twenty other works of al-Bīrūnī have come down to us, among which are: the *K. Taḥdīd Nihāyāt al- Amākin li-Taṣḥīḥ Masāfāt al-Masākin* (geographical extracts in *Bīrūnī's Picture of the World* by A. Zaki Velidi Togan in *Memoirs of the Archaeological Survey of India*, no. 53, New Delhi, 1941; the MS. Fātiḥ 3386 completed at Ghazna in 416 is possibly in his own hand); the *K. fī Istīʿāb al-Wudjūh al-Mumkina fī Ṣanʿat al-Asṭurlāb* (cf. E. Wiedemann and J. Franks, *Allgemeine Betrachtungen von al-Bīrūnī in seinem Werk über die Astrolaben*, in *SBPMS Erlg.*, *Beiträge*, 52-3, 97-121, 1920-21); *the Maḳāla fī 'l-Nisab allatī bayna 'l-filizzāt wa 'l-djawāhir fī 'l-hadjm* (cf. E. Wiedemann, *Über Bestimmung der spezifischen Gewichte*, in *SBPMS Erl.*, *Beiträge*, 38, 163-166, 1906); the *Tardjamat K. Bātandjali fī 'l-Khalās min al-Irtibāk* (cf. H. Ritter, *La traduction du Livre de Patanjali par Bērūnī*, communication in Persian in the *Livre du Millénaire d'Avicenne*, ii, 134-148, Tehran 1955).

Bibliography: Since lack of space makes it impracticable to provide an exhaustive list of the work done on al-Bīrūnī, of which there is a fair volume, though very inadequate for such an important figure, I refer the reader to my study: *L'Oeuvre d'al-Bērūnī*: *Essai Bibliographique*, in *MIDEO*, ii, 161-256 and iii, 391-396, 1956; taking up the work of H. Suter and E. Wiedemann, *Über al-Bīrūnī und seine Schriften*, in *SBPMS Erlangen*, *Beiträge*, 52-53, 55-96, 1920-21, we have listed 180 works of the Master, provided a bibliographical index as complete as possible for each one, with tabular summaries. The main studies of the life and works as a whole of al-Bīrūnī are listed below, as well as a few studies of special subjecs.

A. Bibliographies and Studies of the Works as a Whole: Bīrūnī, *Risāla fī Fihrist*, *op. cit.* ed. P. Kraus; the Arabic text and the autobiographical section are also to be found in E. Sachau's introduction to the *Chronology* (Arabic text); German trans. in H. Suter and E. Wiedemann, *op. cit.*, 71-79; biographical development in the other sections of this work, and also in E. Sachau's introductions to the *Chronology* (Arabic text and English translation) and in *India* (Arabic text and English translation); Ibn Abī Uṣaybiʿa, *ʿUyūn al-Anbāʾ*, ii, 20-21 (cf. E. Wiedemann, *Biographie von al-Bīrūnī*, in *SBPMS Erlg.*, *Beiträge*, 44, 117-8, 1912); Yāḳūt, *Irshād al-Arīb*, ed. Margoliouth, vi, 308-14 (German trans. by E. Wiedemann and J. Hell, *Über al-Bīrūnī*, in *MGMN*, xi, 314-21, 1912); Ẓāhir al-Dīn al-Bayhaḳī in his *Taʾrīkh Ḥukamāʾ al-Islām*, MS. Berlin, 10052 (cf. E. Wiedemann, *Einige Biographien nach al-Baihaḳī*, in *SBPMS Erlg.*, *Beiträge*, 42, 66, 1910); ʿAlī b. Zayd al-Bayhaḳī, *Tatimmat Ṣiwān al-Ḥikma*, ed. Muḥ. Shafīʿ, Lahore 1935, 62-4; Suyūṭī, *Bughyat al-Wuʿā*, Cairo 1326, 20; Brockelmann, I, 475, S I, 870-1; Suter 98-100; G. Sarton, *Introduction to the History of Science*, Baltimore 1927, I, 707-9; L. Leclerc, *Histoire de la médecine arabe*, i, 480-2, Paris 1876; Carra de Vaux, *Penseurs de l'Islam*, ii, 75-87, 215-7; Syed Hasan Barani, *Al-Biruni*: *His Life and Works* (in Urdu), ʿAligarh 1927; idem, *Ibn Sina and al-Beruni. A Study in Similarities and Contrasts*, in *Avicenna Commemoration Volume*, Calcutta 1956, 3-14; H. Ritter, *Werke al-Bīrūnī's*, in *Orientalia*, Istanbul 1933, i, 74-78; A. Zeki Velidi Togan, *Neue geographische und ethnographische Nachrichten*, and in *Geographische Zeitschrift* 1934, 363 ff.; R. Ramsay Wright, Preface to the *Book of Instruction* (*K. al-Tafhīm*), *op. cit.*: Zia ud-Din and F. Krenkow, in *Islamic Culture*, vi, Jul.-Oct. 1932; M. Meyerhof, *Études de Pharmacologie arabe*, in *BIE* 1940, 22, 133-52; Wüstenfeld, in *Lüddes Zeitschr.*, i, 36, in *Die Arab. Ärzte* no. 129 and in *Die Geschichtsschreiber der Araber* no. 195; F. Taeschner, in *ZDMG*, 77, 31 ff.; M. Krause, *Albīrūnī ein iranischer Forscher*, in *Isl.*, 26, 1-15; M. Ya. al-Hāshimī, *Naẓariyyat al-iḳtiṣād ʿinda al-B.*, in *MMIA*, 15, 456-65; Academy of Sciences of the U.S.S.R., history and philosophy section, *Bīrūnī*, Moscow-Leningrad, 1950; Iran Society, *Al-Biruni. Commemoration volume. A.H.* 362-*A.H.* 1362, Calcutta 1951.

B. Detailed Studies: E. Wiedemann (besides the works already quoted) *Astronomische Instrumente. Über trigonometrische Grössen. Geodätische Messungen*, in *SBPMS Erlg.*, *Beiträge*, 41, 26-78, 1909; idem, *Ein Instrument, das die Bewegung von Sonne und Mond darstellt nach al-Bīrūnī*, in *Isl.* iv, 5-13, 1913; idem, *Über die verschiedenen, bei der Mondfinsternis auftretenden Farben nach al-Bīrūnī*, in *Eders Jahrbuch für Photographie*, 1914; idem, *Über Erscheinungen bei der Dämmerung und bei Sonnenfinsternissen nach arabischen Quellen*, in *Archiv für Geschichte der Medizin*, xv, 43-52, 1923; idem, *Meteorolog. Zeitschr.*, 199-203, 1922; idem, *Über Gesetzmässigkeiten bei Pflanzen nach al-Bīrūnī*, in *Biolog. Zentralblatt*, xl, 413-16, 1920; idem, *Geographisches von al-Bīrūnī*, in *SBPMS Erlg.*, 44, 1-26, 1912; E. Wiedemann and J. Hell, *Geographisches aus dem Masʿūdischen Kanon von al-Bīrūnī*, *ibid.*, 119-25; E. Wiedemann, *Über den Wert von Edelsteinen bei den Muslimen*, in *Isl.*, ii, 345-58, 1911; idem, *Über die Verbreitung der Bestimmungen des spezifischen Gewichtes nach Bīrūnī* in *SBPMS Erlg.*, *Beiträge*, 45, 31-4, 1913 (cf. *Mīzān*); H. Sachau, *Indo-arabische Studien zur Aussprache und Geschichte des Indischen*, in *der I. Hälfte des XI. Jahrh.*, *Abh. d. Berl. Ak.*, 1888.

(D. J. Boilot)

BIRZĀL, Banū, a Berber tribe of the Zenata group mentioned as living in the Lower Zab (south of Msīla) at the beginning of the 4th/10th century. These Berbers, in conflict with the Fāṭimid Caliph, ʿUbayd Allāh, who built the fortress of Msīla as a look-out against them, supported the Khāridjite agitator, Abū Yazīd [*q.v.*], and offered him refuge when he was pursued by the Fāṭimid Caliph, al-Manṣūr. Although the latter pardoned them, they nevertheless took part in the rebellion of the governor of the Zāb, Djaʿfar Ibn al-Andalusī [*q.v.*] in 360/971. Fāṭimid repression forced them to flee; they found refuge in Spain where they formed a corps of Berber troops at the service of the Umayyad monarchs. Their chiefs supported the party of Ibn Abī ʿĀmir at the death of the Caliph al-Hakam II; one of them was rewarded for this by being made governor of Carmona. During the period of anarchy in Andalusia at the beginning of the 5th/11th century, the Birzāl formed a little independent state at Carmona which tried to resist the ambitions of the ʿAbbādids of Seville. They were finally obliged to submit to the king of Seville in 459/1067 and disappeared, at any rate as a group, just as they had formerly disappeared from the Maghrib.

(R. Le Tourneau)

al-**BIRZĀLĪ**, ʿAlam al-Dīn al-Ḳāsim b. Muḥammad b. Yūsuf, also called Ibn al-Birzālī, Syrian historian and *ḥadīth* scholar. He was born in Damascus in Djumada I or II, 665/February-April, 1267. A case could be made for the earlier date, sometimes mentioned, of 663/1265, but al-Birzālī himself evidently maintained that he was born in 665. His ancestors belonged to the Birzāl [*q.v.*] Berbers. His great-grandfather, Zakī al-Dīn Muḥammad b. Yūsuf (b. ca. 577/1181-82, d. in Ḥamā in 636/1239), had settled in Syria at the beginning of the 7th/13th century. Zakī al-Dīn's additional *nisba*, al-Ishbīlī, shows that he himself, or one of his ancestors, had once lived in Seville. A work of his is preserved in Damascus (cf. G. Makdisi, in *BSOAS*, xviii/1956, 22); copies of two volumes of Ibn ʿAsākir's *History of Damascus* written by him are preserved in Bankipore (*Cat.*, xii, 144 ff., nos. 800-801; cf. also v, 2, 223, no. 481). Al-Birzālī's grandfather, who succeeded his father in the position of *imām* at the Fallūs Mosque (Flūs [?], according to the vocalisation indicated by J. Sauvaget, *Les monuments historiques de Damas*, Beirut 1932, 60; cf. al-Nuʿaymī, *Dāris*, i, 86, ii, 361), died a young man of twenty-three years in 643/1245-46, leaving al-Birzālī's father, Bahāʾ al-Dīn, to be brought up by his maternal grandfather. Bahāʾ al-Dīn, an official of the judiciary and accomplished scholar, died 699/1300 in his sixtieth year (cf. Ibn Ḳāḍī Shuhba, *Iʿlām*, *anno* 699).

As a member of a family of scholars, al-Birzālī, together with his sister Zaynab, received his instruction from his father and other famous scholars. Ibn Taymiyya, for instance, lectured in his home (Bankipore, *Cat.*, v, 2, 180). He started out very young, but precocious as he was, he retained his love for scholarship all his life. He went through the full curriculum of religious studies, travelled in pursuit of his studies to other Syrian cities and to Egypt, served for a while as an official witness, but spent most of his life as professor of *ḥadīth* in Damascus colleges, his principal position being that at the Nūriyya (*idjāzas* from his courses there in Bankipore, *Cat.*, v, 2, 50 f., 198 f.). He undertook the pilgrimage several times and died at Khulayṣ in the holy territory on 4 Dhu 'l-Ḥidjdja 739/13 June, 1339. His children, among them Muḥammad and Fāṭima, both gifted scholars, had died before him. Among his many students and colleagues were the most prominent scholars of the time, among them al-Dhahabī. There is unanimous agreement among his biographers that he was an unusually attractive person, good-looking, modest, generous with his books and his knowledge, blessed with a good handwriting, extremely industrious as a scholar, and enjoying the confidence of all scholarly factions, even those that were mutually hostile.

No list of his writings is available, and none of the preserved works has been published so far. His great *History*, ending with the year 736/1335-36, was often quoted. It was abridged and continued by later scholars. Its actual title appears to have been *al-Muḳtafā* (cf. al-Sakhāwī, in F. Rosenthal, *A History of Muslim Historiography*, 414, but al-Nuʿaymī, *Dāris*, i, 578, refers to a work entitled *al-Muntaḳā* [= *al-Muḳtafā*?] as if it were different from the *History* often quoted by him). The *Muḳtafā* is preserved in MS. Topkapısaray, Ahmet III, 2951 (cf. al-Munadjdjima, in *Revue de l'Institut des Manuscrits arabes*, 1956, 101 f.). His voluminous *Muʿdjam*, which was highly praised and often cited as a reference work for contemporary scholarly history, is not preserved. A small *Muʿdjam* of his early teachers is preserved in Damascus (cf. Y. al-ʿIshsh, *Fihrist makhṭūṭāt Dār al-Kutub al-Ẓāhiriyya, al-Taʾrīkh*, Damascus 1366/1947, 228 f.). A *Muʿdjam al-Buldān wa 'l-Ḳurā* is cited by Ibn Ṭūlūn, *Lumaʿāt* (Damascus 1348), 35 and 43. A small historical work on those who participated in the battle of Badr is ascribed to al-Birzālī on the strength of the handwriting of a manuscript in Damascus, said to be similar to other autographs of al-Birzālī in the Ẓāhiriyya Library (cf. al-ʿIshsh,

op. cit., 46). Among his works on *ḥadīth* an *Arbaʿūn Buldāniyya* is mentioned. Two selections of *ʿawālī al-ḥadīth* collected from his teachers and a *Thulāthiyyāt min Musnad Aḥmad b. Ḥanbal* are preserved in Bankipore (*Cat.*, V, 2, 194 ff., no. 462, 2, 3, and 6). A *fiḳh* work, on *al-Shurūṭ*, is extant in Cairo. Other works can be confidently expected to turn up in the future. However, al-Birzālī published less than he wrote, and the preservation of his works, therefore, remained a matter of chance. Al-Nuʿaymī (*Dāris*, i, 113) considered it worth mention that he came across the last volume of the *History* in 894/1489.

Bibliography: For the family history, cf., in particular, the biography of Zakī al-Dīn in Dhahabī, *Nubalāʾ*, Ms. ar. Yale University, L 571, vol. 2 (Cat. Nemoy, 1177), fols. 330b-331b. The following biographies deserve mention: Ibn Faḍl Allāh al-ʿUmarī, *Masālik*, Ms. ar. Yale University, L 341 (Nemoy, 1185), fols. 179b-182b; Ḥusaynī Dimashḳī, *Dhayl Ṭabaḳāt al-Ḥuffāẓ*, Damascus 1347, 18-21; Kutubī, *Fawāt*, Cairo 1951, ii, 262-64; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, vi, 246 f.; Ibn Kathīr, *Bidāya*, xiv, 185 f.; Ibn Ḥadjar, *Durar*, iii, 237-39; Nuʿaymī, *Dāris*, Damascus 1367-1370/1948-1951, Ibn Ḳāḍī Shuhba, *Iʿlām*, MS. Oxford, Marsh 143, *anno* 739; i, 112 f. Some of the unpublished works of Dhahabī, who wrote a biography of al-Birzālī in monograph form (cf. Rosenthal, *op. cit.*, 523), and the *Wāfī* of Ṣafadi may also contain valuable information. Cf., further, Brockelmann, II, 45, S II, 34 f.; G. Vajda, *Les certificats de lecture*, Paris 1957, 35 and 56; *id.*, *JA* 1957, 143-46. (F. Rosenthal)

BISĀṬ [see ḲĀLĪ].

BISBARĀY b. Harigarbhdās Kāyath, also called Karkarni, Indian author who wrote in Persian; the correct pronunciation of his name in Sanskrit is Vishwarai (Rajah of the world), son of Harigarhdas (slave of God), of the well known family of Kayastha, which was particularly noted for its Persian culture. His surname Karkarni signifies "he who has ears as big as hands". He translated into Persian, in 1061-2/1651-2, during the reign of Shāh-Djahān, the Sanskrit tale *Vikramačaritram*, making use of the work of his predecessors. (The Sanskrit original also bore the title *Vikrama-čaritram*, that is to say, the life of Vikram, the Radja Vikram Aditti in whose reign commenced the Bikrami era, which has now reached the year 2015). This translation is also known by the name *Singhāsan Battīsī* (Sanskrit *Sing-hāsan-battisi*, 32 tales of the lion throne), and has been translated into French by Lescallier (*Le Trône enchanté*, New York 1817). For the various editions of this Sanskrit tale, and the Persian translations, see the works mentioned below.

Bibliography: Éthé, in *Grundriss der Iranischen Philologie*, ii, 353; Rieu, *Cat. Pers. MSS. Brit. Museum*, ii, 763 f.; Pertsch, *Cat. Berlin*, 1034 f. (Said Naficy)

BĪSHA, an oasis in western Arabia stretching about 25 miles along the banks of the *wādī* of the same name immediately north of 20° N. Lat. The headwaters of the *wādī* are east of Abhā in the highlands of ʿAsīr, and the channel extends c. 400 miles north to its junction with Wādī Ranya, whence the combined channels turn inland to Wādī Tathlīth and Wādī al-Dawāsir (see al-Dawāsir]. The tributaries Hardjāb and Tardj, coming from the east and west respectively, empty into Wādī Bīsha south of the oasis of Bīsha, and Wādī Tabāla [see Tabāla] joins Wādī Bīsha in the heart of the oasis. The early poets mention Bīsha frequently, but on occasion confuse it with the *wādī* and settlement of Baysh in Tihāmat ʿAsīr (see A. Sprenger, *Die alte Geogr. Arabiens*, Bern 1875).

The oasis of Bīsha is noted for its dates, which are transported as far as Djayzān, and the nearby Bedouins raise a famous breed of white camels known as *awārik* (*i.e.*, eaters of *arāk* leaves). Bīsha, at the junction of routes from al-Ṭāʾif and al-Riyāḍ to Abhā, Nadjrān, and all of south-western Arabia, has been an important stop on incense, pilgrimage, and invasion routes. Nimrān and al-Rawshan (Yāḳūt's Rūshān?) are the principal towns of the oasis, the former with the most important market of the region and the latter the site of Ḳalʿat Bīsha, where the Saudi Arabian Amīr of the district is established. Al-Rawshan is divided into Rawshan Āl Mahdī and Rawshan Banī Salūl. Among other towns and villages are al-Dahw, ʿAṭf al-Djabara, al-Ruḳayṭā, al-Naḳīʿ, al-Shaḳīḳa, and al-Djunayna.

Yāḳūt lists the tribes of Bīsha as Khathʿam, Hilāl, Suwāʾa b. ʿĀmir b. Ṣaʿṣaʿa, Salūl, ʿUḳayl, al-Ḍibāb, and Banū Hāshim of Ḳuraysh. At present elements of Shahrān and Aklub (both of which stem from Khathʿam), Banī Salūl, and Ḳaḥṭān predominate.

Bibliography: In addition to Hamdānī and Yāḳūt, Fuʾād Ḥamza, *Fī Bilād ʿAsīr*, Cairo 1951; Muḥ. Ibn Bulayhid, *Ṣaḥīḥ al-Akhbār*, Cairo 1370-3; ʿUmar Riḍa Kaḥḥāla, *Djughrāfiyyat Shibh Djazīrat al-ʿArab*, Damascus 1364; Admiralty, *A Handbook of Arabia*, London 1916-17; H. Philby, *Arabian Highlands*, Ithaca, New York 1952; M. Tamisier, *Voyage en Arabie*, Paris 1840. (W. E. Mulligan)

BĪSHARʿ (Pers.), a term not often used, and then mainly in a pejorative sense; it is a compound of the Persian privative prefix *bī* ("without") and the Arabic *sharʿ*, the canon law of Islam. It denotes in particular those Ṣūfīs who declare that the law of Islam does not exist for persons illuminated by mysticism (antinomians). This somewhat colloquial term seems primarily to denote the adepts of the Ṣūfī sect of the Malāmatiyya, who were given to keeping secret their acts of worship, and hence to neglecting the official ritual. The term occurs very occasionally in the technical terminology of Ṣūfism. (Said Naficy)

BISHĀRĪN, A nomadic Bedja [*q.v.*] tribe, now occupying two areas: (a) the ʿAtbāy, or western slopes of the Red Sea Hills, between approximately 23° and 19° N; (b) the banks of the ʿAṭbarā and adjoining lands between about 17° and 16° N. The tribe is divided into two main clans: (a) Umm ʿAlī, in the north-eastern ʿAtbāy; (b) Umm Nādjī, in the south-western ʿAtbāy and on the ʿAṭbarā. Tribal genealogies indicate a connection with the Arab Awlād Kāhil (Kawāhla), who, in the 14th century, lived near ʿAydhāb. The original Bishārīn homeland was in this region, around Djabal Alba. In the 15th century they apparently expanded into the ʿAtbāy, displacing the Balaw, who may represent the Ḥadārib of medieval Arab writers. Their further expansion into the richer ʿAṭbarā lands was carried out by force of arms under Ḥamad ʿImrān, probably c. 1760-70. After Muḥammad ʿAlī Pasha's conquests in the Sudan, the ʿAṭbarā Bishārīn fell under Egyptian control, while those of the ʿAtbāy remained virtually independent. The expansion of the Ummarār into the Aryāb district, in the early 19th century contributed further to the separation of the two groups. Neither group played an important part in the Mahdiyya, although ʿUthmān Dikna had some control over the ʿAṭbarā Bishārīn. The

separate treatment of the two groups continued under the Condominium until in 1928 a single chief (*nāẓir*) was appointed over the whole tribe. The recent history of the Bis͟hārīn has been uneventful.

BIS͟HBALĪḲ, Bes͟hbalïḳ, the Soghdian (?) Pand͟jikat͟h (both meaning 'Town of Five'), a town in eastern Turkestan frequently mentioned between the 2nd/8th and 7th/13th centuries (concerning the name cf. Minorsky in *Ḥudūd al-ʿĀlam*, 271 f. and 271[5]). It was rediscovered in 1908 by Russian explorers, with the aid of information found in Chinese sources. Its position is 47 km. to the west of Kūs͟hang (Chinese Ku-čʿöng) which was founded in the 18th century, and 10 km. north of Tsi-mu-sa, near the village of Hu-pao-tse. Its ruins (known as Pʿo-čʿöng-tse) have a circumference of 10 km. (B. Dolbežev in the *Izv. Russk. Komiteta dlya izučeniya Sredney i Vostočnoy Azii IX*, April 1909, 65 f.; Ed. Chavannes, *Documents*, 11; *Zap. Ak. Nauk XXIII*, 1915, 77-121; Sir Aurel Stein, *Innermost Asia*, 1928, 554-59).

From the 2nd century A.D. onwards, Bis͟hbalïḳ was mentioned in Chinese sources as the residence of local princes. From 658 onwards, it was the centre of a Chinese administrative area (with a Chinese or Turkish governor). This was due to its position as capital of a 'Five-Town-Area', and as one of the Chinese 'Four Garrisons'. The town is also mentioned in the Ork͟hon inscriptions (II, E 28; Küli-Čur-Inscription; cf. Wilhelm Thomson in the *ZDMG* 1924, 153; A. N. Bernstamm, *Social'no-ėkonomičeskiy stroy ork͟hono-yeniseyskik͟h Tyurok VI-VIII vekov* (The social and economic structure of the Ork͟hon and Yenisey Turks from the 6th to the 8th century), Moscow and Leningrad 1946, index. The Chinese names Kinman, and in particular, Pei-tʿing (northern court) for Bis͟hbalïḳ, appear from this time onwards.

According to the Tʿang-schu (Chavannes, *Doc.*, 96-99) the Scha-tʿo ('people of the Sandy Desert'; cf. below) lived near Bis͟hbalïḳ between 712 and 818. After long disputes (cf. Chavannes, Doc. 113 f.; Kās͟hg͟harī, *Dīwān*, i, 103, 317, (ed. Brockelmann 242); Marwazī, 73; *Ḥudūd al-ʿĀlam*, 227, 272) the town fell into the hands of the Tibetans in 791 (Chavannes, *Doc.*, 305), and later it became the residence of the Turkish Basmil princes, whose inheritance was taken over (with the title of Iduḳ Ḳut, 'Holy Majesty') by the Uigurs in 860. According to a report by a Chinese mission in the year 982 (for list of translations cf. Wittfogel, 104), the town possessed more than 50 Buddhist temples, a Buddhist monastery, Manichaean shrines and one (artificial ?) lake. Some inhabitants, making use of the artificial irrigation, made their living by growing vegetables, others bred horses and did metalwork. The only early Islamic mention of the town (in *Ḥudūd al-ʿĀlam*, 17 a, trans. 94) dates from the same year. It is mentioned as being the residence of the ruler of the Tog͟huzg͟huz [*q.v.*]. Concerning this, and a comparison between the Tog͟huzg͟huz and the Scha-tʿo, cf. V. Minorsky in *Ḥudūd al-ʿĀlam*, 266/72, 481. The mention of it made by Idrīsī, i, 491, 502, is presumably based on a different report, namely that of Tamīm b. Baḥr al-Muṭawwiʿī (cf. bibliography).

As the northern residence of the ruler (Iduḳ Ḳut, Idi Ḳut, or Iduʾut) of the western Uigur part of the state, Bis͟hbalïḳ came under the Ḳara K͟hitay [*q.v.*] (there is mention of a Chinese work on this by Wang-Kuo-wei in Wittfogel 615, bottom left). In 1209, the Uignr ruler handed the town over to the Mongols of his own free will, and took part in their campaigns. Bis͟hbalïḳ came in close contact with the Islamic world within the Mongol Empire, and Islam gradually penetrated into the town in the 7th/13th century, despite the resistance offered by the Uigurs, who realised that they would thereby lose their spiritual leadership of the Mongol Empire. After the Mongol governor of Central Asia, Masʿūd b. Maḥmūd Yalavač ('Ambassador'), had taken up his office in Bis͟hbalïḳ in 1252/53, the Iduḳ Ḳut is said to have issued a secret order in September 1258, for the murder of all Muslims in the town. By order of the Grand K͟hān Möngke, he was taken and executed, but his dynasty remained (D͟juwaynī, ii, 34 f., 88; iii, 60 f.; Ras͟hīd al-Dīn (ed. Blochet), ii, 304 f.; Ḥamd Allāh Mustawfī Ḳazwīnī, *Taʾrīk͟h-i Guzīda*, 577; B. Spuler, *Die Mongolen in Iran*[2], Berlin 1955, 239).

After 1260, the town appears to have enjoyed a period of independence between the empire of the Grand K͟hān and the Čag͟hatay state. It repulsed an attack from the west in 1275. At that time, Bis͟hbalïḳ was the starting point of the postal route from China to Central Asia (Bretschneider, Not. 208). The region of Bis͟hbalïḳ then apparently belonged to the state of Čag͟hatay. Nothing is known about the subsequent fate of the town itself. It apparently vanished at the same time as the dynasty of the Iduḳ Ḳut, in the 14th century. Thereafter, the Chinese used the name Pei-tʿing only as a regional designation for an area which (according to Muḥammad Ḥaydar Dūg͟hlāt, *Taʾrīk͟h Ras͟hīdī*, trans. E. Denison Ross, London 1895, 365) was known as Mog͟hūlistān in the 16th century, and in which Islam was now firmly established. There is no further mention of Bis͟hbalïḳ itself.

AL-**BIS͟HR**, scene of a battle in eastern Syria in 73/692-3 between the Arab tribes of Sulaym and Tag͟hlib. K͟hālid b. al-Walīd campaigned here in 12/633 (Ṭabarī, i, 2068, 2072-3). Yāḳūt describes it as a range of hills stretching from ʿUrḍ near Palmyra to the Euphrates, corresponding to the modern D͟jebel el-Bis͟hrī. The battle is also sometimes called after al-Raḥūb, a local water-course.

The "Day of al-Bis͟hr" was the climax of several clashes between the two tribes. This strife lay to some extent outside the Ḳays-Kalb tribal feud of the period; both tribes were accounted North Arabian, and its immediate cause was Sulaym's encroachment on Tag͟hlib's pastures in al-D͟jazīra.

An uneasy peace was broken through the Christian Taghlibī poet al-Akhṭal's satires at the Damascus court, provoking the Sulamī chief al-Djaḥḥāf b. Ḥukaym. The latter secured a forged diploma authorising him to collect the *ṣadaḳāt* of Taghlib and Bakr, and on this pretext left with 1000 Sulamīs. Taghlib were surprised in their encampments at al-Bishr, and a savage slaughter followed. Because of his filthy cloak, al-Akhṭal was taken for a slave and released, but his son was killed. The ripping-open of women was a reprisal for similar behaviour previously by Taghlib.

Al-Djaḥḥāf was forced to flee to Byzantine territory to escape the Caliph ʿAbd al-Malik's wrath, but returned and made his peace after arranging for a wergild of 100,000 dirhams to be paid to Taghlib in reparation.

(C. E. Bosworth)

BISHR B. ABĪ KHĀZIM (not Ḥāzim, see ʿAbd al-Ḳādir, *Khizānat al-adab*[1], ii, 262) the most considerable pre-Islamic poet of the Banū Asad b. Khuzayma in the second half of the sixth century. al-Farazdaḳ, *Dīwān* (ed. Ṣāwī) 721, mentions him amongst his predecessors. Abū ʿAmr b. al-ʿAlāʾ counts him among the classics (*fuḥūl*). His poems were collected by al-Aṣmaʿī and Ibn al-Sikkīt (*Fihrist* 158, 6). Abū ʿUbayda wrote a commentary on his *Dīwān* which was utilised by ʿAbd al-Ḳādir l.c. ii, 262, 4. The *Mufaḍḍaliyyāt*, Nrs. 96-99 ed. Lyall, contain four poems of Bishr; the last of them (erroneously coupled with Nr. 100) is also found in the *Djamharat ashʿār al-ʿArab* 104, whilst Ibn Shadjarī in his *Ḥamāsa*, Cairo 1306, 65-83, gives a selection of six poems. The numerous verses, quoted in dictionaries, commentaries and books of *Adab* have not been collected so far.

Of Bishr's life little is known besides what we learn from his poems, whilst the reports about him are often inconsistent and unreliable. From his vivid description of the victory of his tribe at al-Nisār in *Muf.* Nr. 96, Vrs. 9-22 it seems certain that he took part in this battle, which is dated by Lyall about 575 A.D. References to other deeds of the Banū Asad do not yield any date. There looms large in his poems the figure of Aws b. Ḥāritha b. Laʾm, chief of the Ṭayyiʾ, the neighbours of the Banū Asad. ʿAbd al-Ḳādir *l.c.* iv, 317, 1 quoting the commentary (of Abū ʿUbayda) states that a raid of the Ṭayyiʾ on some confederates (*ḥulafāʾ*) of the Banū Asad caused Bishr to compose a poem against Aws b. Ḥāritha in which he threatened to satirise him if he did not come to terms (see also *Mufaḍḍaliyyāt* i, 293, 10 and Lane 1126). Such satires are extant in *Mukhtārāt* 66 f. and 68 f. The origin of this feud is told quite differently by Mubarrad, *Kāmil*, i, 132 f. (and further embellished by Ibn al-Athīr, *Kāmil*, i, 169 f.); according to this report, which makes Bishr a contemporary of al-Ḥuṭayʾa (*d.c.* 30/650), the quarrel started at the court of al-Nuʿmān b. al-Mundhir (r. 580-602). Aws b. Ḥāritha raided the Banū Asad, got hold of Bishr but spared his life. Bishr then made amends for his five satires by composing five odes in praise of his benefactor. Whatever the truth may be there are indeed among Bishr's poems some eulogies on Aws b. Ḥāritha (*Mukhtārāt* 75; Ibn al-Shadjarī, *Ḥamāsa* 103) and fragments of a similar ode (cf. ʿAbd al-Ḳādir *l.c.* i, 455; ii, 263; iv, 111 and Mubarrad, *Kāmil*, 133) which however is also ascribed to Djundab b. Khāridja al-Ṭāʾī. If his apology is authentic (Murtaḍā, *Amālī*, ii, 114) then these eulogies are later than the satires. Another satire (Ḳālī, *Amālī*[1] ii, 233; *Mufaḍḍaliyyāt* i, 340, 584, 760; Freytag, *Prov. Arabum* i, 251) is directed against ʿUtba b. Mālik b. Djaʿfar b. Kilāb. The son of this ʿUtba was ʿUrwa al-Raḥḥāl who was slain by al-Barrāḍ about 590 A.D. Abū ʿAmr b. a-ʿAlāʾ (in *Aghānī*[1] xix, 75 f.) says that after this murder which led to the second war of the *Fidjār* al-Barrāḍ asked Bishr to warn Ḥarb b. Umayya and other leaders of the Ḳuraysh against the revenge of the Ḳays ʿAylān. The Banū Asad were in league with the Ḳuraysh (see Ibn Saʿd I/1, 81, 9). Finally there is an elegy on himself (*Mukhtārāt* 81-3) which he is said to have spoken when he was mortally wounded during a raid against the *Abnāʾ* of the Banū Ṣaʿṣaʿa (see ʿAbd al-Ḳādir *l.c.* ii, 262; *Mufaḍḍaliyyāt* i, 31, 6; Marzubānī, *Muʿdjam al-Shuʿarāʾ* 222). Legendary is the account how Bishr, ʿAbīd b. al-Abraṣ (died c. 550-60) and al-Nābigha al-Dhubyānī were regaled by Ḥātim al-Ṭāʾī (Ibn Ḳutayba, *Shiʿr* 124; *Aghānī*[1] xvi, 98). Untenable also is Abū ʿUbayda's assumption, that the "King" ʿAmr b. Umm Iyās, whom Bishr addressed in at least two poems, was a grandson of Ḥudjr Ākil al-Murār (*Aghānī*[1] xv, 87; see also ʿAbd al-Ḳādir *l.c.* ii, 182). Occasionally verses of a later poet of his tribe were attributed to him (*Naḳāʾiḍ* 241; 245 Bevan).

(J. W. Fück)

BISHR B. AL-BARĀʾ, Medinese Companion, of the Khazradjite clan of Banī Salima. Both he and his father al-Barāʾ b. Maʿrūr [*q.v.*] accepted Islam early and were among the seventy odd Medinese who were present at the second ʿAḳaba meeting with the Prophet. Later, Bishr fought at Badr, Uḥud, the siege of Medīna, (Battle of the Ditch), and at Khaybar in 7/628. There he ate from a poisoned sheep which a Jewess offered to the Prophet in an attempt to venge her lost relatives. The Prophet tasted the poison and spat out the meat, but Bishr swallowed it and died, according to some sources immediately, according to others after suffering for a year.

Bishr was a famous bowman, and an enthusiastic Muslim who is quoted as arguing with the Jews of Medīna. The Prophet described him as the *sayyid* of his clan, the Banī Salima. al-Shīrāzī (*al-Muhadhdhab*, Cairo, ii, 176-7) quotes the case of Bishr as a precedent for making that method of poisoning a capital offence.

Bibliography: Ibn Hishām, 309, 378, 499, 764-5; Ibn Saʿd, iii/2, 111-12; Ṭabarī, i, 1583-4, iii, 2538; Ibn al-Athīr, *al-Kāmil*, ii, 170; Yaʿḳūbī, *Taʾrīkh*, ii, 57; *Usd al-Ghāba*, i, 183; Nawawī, 173-4; Caetani, *Annali*, index. (W. ʿArafat)

BISHR B. GHIYĀTH B. ABĪ KARĪMA ABŪ ʿABD AL-RAḤĀN **AL-MARĪSĪ**, a prominent theologian belonging to the Murdjiʾa [*q.v.*]. His father, a fuller and dyer in Kūfa, is said to have been a Jew, and Bishr, on his conversion to Islām, to have become a *mawlā* of Zayd b. al-Khaṭṭāb. He lived

in the western quarter of Baghdād, in the *Darb al-Marīs* (or *al-Marīsī*), from which he took his *nisba*. He died in Baghdād in 218/833.

Bishr was an assiduous disciple of Abū Yūsuf in *fiḳh*, and although he held some opinions of his own, he is counted among the followers of the Ḥanafī school; he also heard traditions from Ḥammād b. Salama, Sufyān b. ʿUyayna, and others. In theology he shared the general position of the Murdjiʾa, and the Muslim haeresiographers regard his followers, sometimes called al-Marīsiyya, as forming one of the branches of this movement. He defined faith (*īmān*) as the ratification (*taṣdīḳ*) of the Islamic creed with the heart and the tongue, and everything that is not *taṣdīk* is not *īmān*; conversely, it follows that prostrating oneself to the sun is not in itself unbelief but an indication of unbelief. On the other hand, he considered all acts of disobedience to Allāh as grave sins (*kabāʾir*), but his followers (and presumably he, too) regarded it as logically impossible, in the light of Ḳurʾān xcix, 7 f., that Muslim sinners should be kept in hell for all eternity.

Bishr held that the Ḳurʾān was created, a doctrine first explicitly propounded by Djahm b. Ṣafwān [*q.v.*], so that he was later vituperatively called a Djahmī. It is also one of the basic tenets of the Muʿtazila [*q.v.*], so that the Muslim haeresiographers could, at the same time, include him among these last. A distinction which he made between two kinds of Allāh's "will", led him to adopt, on the question of predestination, a position intermediate between the two extremes of the Djabriyya and the Ḳadariyya (*qq.vv.*), similar to that which was to become orthodox doctrine, and opposed to that of the Muʿtazila. His main disciple, al-Nadjdjār [*q.v.*], whose doctrine was said to approach closely to that of his master, was in fact attacked by his Muʿtazilī contemporaries.

Bishr is said to have been persecuted for his opinions; in particular it is said that he had to keep in hiding for 20 years during the reign of the ʿAbbāsid caliph Hārūn al-Rashīd. This is probably a legend, because that pillar of orthodoxy, al-Shāfiʿī, is reported to have lived with Bishr and his mother, a pious Muslim woman, in her house during his stay in Baghdād, well in the middle of the alleged period of hiding. But it is true that the traditionists (*ahl al-ḥadīth*, [*q.v.*]), and in particular Aḥmad b. Ḥanbal and his followers, opposed Bishr with implacable hatred, so that he later came to be regarded by the orthodox, notwithstanding his ascetic life, as one of the arch-heretics of Islam, and scurrilous features were added to his biography.

(CARRA DE VAUX-[A. N. NADER and J. SCHACHT])

BISHR B. **MARWĀN** B. AL-ḤAKAM, Abū Marwān, an Umayyad prince, son of the Caliph, Marwān [*q.v.*] and of Ḳuṭayya bint Bishr (of the Banū Djaʿfar b. Kilāb, thus a Ḳaysite). He took part in the battle of Mardj Rāhiṭ (65/684) and there killed a Kilāb chief. After his father's accession to the Caliphate he followed him at the time of his expedition to Egypt, for the sources tell us that when in 65/684 Marwān had regained this province for the Umayyads, taking it from Ibn al-Zubayr [*q.v.*] who had seized it in Shaʿbān 64/March-April 684, and had put his son, ʿAbd al-ʿAzīz [*q.v.*] in charge of the Prayer and the collection of *kharādj*, he left Bishr there to keep him company and to help him to forget his separation from his family. Some time later the relation between the two brothers changed and Bishr returned, probably to Syria. The chroniclers bring up his name again in connexion with the events of 71/690-91 (al-Ṭabarī, ii, 816), the year in which the Caliph, ʿAbd al-Malik appointed him governor of Kūfa. It was only in 72, probably after the end of the campaign against Muṣʿab b. al-Zubayr [*q.v.*] in which Bishr had taken part (al-Balādhurī, *Ansāb*, v, 335, 338), that he took up his residence there (al-Ṭabarī, ii, 822), and had as counsellor not only his uncle, Rawḥ b. Zinbāʿ [*q.v.*], but also Mūsā b. Nuṣayr whom ʿAbd al-Malik had asked of ʿAbd al-ʿAzīz with this in mind (according to the *Kitāb Aḥādīth al-Imāma wa 'l-Siyāsa*, in the appendix to P. De Gayangos, *The History of Moh. Dynasties in Spain*, London 1840-43, L-LII). In 73/692-3, the Caliph gave him in addition to the governorship of Kūfa, that of Baṣra, which he had taken away after only a few months from Khālid b. ʿAbd Allāh b. Khālid b. Asīd because of his unsuccessful conduct of the war against the Khāridjites; at the end of the same year or in 74, Bishr transferred himself to this city, leaving ʿAmr b. Ḥurayth al-Makhzūmī as his lieutenant at Kūfa. As governor of Kūfa, Bishr sent contingents to reinforce the troops in operation against the Khāridjites on ʿAbd al-Malik's behalf; but although he had been appointed commander-in-chief (*amīr*), he received an order directly from ʿAbd al-Malik to give the command of the army fighting this sect to al-Muhallab [*q.v.*]. This he did very much against his will when he reached Baṣra because he had intended to appoint ʿUmar b. ʿUbayd Allāh b. Maʿmar. Shocked by the Caliph's not having left the initiative to him in this matter (al-Ṭabarī, ii, 855 sq., etc.), he advised the commander of the Kūfa troops to oppose the military action of al-Muhallab, an action which provoked the indignation of the latter (al-Ṭabarī, ii, 856).

On his arrival at Baṣra, Bishr was suffering already from some hidden disease (al-Balādhurī, v, 171, 179, etc.) or from an infection (Ibn Kathīr, ix, 7) and he died very soon afterwards at a few years over forty, according to Ibn ʿAsākir, in 74/693-4 (according to al-Wāḳidī *apud* al-Ṭabarī, ii, 852, in 73; in 75 according to al-Dhahabī, *Taʾrīkh*, ms. Bodl. ii, fol. 95r and Yāfiʿī, *Mirʾāt al-Djanān*, ms. Paris 1589, fol. 55r.) He was buried at Baṣra but a few days later it was already impossible to distinguish his grave from that of a negro who had died on the same day, which shows how little interest was taken in tombs at that time. On the news of his death, there were some defections in the army of al-Muhallab.

Bis̲h̲r was a very agreeable young man, a governor who could be approached without difficulty (see the verses of Aymam b. K̲h̲urayn in *Ag̲h̲ānī*, xxi, 12), remarkably inclined to be merciful; nevertheless he executed the emissaries of Ibn al-Zubayr who, even after the death of Muṣʿab, continued his intrigues in the city of Baṣra. The only criticisms levelled against his government concerned some innovations in ritual (al-Balād̲h̲urī, v, 170, etc.), and his failure to distribute food among the people, his custom being to reserve this for his guard and the members of his court (al-Balād̲h̲urī, v, 180).

Like many other Umayyads, Bis̲h̲r used to drink wine, get drunk and lead a merry life with his companions (al-Masʿūdī, *Murūd̲j̲*, v, 254-58 tells us of the trick played by one of his friends to rid him of the somewhat too constraining presence of his uncle, Rawḥ; the latter's removal is nevertheless explained in a different way by Ibn Ḳutayba, *ʿUyūn*, ed. Brockelmann, 207 f.). He liked to listen to music and to write poetry, and poets enjoyed his sympathy and generosity (see a long panegyric and an elegy in the *Dīwān* of Farazdaḳ, ed. Boucher, Paris 1870, 173-75, 129, transl. 521-25, 361; ed. Hell, Munich 1900, index; poems in his honour in al-Ak̲h̲tal, *Dīwān*, ed. Salḥānī, 38, 58, 68, 120). Other poets too lived in his entourage or addressed verses to him: D̲j̲arīr, Kut̲h̲ayyir ʿAzza, Nuṣayb, Surāka b. Mirdās al-Bāriḳī, al-Aʿs̲h̲ā of the Banū S̲h̲aybān, Ayman b. K̲h̲uraym al-Asadī, al-Mutawakkil al-Layt̲h̲ī, Ibn Ḳays al-Ruḳayyāt, Ibn al-Zabīr, al-Ḥakam b. ʿAbdal, al-ʿUḳays̲h̲ir al-Asadī, al-ʿAd̲j̲d̲j̲ād̲j̲, Kaʿb al-As̲h̲ḳarī, al-Rāʿī. Zufar b. al-Ḥārith, who supported Muṣʿab, on the other hand, wrote invectives against him.

Bibliography: the longest biographies are those of Balād̲h̲urī, *Ansāb*, ed. Goitein, v, 166-180 (see also v, 140, 164); Sibṭ Ibn al-D̲j̲awzī, *Mirʾāt al-Zamān*, ms. Bodl. Marsh 289, fol. 167v-168r, ms. Paris 6131, fol. 223v-224r; Ibn Kat̲h̲īr, *al-Bidāya wa-'l-Nihāya*, Cairo 1351/1932 . , ., ix, 7. (L. VECCIA VAGLIERI)

BIS̲H̲R B. **AL-MUʿTAMIR** (ABŪ SAHL AL-HILĀLĪ), born in Bag̲h̲dād, from where he went to Baṣra where he met Bis̲h̲r b. Saʿīd and Abū ʿUt̲h̲mān al-Zaʿfarānī, both companions of Wāṣil b. ʿAṭāʾ (founder of the Muʿtazilite school) who initiated him in the principles of the school. Another of his masters was Muʿammar b. ʿAbbād al-Sulamī. After his return to Bag̲h̲dād, Bis̲h̲r was able to win a large number of converts to the *iʿtizāl*. Hārūn al-Ras̲h̲īd, who was hostile to the Muʿtazilite doctrine, threw him into prison. Bis̲h̲r thereupon composed some forty thousand lines of remarkably eloquent verse on "justice" (*al-ʿadl*), "monotheism" (*al-tawḥīd*) and "menace" (*al-waʿīd*), three fundamental principles of the Muʿtazilite school. These verses found their way outside the prison precincts; they were recited at meetings everywhere. Al-Ras̲h̲īd, realising that Bishr's verses had more power over the masses than his teaching before his imprisonment, freed him. Bis̲h̲r dedicated a veritable dithyramb to reason. He was at once a great poet and a great rhetorician. His advice to authors and especially to poets is quoted in a celebrated page of al-D̲j̲āḥiẓ (*al-Bayān*, i, 104): "The poet must feel that secret influence of the heavens and choose elegant and beautiful terms which are simple and clear of expression".

Only a few fragments of his writings on the Muʿtazilite principles have come down to us. He stressed especially the problem of "moral responsibility" and was the first to speak of "engendered acts" (*al-tawallud*) with a view to clarifying the nature of this responsibility and of explaining at the same time the problem of sensation. The "engendered act" (*tawallud*) is an act prompted by a cause which is itself the effect of another cause. Thus, in the act of opening a door with a key, there is first a voluntary act, then the movement of the hand which turns the key, and lastly that of the key which turns the tongue of the lock. This last movement is an engendered act for it does not emanate directly from a voluntary decision. Thus, he says, we are responsible for acts initiated by ourselves either directly or "engendered" by our direct (voluntary) acts in measure as we are aware of all their consequences. Bis̲h̲r also explains sensation as an "engendered act" through the impression which is first made on the senses; the sense then naturally translates this impression into sensation. Reason, he says, once it has reached maturity, can comprehend the great moral problems: distinguish good from evil, even before any revelation. And thus, merit or the lack of it depends upon ourselves alone, for we have freedom of choice and action. And he adds, "there is greater merit in the man who does good by his own means than in him who is helped by divine grace". He remarked also, that voluntary decision need not necessarily be followed by implementation, even in default of impediment. We are responsible in so far as we perceive the moral value of our actions; in the case of ignorance there is no responsibility. Repentance is valueless, he says, unless it goes with a decision not to repeat the forbidden act and not to persist in it.

As to our knowledge of the external world, it may be partial and relative, but this need not cast doubt on the value of reason. He allows that movement lies between the two moments of rest through which the mobile agent passes; and, he says, cause must always precede its effect. He defends the principle of universal determinism; the only exception he allows is that of man's freedom of motion. Finally, he considers the soul as ineluctably united to the body in man.

Disciples of Bishr were the Muʿtazilite masters: Abū Mūsa al-Murdār, T̲h̲umāmā and Aḥmad b. Abī Duʾād. He probably died between 210-226 H/825-840.

Nader, *Le Système Philosophique des Muʿtazila*, Beirut 1956), 38 *et passim*. (ALBERT N. NADER)

BISHR B. **AL-WALĪD** B. ʿABD AL-MALIK, Umayyad prince, one of the numerous sons of the Caliph al-Walīd and brother of the Caliphs Yazīd III and Ibrāhīm. His learning earned him the title of scholar (*ʿālim*) of the Banū Marwān. He led many military expeditions (certainly in 92/710-11: al-Yaʿḳūbī, ii, 350, and in 96/714-15 against the Byzantines: al-Ṭabarī, ii, 1269 etc.). He was nominated *amīr* of the pilgrimage by his father in 95/714. His name does not appear in the sources until the conspiracy against his cousin al-Walīd II in 126/743-44. Despite the prohibition of his brother al-ʿAbbās, the famous general, he joined the opposition to the Caliph which supported Yazīd b. al-Walīd (the future Yazīd III). He was not, however, the only member of the family to do so, since Yazīd was supported by thirteen brothers.

He was governor of Ḳinnasrīn when Marwān b. Muḥammad, the governor of Armenia and Mesopotamia, took the field against Yazīd's successor Ibrāhīm in 127/744-45. Marwān, having succeeded in winning over the garrison of the town, largely composed of Ḳaysites, persuaded their leader to hand over to him Bishr and his brother Masrūr, and threw them both into prison. The date of Bishr's death is not known, but as Marwān in the course of his march after the battle of ʿAyn al-Djarr took over the caliphate, it is presumed that the two captives never recovered their liberty and died in prison.

BISHR AL-ḤĀFĪ, full name: ABŪ NAṢR BISHR B. AL-ḤĀRITH B. ʿABD AL-RAḤMĀN B. ʿAṬĀʾ B. HILĀL B. MĀHĀN B. ʿABD ALLĀH (originally Baʿbūr) AL-ḤĀFĪ. He was a Ṣūfī, born in Bakird or in Mābarsām, a village near Marw (al-Shāhidjān) in 150/767 (or 152/769), and died in Baghdād (some sources say that he died in Marw, but this seems unlikely) in 226/840 or 227/841-42. Little is known about his early age. He is said to have belonged to some young men's association, or a gang of robbers, whilst still in Marw. He has also been described as a great friend of wine. Another tradition has it that he earned his living by making spindles. We do not know how this fits in, or to which period of his life it belongs. It is a known fact, however, that like his maternal uncle ʿAlī b. Khashram (165/781-258/872) he was a traditionist. With the exception of ʿAbd Allāh b. al-Mubārak (who came from Marw but travelled a great deal), his teachers lived in the Arabic-speaking regions; so Bishr is certain to have continued his *ḥadīth* studies after he left his home, and it may be these very studies that induced him to go away. He had already made a name for himself when he reached Baghdād from ʿAbbādān for the first time, for a Baghdād traditionist was anxious to meet him. Bishr is also said to have studied under Mālik b. Anas (who died in 179/795) and to have gone with him on a pilgrimage to Mecca. For chronological reasons Abū Ḥanīfa cannot possibly have been one of his teachers, as Hudjwīrī and ʿAṭṭār assert.

It is also not clear how and when he became a Ṣūfī. There is no mention anywhere of a novitiate, and two completely different events are mentioned as the reasons for his conversion. According to one version a certain Isḥāḳ al-Maghāzilī (who is, unfortunately, otherwise unknown to us) wrote a letter to him in which he asked him how he meant to earn his living if he lost his sight and his hearing and was no longer able to make spindles. According to the other version he picked up a piece of paper in the street (one report of this even says that he was drunk at the time) with the name of God on it; he perfumed it and kept it reverently, with the result that either Bishr himself, or someone else, had a dream promising the exaltation of Bishr's name. In each case, the result mentioned is Bishr's conversion to a pious way of life. Quite apart from these contradictions, we do not know what form this piety took—*e.g.*, whether it included *ḥadīth*—and we have no proof that these events actually were the beginning of his life as a Ṣūfī. From Bishr's sayings which have survived we merely see that at some point, at the latest in Baghdād, he did turn away from traditionist studies, he buried his *ḥadīth* writings and concentrated on Ṣūfī devotions. Traditionist studies, he says, do not equip one for death, they are merely a means to gain wordly pleasure, and they impair piety. He asked his former colleagues to impose a "poor-rate" on the *ḥadīth*, that is to say, to follow truly 2½% of the pious verses which they had learnt and which they declaimed with such professorial self-complacency. He refrained from teaching *ḥadīth*s for the very reason that he so greatly wished to teach them, and promised to return to them as soon as he had overcome his longing to teach them: "Beware of the *ḥaddathanā*, for in the *ḥaddathanā* there is embedded a particular sweetness". He admitted the science of *ḥadīth* only in so far as it was pursued "for the sake of God", and quoted *ḥadīth*s only in conversation, where this would fit into the general framework of a training for a pious way of life. Still, as we do not know whether his earlier traditionism might not have been practised with this same idea in mind all along, we ought perhaps not to speak of an actual breach with his past.

Bishr's Ṣūfī piety is based upon the acceptance of the laws of Islam and the Sunnī Caliphs, but he is also said to have held the family of the Prophet in loving veneration. He was greatly respected not only by Aḥmad b. Ḥanbal, but also by Maʾmūn (Muʿtazila, Shīʿa). The statement that he took Faith to mean a positive confession, a belief in its truth and man's acting according to it, as Hudjwīrī puts it, is, when formulated in this way, hardly true, although it is justifiable with regard to his practice. The decisive factor for Bishr was the deed itself. As an absolute minimum in this respect, he demanded that man should at least not sin, and to accomplish this he advised contemplation of God's greatness—before which he himself trembled, despite his own ascetic life, up to the very point of death. Before

the choice between God or the world, he made his choice unreservedly in favour of God, and he despised all forms of worldly ambition and selfishness. He preached poverty, which was to be borne with patience and charity, and it is said of him that when one day he met a man suffering from cold, and could not help him in any other way, he unclothed himself to show his sympathy and to give an example; he died in a borrowed shirt because he had given his own away to a poor man. He spoke against the avaricious, the very sight of whom "hardens the heart"; and he advised a man about to start off on a pilgrimage to Mecca, to give his money instead to an orphan or to a poor man, for the joy caused thereby was worth a hundred times more than a pilgrimage. By saying this he hardly meant that the one pilgrimage to Mecca, which the law prescribes, could be replaced by some social act, as some other Ṣūfīs have taught, but must have referred to some additional pilgrimage. Ṭāwūs b. Kaysān already (who died in 105/724) is said to have refrained from going on a pilgrimage because he chose to stay with a sick friend instead (*Ḥilyat al-Awliyā᾽*, 4, 10; cf. Meier, *Zwei islamische Lehrerzählungen bei Tolstoj?* in *Asiatische Studien*, 1958). And Bis̲h̲r called pilgrimages the holy war of women, but, unlike for instance D̲j̲aʿfar al-Ṣādiḳ (al-Ḳāḍī al-Nuʿmān: *Daʿā᾽im al-Islām*, i, 346-47), he put the giving of alms above both pilgrimage and the holy war—because alms could be given in secret, without other people getting to know of it. The very wish to have one's good deeds known by other people is, for Bis̲h̲r, an example of worldly mindedness, and in this he sees an element capable of destroying even the good deeds of man. He condemned the wish to be well thought of by one's fellow men to the extent of advising one against mixing with them at all—even if only to give testimony and lead the prayers. Here his teachings come close to the Malāmatiyya: "Do not give anything merely in order to avoid the censure of others!"; "Hide your good deeds as well as your evil ones". He confesses that he himself still attaches a certain importance to the effect he makes on others, and to his appearance as a pious man, but he wages an unrelenting war against all this "pretentiousness" (*taṣannuʿ*)—in himself as well as in others. He only recognises those who wear patched cloaks (*muraḳ-ḳaʿāt*) as sharers of his views, when one of them has told him of his resolution to live up to this symbol of dedication to God's service by au active furtherance of religion. He himself refrained, on one occasion, from accepting dates in the dark at the back of a shop, in order not to be different in secret from what he was generally considered to be. His abstemiousness (*waraʿ*) went beyond mere abstention from dubious things by putting a limit to the unrestrained enjoyment of what was permitted: "what is permitted", he says, "does not tolerate immoderation (*isrāf*)". Of everything he ate a little less than his conscience would have permitted, thereby creating the 'Tabu-zone' which had already been recommended in the Jewish *Pirḳē Āboth*, and which was also observed by numerous other Islamic ascetics. Destitute, he often lived on bread alone, and sometimes he was starving. Where the question of faith in God's providence (*tawakkul*) arose, he distinguished three types of the poor: (1) those who neither beg nor accept anything, yet receive everything they ask for of God; (2) those who do not beg but accept what they are given; (3) those who hold out for as long as they can, but do then beg (Sulamī: *Ṭabaḳāt*, 47; ʿAṭṭār: *Tad̲h̲kira*, i, 110), describing those who belong to the middle group as people trusting in the providence of God, however, another place (*Tad̲h̲kira*, i, 110, 24-25). In he characterises this confidence as being the resolution not to accept anything from any man; whilst in a third place *tawakkul* appears to be compatible with manual work provided the deed be done under the will of God (*Ḥilya*, 8, 351)—but the explanation of that oracular definition *iḍṭirāb bilā sukūn wa sukūn bilā iḍṭirāb* does not seem to me to be beyond all doubt. Admittedly, Bis̲h̲r is said to have begged only from Sarī al-Saḳaṭī, knowing that this man would rejoice in the loss of any worldly possessions; but some stories suggest that he lived largely on the earnings of his sister Muk̲h̲k̲h̲a, who looked after him and lived by spinning. (Bis̲h̲r had three sisters who are all said to have lived in Bag̲h̲dād). The question of begging links up with the one concerning "giving and taking', which played a great part in Ṣūfism, especially later on (cf. Meier, *Die Vita des Scheich Abū Isḥāq al-Kāzarūnī*, in *Bibliotheca Islamica*, 14, 1948, Introduction 57-61). In spite of taking a great interest in the lot of the poor, Bis̲h̲r did not—unlike Kāzarūnī for example—function as their spokesman and mediator, but rather withdrew into himself. He refrains from admonishing princes, he does not even drink of the water for which a prince has dug the channel. As a consolation when the cost of living is high he advises contemplating death. He knows that there is no way of satisfying mankind, and regards his own time (on a well-known pattern) as particularly far removed from the ideal of contentment: "Even though a cap should fall from heaven on to somebody's head, that man would not want it"; nor, like Muḥāsibī, does he have much to say in his days in favour of the readers of the Ḳur᾽ān: "Rather a noble robber than a base-minded reader of the Ḳur᾽ān". He finds true piety restricted to the very few: "In these days, there are more dead within than without the walls". A Ṣūfī is one who stands before his God with a pure (*ṣāfī*) heart, and perfect is only he whom even his enemies no longer fear; but in Bis̲h̲r's own days not even friends, he says, could trust each other. The opposition which a pious man has to overcome lies in his inclinations (*s̲h̲ahawāt*): only those who have erected an iron wall against these inclinations, says Bis̲h̲r, can feel the sweetness of the service of God. He advises silence to those who derive pleasure from speaking, speech to those who enjoy being silent. He declines teaching *ḥadīt̲h̲*s, because he does not wish to give in to a desire to do so; he eats no aubergines in order to fight his craving for them, and no fruit in order not to satisfy the fruit's own longing. He does not, however, advocate the repression of sexual desire, and does not even object to a harem of 4 women—though he himself remained unmarried.

In spite of the fact that Bis̲h̲r puts the deed before knowledge, he is considered both knowledgeable and intelligent. This does not refer to his theological knowledge, but also to his ability to experience and expound religious feelings and to his pious way of life: "A wise man is not one who merely knows good and evil, but he who both does the former and refrains from doing the latter"; "First to know, then to act, then really to know". Aḥmad b. Ḥanbal is said to have claimed for himself greater theological knowledge, but to have referred to Bis̲h̲r for knowledge concerning the reality of things, the higher facts (*ḥaḳā᾽iḳ*). Without question, though only a few dicta and some verses in the style of the *zuhdiyyāt*

have survived, Bis̲h̲r played his part through his word in expanding the teaching of the mystical shaping of man in Islam. Some sayings of his, however, belong to an earlier tradition which he simply passes on—one of his frequently quoted Ṣūfī teachers is Fuḍayl b. ʿIyāḍ. The men who learnt from him are recognisable from the *isnāds* of his dicta.

With regard to the origin of Bis̲h̲r's cognomen "the barefooted" (*ḥāfī*), Ibn K̲h̲allikān tells the following story: Bis̲h̲r once asked a cobbler for a new strap for one of his sandals, but the cobbler called this a nuisance, whereupon Bis̲h̲r threw down both his sandals and henceforth walked barefoot. Much speaks in favour of this report, even if the explanation is not clear in every detail. Did Bis̲h̲r fly into a rage at the cobbler's answer, and then, being a pious man, did he draw the consequences? Or did he, blaming only himself, soberly come to the decision never to inconvenience a cobbler again? Later referring to Sura LXXI, 19 "And God made the earth your carpet", he said that one did not step onto a king's carpet wearing shoes. As a further reminder he also says that at the "time when the pact was made" they too were barefoot. This probably refers to the pact of obedience which human beings are said to have made with God before their appearance on God's earth (Sura VII, 172: *a-lastu bi-rabbikum*). Such justifications belong to the symbolic associations which Ṣūfīs later attached to the various parts and colours of their clothes (cf. Meier, *Ein Knigge für Sufi's*, in *RSO* 32, 1957, 485-524). The statement made by Hud̲j̲wīrī and repeated by ʿAṭṭār that Bis̲h̲r went barefoot because he was so deeply moved in contemplation of God, is hard to understand—and, together with the explanations given by Hud̲j̲wīrī and ʿAṭṭār, mere theory. Bis̲h̲r is said to have called himself "the barefooted" and to have been called to account for this by a girl who said "All you have to do is to buy a pair of sandals for two *dāniḳ*, but then you would no longer have your beautiful name". Al-Hafi is also the name of the dervish in Lessing's *Nathan der Weise*. Although Reiske's *Abilfedae Annales Moslemici*, i, Leipzig 1754, where our Ṣūfī appears on page 193, *vulgo Beschr ol Hafi* [*seu nudipes*] *dictus*, had already appeared by the time Lessing's play was written, it can hardly be regarded as its source. Lessing is more likely to have sought Reiske's advice personally, or to have derived the name from d'Herbelot (cf. *Baschar al-Hafi* and *Hafi*).

(F. Meier)

BISKRA, town and oasis of the Zībān in the south-east of Algeria and on the northern fringe of the Sahara. It is situated at an altitude of between 100-120 metres, on the alluvial cone and the west bank of the Oued Biskra, at the mouth of a wide depression which extends from the Awrās massif to the western Saharan peaks of the Atlas Mountains. This has always been a route much used by nomads and conquering shepherds. Its blue sky, seldom streaked with clouds, its mild winter climate (mean temperature for January 11.2° = 52° F.) make of it a winter resort (it has numerous hotels); but its summer climate is torrid (33.3° = 92° F. in July) and favourable to the ripening of dates. Rains are fairly rare (156 mm. = 6.14 ins. per year) and, above all, irregular. The palm grove which covers an area of 1300 hectares, numbers more than 150,000 palm trees and thousands of fruit trees; it is irrigated by the waters of canalised springs. In the cold season, the surplus water makes it possible to irrigate vast fields of wheat and barley at the southern end of the oasis, where the harvest begins in April. The European town, which has grown into the administrative, commercial and tourist centre, is laid out on a grid plan; it was built upstream from the palm-grove, near a fort. The Muslim cultivators are dispersed in villages, in houses of crude brick. These are mainly to the south, surrounding the ruins of an ancient Turkish fortress. These villages are: Msid, Bab al-Dorb, Ras al-Guerria, Sidi Barkat, Medjeniche, and Gueddacha; on the perimeter, a little apart, are Beni Mora, al Kora, Filiach and Aliya. Biskra, which is the chief centre of the Ziban group of oases, is a township of 52,500 inhabitants in all, among which are a few hundred Europeans. It is served by the railway which runs between Touggourt and Constantine, and by the pipeline, which, since 1958, has carried the petrol of Hassi-Messoud to the port of Philippeville, and will soon extend to Bougie.

Biskra is built on the site of the old city of Vescera, one of the Roman *limes* posts which doubtless was not occupied by the Byzantines. Its name dates back to the 3rd/11th century when it was conquered by the Ag̲h̲labids of al-Ḳayrawān with the whole of the province of Zāb (pl. Zībān) whose capital at that time was Ṭubna, in eastern Hodna. Under the Ḥammādids, Biskra was autonomous, with a council of s̲h̲ayk̲h̲s on which two families fought for pre-eminence: the Banū Rumman and the Banū Sindī. Al-Bakrī (Slane's translation 2nd ed., 111-12) speaks of its beauty and prosperity at that time and also describes its ramparts, the richness of its oasis and the Berber shepherds, Mag̲h̲rāwa and Sadrāta, who led a nomadic existence round about. In the 6th/12th century Biskra succeeded Ṭubna, in the Almohad era, and finally supplanted Tahūda, known in antiquity as Tabudeos; according to al-Idrīsī, it was always well fortified. The Zāb had just been occupied by the Atbed̲j̲ (Hilalian) Arabs coming from the east. A settled family of the Latīf tribe (from the Atbed̲j̲ confederation), the Banū Muznī, sought to take over authority from the Banū Rummān who had old ties with the country. They succeeded in the 7th/13th century with the support of the Ḥafṣids of Tunis. Biskra became the principal town of the whole south-western region of the Ḥafṣid states but was, in effect, the capital of a prosperous and virtually independent principality, to which caravans came to barter the products of the Sahara for those of the Tell.

In the 8th/14th century, the Banū Muznī committed more than one act of disloyalty to the Ḥafṣids for the benefit of the rulers of Bougie, Tlemcen or Fez. Then, in 804/1402, the king Abū Fāris re-established the authority of Tunis over Biskra; he led away the last of the Banū Muznī as his captive and replaced him, as elsewhere, by a *Ḳāʾid* of his own entourage.

With the decline of the Ḥafṣids at the end of the 9th/15th century, Biskra and the Zāb became the fief of the nomad Arabs, the Dawāwida. The town was still "decently populated" but the people were poor, wrote Leo Africanus in the middle of the 10th/16th century (trans. Épaulard, 440). This was the point at which the Turks, following the two expeditions of Ḥasan Aghā in 949/1542 and Salāḥ Raʾīs in 959/1552 took over to establish a garrison and construct a fort. In practice, power was in the hands of the chiefs of the Bu ʿUkkāz family, who were given the title of *Shaykh al-ʿArab*. In the eighteenth century, the Bey Salāḥ of Constantine, finding them too powerful, set up a rival family, that of Ben Ganah. Biskra suffered from this rivalry and from the abuses of the Turks: its inhabitants gradually abandoned the town to put a greater distance between themselves and the *ḳaṣba* and dispersed to small villages spanning the oasis.

After the French landing at Algiers (1830), the rivalry continued. Farḥat b. Saʿīd, representative of the Bū ʿUkkāz family, finally appealed to ʿAbd al Ḳādir, but the Ben Ganah family joined up with France in 1838, following the capture of Constantine. Biskra was occupied by the Duke of Aumale in 1844, in the following year a permanent garrison was established and a fort built on the site of the old *ḳaṣba*. The Ben Ganah retained their position as the most influential family and held most of the key appointments in the region. They have recently become reconciled with the Bū ʿUkkāz family (1938) whose allies they now are. Biskra has become a prosperous centre, chief town of a district, then of an annexe of the military territory of Touggart, centre of a mixed commune and of a commune with full powers. It has just become the chief town of the *sous-prefecture* in the new Department of Batna (1956). It is the economic capital of the Zībān.

(J. Despois)

BISMILLĀH [see BASMALA].

BISṬĀM (also Basṭām, rarer Bosṭām). A town of ca. 4,000 inhabitants (1950) in Khurāsān, in the district (*shahristān*) of Shāhrūd, and county (*bakhsh*) of Ḳalʿa-i naw. It is located 6 km. N. of Shāhrud at 55 E. Long. (Greenw.) and 36° 30′ N. Lat, on a spur of the Elburz mountains.

The pre-Islamic history of the town is unknown. According to one tradition the town was founded by Bisṭām, governor of Khurāsān during the rule of his nephew Khusraw II Parwīz, ca. 590 A.D. Yāḳūt attributes the town to Shāpūr II (cf. Schwarz, 821). During the Arab conquest Suwayd b. Muḳarrin occupied the town before his invasion of Djurdjān, but the date is uncertain (Ṭabarī, refs. in Schwarz).

During the ʿAbbāsid caliphate Bisṭām was the second town of Ḳūmis province after the capital Dāmghān. Little is known of the town except as the burial place of the Ṣūfī Abū Yazīd al-Bisṭāmī [*q.v.*]. After the Mongol invasion the town declined and later it was replaced by Shāhrūd in importance. On the sanctuary of Bāyazīd see Houtum-Schindler in *JRAS*, 1909, 161.

At present in addition to the tomb and sanctuary of Bāyazīd, there are remains of a citadel from the 6/12th century, and of an Imāmzāda Muḥammad. The mosque probably dates from the 18th century but a minaret and adjacent tomb are much older. On these monuments see E. Herzfeld in *Der Islam* 11 (1921), 168-9.

BISṬĀM B. ḲAYS b. Masʿūd b. Ḳays, Abu ʾl-Ṣahbāʾ or Abū Zīḳ (according to Ibn al-Kalbī, *Djamhara* 203, nicknamed "al-Mutaḳammir")—pre-Islamic hero, poet and *sayyid* of the Banu Shaybān. His family was considered one of the three most noble and aristocratic Bedouin families (*al-Aghānī*, xvii, 105). His father is known (*al-Muḥabbar*, 253) as one of the "dhawū ʾl-Ākāl" (enjoying grants of the foreign rulers) and was granted by the Sāsānid kings as a fee Ubulla and the adjacent border territories (Ṭaff Safawān) against the obligation to prevent marauding raids of his tribesmen. Failing to fulfil his obligation in face of the opposition in his own tribe, and being suspected of plotting with Arab chiefs against Persian rule, he was imprisoned and died in a Persian gaol (*al-Aghānī*, xx, 140).

It is a significant fact, that Bisṭām did not avenge the death of his father. On the contrary, Persian diplomacy succeeded, despite the Arab victory at Dhū Ḳār, in assuring the collaboration of Bisṭām, and a fairly trustworthy tradition (*al-Naḳāʾid*, 580) shows that the Shaybānī troops were equipped by the Persian *ʿāmil* at ʿAyn Tamr. Born in the last quarter of the 6th century A.D. (T. Nöldeke, in *Der Islam*, xiv, 125) Bisṭām became a leader of his tribe at the age of twenty (Ibn al-Kalbī, *op. cit.*) and succeeded in uniting his tribe: he is known as one of the "djarrārūn" (*al-Muḥabbar*, 250). Abandoning the idea of fighting the Persians he directed all his activities against his neighbours of the Banū Tamīm.

His first raid against the Banū Yarbūʿ, a branch of the Banū Tamīm, was—according to al-Balādhurī—at al-Aʿshāsh (*Ansāb*, x, 998 b). The Shaybānī troops were defeated, Bisṭām himself captured and released without ransom. His second raid was probably at Ḳushāwa (*Ansāb*, x, 1003b). Here it is clearly mentioned that Bisṭām commanded the attacking troops, but the raid itself was insignificant and ended with seizing of camels of a clan of the Banū Salīṭ. To the same early period belongs apparently the encounter with al-Aḳraʿ b. Ḥābis at Salmān, in which al-Aḳraʿ [*q.v.*] was captured. A more serious enterprise was the raid of Ghabīṭ al-Madara (known as the Yawm Baṭn Faldj). A tribal federation of the Thaʿalib was attacked and overcome by the troops of Bisṭām, but when the attackers proceeded against the Banū Mālik b. Hanẓala they met resistance and were put to flight with the aid of warriors of Banū Yarbūʿ. Bisṭām, captured by ʿUtayba b. al-Ḥārith, had to pay a very high ransom and was compelled to promise not to attack the clan of ʿUtayba any more (*Ansāb*, 998a, 988a, 995b, 996a). Breaking his promise he attacked after a short time a the camp of ʿUtayba's son at Dhū Ḳār (Ansāb 995b, 998a) and succeeded in seizing the camels (the raid is also known as Yawm Fayḥān). Not content with this victory, he prepared an attack on the Banū Tamīm in order to capture ʿUtayba; but he was defeated in this battle at al-Ṣamd (or Dhū Ṭulūḥ) and barely escaped with his life (*Ansāb*, 998a). A further battle at al-Ufāḳa (known as the battle of al-Ghabīṭayn or al-ʿUẓāla), prepared and aided

by the Persian *ʿāmil* at ʿAyn Tamr, ended with the defeat of the attackers and with the escape of Bisṭām (*Ansāb*, 1004 b). Bisṭām fought his last battle at Naḳā al-Ḥasan. He was killed by a half-witted Ḍabbī, ʿĀṣim b. Khalīfa, who is said to have boasted of his deed at the court of ʿUthmān. The date of his death may be fixed at *circa* 615 A.D.

Very little is known about the posterity of Bisṭām. His grand-daughter Ḥadrāʾ, the daughter of his son Zīḳ was about to marry al-Farazdaḳ, but died before the appointed date.

Bisṭām is said to have been a Christian. He was the *sayyid* of his tribe; when the news of his death reached his tribe they pulled down their tents as an expression of their sorrow. Many elegies were composed on his death, and his person was glorified as the ideal of Bedouin courage and bravery. But in the times of al-Djāḥiẓ, in the urban mixed society of the towns of ʿIrāḳ, his glory faded away, and the common people preferred to listen to the story of ʿAntara (*al-Bayān*, i, 34) which came closer to their social equalitarian tendencies (cf. *EI*, s.v. *ʿAntara*, R. Blachère).

AL-**BISṬĀMĪ, ʿABD** AL-**RAḤMĀN** B. MUḤAMMAD B. ʿALĪ B. AḤMAD AL-ḤANAFĪ AL-ḤURŪFĪ was born in Antioch and appears to have witnessed the sack of Aleppo, by Tīmūr, in 803/1400. He studied in Cairo and went to Bursa, then the Ottoman capital and imperial residence. There he gained the favour of Sulṭān Murād II, a patron of learning, to whom several of his works are dedicated; there he died in 858/1454.

He was a mystic, belonging, as his name indicates, to the Ḥurūfī [*q.v.*] order of dervishes, who attributed a mystical signifcance to the letters of the alphabet and to combinations of these (cf. his *Kashf Asrār al-Ḥurūf* and his *Shams al-Āfāḳ fī ʿilm al-Ḥurūf*, written in 826/1423). Among works of this type is also his *Miftāḥ al-Djafr al-Djāmiʿ*. He wrote a number of Ṣūfī works, perhaps the best-known being *Manāhidj al-Tawassul fī Mabāhidj al-Tarassul*, and also wrote on history and geography, the most important work being the encyclopaedia entitled *al-Fawāʾiḥ al-Miskiyya fi 'l-Fawātiḥ al-Makkiyya*.

BĪSTĪ [see SIKKA].

BĪSUTŪN, (BIHISTŪN of the Arabic geographers, Bīstūn in present local parlance), a mountain ca. 30 km. E. of Kirmānshāh on the main road from Baghdād to Hamadān.

The name is found in Greek sources (Diodorus 2.13 and Isidore of Charax) τὸ βαγίστανον ὄρος, and in early Islamic authors (as al-Khwārizmī and Ḥamza al-Iṣfahānī) where we find the archaic form Baghistān, Old Persian* *bāgastāna* "place of the gods", (or one divinity in particular). Later Islamic authors have the form Bihistūn (Bahistūn) which in modern times became Bīsutūn (Bīstūn). The site is mentioned many times in Arabic literature since it lay on the main road from ʿIrāḳ to Khurāsān.

High above the road is the famous bas-relief of Darius the Great with cuneiform inscriptions in three languages, Old Persian, Accadian, and Elamite. Beside the road below was the relief of the Parthian king Gotarzes, unfortunately now almost obliterated by a modern New Persian inscription.

Bīsutūn was regarded as a world wonder by the Muslims. In the books of those authors who follow Abū Zayd al-Balkhī appears a short description of the sculptures which is fanciful since the Bīsutūn sculptures are confused with those of nearby Ṭāḳ-i Bustān (considered Khusraw II Parwīz with his horse, a work of Ḳaṭṭūs b. Sinimmar). Ibn Ḥawḳal gives the curious explanation of the Darius relief with his captives as a teacher and pupils. Most Islamic authors thought the sculptures depicted Shirīn and Khusraw II.

The trilingual inscription of Darius provided the key to the decipherment of all cuneiform inscriptions.

Bibliography: Le Strange, 187; al-Khwārizmī (ed. Vloten), 111; the Arab geographers are summarised in Schwarz, *Iran im Mittelalter*, iv, Leipzig 1921, 487 f. For the O.P. inscriptions, cf. R. G. Kent, *Old Persian*, New Haven, Conn. 1953, 108. For photographs see F. Sarre & E. Herzfeld, *Iranische Felsreliefs*, 189-198, plates 33-5. (E. HERZFELD-[R. N. FRYE])

BITIK, BITIKČI, Turkish words derived from the verb *biti-* "to write". A deverbal-noun *bitig* "written document book" is found in the Orkhon inscriptions and in the Turkish texts of Turfan. *Bitikči*, is a *nomen agentis* in *-či* signifying "scribe, secretary". It is first found in *Qutadyu bilig* under the form *bitigči*. The forms with a final surd (*bitik*, *bitikči*) are well attested in middle Turkish notably in Čagatay and Coman. The verb *biti-* and its derivatives have almost disappeared from modern dialects. Khakas has preserved *pičik*, book, writing, document" as well as *pičikči* "cultured, literate" and in Tuvin we have for example *bižik* "official document".

The etymology of *biti* is unknown. The much quoted derivation from the Chinese 筆 *pi* (> **pįĕt*) «writing brush» must be treated with caution. Comparison with Indo-European forms, such as Khotanese *piḍaka* "written, document", Sanskrit *piṭaka* "collection of canonical books", or Greek πιττάκιον "letter", is tempting but unsubstantiated by the phonetic history of these words.

In written Mongol the verb "to write" is *biči-*, a form which corresponds with the Turkish *biti-*. The deverbal noun *bičig* "written document, writing, letter, missive" occurs from the time of the Secret History of the Mongols and a *nomen agentis bičigeci* "scribe, secretary, copyist" is found in the Mongol administrative documents of the Īl-khāns. Mean-

while in Mongol-administered Persia the Turkish form *bitikči* seems to have been preferred to the Mongol form. One may see in this an indication of Uighur preponderance in the administration of the Mongol Empire. The two words of literary Mongol are clearly observable in modern dialects. For example: modern Khalkha *bičig* and *bičēči*, Buryat *bəsəg* and *bəšəše*, Kalmuk, *bičig* and *bičēči*, Ordos *bičik* and *bičēči*.

The most ancient Tunguz form is Ju-chen **bitge(i)* "book". Mandju *bithe* "written document, as the book, document, letter" must be a loan-word as the derivation cannot be explained by the facts of Mandju. On the other hand *bithesi* "scribe, secretary" is a regular Mandju *nomen agentis*. In Evenki *biči* "to write" and *bičiga* "written document" are borrowed from the Mongol, while the Oroch *bitihö*, Oltcha *bithö* "written document, letter", is directly connected with Mandju forms.

It is reasonable to conclude that the Turkish words implanted in Mongol by Uighur scribes, followed the Mongol conquests, which enabled them to become technical administrative terms. — These found ready use in the highly developed states of the Ju-chen and the Mandjus. See further BERAT.

BITLĪS [see BIDLĪS].

BITOLJA [see MANASTIR].

BIṬRAWSH, in Spanish Pedroche, a little place in the administrative district of Pozoblanco, 60 kms. north of Cordoba, on the Cordoba-Toledo road, and the same distance from Dār al-Baḳar now El Vacar). According to Idrīsī, it was a heavily populated fortified town with high walls; situated in the region of Faḥṣ al-Ballūṭ of which Ghāfiḳ (now Belalcázar) was the capital, it was the seat of a provincial judge. Its inhabitants like those of Ghāfiḳ had won renown for their bravery in repulsing the attacks of the Christians. Its mountains and plains were, and to a great extent still are, covered with a variety of oak trees distinguished by the quality of their acorns, which the inhabitants cultivated with great care, and which in years of famine served them as food, for as al-Rāzī affirms, they were the best in all Spain. Abū Ḥafṣ ʿUmar al-Ballūṭī, who came originally from Pedroches, occupied Crete with the survivors of the ʿBattle of the Suburb' (*al-rabaḍ*) and there founded a dynasty which lasted until 350/961. The Berbers settled in the district of Los Pedroches took part, under an Andalusian mystic called Abū ʿAlī al-Sarrādj, in a rising against the *amīr* ʿAbd Allāh which ended in the rout and death of their chief in front of the walls of Zamora (288/901). Of its history during the Almoravid and Almohad periods, we only know that at the beginning of the year 550/1155, the governor of Cordova, Abū Zayd ʿAbd al-Raḥmān b. Igit, made a sortie with Almohad troops against the forth of Pedroche and those of the Faḥṣ al-Ballūṭ region of which Alfonso VII had just taken possession in the course of a rapid invasion which had also anabled him to take Andujar. Ibn Igit routed the Count, the lord of Pedroche, whom Alfonso VII had left there as governor, and, in the course of his assault on the fort, took him prisonner and sent him to Marrakūsh.

(A. HUICI MIRANDA)

BIṬRĪḲ, Arabicised form of Latin *Patricius*. The *patriciatus dignitas* was instituted by the Emperor Constantine (A.D. 306-337), an honorary dignity, not connected with any office, and conferred for exceptional services to the State.

I.—It is certain that no Arabs in the service of Rome were endowed with the patriciate before the Ghassānids [*q.v.*] and no Ghassānid before al-Ḥārith b. Djabala, who was honoured with the dignity *ca.* 540 A.D., as was also his son and successor al-Mundhir *ca.* 570 A.D. The assumption of this high Roman honour by the two Ghassānid dynasts is the most telling indication of their place and importance in the Roman hierarchy. Al-Ḥārith and al-Mundhir are the only figures in the history of the Arabs before Islam whose patriciate can be established with certainty; there is no positive evidence in the sources that the Romans conferred it again on a Ghassānid after al-Mundhir.

II.—As the Muslim conquests in the seventh century changed the status and rôle of the Arabs in their relation to the Romans from subjects and "allies" to conquerors, the patriciate, which in the pre-Islamic period had been greatly coveted by Arab princes as a symbol of their Roman connexions, naturally ceased to be assumed by them. Instead, it survived as a term in their literature. Almost a *hapax legomenon* in pre-Islamic poetry, *biṭrīḳ* acquired three broken plurals and found its way into the literature of the Muslim period. It was woven into the texture of Arabic poetry by al-Mutanabbī and Abū Firās and was frequently mentioned by the historians and the geographers. Indeed, in the military annals of Arab-Byzantine relations it became the regular term for a Byzantine commander. Although other terms occur, like سرطغوس στρατηγός, دمستق *domesticus*, and دوقس *dux*, paradoxically enough it was *biṭrīḳ*, a non-military term, which received the widest vogue.

III.—The frequent occurence of *biṭrīḳ* in Arabic authors was, however, attended by confusions and inaccuracies. The patriciate was conceived as though it were (a) an office (b) hereditary (c) applicable to the Persians, and (d) interchangeable with *baṭrak* (patriarch). The truth, of course, is that the patriciate was a dignity, non-hereditary, peculiarly Byzantine, and non-ecclesiastical. But it is important to draw a distinction between the reckless use of the term in literary works of the type of al-Tanūkhī's *Faradj* and the careful use of it in the serious works of the historians and the geographers. These have preserved information of some interest and relevance to the Byzantinist for the history of this dignity with particular reference to the term πρωτοπατρίκιος.

IV.—*Biṭrīḳ* was recognised by the Arabic lexicographers as a foreign term and was considered by some as a homophone and homograph of a supposedly indigenous Arabic word, which, *inter alia*, means "a proud and self-conceited man".

AL-BIṬRŪDJĪ, NŪR AL-DĪN ABŪ ISḤĀḲ, called Alpetragius by mediaeval European authors, a Spanish-Arab astronomer, the disciple and friend of Ibn Ṭufayl (about 600/1200). His astronomical theory, the origins of which must be sought in the return to Aristotelianism initiated by Ibn Bādjdja and other Arab philosophers of Spain like Ibn Ṭufayl and the astronomer Djābir b. Aflaḥ, involved the reintroduction of the idea of impetus roughly formulated by Simplicius (6th century A.D.), the abandonment of epicycles and excentrics, and the view that the celestial spheres revolve around different axes, thus producing a spiral movement (*ḥaraka lawlabiyya*). The work in which he sets forth his principles, entitled *Kitāb fi 'l-Hayʾa*, was translated by Michael Scot; Carmody published in 1952, at Berkeley, a critical edition of this translation compared with the Arabic text. In 657/1259, Moshe ibn Tibbon translated the work from Arabic into Hebrew, and in 934/1528, Ḳalonimos ben David made a Latin translation, based on the Hebrew version, which was printed at Venice in 1531, at the same time as the *Treatise on the sphere* of Sacrobosco.

BIYĀBĀNAK, an area in the central desert of Iran (Dasht-i Kawīr), with some twelve oases. The area is included within E. Long. (Greenw.) 54° 15′ and 55° 15′ and N. Lat. 33° 5′ and 34° 10′, roughly 70 miles by 90 miles. The date palm and underground springs of water, some hot but all salty, have enabled the oases to flourish isolated from the rest of Iran. The word is probably a diminutive meaning "little desert", but the name does not appear before the 16th century (Tavernier).

We find no references to the area in pre-Islamic times, though local tradition claims that it was a place of banishment under the Sāsānids, and the existence of site names such as Atashkada (6 km. south of the oasis of Mihrdjān), attest pre-Islamic occupation.

A history of Yazd (see below) claims that the Arabs in pursuit of Yazdadjird passed through the central desert area and obtained the submission of the local inhabitants. This, however, may apply only to Ṭabbas since local tradition (oasis of Farrūkhī) claims that the Biyābānak was only converted to Islam in the 3/9th century in the time of the Imām ʿAlī al-Riḍā, and conversion was accomplished only by warfare. Ibn Ḥawḳal says there are three villages at five stages from Nāʾīn on the desert road to Khurāsān, Biyādaḳ, Djarmaḳ, and Arābah, each within eyesight of the other. The palm trees are especially noteworthy here. Nāṣir-i Khusraw mentions the village of Karmah, 43 farsakhs from Nāʾīn, and says that the area was infested formerly with Kūfidjān (Ḳufṣ), but in his time (5th/11th century). Amīr Gīlakī of Ṭabbas had rid the region of them. Later the area suffered from Balūčī raids until the 1920s. Apparently Arab tribesmen from Khūzistān raided this area as well, for European travellers in the last century report Arabs living here and local tradition tells of a tribe called the Īl-i Basīrī which terrorised the area under the Ḳādjārs.

At present there are perhaps 10,000 people living in the oases, the nine principal oases being Djandaḳ, Farrūkhī, Djarmaḳ, Urdīb, Īrādj, Mihrdjān, Bayāzah, Čūpānān, and the administrative centre Khūr. Dialects are spoken in all of the oases save Djandaḳ where Persian is spoken. The date palm provides the principal livelihood for the people of the oases.

BLIDA [see BULAYDA].

BOABDIL [see NAṢRIDS].

BOBASTRO [see BARBASHTURU].

BODRUM, a small town situated on the west coast of Asia Minor, opposite the island of Istanköy (Kos). It stands near the site of the ancient Halicarnassus in Caria. When the Turks overran western Asia Minor in the years around 1300, this region came under the rule of the Begs of Menteshe [*q.v.*]. The Ottomans seized the emirate of Menteshe in 792/1390, lost it after their defeat in battle against Tīmūr Lang at Ankara in 804/1402 and did not recover full and direct possession of Menteshe until 829/1425-1426. This second and definitive annexation of the emirate was not, however, destined to include the old Halicarnassus, for the Knights of St John at Rhodes, under their Grand Master Philibert de Naillac (1396-1421), had meanwhile occupied the site of the ancient town, and had built close at hand a fortress which received the name of "Castellum Sancti Petri" (Gr. Πετρόνιον). It has been suggested that the name Bodrum derives either from the vault-like arcades amongst the ruins of Halicarnassus (cf. the Turkish *bodrum*: a subterranean vault, a cellar) or from the Latin name for the new fortress ("Sanctum Petrum").

The Venetian admiral Pietro Mocenigo, during the course of his sea campaigns in the eastern Mediterranean (1471-1474), ravaged the Ottoman-held hinterland of Bodrum. In 885/1480, the Ottomans, returning to Istanbul from their unsuccessful siege of Rhodes in that year, attempted, but without avail, to take the Castle of St Peter. Bodrum came under Ottoman rule only in 929/1522, when the Knights of St John, after a long and desperate resistance, surrendered Rhodes, together with its dependent possessions, to Sulṭān Sulaymān Ḳānūnī. Ewliyā Čelebī mentions that a naval engagement occurred in the harbour of Bodrum during the Ottoman-Venetian war of 1055-1080/1645-1669. Bodrum suffered bombardment from the Russian squadron operating in the eastern Mediterranean in the course of the Ottoman-Russian war of 1182-1188/1768-1774. It was again bombarded during the

Great War of 1914-1918, the fortress on this latter occasion receiving considerable damage, which was, however, repaired when Italian forces occupied the town in 1919-1920. Bodrum, under Ottoman rule, belonged to the *sandjak* of Menteshe in the *eyālet* of Anadolu. It had later the status of a *kaḍā'*, when this *sandjak* was subordinated, in 1864, to the newly formed *wilāyet* of Aydin (Smyrna). The town is now included in the present Turkish province of Muğla and had in 1950 a population of about 4,800 inhabitants.

BOGHĀ AL-KABĪR [see BUGHĀ AL-KABĪR].

BOGHĀ AL-SHARĀBĪ [see BUGHĀ AL-SHARĀBĪ].

BOGHAZ [see BOGHAZ-IČI].

BOGHAZ-IČI (BOĞAZIÇI) ("interior of the strait") is the expression used in Turkish to denote the Bosphorus, and especially the shores, waters, bays and promontories which constitute its middle section. The name Bosphorus (Gr. Βόσπορος, Lat. Bosporus, Bosphorus) derives from a word of Thracian origin (cf. Pauly-Wissowa). This narrow channel, the Thracian Bosphorus (so-called in order to distinguish it from the Cimmerian Bosphorus, *i.e.*, the strait of Kertch between the Sea of Azov and the Black Sea) unites the Sea of Marmara (the ancient Propontis, Marmara Denizi in Turkish) and the Black Sea (the Pontus Euxinus of classical times, the Kara Deniz of the Turks). The Byzantines often referred to it simply as τὸ Στενὸν, "the strait", while, to the Latins at the time of the Crusades, it was known as the "brachium S. Georgii" (cf. Tomaschek). It is mentioned under a number of different names in the Turkish sources, *e.g.*, Khalīdj-i baḥr-i siyāh, Khalīdj-i Ḳusṭanṭīniyye, Ḳusṭanṭīniyye boghazī, Istanbul boghazī, etc. The word *boghaz* means "throat" or "gullet" in Turkish, but has in geographical names the sense of "defile", "strait" (cf., *e.g.*, Külek Boghazī, the Cilician Gates, or Čanāḳ-ḳal'e Boghazī, the Dardanelles).

The Bosphorus has a mean length of about 30 km. and a width which varies from approximately 700 to about 3550 metres. A strong current (3-5 km. per hour) flows down the centre of the channel from the Black Sea to the Sea of Marmara, but a counter-current runs in the opposite direction below the surface and along the shores. The more notable localities which border the strait can be enumerated as follows (the names are given in the modern Turkish form): on the European side, in order from south to north, are to be found Tophâne (the Byzantine Argyropolis), Beşiktaş (Byz. Diplokionion), Ortaköy (Byz. Hagios Phokas), Arnavut-Köyü (Byz. Anaplous), Bebek (Byz. Challai), Rumeli-Hisarı (Byz. Phoneus), Istinye (Byz. Sosthenion), Yeni-Köy (Byz. Neapolis), Tarabya (Byz. Therapeia), Büyük-Dere (Byz. Kalos Agros) and Rumeli-Kavağı; on the Asiatic shore, in sequence from north to south, are located Anadolu-Kavağı (Byz. Hieron), Beykoz, Paşa-Bahçesi, Çubuklu (Byz. Irenaeon), Kanlıca, Anadolu-Hisarı, Kandilli (Byz. Brochthoi), Çengel-Köyü, Beylerbeyi, Kuzguncuk (Byz. Chrysokeramos) and Usküdar (Scutari: Byz. Skoutarion, an imperial palace in Chrysopolis). The Bosphorus proper ended, according to the view held in ancient times, at the present Rumeli-Kavağı and Anadolu-Kavağı, the waters beyond this line, towards the north, being considered as a part of the Black Sea.

The Byzantines fortified the northern end of the Bosphorus in the region of Rumeli-Kavağı and Anadolu-Kavağı, where the strait narrows to a width of about 1000 metres. Traces of a Byzantine fortress can still be discerned to the north of Rumeli-Kavağı. There is in fact a tradition that the Ottoman Sulṭān Meḥemmed II demolished this ancient fort ("Eski Ḳal'e"), the material thus acquired being used in the construction of Rumeli-Hisarı in 856/1452 (cf. Gabriel, 77 and 81). A Byzantine fortress also existed at Anadolu-Kavağı. It was known to the Ottomans as Yoros (Yeros) Ḳal'esi (cf. Byz. Hieron) or Djenevīz Ḳal'esi. This latter name arose from the fact that the Genoese, in 1350, had taken over from the Byzantines control of the defences in the northern zone of the Bosphorus.

It was only with the rise and growth of the Ottoman empire in the 14th-15th centuries that the lands bordering on the Bosphorus came under Muslim rule. The Ottoman Sulṭān Bāyazīd I (791-805/1389-1403) built on the Asiatic shore of the strait a strong fortress called Anadolu-Ḥiṣārī (also known as Güzeldje Ḥiṣār), to which Sulṭān Meḥemmed II made various additions and improvements in 856/1452. On the European shore, opposite Anadolu-Ḥiṣārī and at the site which the Byzantines called Phoneus (Φωνεύς, also Φονέας and Φωνέας), Meḥemmed II constructed, in this same year, the fortress of Rumeli-Ḥiṣārī (often called Boghaz-Kesen, *i.e.*, "which cuts the throat" or "which cuts the strait"). The Sulṭān furnished both these fortresses with artillery capable of firing across the Bosphorus, here compressed to its narrowest width (about 700 metres). After the fall of Constantinople in 857/1453

the Black Sea became in effect an Ottoman lake. Meḥemmed II brought to an end the former Genoese imperium over the Black Sea in 865/1461 and 880/1475. Moreover, in this latter year, the Khān of the Krim Tātārs was reduced to the status of an Ottoman vassal. Rumeli-Hisarı and Anadolu-Hisarı, together with what remained of the old Byzantine defences at the northern end of the Bosphorus, now lost their earlier importance.

After a long interval of calm, danger threatened from the north, when Cossack sea-raiders plundered Sinope on the south shore of the Black Sea in 1023/1614 and ten years later, in 1033/1624, carried fire and sword into the Bosphorus itself, ravaging Sarı-Yer, Büyük-Dere, Tarabya and Yeni-Köy on the European shore of the strait. To ward off this menace, the Ottomans, in the reign of Sulṭān Murād IV (1032-1049/1623-1640), built two new fortresses, one in the region of Rumeli-Kavağı, the other near Anadolu-Kavağı. These forts (not to be confused with the former Byzantine defences in this section of the Bosphorus) are described in Ewliyā Čelebī (i, 461) as the *ḳalʿe-i kilīd al-baḥr*, "the forts which are the lock of the sea" (baḥr-i siyāh, the Kara Deniz or Black Sea). No trace of them now remains, both having been demolished in the course of the 19th century (Gabriel, 82).

During their unsuccessful war against Russia in 1182-1188/1768-1774 the Ottomans began to reorganise the defences of the Bosphorus. New fortifications arose, in 1187/1773-1774, at Kilyos (Ḳalʿe-i Baghdāddjïk) on the European, and at Irva (Ḳalʿe-i Revāndjïk) on the Asiatic shore of the Black Sea, just outside the strait itself, and also at Fener-i Rumeli and Fener-i Anadolu on the northern exit from the strait. Additional forts soon made their appearance at Garipçe and Büyük-Liman on the European, and at Poyraz-Limanı on the Asiatic side of the Bosphorus above Rumeli-Kavağı and Anadolu-Kavağı. This defence system received the name of "Ḳilāʿ-i Sebʿa" (the seven fortresses). A sustained effort was made during the reign of Sulṭān Selīm III (1203-1222/1789-1807) to extend and perfect the new defences of the Bosphorus. At the same time the older fortifications situated within the Bosphorus proper, southward from Rumeli-Kavağı and Anadolu-Kavağı in the direction of the Marmara Sea, underwent a process of repair and modernisation. These years witnessed, however, the emergence, in its modern form, of the Eastern Question. The control and defence of the Straits, *i.e.*, of the Dardanelles as well as of the Bosphorus, was now to become a matter of prime concern, not to the Ottomans alone, but also to the Great Powers of Europe, who, during the 19th-20th centuries, imposed on the Straits a much debated and often altered, system of international control.

BOGHAZ KESEN [see RŪMELI ḤIṢĀR].

BOGHDĀN, originally Boghdān-ili or Boghdān-wilāyeti ('the land of Boghdān'), Turkish name of Moldavia, so called after Boghdān who in 760/1359 founded a principality between the Eastern flanks of the Carpathians and the Dniester (Turla). The name Boghdān-ili appears in the *ḥükm* of Meḥemmed II dated 859/1455 (Kraelitz, *Osm. Urk.* Table I). The name Ḳara-Boghdān is found in the letter of Iminek dated 881/1476 (Belleten, no. 3-4, 644) and in the Ottoman chroniclers generally.

The principality suffered its first raid (*aḳïn*) by the Ottomans in 823/1420 (unsuccessful siege of Aḳ-Kirmān). In 831/1428 the Khān of the Golden Horde, Ulugh Muḥammad, proposed to Murād II that they should act in concert to destroy the Vlach infidels dwelling between them (cf. Kurat, *Yarlık ve Bitikler*, 8). Ḥādjdjī Gerey [*q.v.*] made an alliance against Boghdān-ili with Meḥemmed II, and an Ottoman fleet attacked Aḳ-Kirmān in 858/1454. As a result the *voyvode* Petru Aron accepted Ottoman suzerainty, agreeing to pay an annual tribute of 2000 ducats (autumn 859/1455) (Fr. Babinger, *Beiträge zur Frühgesch. der Türk. in Rumelien*, 21), and the sultan granted the merchants of Boghdān freedom to trade in the Ottoman dominions (Kraelitz, *ibid.*).

Stephen the Great (1457-1504) renewed the vassalage to the king of Poland, repulsed an attack by the Crimeans in 873/1469, entered into diplomatic relations with Uzun Ḥasan [*q.v.*], and defeated the Ottoman *beylerbeyi* of Rūmeli on 2 Ramaḍān 879/

10 Jan. 1475. Finally Meḥemmed II invaded Boghdān and burned its capital Suc̣eava (Rabīʿ I, 881/July 1476). In 889/1484, as a result of the joint action of Bāyazid II and his vassal the Crimean Khānʿ Aḳ-Kirmān and Kili were occupied by the Ottomans, and Kawshān and Tombasār by the Khān. In 897/1492 Stephen, by sending tribute and his son to the Porte, acknowledged Ottoman suzerainty.

Under the Ottomans Aḳ-Kirmān and Kili became more actively engaged in the commerce of the Levant (this can now be seen from the records of the Ottoman customs houses of this period at the Başvekalet Arşivi Istanbul, Maliye no. 6). With its exports of cereals, meat, butter and wax the trade of Boghdan became, under a monopoly system, more and more dependent on the Istanbul market.

Ottoman-Boghdān relations rested on the Islamic principle of the *dār al-ʿahd* [*q.v.*], as expressed in the *ʿahd-nāmes* granted by the Ottoman sultans and the *berāts* issued to the voyvodes (cf. the *berāt* of Alexandru VI Iliash in Ferīdūn, *Münsheʾāt*, ii, 398). The bonds attaching the *voyvode* to the Porte were made still stronger when he received his appointment directly from the sultan, the first *voyvode* so appointed being Petru IV Raresh (933/1527). The *voyvode*'s whole authority emanated from the sultan. The sultan, in his *berāt*, enjoined upon all the *boyars*, priests and people that they should recognise the *voyvode* as their ruler (*beg*); if they failed to do so their land would be regarded as *dār al-ḥarb*. The *voyvode*'s symbols of authority were the standard, the robe of honour (*khilʿat*), and the red *börk* (felt cap). An *āghā* accompanied the *voyvode* to his capital, seated him on his throne, and had the proclamation read to the people. As late as the 10th/17th century it was felt to be important that the *voyvode* should be a descendant of a former voyvode (cf. Ferīdūn, ii, 398, 446). Nevertheless the wishes of the local *boyars* were taken into consideration. The Ottomans, assisted by the Crimean Tatars, had no great difficulty in removing pretenders supported by Poland or the Cossacks and *voyvodes* who refused to recognise the sultan's order of deposition. After the treachery of Dimitri Kantemir in 1123/1711 the *voyvodes* were selected exclusively from a few families of Phanariot Greeks (the Mavrokordati, Kallimachi, Hypsilanti). In this Phanariot period (1123-1236/1711-1821) the *voyvodes* were reduced to being merely Ottoman officials. They were frequently changed, but after 1217/1802, as a result of Russian pressure, they were appointed for periods of seven years.

The tribute which the Moldavians paid as *ahl al-ʿahd* was regarded as *kharādj maḳṭūʿ*, farmed by the *voyvode*, who, acting as *ʿāmil* (tax-farmer), was expected to raise the maximum amount of tribute that the country could support. In 859/1455 the tribute was fixed at 2000 ducats; it was increased under Stephen the Great to 4000, under Petru IV Raresh to 10,000, and in 1028/1619 under Gashpar to 40,000 ducats. In the 12/18th century it was 65,000 *ghurush* [*q.v.*]. Boghdan also paid tribute (7000 ducats annually)to the Crimean Khān. The gifts (*pīshkesh*) which the *voyvode* made to the Sultan, the *wazīrs* and other influential people became an established usage, and nearly equalled in amount the sum paid as *kharādj*.

The *ʿahd-nāme* granted to the *voyvode* also prescribed that he should be 'the friend of the sultan's friends and the enemy of his enemies', and should supply military aid when called upon, the *voyvode* serving in person when the sultan himself took the field (Naʿīmā, vi, 322). But the *berāts* emphasised that Ottoman officials were not to interfere in any way in the internal affairs of the principality. The *voyvode* had a representative (*ḳapu-ketkhudāsī* or *kahyā*) in Istanbul to attend to matters arising between the *voyvode* and the Porte.

The people of Boghdan were regarded as *kharādj-güzār raʿiyyet* of the Sultan, who was obliged to defend them against their enemies and to depose *voyvodes* who oppressed them. The *boyars* never formed a hereditary nobility. In the 9th/15th century they were no more than a class of wealthy peasants. The Porte was able to strengthen its control of the country by playing off the *boyars* against the *voyvode* and *vice versa*. In the 12/17th century the *boyars* became great landowners and the peasants were reduced to serfdom; but the Phanariot *voyvodes* tried to break the power of the *boyars*, and in 1153/1740 Constantine Mavrokordato abolished serfdom and freed the peasants from their control. From then on the *boyars* looked for support more and more to the Christian powers, especially Russia. By the *Regulamentul Organic* which was drawn up in 1247/1831 during the Russian occupation, the council of *boyars* was given the right to elect the *voyvode*.

In the course of time the Ottoman state had absorbed various parts of the principality into the *dār al-Islām*. Süleymān I's campaign of 945/1538 represents a turning point in many respects: the *voyvode* was brought into closer dependence on the Porte, and the district of Budjāḳ [*q.v.*] was annexed to ensure the security of the port of Aḳ-Kirmān. In 1030/1621 ʿOthmān II rescued Khotīn from the Poles to give to Boghdān, but annexed to the Ottoman dominions the area north of Ismail. In order to recover Budjāḳ, Dimitri Kantemir in 1123/1711 secretly recognised the protection of the Czar. After the treaty of the Pruth, the Porte placed Khotīn and the surrounding district as far as the Pruth under an Ottoman Pasha. In 1189/1775 Austria seized the north-western part of the country (Bukovina), and in 1227/1812 Russia annexed Bessarabia. After the Treaty of Küčük Kaynardja (1188/1774) Russia posed as the protectress of Moldavia, and eventually after the Treaty of Aḳ-Kirmān (5 Rabīʿ I 1242/7 Oct. 1826) Ottoman suzerainty over the principality became nominal and Russia was recognised as the Protecting Power. In 1276/1859 the twin principalities of Wallachia and Moldavia (*Mamlakatayn*) were united, though the Sultan did not recognise the union until two years later (28 Djumāda I 1278/2 Dec. 1861).

BŌGRĀ, town and head-quarters of the district of the same name in East Pakistan, situated in 24° 51′ N. and 89° 23′ E. on the west bank of the Karātōyā. Population, (1951) was 12,80,581 for the district and 25,303 for the town. The town is pre-

dominantly Muslim; even before the partition of the sub-continent in 1947 it had the largest number of Muslims in the whole of Bengal. They are mostly converts from the Kōč or Rādjbansīs of the northern areas although there are some Pathāns and Sayyids also. The district and the town are both liable to cyclones and floods, sometimes of a terrible nature. In 1281/1864 many houses and trees were levelled to the ground by the cyclone which swept over the district. In 1304/1886 the town was inundated when 18″ of rain fell within a short span of 1½ hours. Earthquakes of great intensity have also frequently occurred. The severe earthquakes of 1885, 1888 and 1897 did considerable damage to both life and property. Many of the brick buildings in the town were destroyed in the earthquake of 1897.

The district seems to have been converted *en masse* to Islam in the 7th/13th century as most of the villages still bear Hindu names but have no Hindu inhabitants. In 1005/1596 when the district was re-conquered by Rādjā Mān Singh, the Mughal viceroy, he built a mud fort at Shīrpūr and named it Salīmnagar after Djahāngīr. A fort was also built at Mahāstʾhān, now desolate. Shīrpūr, to the south of Bōgrā, was founded by Shīr Khān, the Afghān ruler of Bengal (c. 666-70/1268-72). These two places abound in archaeological remains while in the town itself the "Bogra Palace", the seat of the Čawdharī family, is the only place of some antiquity and interest.

BOHORĀS (Bohrās, Buhrah), a Muslim community in Western India (mainly of Hindu descent, with some admixture of Yemenite Arab blood), for the most part Shīʿīs of the Ismāʿīlī sect, and belonging to that branch of the Shīʿa which upholds the claims of al-Mustaʿlī (487-495/1094-1101) to succeed his father al-Mustanṣir in the Fāṭimid Caliphate of Egypt. (For the history of the Fāṭimids, see the articles Fāṭimids and Ismāʿīlīs). Mustaʿlī opposed his brother Nizār, whose adherents (the so-called Assassins) are represented in India by the Khōdjas [*q.v.*]. The name *bohorā* denotes a "trader, merchant" (from the Gudjarātī *vohōrvū*, "to trade") and records the occupation of the earliest converts to Islam. This is clearly mentioned in an Arabic work, *al-Tardjama al-Ẓāhira* ... (see below, and cf. Asaf A. A. Fyzee, *Ismaili Law of Wills*, Oxford 1953, 3, footnote 2). The appellation however is not confined to Muslims, and in the Census Report of 1901, 6,652 Hindus and 25 Djayns returned themselves as Bohorās. The exact figures are a matter of some doubt, as Hindu Bohorās, Sunnī Bohorās (of Gudjarāt and particularly, of Rāndēr) and Djayn Bohorās are occasionally confused with Ismāʿīlī Bohorās. The number of Muslim Bohorās was given in 1901 as 146,255, of whom 118,307 resided in the Bombay Presidency. Under the communities the following figures are given:

Bohorā (British Districts)	1911	1921	1931
	92,081	108,150	110,124

In the Census Reports of 1941 and 1951, the distribution of the communities is not given, with the result that it is now impossible to give accurately the figures for India. An approximate figure allowing for the natural increase in population would be 150,000 in India, and 200,000 for the world, including the trading communities of Ceylon and East Africa.

The Bohorās fall broadly in two main groups, the larger of which, belonging to the mercantile class, is Shīʿī; the other, composed mainly of peasants and cultivators, is Sunnī. Some of the Sunnī Bohorās of Rāndēr (Gudjarāt) traded in Burma and made large fortunes. Certain families of Ismāʿīlī Bohorās claim to be descended from refugees from Arabia and Egypt. It is difficult to substantiate this claim; but intermarriage, particularly with Yemenite Arabs of the Mustaʿlian branch, has taken place in a number of well-known cases. Recently among the Sulaymānīs, intermarriage has taken place with Sunnīs, Ithnā ʿAsharī Shīʿīs, Hindus and even with Europeans; but the large majority of the Bohorās do not marry outside their communities.

The majority of Bohorās are undoubtedly of Hindu origin, their ancestors having been converted by Ismāʿīlī missionaries. The first of these is commonly stated to have been sent from Yemen by the Imām of the Mustaʿlian sect and to have been called ʿAbd Allāh. It is related that he landed in Cambay (Western India) in 400/1067 and actively engaged in propaganda. This story is given in varying forms, one of which is preserved in an Arabic booklet entitled *al-Tardjama al-Ẓāhira li-Firḳat Borhat al-Bāhira*. A copy exists in the library of the Bombay branch of the Royal Asiatic Society. It has been translated into English by K. M. Jhaveri, *A Legendary History of the Bohoras*. *Journal Bombay Branch Royal Asiatic Society*, 1933, New Series, Vol. 9, 37-52. The text has been edited by H. M. Fakhr (Ṭālib), in the *Journal Bombay Branch Royal Asiatic Society*, 1940, N.S., Vol. 16, 88. Other accounts give Muḥammad ʿAlī, whose tomb is still revered in Cambay, as the name of the first Mustaʿlian missionary in India (died, 532/1137). The Čālukya dynasty of Aṇahilāvāḍa was then ruling over Gudjarāt and the Ismāʿīlī missionaries seem to have been allowed by the Hindu government to carry on their propaganda without interruption and with considerable success. In 1297 the Hindu Kingdom came to an end and for a century Gudjarāt remained more or less in subjection to Dihlī. However, under the independent Kings of Gudjārat (1396-1572), who favoured the spread of the Sunnī doctrine, the Bohorās were on several occasions exposed to severe persecution.

Up to 946/1539, the head of the sect resided in the Yemen, and the Bohorās made pilgrimages to him, paid tithes and referred their disputes for decision and settlement. In 946, however, Yūsuf b. Sulaymān migrated from the Yemen to India and settled in Sidhpūr (Bombay State). About fifty years later, a schism occurred after the death of the *dāʿī* Dāʾūd b. ʿAdjab Shāh in 996/1588. The Bohorās of Gudjarāt, in fact the large majority of the community, chose one Dāʾūd b. Ḳuṭb Shāh as his successor, and sent the tidings of his appointment (Ar. *naṣṣ*) to their co-religionists in the Yemen; but the latter, including a small proportion of the community in India, supported the claims of a certain Sulaymān, who claimed to be the rightful successor in virtue of a

formal mandate from Dā'ūd b. ʿAdjab Shāh. This document is still in the possession of the Sulaymānī *daʿwat* (the communal administration is called *daʿwat*; the *t* is pronounced by the community), but its authenticity has never been subjected to a scientific, critical or legal examination. Sulaymān died in Aḥmadābād, where his tomb and that of his rival, Dā'ūd b. Ḳuṭb Shāh are still reverenced by their respective followers. Those who recognise the claims of Sulaymān are called Sulaymānīs and their *dāʿī* is in the Yemen. His chief agent in India is called the *manṣūb*, and the seat of the Sulaymānī *daʿwat* is in Baroda, where there is a good library of Ismāʿīlī MSS. Another difference is that the Dā'ūdīs use a form of Gudjarātī language which is full of Arabic words and phrases, write in the Arabic script for all official purposes and deliver their sermons in this language, whereas the Sulaymānīs use Urdu for the same purposes.

The head of the Dā'ūdī Bohorās resides generally in Bombay, but his headquarters are in Sūrat and are known as the *Deoṛhi*. In both places there are good collections of Ismāʿīlī MSS. There is at Surat an Arabic *madrasa* known as the *dars-i sayfī*, named after the present *dāʿī*, Sayyidnā Ṭāhir Sayf al-Dīn. The *dāʿī al-muṭlaḳ*, to give him his official designation, is commonly known as the *Mullādjī Ṣāḥib* or *Sayyidnā Ṣāḥib*, and is greatly revered by his followers. In his presence a large number of the sectarians perform a form of obeisance, the *taḳbīl al-arḍ*, which has apparently come down from Fāṭimid times and differs but little from the traditional *sadjda*.

As regards marriage and death ceremonies, and ritual prayers, the Bohorā community is in general well-served by local officiants, called *ʿāmils*, who are appointed by the Mullādjī Ṣāḥib and are the servants of the *daʿwat*. They perform duties similar to those of the *ḳāḍīs* of the Sunnīs, but in addition refer disputes to the Mullādjī Ṣāḥib and have a much greater hold over their "parishioners". A feature of the Bohorā community both in India and elsewhere is that they form themselves into guilds, have little to do with others, and do not intermarry even with other Muslims, much less with adherents of other religions, and take little part in public affairs. In general, they restrict themselves to trade; but in some parts of India, Ceylon and East Africa, and particularly amongst the Sulaymānīs, certain families have entered public life and taken to Government service.

Two insignificant secessions from the Dā'ūdīs may be mentioned: (i) The ʿAliyya Bohorās, who in 1624 supported the claims of ʿAlī, the grandson of Shaykh Ādam, the head Mullā, in opposition to Shaykh Ṭayyib, whom Shaykh Ādam had nominated as his successor, and (ii) the Nāgōshias, who broke away from the ʿAliyya sect about the year 1789; their name indicates that they consider the eating of flesh as sinful. The Djaʿfarī Bohorās are mainly descended from the Dā'ūdī Bohorās who became Sunnīs in the reign of Muẓaffar Shāh (810-813/1407-1411) and succeeding Kings of Gudjarāt, but they have received accession to their numbers from Hindu converts. They derive their name from a saint named Sayyid Aḥmad Djaʿfar Shīrāzī (15th Century), whose descendants they reverence as their spiritual guides.

The Bohorās keep their religious books secret, but recently some of their works on law (such as *Daʿā'im al-Islām*), history (such as *Sīrat Sayyidinā al-Mu'ayyad*) and philosophy (such as *Rāḥat al-ʿAḳl* and *al-Risāla al-Djāmiʿa*) have been printed. Further details will be found in the bibliography by W. Ivanow, *Guide to Ismaili Literature*, London 1933, of which a second edition is contemplated. For their religion and doctrines see Zāhid ʿAlī, *Hamārē Ismāʿīlī Madhhab awr uski Ḥaḳīḳat* (Urdu), Ḥaydarābād, Deccan, 1954/1373. In this work a full exposition of the *ḥaḳā'iḳ* (the Ismāʿīlī term for their secret philosophical doctrines) has been given by a learned Bohorā. Recently A. A. A. Fyzee has given his collection of Mustaʿlian Ismāʿīlī MSS. numbering 160 to the Library of Bombay University.

Bibliography: General works: Nūr Allāh b. Sharīf al-Shushtarī, *Madjālis al-Mu'minīn* (*Madjlis-i Duwwum*, ad fin.); Alī ʿMuḥammad Khān, *Mir'āt-i Aḥmadī*, Bombay 1307, ii, 87; A. K. Forbes, *Rās Mâlâ, or Hindoo Annals of the Province of Goozerat*, i, 343-344 (London 1856); *Gazetteer of the Bombay Presidency*, Vol. ix, Bombay 1899, Part ii, 24 ff.; D. Menant, *Les Bohoras du Guzarate*, in *RMM*, x, 465 ff.). See also the articles FĀṬIMIDS, ISMĀʿĪLIYYA and ḲĀḌĪ NUʿMĀN); Zāhid Alī's work, cited above; Sh. T. Lokhandwalla, *The Bohoras, a Muslim Community of Gujarat*, in *St. Isl.* 1955, 117-135; ʿAbbās H. al-Ḥamdānī, *The Ismāʿīlī Daʿwa in Northern India*, Cairo 1956.

History of the daʿwat: No exhaustive history of the Bohorās has been written so far on scientific lines. See however an Arabic work still unpublished, *Muntazaʿ al-Akhbār* (2 vols., see W. Ivanow, *Guide*, no. 335), on which is based the Gudjarātī work lithographed in the Arabic script, *Mawsim Bahār fī Akhbār al-Duʿāt al-Akhyār*, 3 vols., by (Miyān Ṣāḥib) Muḥammad ʿAlī b. Djīwābhā'ī, Bombay, n.d.

The literature of the *daʿwat* is still mostly unpublished, but has been described by W. Ivanow, *op. cit.* (with addenda by Paul Kraus in *RÉI*, 1932, 483-90). For further bibliographical material see A. A. A. Fyzee, *Materials for an Ismaili Bibliography*, 1920-1934, *Journal of Bombay Branch of the Royal Asiatic Society*, 1935, 59-65, and *ibid.*, 1940, 99-101. Several important texts have recently been edited and published by Dr. Muḥammad Kāmil Ḥusayn (Cairo).

Law: al-Ḳāḍī al-Nuʿmān, *Daʿā'im al-Islām*, vol. i, ed. A. A. A. Fyzee, Cairo 1951. The second volume is in the press. (A. A. A. FYZEE)

BOHTĀN [see KURDS]

BOLOR DAGH [see PAMIR]

BOLU (Boli, near anc. Bithynium, later Claudiopolis) 40° 15′ N 31° 30′ E. The capital of a forested NW Anatolian *wilāyet*, elevation 710 m., area 11,140 sq. km., lying between the Saḳārya river bend and the Black Sea. In 1955 the population was 11,884 (town) and 318,612 (province). Bolu lies in a plain on the Bolu Suyu and is subject to severe earthquakes, notably that of May 26, 1957. It is on the highway 263 km. from Istanbul and 208 from Ankara. It boasts 32 mosques, a bath dated 791/1388-9, a women's teachers college, forestry school, other fine primary and secondary schools, a hospital, and new "briquette" and lumber factories. Bolu is the home of Köroghlu, ʿĀshiḳ Derdli and good cooks. Lake Abant lies 37 km. SW. Atatürk visited Bolu from 17-19/vii/'34 and Inönü from 5-7/viii/'39. Its *ḳaḍā*'s are Aḳchaḳodja, Bolu, Düzdje, Gerede, Göynük, Kıbrısdjıḳ, Mengen (where lignite has been exploited since 1956) Mudurnu, Seben and Yıghıldja. Bolu fell to the Ottomans circa 726/1325, to the

Isfendiyāroghullari from 805-27/1402-23, was retaken, governed by Prince Süleymān (914-15/1509) and served as base of the abortive *Khilāfet ordusu* in April 1920/1338 (*Tarih*, iv, 67, 304; *Nutuk*, 11). Bolu was a *sandjak* of the *eyālet* of Anadolu till 1103/1692, a *muḥaṣṣillik* till 1226/1811, an independent *sandjak* till 1231/1864, attached to Ḳasṭamōnū till 1327/1909, then a large, independant *liwā'* until it became a *wilāyet* in 1341/1923.

(H. A. Reed)

BÖLÜK (from the verb *bölmek*), meaning a part, a section, or a category, was used in Eastern Turkish and in Persian to designate a province or a region. In Anatolian Turkish, from the time of the *Tanẓīmāt* [*q.v.*] onwards, it designated units of infantry or cavalry under the command of a *yüzbashî* (captain). In the old Ottoman military organisation, the term *bölük* was used in the *ḳapî-ḳulu* [*q.v.*] *odjaḳ*s [*q.v.*], as well as in provincial troops and the military retinues of senior officials. The size of the *bölük* varied. In Janissary *odjaḳ*s, for example, which numbered 1,000 men, there were 10 *bölük*s of 100 men each. The commander of the *bölük* was known as *yayabashî* (chief infantryman). The Gelibolu (Galipoli) *odjaḳ* of *ʿadjamī-oghlan*s [*q.v.*], which numbered at first 400 men, consisted of 8 *bölük*s of 50 men each. These *bölük*s were commanded by an officer known as *čorbadjî*. Janissary *odjaḳ*s were later enlarged to include 101 *bölük*s, known also as *djemāʿat* and *orta*. Each *bölük* had a different name and function. Thus *bölük*s 1-3 were known as *djemāʿat-i shuturbān* (*djemāʿat* of camel drivers), the 28th *bölük* was the *bölük* of *imām-i ḥadret āghā*, *bölük*s 60-63 were known as *solaḳ-ortasî* (the *orta* of Solaḳ guards). The *Segbān*s (Keepers of the Sultan's Hounds), who constituted an independent *odjaḳ* until 1451, were assigned on that date by Sulṭān Meḥemmed II to the *odjaḳ* of Janissaries as the 65th *orta*. They retained, however, an autonomous organisation consisting of 34 *bölük*s. Each *bölük* had a different size, name and functions. As a result of the mutiny organised by the *agha* (commander) of the Janissaries under Bāyezīd II or Selīm I, an *agha* was appointed by the Palace and put in charge of a separate organisation consisting of 61 «*bölük*s of the *agha*», in the hope that he would maintain a balance of forces in the *odjaḳ*. It was these that were usually meant when the term *bölük* was used. Otherwise if a *bölük* in the *odjaḳ*s of armourers, artillerymen, artillery drivers etc. was meant, its name and the name of the *odjaḳ* were usually given. There were 6 *bölük*s in the mounted *odjaḳ* of *ḳapî-ḳulus*. Their members were known as "the people of the *bölük*» or «the people of the six *bölük*s". Excluding the *sipahī*s and *silāḥdār*s, they were known as *bölükāt-i erbaʿa* (four *bölük*s). The seven Ottoman *odjaḳ*s in Egypt were called *bölükāt-i sebʿa* (seven *bölük*s). The officers of these various *bölük*s enjoyed different rates of pay and were subject to different rules of promotion. As in the case of *odjaḳ*s, the importance of *bölük*s in the eyes of the Government varied from time to time. For detailed information on *odjaḳ*s and *bölük*s see İsmail Hakkı Uzunçarşılı, *Osmanlı Devleti Teşkilâtından Kapı Kulu Ocakları*, i, 1943, and Gibb and Bowen, i, index.

(İ. H. Uzunçarşılı)

BÖLÜK-BASHÎ, the title given to the headmen of various groups of functionaries in the administrative organisation of the Ottoman State. In the old Ottoman military organisation the commanders of the *bölük*s [*q.v.*] in the *odjaḳ* [*q.v.*] of the Janissaries were generally known as *yayabashî* or *ser-piyāde* (chief infantryman), while the commanders of the *bölük*s in the *odjaḳ* of the *ʿadjamī oghlan*s [*q.v.*] were called *čorbadjî*. It was only the commanders of the "*bölük*s of the *agha*" (see BÖLÜK) who were called *Bölük-bashî*, the most senior being known as *Bash-bölük-bashî*. The *Bölük-bashî*s were mounted and had an iron mace and a shield tied to their saddles. When the Sultan left the palace to go to a mosque, the *Bölük-bashî* was present wearing ornate clothes and holding in his hand a reed instead of a spear. Under Suleyman the Magnificent there were 58 *bölük-bashî*s of "*bölük*s of the *agha*"; their daily pay was 9 aspers. Their numbers and pay were later increased. The *Bash-bölük-bashî* was appointed on promotion junior *agha* of the *odjaḳ* known as that of *ḳatar-aghalarî* (*āghā*s of trains or caravans). *Bölük-bashî*s of the *bölük*s of the *agha*, when invested with a *tîmār*, were numbered among the wardens of fortresses and received a life grant of 8,000 to 15,000 (aspers). Apart from the *odjaḳ* of the Janissaries, the mounted *ḳapî-ḳulus* [*q.v.*] had their *bölük-bashî*s commanding separate *bölük*s, as had the *segbān*s (keepers of the Sultan's hounds), *levend*s (irregulars) and *tüfengči*s (fusiliers). For more details see İsmail Hakkı Uzunçarşılı, *Osmanlı Devleti Teşkilâtından Kapı Kulu Ocakları*, i, 1943, and Gibb and Bowen, i, index.

(İ. H. Uzunçarşılı)

BOLWADIN (Bolvadin, sometimes Karamuk, anc. Polybotum) 38° 44′ N, 31° 03′ E. A municipality and *ḳaḍā'* in the *wilāyet* of Afyūn Ḳara Ḥiṣār [*q.v.*], with its own and Isḥāḳlı *nāḥiye* (its former *nāḥiye* of Çay, with 20 villages, became a *ḳaḍā'* on April 1, 1958/1377), consisting of 26 villages. The population in 1375/1955 was 12,604 (town), 61,280 (district); elevation 900 m., area 2,420 sq. km. Bolvadin lies 45 km. E of Afyūn, 8 N of Çay railway station, N of the Sazlı and Eber lakes and a fertile plain watered by the Aḳar Çay, on the old Baghdād road and the modern Eskishehir-Ḳonya highway. Bolvadin was under the Ashraf-oghullari [*q.v.*] circa 702-26/1302-25, taken by Murād I, regained by the Germiyān-oghullari after 805/1402, retaken by Murād II in 832/1428-9, rebuilt, partly by Sinān (mosque, bath and fountain of Rustem Pasha, cf. Uzunçarşili, ... *Kitabeler*, ii),

under Süleymān I, and fell briefly to the rebel Uzun Khalīl in 1014/1605. It was a key military HQ before the great nationalist counter-offensive against the Greeks in August 1922.

BOMBAY CITY, capital of Bombay State, one of the chief sea ports of India and an emporium of trade and manufacturing industries. Its area is 111 sq. miles, and the population of the city in the census of 1951 was 2,839,270. Of these, 281,975 had Urdu as their mother tongue, 6,527 Persian, 6,376 Pashto, 2,536 Arabic, figures which indicate the number of Muslims in the city. The figures include representatives of different races that have embraced Islam: Arabs, Persians, Turks, Afghāns and others. Among the important classes of traders, Memons, Bohorās & Khōdjas [*qq.v.*] constitute an appreciable number. Their enterprise in trade & commerce is well-known and they are prominent in trade relations with East Africa, the Persian Gulf, Malaya, Singapore and other places.

The history of the city is interesting, the present emporia having grown out of seven detached islands with mud swamps in between. There were Muslim rulers before the advent of the Portuguese, and a prominent relic is the tomb of Shaykh ʿAlī Pārū, built about 835/1431-2 and repaired in 1674 A.D.. An annual fair is held here and it attracts a large number of visitors. There is a Djāmiʿ Masdjid also dating from 1902.

BOMBAY STATE, one of the States of the Indian Union, covering the territories of Cutč, Saurāshtra, Gudjarāt, Mahārāshtra, Marāthwāḍā and Vidarbh. The present limits of the State territory were decided upon in consequence of the reorganisation of the States of the Indian Union that took place in 1956. The composition of the State differs from that of the other States of the Union inasmuch as it comprises areas having two different languages, namely Marathi & Gudjarātī. The total area of the State is 190,872 sq. miles and the total population is 48,264,622. The figures of population are based on the census of 1951. The whole of this State was at one time under Muslim rule, and even now, in many of the important centres, population statistics reveal the existence of a substantial proportion of Muslims. The Muslims constitute the second most important religions group in the State, though their numbers have gone down in recent years due to the emigration of some Muslims from the State to Pakistan after partition. In 1951, at the last census, 5.33% of the population of the State had Urdu as their mother tongue. The major centres of Muslim population apart from the city of Bombay are the districts of Aḥmadābād, East Khandesh and Sorath. The majority of the Muslims are Sunnīs.

Campbell, *Bombay District Gazetteers*, Bombay 1877-1901; *Imperial Gazetteer of India*. Provincial Series, *Bombay Presidency*, Calcutta 1909. (A. A. A. Fyzee)

BÔNE [see AL-ʿANNĀBA]

BONNEVAL [see AḤMED PASHA BONNEVAL]

BÖRK [see LIBĀS]

BÖRKLÜDJE, MUṢṬAFĀ [see BADR AL-DĪN B. ḲĀḌĪ SAMAWNĀ],

BORKOU, the name by which the inhabitants designate the chain of palm groves along the southern edge of the lowland region between the massifs of Tibesti and Ennedi which extends via the Baḥr al-Ghazāl to Lake Chad. To this traditional Borkou the French have added on the one hand the pastoral areas of Bodélé-Djourab-Koro-Toro, and the north of Mortcha, whose economy is complementary to that of the oases and on the other hand the S.E. of Tibesti with the Emi Koussi (11,200 ft), considered to be the bastion of Borkou. The district forms a trapeze of which the great base in the south measures about 500 km. along the 16th parallel between the meridians of 15° and 21° E, and of which the summit coincides with the Libyan frontier between the meridians of 19° and 20° 20′. Its area is 230,000 sq.km.

Save for Tibesti the relief is gentle. From the foot of the Emi Koussi a sandstone plateau slopes down from 2,300 to 650 ft towards the S. and SW., where it merges into the vast sandy depression of the Djourab and Bodélé. At the 18th parallel a chain of basins strung along a line from the NW. to the SE., from N'Galakka to Largeau cuts the plateau into two. To the north of this depression the surface is intersected by the *wādīs* which, radiating from the summit of the Emi Koussi, branch out and carve the plateau onto strips of broken ground encroached on by 'barkhanes' or crescent-shaped dunes. In the south the plateau remains unbroken and slopes gently. Three series of basins, from the SW. to the NE., eat into or border this slope. Beginning with the south, these are the depression of Bodélé and that of Djourab where long ridges encroached on by the 'barkhanes' alternate with wide shallow basins; then the central depression, a chain of palm trees cut across by 'barkhanes' and 'nebkas' (little triangular dunes); and lastly the sunken zone of Ounianga and its lakes which lead up by Gouro towards the eastern flank of the Emi Koussi.

The climate is that of the desert with contrasts of temperature between the hottest months of April

to September and the coldest months whose coolness is increased by the NE. winds then blowing continually and frequently heavy with sand. The index of aridity compares with that of Tanezrouft, but the country differs from the central Sahara in that it does not have long series of dry years; the rains, even if the fall is slight, come each year at least from May to September. This regularity is not in itself enough to explain the existence of profuse vegetation which round the springs takes on an almost tropical aspect. Water in fact is abundant: salt lakes at the foot of the Emi Koussi, pure or natronated springs of the central depression, layers of water saturating the sands of the valleys or appearing on the surface on the southern basins, the lakes of Ounianga. These waters apparently have their origin in the spates of the *wādīs* of the Emi Koussi, which soak between the volcanic outcrops and percolate through the sandstone to reappear in the depressions.

The character of the steppe changes from north to south. The 'had' which preponderates in the north and which supports a few species of grassy plants gives way about the 17th parallel to the 'cram-cram' (*cenchrus biflorus*). Then Sahilian species appear, forerunners of the savannah; the domain of the ariels and ostriches begins. Islets of woodland in the northern valleys and especially in the central depression—doum palms and particularly handsome acacias—seem to bear witness to at one time more extensive and denser woodlands.

Oases and pasture have attracted the populations of the neighbouring mountains since the 10th century. The nomad tribes of eastern and central Tibesti (the two branches of the Tūbū people: Teda and Dazā) occupied the oases of Gouro then the central oases (Woun), pushing back the Donza who seem to have been the aboriginal inhabitants, towards the palm groves to the south of the Emi Koussi, their present habitat. The nomads belonging to the lowest caste clans have become sedentary, sometimes partially, being enabled by the 'had' and supplies of natronated water close by to keep their camels. The others have drifted to the southern steppes which are richer in pasture. Some tribes have reached as far as the Chad lowlands where they have changed from camel to cattle rearing.

Other populations, coming down from Ennedi and Wadai, have mixed with the Tūbū. The Anakkaza, who constitute the most important group in Borkou, were formed in this way, whereas the Gaeda seem to be descended from the Tundjur of Kanem. Borkou has thus been a melting-pot in which, however, Tūbū influence has predominated. The Dazā language is spoken by most of these populations, their customs are those of the Tūbū, and the Tūbū physical type—non-negroid black—is the commonest. One can understand that the Arabs should have lumped the whole of the Borkouans together under the single name of Ḳuraʿān. According to official statistics the Borkouans now number about 20,000.

The nomads live by stock rearing supplemented by the resources of the oases, whether they still enjoy over these suzerain rights acquired in the past, or whether the gardens are cultivated for them by the sedentary Kamadjas, whose origin, though certainly servile, is ill-known. The Kamadjas, who had become share-croppers of the nomads, have gradually freed themselves from their tribute-obligation with the support of the French administration. The palm groves contain at present about 1,000,000 productive trees of which 90 per cent are in the central depression. They produce 30,000 quintals of dates per annum. The irrigation channels in the gardens are fed by balance-arm wells and produce on the average 120 tons of wheat and 200 tons of millet per annum; vegetables (onions, tomatoes, sweet potatoes, and pimentos) are also grown. Salt-pans from which salt is obtained by evaporation are numerous in the northern valleys, and their product, joined with that of Ennedi, represented (in 1950) half the Saharan production. The nomads of the southern steppe bring meat, butter, and tanned skins to the oases to exchange for their products. Sedentary and nomadic populations alike obtain their tools and arms from the despised smith caste. These smiths, known in the the Tūbū domain as Azzas, deprived of local supplies of ore which are now exhausted, use as their raw material scrap iron or raw iron plates bought in Bornu.

These exchanges suffice for local needs. 1,200 miles from the Mediterranean coast by the economically unimportant Kufra track, detached from the trade routes joining the Sudan with the Mediterranean (which avoid Tibesti and its brigands), detached from the tracks leading to the Nile lands passing to the south of Wadai, Borkou has always lived turned in on it self. For this reason archaic modes of life have survived in these oases until the present day and paganism had not retreated before Islam, in the 19th century. This isolation has of late years been twice violently broken. For half a century after 1842 the country was ravaged by the waves of the Awlād Sulaymān who swept down from the Fezzan in flight from the Turks. Then, about 1900, the Sanūsiyya, falling back from Kanem and Manga, settled themselves firmly at the two ends of the central depression, at N'Galakka and at Woun (*alias* Faya, later Largeau). They made their *zāwiyas*, especially that at Gouro, agricultural centres as well as intellectual and religious centres from which Islam was propagated. But they indulged in raids which, by forcing the nomads to choose between the palm groves occupied by the Sanūsiyya and the pasture lands to the south controlled by France since her occupation of Wadai and Baḥr al-Ghazāl, disorganized and so ruined economic life. The Sanūsiyya had the backing of the Turks, who placed garrisons in the country in 1911, but the Italo-Turkish conflict brought about the withdrawal of these garrisons in 1912, and in 1913 France occupied the whole of Borkou.

BORNEO, the corrupted form of Brunai (which is a town in British North Borneo at about Lat. 5° N. and Long. 115° E.) applied to the largest of the greater Sunda Islands in Indonesia, probably as early as the 14th century, and in any case by the Portuguese since the 16th century. The greater part of the island is now called Kalimantan and constitutes a province of the Indonesian Republic. From the view-point of Muslim studies the importance of the island is small, as practically the whole population of the interior of Borneo is pagan. Islam and Christi-

anity penetrated in the coast areas whence they have been slowly spreading into the interior; since 1942 political conditions favour the propaganda of Islam rather than the spreading of Christian denominations. The character of the local Islam is not different from what we find elsewhere in Indonesia [*q.v.*]. The only important centre of Muslim activity is Pontianak [*q.v.*] on the West Coast. (C. C. BERG)

BORNŪ, or Barnū, the name—of doubtful etymology the root of which reappears in Beriberi (= Baribari) as their neighbours call the Kanuri—given to a region in the hinterland of West Africa and used:

(a) loosely, of an area never precisely defined in geographical terms, were there was established one of the major states of that part of the Western Sudan,—see para. 6 below,—and

(b) of a province;—area, according to 1931 census, 45,900 square miles—lying between latitudes 10° and 13.5° N. and longitudes 10° and 14° E., in Northern Nigeria, containing that part of (a) west of the Anglo-German and south of the Anglo-French original international boundaries, plus an adjacent narrow strip on the eastern frontier of the former German Kameruns mandated to Great Britain after the war of 1914-18; including the Shaykhdoms of Bornu and Dikwa, together with some other administrative units.

2. Geography. Bornū consists in the main of a vast sandy plain, drained by two rivers,—the Yobe running from west to east in the north and the Yedseram from south to north in the south,—into the marshy shores of Lake Chad which lies in its north-eastern corner. The only mountainous features occur in the extreme south and south-east of the Province. In earlier times the Shari River which also flows from south to north into Lake Chad was regarded as the eastern border of Bornu, dividing it from Bagirmi [*q.v.*] country. The early medieval geographers and historians were cognisant of the region under this name, which appears on the Catalan atlas of Charles V (1375 A.D.), and is mentioned by al-ʿUmarī (d. 1348 A.D.), Ibn Khaldūn (d. 1406 A.D.), al-Maḳrīzī (d. 1442 A.D.) and others. It was visited and described (Book VII)by Leo Africanus (d. circa 1552).

3. Transport and Trade. The main modern motor road (Kano-Maidugari-Fort Lamy) runs from west to east across the region, with feeders from north and south, as did the former caravan route (Kano-Kukawa-Bilma). There is a permanent aerodrome at Maidugari and emergency landing grounds elsewhere. Of old slaves and ivory were the main exports, now groundnuts, hides, gum, cotton and numerous minor items have replaced these. Imports consist of manufactured articles, especially cotton goods. There is a considerable internal trade in dried fish from the Lake Chad area, salt and kola nuts.

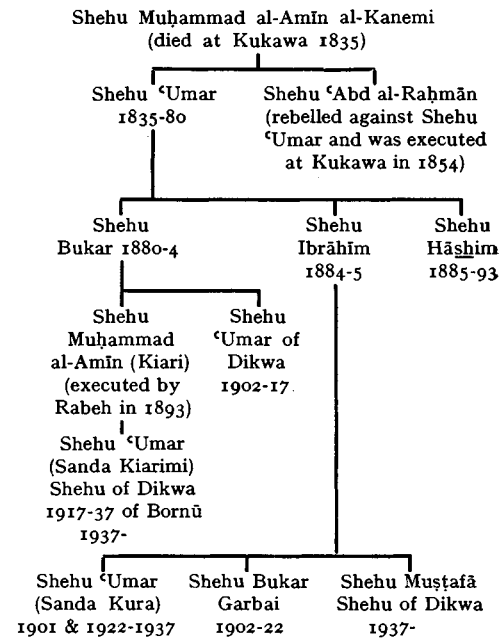
4. Economy. The region is not industrialised and contains no cities. It is self contained so far as the necessities of life are concerned, and its population is mainly agricultural. In the 1952 census, of 790,361 males, 376,561 are shown as engaged in agriculture and fishing. Its capital wealth consists in numerous herds of cattle, sheep and goats, together with the fisheries of Lake Chad.

5. Ethnography. (a) The population of the region described in para. 1 (b) above comprises the Kanuri, Fulānī, Hausa [*qq.v.*], Shuwa Arabs and some other tribes. At the census of 1952, the salient figures for the Bornu Province of Nigeria were—Kanuri 752,683; Fulānī 168,944; Hausa 84,729; Shuwa Arab 98,909; Bura 89,826. Total—including other less numerous mostly pagan tribes situated mainly in the hilly south and south east of the Province,—1,595,708. The comparable total in the 1931 census was 1,118,360.

(b) Languages. Kanuri [*q.v.*] is the major language of the region, but of importance also are the colloquial Arabic spoken by the Shuwa Arabs, and Fuffulde spoken by the Fulānī [*q.v.*]. Hausa is little spoken except by the trading elements in the towns. The pagan tribes have their own tongues. English is also used by those who have been educated in the more advanced schools.

6. History. The early history of Bornū is linked with that of the Kanem Empire. In 666 A.D., ʿUḳba b. Nafiʿ penetrated the east central Saharan desert as far as Tibesti in the Tebu country to the north of Lake Chad, the inhabitants of which, according to legend, were the So, a giant race originating from the Fezzan. According to tradition the first king of Kanem in this area was one Sayf, claiming descent from Sayf b. Dhī Yazan of the Banī Ḥimyar. This tradition may be post-Islamic and fabricated. The ruling class of old in this area was called the Maghumi, a word the root of which appears in the Kanuri words Mai (ruler) and Maghira, the title of the Bornu Queen Mother, an office which carried and still carries considerable power. There is strong traditional and some written evidence that this ruling class was 'white-skinned', and a reasonable supposition is that it was originally matrilinear and probably of origins connected with the Tawāriḳ, (plur. from sing. Tarḳi, vulg. Tuareg). The Saifawa were a nomadic people who absorbed or conquered the Tebu peoples to their north, and founded the Empire of Kanem, with capital at Njimi. Their rulers are said to have given 'the Sultan of the Beriberi' permission to settle, and tradition speaks of an invasion by Muslim Beriberi from Yaman via Fezzan and Kuwar in 800 A.D. The Empire of Kanem had received Islam by the 11th century if not earlier, and by the 13th century was powerful enough for its influence to reach as far as Egypt in the north east and Dikwa in the south. Ibn Khaldūn speaks of the 'King of Kanem and the Master of Bornū', the last word apparently describing the southern part of the Kanem empire from Lake Chad to Dikwa. But, circa 1389 A.D., the Sayf dynasty was driven out of Kanem by a kindred tribe, and the consequent tribal movements resulted in the advance of the Kanuri nation to the west of Lake Chad, and finally to their founding, circa 1470 A.D., on the River Yo, of Birni N'gazargamu as the capital of Bornū and of the Kanuri nation. It remained their capital for three centuries, though, circa 1507 A.D., Njimi itself was recaptured by the Kanuri, and old Kanem became a province of the new Bornū Empire. In the 16th century and under a succession of able 'Mai's or rulers (Muḥammad 1526-45, Dunama 1546-63, ʿAbdallah—in whose reign Fulānī settlers in Bornū are first mentioned—1564-70) the Bornū Empire expanded greatly, and this process was no doubt helped by the conquest, in 1592 A.D., by Morocco of Bornū's rival in the western Sahara, the empire of Songhay. Of these rulers the greatest was probably Mai Idrīs Atuma, (ob. 1602), who successfully campaigned as far afield as Kano, and also subdued the tribes of Air [*q.v.*] and the Tebu. Mai Idris made the pilgrimage to Mecca and was buried in Alo Lake near Maidugari. This peak was followed by two centuries of quiescence (Mai Ali, 1645-84 A.D., made the pilgrimage thrice), during part of which

at least the Bornū Empire seems to have been on the defensive, for ʿAlī was beseiged unsuccessfully in his own capital by the Tawāriḳ and the Kwararafa. Contributing causes may have been a series of severe famines,—one is recorded of seven years' duration,—and the general dislocation which followed the Moorish conquest of Songhay. The Fulānī *djihād* further to the west at the beginning of the 19th century soon had repercussions affecting Bornū, the suzerainty of which over the Hausa states lying between Bornū and Sokoto was challenged. In 1808 the Fulānī in Bornū assembled at Gujba, defeated Mai Aḥmad b. ʿAlī and sacked his capital at N'gazargamu. (One of the successful Fulānī leaders in this campaign later founded the town and amirate of Katagum with the title of Sarkin Bornū). Mai Aḥmad fled to Kanem where he invoked the aid of a leading chief there, Muḥammad al-Amīn al-Kanemi, a man who had travelled extensively in the Muslim world and had a wide reputation for learning and piety. He reinstated Mai Aḥmad and expelled the Fulānī, who, however, on Mai Aḥmad's death soon after, returned to defeat his successor, Dunama b. Aḥmad. The last named in turn sought the aid of al Kanemi, and at this point the modern history of Bornū may be said to begin. Al-Kanemi, victorious again over the Fulānī and Baghirmi, restored the old Sayf ruling house as titular kings and established himself at Kukawa, where he was visited by Denham in 1822, as the power behind the throne. His further attempts, circa 1826, to re-establish the empire of Bornū over the Hausa states were less successful, and, after being defeated, he died in 1835, and was succeeded by his eldest son ʿUmar who made peace with the Fulānī. During the absence of ʿUmar on these negotiations, the Sayf royal house called in the ruler of Wadai to help them expel the house of al-Kanemi. This plot failed. The then Mai, Ibrāhīm, was executed in 1846, and the last of the Sayf dynasty, his son ʿAlī, was killed in battle. ʿUmar now became *de jure* as well as *de facto* ruler of Bornū, adopting the title Shehu (= Shaykh) instead of Mai, thus inaugurating the Kanembu dynasty. He rebuilt Kukawa which had been destroyed by the men of Wadai, and was visited here by Dr. Barth in 1851 and 1855. War with Wadai was almost continuous, seriously weakening the strength of Bornū, and the outlying western territory of Zinder became virtually independent. In 1893, Rabeh [*q.v.*] entered Bornū from Wadai with a well armed and trained force of some two thousand men, which was altogether too strong for any forces with their antiquated weapons which could take the field against him. He defeated a general of the then Shehu, Hāshim, at Amja, next Hāshim himself near Ngala. He then took and plundered Kukawa, after which he returned to Dikwa where he made his headquarters, and built the fort which can still be seen. A cousin, Muḥammad al-Amīn nicknamed Kiari, of Shehu Hāshim caused the latter, now a fugitive, to be secretly murdered and himself advanced against Rabeh from Geidam. The two forces met at Gashegar and Kiari's troops had some initial success, even taking Rabeh's camp, but were finally put to flight by Rabeh's army. Kiari himself was taken and executed. This ended the resistance to Rabeh in Bornū. Rabeh established a military regime at Dikwa and sent out columns on predatory raids. His rule was entirely destructive and caused incalculable loss and dislocation over a wide area. In 1900, Rabeh was defeated and killed by French troops under Commandant Lamy. Rabeh's son, Faḍl Allāh, fled westwards before the French, was pursued and finally, on 3 Aug. 1901, killed by them under command of Captain Dangeville in an engagement at Gujba in Nigeria, (150 miles on the British side of the Anglo-French boundary which, though approved on paper, had not yet been delimited by boundary commissions on the ground, thus causing considerable confusion in the then so unsettled state of the country). The French authorities offered restoration to Sanda, a son of the late Shehu, but he was unable to meet their conditions, and finally the Kanemi dynasty was restored by the British authorities with Shehu Bukar Garbai, his brother. Shehu Bukar set up first at Mongonu, then moved to Kukawa and finally, in 1907, to Yerwa near Maidugari which has remained the capital of Bornū to the present time. Dikwa became part of the German Kameruns, which, after the German defeat in the 1914-18 war, were mandated to Great Britain and France by the League of Nations, Dikwa falling into the former's area. Details on the history of Bornu in the present century will be found in the reports of the Government of Nigeria.

THE SHEHU-S OF BORNŪ AND DIKWA


7. Religion. Islam is the religion of the Kanuri, Fulani, Shuwa Arabs and Hausa, and their *madhhab* Mālikī. Of the Ṭarīḳas, the Ḳādiriyya [*q.v.*] and the Tidjāniyya [*q.v.*] are the best supported, though representatives of others will also be found, including the Sanūsiyya [*q.v.*] and the Shādhiliyya [*q.v.*]. The Church of the Brethren (American Protestant) Mission operates among the Bura tribe in the south of the Province. It seems certain that, in modern conditions, the animism of the pagan tribes will gradually disappear.

8. Miscellaneous. Notable European explorers who visited Bornū were Denham, Oudney and Clapperton (1823), Barth, who made long stays at Kukawa between 1851 and 1855 and collected much information about the history and circumstances of the region, Vogel (1854-6), Beurmann (1860), Rohlfs (1866), Nachtigal (1870-2), Matheucci and Massari (1880-1), Monteil (1892).

BOSNA (Bosnia and Herzegovina).

1. General outline.

Bosnia and Herzegovina, with a total area of 51,129 km.², lies within the latitudes 42° 26′ and 45° 15′ North and longitudes 15° 44′ and 19° 41′ East; it thus occupies the western—largely mountainous—region of Yugoslavia, rich in mineral resources, water-power, and forests. It is divided into two geographical and historical entities—Bosnia and Herzegovina. The name of Bosnia refers to the larger northern part of the country, while Herzegovina comprises the southern districts with the basin of the river Neretva. The name "Bosnia" is derived from the river Bosna (of uncertain meaning but doubtless of Illyrian origin) which flows through the central part of the country. It was round the source and the upper basin of the river that traces have been found of a district called Bosna (first mentioned by Constantine Porphyrogenitus, who thought it belonged to Serbia), inhabited by early settlers, members of Slav tribes. After many changes of fortune brought about by a succession of foreign and native rulers, the region became an integral part of a new State bearing its name, which—under the reign of King Tvrtko I (1353-1391)—comprised not only the present territory of Bosnia and Herzegovina, except for a small district in the north-west, but also a large part of the Adriatic coast with the neighbouring districts in the south and south-east. Under Turkish rule, Bosnia was one of the *sandjaks* of the Ottoman Empire, and from 988/1580 an *eyālet* which comprised a larger area than that of the present Bosnia and Herzegovina, not only before but even after the loss of territory suffered in the second decade of the 12th/end of the 17th century. The name of Herzegovina dates from the middle of the 15th century when the magnate Stjepan Vukčić Kosača rebelled against the then king of Bosnia and had himself proclaimed "Herzeg (Duke) of St. Sava". The region later came to be called "Hercegovina" (the land of the Herzeg) and in Turkish: ***Hersek ili*** or ***Hersek sandjaği***. The present territory of Bosnia and Herzegovina roughly corresponds to the area that constituted the province of Bosnia and Herzegovina under Austrian rule (1878-1918) and which was part of the Kingdom of Serbs, Croats and Slovenes (from 1918). The boundaries and the extent of the region remained unchanged during the later administration of the new Kingdom (under the so-called Vidovdan Constitution). After the suppression of parliamentary rule in Yugoslavia (1929), an authoritarian Kingdom of Yugoslavia emerged, made up of nine large administrative units called "banovinas". This division altered the boundaries of the country, for the two banovinas with their seats within Bosnia and Herzegovina (those of Sarajevo and Banjaluka) now comprised parts of the neighbouring area, with the result that part of Bosnia and Herzegovina territory came to belong to the banovina the seat of which was in Split, while part of Herzegovina was included into the banovina whose seat was in Montenegro. In present-day Yugoslavia a separate people's republic of Bosnia and Herzegovina has been formed within its traditional historic boundaries.

The social and political organisation of Bosnia and Herzegovina as one of the republics of Yugoslavia, is based on the written Constitution of the Federal People's Republic of Yugoslavia, passed 13th January 1946, the Constitution of the P.R. of Bosnia and Herzegovina dated 31st December 1946, the Constitutional Law of 13th January 1953 concerning the foundations of the social and political organisation of the F.P.R. of Yugoslavia and the federal organs of government, and the Constitutional Law of 29th January 1953 concerning the social and political organisation of the P.R. of Bosnia and Herzegovina and the republican organs of government.

The P.R. of Bosnia and Herzegovina has, as does each of the Yugoslav republics, its own People's Assembly with its Executive Council and Secretariats in Sarajevo, the capital city of the Republic. The country is divided into 12 districts and 134 communes (1958).

The population of Bosnia and Herzegovina shown by the census taken in 1953 was 2,847,790. Serbo-Croat is the language spoken by the people (except for small numbers of Slovenian and Macedonian settlers and national minorities) who are, however, divided—as regards nationality— into Serbs (largely of the Orthodox Church, the rest being Muslims), Croats (largely Roman-Catholics, the rest being Muslims) and those that abstained from declaring their nationality (very largely Muslims).

According to the preliminary results of the census of 1953 there were in Bosnia and Herzegovina: 10.3 per cent of no denomination, 35.1 per cent Orthodox, 21.4 per cent Roman-Catholics, 32.3 per cent Muslims, and 0.9 of other denominations.

The official and final results, now in print, of the census taken in 1953 are as follows:

Serbs	1,264,372—44.3%	(including 35,228 Muslims)
Croats	654,229—23.0%	(including 15,477 Muslims)
Undeclared Yugoslavs	891,800—31.4%	(of whom 860,486 were Muslims)
Others	37,389— 1.3%	

The common language and close ethnical affinity of the population notwithstanding, the people are split into three groups owing to historical influences but mainly to different religious beliefs which were responsible for the formation of national differences between Serbs and Croats. The islamisation of Bosnia and Herzegovina—the centuries-old borderland of the Ottoman Empire, situated at the very confines of East and West with their respective influences—came to introduce yet a third denominational element. Under Austro-Hungarian rule, the population of Bosnia and Herzegovina was officially classified according to denominations—except for a small number of settlers whose nationality was duly recorded—although the greater part of the people was becoming nationally conscious, *i.e.*, the Orthodox population professed to be Serbs, and the Roman-Catholics Croats. Up to the World War II, Belgrade and Zagreb had each claimed national kinship with the Moslems of Bosnia, hence it came that a certain part of the Muslim population—mostly urban intelligentsia had declared themselves Serbs and Croats respectively.

However, the great majority of the Muslims in Bosnia and Herzegovina remained unimpressed and abstained from declaring themselves Serbs or Croats. Personal opinion and feelings on the question of nationality have been fully respected in modern Yugoslavia; consequently, the Serbo-Croat speaking Muslims are free to choose whether to declare themselves Serbs or Croats, or make no declaration of their nationality. Among other reasons, the fact that there are in Bosnia and Herzegovina large numbers of nationally undecided Serbo-Croat speaking Muslims was decisive for Bosnia and Herzegovina being made a separate people's republic of modern Yugoslavia.

The four centuries of Turkish rule (867/1463-1295/1878) have resulted not only in the islamisation of a large part of the population but have also left their mark on the whole country. In Bosnia and Herzegovina Serbo-Croat is the language alike of Muslims and of the rest of the population. Consequently, elements of oriental culture have taken firm root in the pattern and way of life not only of the Muslims but of the entire population of Bosnia and Herzegovina.

The centuries of Turkish rule delayed the growth of middle-class society in Bosnia and Herzegovina. However, the economic policy pursued in Bosnia and Herzegovina under Austro-Hungarian rule proved unable to develop and exploit all the productive possibilities of the country's resources, with the result that Bosnia and Herzegovina remained a backward country in many ways. In pre-war Yugoslavia, owing to various unfavourable circumstances and to the economic policy of the Government, the inherited backwardness did not show any great improvement. It was only after the World War II and the carrying out of revolutionary measures by the new regime of Yugoslavia that the natural resources of Bosnia and Herzegovina came to be exploited to the full due to the growing industrialisation of the country. Since 1945, a great number of industrial plants and establishments have been set up, small and large hydro-electric and thermo-electric power stations have been built and the mining industry modernised and extended. In the period from 1947 to 1954 the investments made in the industries and mining of Bosnia and Herzegovina totalled 236,494 million dinars or 61.3 per cent of all investments. The investment policy had to be adjusted and slightly changed after this period of most intensive industrialisation. The investments made in 1957 totalled 75,667 millions, of which 33,846 was spent on industry and mining. The consequences of rapid industrialisation are also reflected in the official returns concerning the ratio of agricultural population in Bosnia and Herzegovina, which was as follows:

	1895	1910	1931	1948	1953
Engaged in agriculture, forestry & fishing	88.4	86.6	83.4	76.7	63.5
Engaged otherwise	11.6	13.4	16.5	23.3	36.5

The rate of growth in the other branches of the national economy was less rapid, especially as regards the use of agricultural land and cattle and sheep raising, but recent trends in agricultural policy have resulted in greater emphasis being laid on tillage and other types of farming. In 1957 there were in Bosnia and Herzegovina 2,613,000 hectares of agricultural land, 64.7% of which were cultivable, the rest being pastures and hill grazings (35%) and marshland and reed-beds (0.1%).

Concerning communications, Bosnia and Herzegovina is still suffering from the consequences of adverse former conditions, especially as regards the railway network. In 1957 the country had 2,111 km. of railways, 1,339 km. of which were of standard gauge as against 772 km. of narrow gauge.

The total value of national production in Bosnia and Herzegovina during 1956 was 215,639 million dinars, the chief sources and amounts (in millions) contributed by each being as follows:

Industry & Mining	108,446
Agriculture	46,828
Building	11,154
Transport	19,877
Forestry	10,041
Handicrafts	5,653
Trade & Catering	13,640

Similar to the inherited underdeveloped state of the country's economy is the inherited cultural backwardness of the people, particularly in rural areas. The Austro-Hungarian government set up state-controlled primary schools without abolishing denominational schools. Compulsory primary education was introduced in 1911, yet in 1912/13 there were in Bosnia and Herzegovina only 374 state-controlled primary schools. The small number of schools, state-controlled and denominational together, could only cope with 18.55% of the children of school age. The Government of the Kingdom of Yugoslavia would only recognise the State primary schools, yet hardly one third of the children of school age were able to attend. The number of primary schools in 1938-39 was only 1,092, hence the large-scale illiteracy at the time. After World War II, despite the great efforts made to increase the number of schools and reduce illiteracy of adults, the official returns of 1953 showed that there were 225,000 illiterate males and 615,000 illiterate females in Bosnia and Herzegovina out of a total of 2,116,000 persons over the age of 10.

In 1945 and over the following years special efforts were made to raise the standard of literacy and education in Bosnia and Herzegovina. Thus in 1957 there were altogether 2,406 primary schools (including the continuation and eight-year schools), 37 "gymnasiums" (secondary classical or grammar schools), 159 professional training schools and 27 others. For adults there were 26 two-year elementary schools, 10 secondary schools, 12 technical schools for workers, 19 schools for skilled workmen and 11 others. Some time after the war a university with seven faculties was founded in Sarajevo, as well as an academy of music and a number of science institutes. In addition to these, there are now three Teachers Training Colleges in Bosnia and Herzegovina, several higher (professional) training colleges, six theatres, sixty science libraries, three hundred and twenty-five public libraries, eighteen museums and a radio broadcasting station.

2. History of Bosnia and Herzegovina underd Turkish rule.

(a) *During the rise of Turkish power*

The establishment of Islam in Bosnia and Herzegovina is associated with the setting up and strengthening of Turkish rule. The first Turkish invasion occurred in the year 788/1386 during the reign of the first Bosnian king Tvrtko I (1353-91, king from 1377) when he was at the summit of his power. The next invasion took place in 790/1388 when the Turkish army was defeated by the Vojvoda Vlatko Vuković. In the following year, a Bosnian army led by Vlatko Vuković took part in the battle of Kossovo in support of the Serbian Duke Lazar. In the course of fighting Sultan Murād was mortally wounded and died when the battle had ended, yet Prince Bāyazīd succeeded in carrying the day and taking Duke Lazar prisoner. After the battle of Kossovo the Duke's successors had to acknowledge Turkish suzerainty. The vassal Serbs considerably weakened the position of Bosnia. King Tvrtko's successor was allowed to rule over the lands that actually belonged to him, while the greater part of Bosnia was in the power of independent magnates each exercising full control over their respective districts. The conquest of Skopje (in Turkish Üsküp) by the Turks in 794/1392 brought about the formation of a Turkish March bordering on Serbia and Bosnia. Skopje became the seat of the first *Sandjaḳ-beyi* Pas͟ha Yigit, who was succeeded by his son Isḥāḳ. From 818/1415 frequent Turkish incursions took place: as a result, Turkish influence made itself increasingly felt in the internal affairs of the country and in the ever growing dissensions among Bosnian barons and pretenders to the throne. Soon after the accession of Tvrtko II (1420-43), who had to acknowledge Turkish suzerainty, Bosnian kings were subjected to tribute by the Turks (from 832/1428-29) who had temporarily occupied and garrisoned a number of towns on several occasions. It was not until the middle of the 9th/15th century that the Turks became firmly established in the town of Hodidjed and the surrounding country—in the present district of Sarajevo—where a frontier March was formed and administered by the Governor ʿĪsā Bey of Skopje, the son of Isḥāḳ Bey, under the direct control of a Turkish dignitary with the title of *voyvoda*. The area was under dual control, for the Bosnian lords of the surrounding districts were vassals of the Turks. This administrative area is recorded in a Turkish cadastral register of the year 859/1455, but no mention is made there of a settlement called Saray Ovasī though a district of the same name is recorded. However, the origins of Sarajevo date back before the final downfall of the Kingdom of Bosnia, for the townlet of Saray Ovasī is recorded in 866/1362. At that time the Bosnian throne was occupied by Stjepan Tomaš (1443-1461), who relied on the support of the West but failed to obtain release from the obligation to pay tribute to the Turks. On that occasion, the Pope demanded not only the conversion of the king to catholicism but the suppression of "heresy" as well, a religion which, despite constant persecution, had taken firm root and become the established church. However reluctantly, the King finally ordered the persecution of the heretics who took refuge in the districts held by Turks and in the region of later Herzegovina. The Turks continued to exploit not only the religious antagonism in the kingdom but social differences as well. The attempt made to unite the Kingdom of Bosnia and the Despotate of Serbia by means of an arranged marriage between the King's son Stjepan Tomašević and a Serbian Princess, brought about the fall of the Despotate and its capital city of Smederevo (1459). Stjepan Tomašević (1461-1463), the last of Bosnian kings, came to depend upon the West for support to a much larger extent than his father ever did.

In 867/1463 when the King refused to pay tribute, the Turkish armies, led by the Sultan himself, invaded and rapidly conquered Bosnia. Soon after the withdrawal of Turkish troops, the Hungarian King Matthias Corvinus marched into Bosnia and occupied the town of Jajce with adjacent districts. During the following year Hungarian forces conquered Srebrenik, when two "banats" were set up—the seat of one in Jajce and of the other in Srebrenik—which formed a Hungarian March reinforced by the belt to the South of the Sava. During the 9th/15th century several incursions were launched from here, culminating in a three-day occupation of Sarajevo. King Matthias made one of his barons titular King of Bosnia. The Turks had earlier given the conquered districts of the kingdom to a cousin of the former dynasty and had founded a titular kingdom which had lasted only up to 881/1476.

The first *Sandjaḳ-beyi* of Bosnia was Meḥmed-bey Minnet-og͟hlu. The *sandjak* of Herzegovina was founded in 874/1470 (the rest of Herzegovina was conquered by the Turks at the end of 886/beginning of 1482); another *sandjaḳ* was later set up, the seat of which was in Zvornik. The Banat of Srebrenik fell to the Turks in 918/1512, who also captured Jajce and Banjaluka after the battle of Mohács (in 1527 or 1528). From Bosnia the Turks penetrated into Lika and occupied the greater part of Dalmatia with the castle of Klis. The Bosnian *sandjaḳ-beyi* took part in the conquest of Slavonia.

The seat of the *sandjak* of Bosna was in Sarajevo (until the middle of the 10th/16th century) where many imposing buildings were erected by the *sandjaḳ-beyi* G͟hāzī K͟husrew-bey, who came there as *sandjaḳ-beyi* in 926/1520 and died in 948/1541. By that time the town of Sarajevo had become a large and important place. However, the seat of the *sandjaḳ* was moved to Banjaluka (towards the middle of the 10th/16th century), the lay-out and building of which as a Muslim city was completed by Ferhad Sokolović (Sokollu), a Governor of Bosnia who became the first Bosnian pas͟ha (*beyler-beyi*). In the year 988/ 1580 the *eyālet* of Bosnia was formed, with Banjaluka as its seat, which comprised seven *sandjaḳ*s (Bosnia, Herzegovina, Klis, Krka, Pakrac, Zvornik and Požega). In addition to the present area of Bosnia and Herzegovina, the *eyālet* included parts of Slavonia, Lika and Dalmatia, as well as the frontier districts of Serbia. At the beginning of the 11th/ the end of the 16th century the *eyālet* was composed of eight *sandjaḳ*s, and at the end of the first decade of the 11th/the beginning of the 17th century the *sandjaḳ* of Požega was incorporated into the newly formed *eyālet* of Kanizsa.

The Turkish conquest brought about great changes in the social pattern of Bosnia and Herzegovina. At the time when Bosnia came under Turkish control, the foundations of the structure and organisation of the Ottoman Empire had been completed.

Having conquered the country, the Turks proceeded to introduce their own social structure, a strictly centralised government, and their military

and feudal systems. This resulted in great changes in economic and social relations. Mining, next to agriculture the most important branch of former Bosnian economic activities, was taken over by the new rulers, and all the mines became the property of the sultan. The days of high and powerful feudal lords, masters in their own districts, were gone. In agrarian relations, the *tīmār* system was introduced controlled by a central authority. The *sandjaḳ*s were administered by governors directly controlled by the sultans, whose incomes were the largest next to those of emperors. Governors used to be replaced all too frequently. On the other hand, the pressure on the peasant eased and sheep-raising began to improve. In the countryside generally, patriarchal ways of life and a measure of autonomy became apparent.

At the same time, great religious and ethnical changes occurred involving the whole population. There was a large-scale islamisation. An improvement in animal husbandry in certain mountainous districts, particularly in those of Herzegovina, became evident, sheep-breeders were resettled in fertile agricultural districts which had been laid waste by wars and the like. Settling down on fertile lands, thousands of sheep-raisers turned to tillage, thus providing fresh manpower for the improvement of devastated areas. In view of the great importance attached to their work as colonisers, the settlers were allowed to retain their former privileges as sheep-raisers; however, with the growth of the feudal system and more settled conditions the settlers very largely became common *reʿāyā*. Because most of these settlers were Orthodox Serbs, many districts which had been devoid of Serbs now became peopled with them.

On the other hand, islamisation helped the reigning religion to win adherents and partisans among all classes: peasants, feudal lords and townspeople. The islamisation of Bosnia and Herzegovina has not been the subject of comprehensive studies so far, so it still presents a problem awaiting solution. Before the World War I the generally accepted opinion was that the followers of the heretic Church, the so-called Bogumils had passed over to Islam in a body, allegedly because of a similarity of views on moral law, and owing to the earlier persecutions on the part of the Church of Rome. This opinion is still shared by many scholars today (A. Solovjev and others). By passing over to Islam *en masse*, Bosnian nobles had been allowed to retain their estates, and the traditional pattern of land-tenure in Bosnia and Herzegovina had thus remained unchanged until the 13th/19th century. The *tīmār* system was only introduced as a superstructure. One of the chief supporters of this theory, before the World War I, was Ć. Truhelka. According to Truhelka and others, Bosnia had from the very beginning enjoyed a separate status in the Ottoman Empire.

During the interval between the two world wars some Yugoslav historians (V. Čubrilović, V. Skarić) sought to prove the groundlessness of these views. They were of the opinion that (a) the islamisation had been carried out gradually, (b) the Bosnian nobles had not retained their estates after the conquest because of the setting-up of the *tīmār* system, and (c) the system of land-tenure, such as prevailed during the 18th century and was continued in the following century, had developed only gradually within the framework of the old agrarian system.

Attention has been drawn by modern Yugoslav historians to Turkish sources of the first order, particularly to cadastral registers, which are likely to throw light on the history of the Yugoslav peoples during the period in question; however, the results of the investigations have not all been made public as yet.

Before 867/1463, while the Turks held part of Bosnia under their control, there were no *sipāhī tīmārs* in the outlying districts of the borderland governed by ʿĪsā Bey, the only *tīmārs* being those owned by men of the garrison of the fort at Hodidjed. Moreover, in the interior of the borderland, within the estates of ʿĪsā Bey, there were a number of *sipāhīs*, mostly Muslims with a few Christians. After the conquest, it was mainly from here and Macedonia, then from Serbia and other regions that the bulk of *sipāhīs* were drawn. Among the *sipāhīs* that were sent to Bosnia there were many of Slav origin. After liquidating the leading representatives of the old Bosnian nobility during and after the conquest, the Turks at first left a few members of noble families and a good number of the old minor feudal landowners in possession of their estates. The conquerors also gave lands to headmen of sheep-raisers. This accounts for the presence at the time of many Christian *sipāhīs*, particularly in Herzegovina.

The coming over of Bosnian feudatories to the side of Turks began rather early, at a time when they had to rely on influential Turks in the settling of disputes. Thus the land of the ducal family of Pavlović was recorded in the cadastral register of 859/1455 as land paying tribute in a lump sum (*muḳāṭaʿa*) (see Başvekalet arşivi, Mâliye deft. 544). Herzeg Stjepan's line of policy was for long one of complete reliance on the Turks. His sons had some time to rely on the Turks as well. His youngest son went over to the Turks, embraced Islam and as Hersekzāde Aḥmed Pas̲h̲a held the office of Grand Vizier five times during the reigns of Bāyazīd II and Selīm I. A considerable number of natives of Bosnia and Herzegovina belonging to Muslim feudal families, as well as boys collected from the *reʿāyā* by *devs̲h̲irme* and educated at the Court, were to hold the offices of Viziers or Grand Viziers. Meḥmed Pas̲h̲a Sokolović (Sokollu), one of the foremost Ottoman statesmen, Grand Vizier 972/1564-987/1579, was descended from a distinguished Serbian family in Bosnia, whose Christian relatives were Patriarchs of Serbia after the restoration of the Patriarchate of Peć (1557). The bonds of blood and kinship between men of Bosnian descent who held high offices and their kinsmen helped greatly to raise the fortunes of certain Bosnian families.

Although the ranks of *sipāhīs* were partly filled with foreign newcomers, the majority were of native descent, raised from among the old Bosnian feudalists or the new *sipāhīs* created during Turkish rule. In the earliest cadastral registers of the *sandjaḳ* of Bosnia, the names of islamised *sipāhīs* and their Christian relatives are recorded. Likewise, the members of their whole families are found grouped around the names of outstanding dignitaries (see Başvekâlet arşivi, Tapu deft. 18 and 24). During the period there were in Bosnia, adjacent to Sultans' and *Sandjaḳ-beys*' estates, a number of *čiftliks* held by feudal landlords and others; some of the *sipāhīs* likewise owned *čiftliks* in addition to *tīmārs*, but most of the latter contained no *čiftliks* as a rule. The *čiftliks* were hereditary possessions and remained as such even should the *sipāhī* have lost possession of the tīmār. On the whole it would seem that a number of earlier feudatories, converted to Islam, had kept their inherited land in the form of *čiftliks*. The latter, however, were few in number and consisted of

small estates, thus the theory can hardly be upheld, as Ć. Truhelka would have it, that the Bosnian nobles had remained in possession of their estates at the time of the conquest and had succeeded in holding them till the 13th/19th century. As a matter of fact, the number of *čiftlik*s continued to increase, however slightly, until the beginning of the 10th/the end of the 15th century when, during the reign of Sulṭān Suleymān the Lawgiver, the *čiftlik*s of this kind were finally abolished. Such *čiftlik*s, however, were to serve as a basis and pattern for the future development of new agrarian relations out of the old.

Muslim descendants of Christian *sipāhī*s and members of islamised families who had mended their fortunes under Turkish rule were to be found later as *sipāhī*s and *za*ʿ*īms*, as *dizdār*s of fortresses and higher functionaries. The importance attached to Bosnia as a frontier land favoured the rise to influence and power of the native Muslims. True, after the break-through of the Turkish armies and the invasion of areas under Hungarian rule, a great many *sipāhī*s were ordered to settle in newly conquered regions, yet this was not followed by the same consequences as in Serbia where the process of islamisation virtually stopped with the Turkish invasion of Hungary. In Bosnia and Herzegovina islamisation had resulted in the creation of a broad basis of Muslims recruited not only from the townspeople but also from the peasantry.

The creation of conditions necessary for the development of town communities in Bosnia—particularly those of mining centres—had begun during the period preceding the Turkish conquest. After the establishment of Turkish rule, Bosnian towns began to develop and grow. Turkish craftsmanship, particularly the handicraft characteristic of the Near East, was far advanced as compared with the craftsmanship of the earlier Bosnian period. Consequently, handicrafts and trade guilds of an oriental type developed greatly over the first two centuries of Turkish reign in Bosnia and Herzegovina. Great progress was made in trades related to the manufacture of leather, in goldsmiths' work, and in crafts connected with the production of military equipment and of goods required by townspeople. On the other hand, the Ottoman mining industry was less developed than in Bosnia or Serbia where Saxon settlers had introduced their mining technique and rules. Owing to the introduction, by the Turkish authorities, of bureaucratic administrative measures in mining areas which became merged with the Imperial domains (*khāṣṣ*), the mining industry suffered a setback in the first century of the Turkish rule, with a consequent falling off in production and, more particularly, in the output of precious metals; the production of iron, however, showed a slight increase. For these reasons, the growth of towns in Bosnia and Herzegovina during the period of Turkish rule was associated—apart from military considerations, which were the most important factor in the siting and building of towns—not with the development of the mining industry but rather with the advancement of crafts and the related trade. The towns built by the Turks were all situated on sites ensuring good communications. Over the second half of the 10/15th century, the islamisation of the old Bosnian mining market-towns proceeded but slowly and was less conducive to their future development than in the case of new towns built by the Turks on the sites of former market-towns. A good instance are the towns of Sarajevo and Banjaluka, among others, which, as the seats of Turkish authorities and military garrisons, expanded and developed into crafts centres and trading settlements. Besides the Muslims civil servants and soldiers, the populations of similar towns continued to grow because of the migration of Muslims from various places who brought in Oriental customs and ways of life. At the beginning however, it was the merchants of Dubrovnik who were the only traders on a large scale.

The building of the most important towns in Bosnia and Herzegovina was due to the initiative of individual governors. It was in and around these towns that governors had their estates, mills, houses, *ḥammām*s and shops, which they would bequeath and leave, during their lifetime, as religious and charitable endowments (*waḳf*). Thus a great number of mosques, *tekiye*s and religious schools were built, with libraries adjoining mosques or schools. Dervish orders introduced mystic rites and ceremonies likely to please the urban population. Briefly, the towns of Bosnia became the strongholds of Turkish power and the mainstays of Muslim culture. The towns also had an influence on the countryside and attracted great numbers of peasants and people from rural areas. Most of the migrants were peasants converted to Islam, and the non-Muslims soon became converts as well. Christians and Jews living in towns were few in number.

The earliest Turkish cadastral registers of the *sandjaḳ*s of Bosnia and Herzegovina provide documentary evidence bearing out the contention that the islamisation *en masse* had its origin in towns and the surrounding country districts. At the beginning of the period, as shown in the records, converted peasants in the *sandjaḳ* of Bosnia were to be found only around the town of Sarajevo. In 894/1489 there were in the *sandjaḳ* over 25,000 Christian houses, 1,300 odd Christian widows' houses, and over 4,000 unmarried Christian men, as compared with approximately 4,500 Muslim houses and over 2,300 single Muslims (cf. Başvekâlet arşivi, Tapu deft. no. 24). The earliest cadastral register of the *sandjaḳ* of Herzegovina for the year 882/1477 (Tapu deft. no. 5) clearly shows—and so do the other cadastral registers—that the islamisation was not instantaneous; nor is there any evidence to prove the assumption that the conquerors had been joined by masses of partisans that belonged to the heretic Church of Bosnia. Only in some mountain villages of Herzegovina, as shown by the registers, were to be found the "devoted believers of the Church of Bosnia" (*krstjani*); also, some believers of the Church of Bosnia were recorded to have lived in a deserted village in the *sandjaḳ* of Bosnia, this being the only instance. It would seem that twenty years' persecution of Bosnian heretics during the reigns of King Stjepan Tomaš and King Stjepan Tomašević had broken up the heretic Church of Bosnia; the change-over to Orthodoxy of Herzeg Stjepan Vukčić must also have had its share in weakening the position of the Bosnian Church in Herzegovina. The Turkish government recognised the Serbian Orthodox Church. Under the Sultan's *berāt* [*q.v.*], the Orthodox Church enjoyed considderable rights and privileges. The Catholic Church was also granted certain privileges by Meḥemmed II the Conqueror. It is evident from data in the cadastral registers that the "devoted believers of the Church of Bosnia" had retired into remote secluded districts of Herzegovina. There is no recorded evidence of any islamisation of those parts of the country or the people at the time. The inference

could therefore be drawn that the Bosnian heretics in most areas had already been brought into the fold (Orthodox or Catholic), which would exclude the possibility of a general conversion to Islam of the followers of the Church of Bosnia.

However, the probability is that the earlier persecutions on the part of the Catholic Church, combined with the pressure brought to bear by the Orthodox Church, which had the right to collect church-dues, had created conditions favouring the conversion to Islam of the former followers of the Bosnian Church. At all events, the development of towns as centres of Islam, and their influence on the surrounding countryside resulted in a steady spread of Islam among the peasantry of certain areas as early as the 9th/15th century. Thus a foundation was laid for a major islamisation of the peasantry. The islamised peasants were given the distinctive name of *potur*. Their religion was a mixture of Islamic and other elements, christianised pagan, Christian and heretical-Christian. It was on these grounds that the Muslim feudatories and religious intelligentsia were inclined not to regard the Muslim peasantry as their equals.

During the reign of Süleymān Ḳānūnī measures were taken to check the growing power of the feudal class, which had been completely islamised by then. Bosnian *sipāhī*s were made to move to newly conquered areas, the vacant *tīmār*s being made over to *sipāhī*s from other districts. *Čiftlik*s were transformed and made part of *reʿāyā* lands. It was at this time—and to a greater extent later on—that by graft and bribes a number of courtiers began to acquire estates in Bosnia. However, at the same time concessions had to be made in view of the needs of defence, particularly those of the borderland, and the existence of many devasted areas. Over the second half of the 10/16th century the number of *čiftlik*s in possession of feudal lords and army officers continued to grow, particularly in frontier districts. The post of *ḳapudan* (captain), formerly concerned with service on rivers in the borderland, came to be that of an officer in command of forts and defensive works of a district. The native feudal class could always rely on the *ḳapudan's* office for effectual support. The setting up of the *eyālet* of Bosnia added greatly to the ever increasing importance of the native nobility.

The second half of the 10th/16th century proved to be a period of rapid growth and development of certain Bosnian towns. There followed a steady rise in the volume of trade with Italian towns by enterprising home traders and Dubrovnik merchants. Being in the majority, the Muslim inhabitants of towns enjoyed certain privileges and lived in special quarters apart from the Christian population. Owing to the influx of newcomers certain guilds closed their doors, hence a migration of Muslim population to places and towns beyond the Sava.

In the second half of the 10th/16th century, the signs of a crisis in the Ottoman general administrative structure became increasingly apparent in the country's finances. One of its effects was a considerable weakening of Turkish military power. This crisis became evident in Bosnia as well. The last military ventures and offensive operations made under the leadership of Ḥasan Pasha Predojević, the *beyler-beyi* of Bosnia, ended in the capture of Bihać. In the following year (1002/1593), a Bosnian army led by Ḥasan Pasha suffered a heavy defeat at Sisak, which brought about the war between the Habsburgs and Turkey.

(*b*) *The period of crisis in the Turkish state and military defeats of the Ottomans*

The administrative structure and extent of the *eyālet* of Bosnia, which took definite shape at the beginning of the 11th/17th century, remained unchanged until about the end of the century. At this time, the governor of the *eyālet* bore the title of Vizier, and the seat of governement was transferred from Banjaluka to Sarajevo in 1049/1639.

The crisis in the economic and financial affairs of the Ottoman Empire and the cracks in the Osmanli structure were also reflected in the conditions that prevailed in Bosnia where disorders were frequent and corruption rife. Owing to financial difficulties and the rising costs of maintaining control over wide areas of the conquered territory, the central government had to extend the system of lease of all public and imperial revenue and to raise the taxes and introduce new ones. The system of lease was extended to include the renting of local rates, and even the incomes from *tīmār*s and *zeʿāmet*s acquired by courtiers, officials attached to central offices, and by many other prominent men living in the capital. The widespread centralised bureaucratic system, designed to control and check oppression, became a source of corruption, practised by local authorities as well. From the second half of the 10th/16th century on, the financial burdens and exploitation of the *reʿāyā* (peasantry) increased, the pressure being put on the sheep-raisers of the autonomous districts likewise. The long war (1593-1606) was a constant drain on Turkish resources and manpower, with Bosnia bearing the brunt in her exposed position. Owing to the war there was much unrest and many risings of the Serb people in Herzegovina both during and after the war. Over the first two decades of the 11th/17th century, former rebels from Anatolia were sent to Bosnia as governors and would turn rebels in Bosnia as well; they could always rely for support on a large number of malcontents among the native *sipāhī* class who were embittered because courtiers and those near to central authorities would be given *tīmār*s and *zeʿāmet*s as a present, thus enabling individuals and local bureaucrats to acquire estates as large as several *tīmār*s put together. Turkish governors, whose term of office was rather short, were anxious to amass riches and exploited the country for their own profit, as did the officials of the central government sent to investigate malpractices and causes of unrest.

Despite such conditions the native feudal class continued to prosper and grow in strength. The process of transformation of peasant lands into *čiftlik*s owned by military commanders, *sipāhī*s and wealthier citizens was gaining ground as was alienation of free *bashtina*s (inherited possessions) of *knez*-es (village headmen) and other categories of land. Peasant tenants (*čiftči, kmet*) of such *čiftlik*s were required to deliver one third of a fourth (at a later period a fifth, or a ninth in some instances) of corps to their owners (*čiftlik ṣāḥibi*) besides being forced to work on *čiftlik*s belonging exclusively to the *čiftlik* owner. Such tenants were bound to pay *ʿushr*, *sālāriye* and other duties of the *tīmār* system to their *sipāhī*s (*ṣāḥib-i arḍ*) should the *čiftlik* happen to be part of a *tīmār* or a *zeʿāmet*, which was usually the case. The system of government by *ḳapudan*s was extended and came to be applied in the inland areas of the country, for the central government could not afford the means required for the upkeep of as large an army of mercenaries as was needed.

In the circumstances. *ḳapudans* tended to grow overbold and defy orders issued by Pas̲h̲as.

Yielding to the demands of Bosnian *sipāhīs* supported by the Pas̲h̲a, Sulṭān Aḥmed (1603-1717) issued a firman establishing *tīmārs* with rights of family succession (*od̲j̲aḳlīḳ*), the successors being sons or brothers of the deceased, or else kinsmen living with the family (*od̲j̲aḳ*).

Changes in land tenure and economic policy mainly affected the Christian peasantry; the land of Muslim peasants was seldom interfered with. Increased taxation and growing exploitation deepened the existing divisions between the two classes of peasantry, hence the frequent flights of Christian peasants over the border and increasing numbers of outlaws (*haydut* in Turkish), who as highwaymen became a menace to safety on the roads.

The trends of development in agriculture and other branches of national economy, apparent in the earlier period, became more pronounced during the second half of the 10th/16th century and during the 11th/17th century. Mining industry continued to decline and was at its lowest at the end of the century. The towns grew and developed during the second half of the 16th and the first half of the 17th centuries as a result of the expanding trade and commerce. The opening of the port at Split (1592), a rival to the port of Dubrovnik, proved an event of great importance to Bosnian trade. The town guilds came under the exclusive control of the janissaries, and this led to the further transformation of guilds into closed organisations. Town notables (*aʿyān, q.v.*) and powerful *ag̲h̲as* made their appearance in growing numbers. However, part of the inhabitants of towns were Christians, some of whom were craftsmen and tradesmen. Following the increasing migration of country people into towns the tax on abandoned land was very increased. Over the second half of the 10th/16th and the first half of the 11th/17th centuries, some of the towns grew both in extent and importance, particularly the town of Sarajevo. The amassed money-capital, however, served to advance the practices of usury. Besides the prosperous Muslim class, there were in towns certain Christian families of rich traders and merchants—Christian usurers. The urban social pattern showed a marked tendency towards a sharper division between the wealthier, politically influential class and the lower class of the urban poor. In the 11th/17th century there occurred several serious outbreaks of disorder and rioting among the poor of Sarajevo, largely Muslim.

While in the first half of the 11th/17th century the Thirty Years War in Europe prevented any major military undertaking against the Turk, in the second half of the century two long wars caused much suffering and lowered the standard of living conditions and the economy of the *eyālet* of Bosnia. The war against Venice (1644-1669) and the shorter war against the Habsburgs (1663-1664) were waged in areas belonging to the *eyālet* of Bosnia, where frequent incursions took place. The consequent flights of Christian population across the frontier resulted in the enlistment of many of the fugitives, called *uskoci*, in the military service of Venice. In Herzegovina also there was unrest and rising of the people. After the wars there followed a 14-year period of welcome peace, which on the whole resulted in consolidation of Turkish power. The attack on Vienna started the new war with the Holy Alliance which was to last a long time (1683-1699). For once the Bosnian territory south of the Sava escaped being the main scene of the operations, but a Bosnian army had to take part in the war and defend the frontiers. Austrian troops temporarily occupied some districts south of the Sava (in 1688), and nine years later Prince Eugene, after the battle of Senta, advanced as far as Sarajevo, burning it down in 1109/1697. The Christian population, particularly the Roman Catholics, migrated and retreated with the invading armies. The long wars left an epidemic of plague in their trail.

Under the terms of the peace-treaty of Karlovci (1110/1699) the *eyālet* of Bosnia retained, with minor changes, the present frontiers of Bosnia and Herzegovina on the north and west. However, on these frontiers new fortifications began to be built and the old ones repaired; more "ḳapudanships" were established. The *eyālet* now consisted of five *sand̲j̲aḳs* (Bosnia, Herzegovina, Klis, Zvornik and Bihać), the last being abolished soon after. It was at this time that the residence of the Bosnian vizier was transferred from Sarajevo to Travnik.

Muslim refugees from the ceded areas of Hungary, Slavonia, Croatia and Dalmatia came to settle in Bosnia on lands abandoned or sparsely populated, which they were allowed to hold as *čiftliks*. The new settlers were embittered against the Christian Powers and the insurgents, which added to the division and differences between Muslims and Christians. A number of settlers came to stay in towns, for the most part tradesmen, craftsmen and soldiers.

The exposed position of the *eyālet* of Bosnia called for great efforts on the part of the Muslim population. Under the peace-treaty of Požarevac (1130/1718) Austria was given a belt of territory south of the Sava, and some areas around the western frontier were also lost to Austria and Venice. Despite the ravages wrought by the plague coupled with a succession of bad harvests and heavy loss of life suffered by Bosnian *sipāhīs*, a Bosnian army led by Ḥekīm-og̲h̲lu ʿAlī Pas̲h̲a gained a decisive victory over the Austrians at Banjaluka in 1150/1737. The treaty of Belgrade (1152/1739) deprived Austria of all the territories held under the treaty of Požarevac, except for the castle of Furjan.

Bosnian feudal nobility and Muslims in general had by now lost confidence in the power of the Empire. The arrival of janissaries from the abandoned regions strengthened the privileged position of certain towns, particularly that of Sarajevo, which were now granted virtual autonomy, the greatest power being yielded by municipal *aʿyān* and military commanders ("*bas̲h̲as*") with *ḳapudans*. These dignitaries came to be the main representatives of political power. In the time of ʿAlī Pas̲h̲a a Council of *aʿyān* was set up, composed of municipal *aʿyān*, *ḳapudans* and men of note from different parts of the *eyālet*. The Council was meant to exercise control over the vizier himself and was given powers to determine certain vizier's incomes.

Sprung from this privileged class, the new native Muslim nobility was founded on the subjection of peasantry and depended on further extension of villainage. *Beys* and *ag̲h̲as* as land and *čiftlik* lords took over or seized new *čiftliks*, causing peasants from stock-rearing districts to settle on deserted land, and generally acting independently of the central authority. *Ḳapudans* usurped the powers and functions of officers of state, renting the state's revenue, taking over *čiftliks*, and acquiring property by every means. Certain families of *ḳapudans* recorded in the first decades of the 12th/18th century

had reached a high position in society by the end of the century.

In order to acquire riches and indemnify themselves for taxes paid and bribes offered to obtain the appointment to the office, viziers of Bosnia would raise the rate of taxation and impose new rates, taxes and other dues. Indeed, immediate delivery of certain goods was often demanded as advance payment for taxes 6-9 months before they were to fall due. This provoked a series of revolts and risings of poor citizens and Muslim peasantry over a period of ten years about the middle of the 12th/18th century.

Such circumstances had an adverse effect on trade in town and country alike. The prevailing conditions acted as a serious set-back to economic growth of the country.

In the war between Austria and Turkey (1788-1791) the responsibility for the defence of the frontier districts rested with the Bosnian forces. Apart from capturing certain frontier castles (1788-1790) the Austrian armies had but few successes. Under the terms of the peace-treaty of Svishtov (1791) Turkey surrendered a little part of her territory, and Austria evacuated the captured frontier castles.

At the beginning of the 13th/end of 18th century Sulṭān Selīm III introduced a series of reforms and measures largely designed to curb the power of janissaries. The policy of the proposed reforms ran counter to the established foundations and prevailing influence of Muslim nobility and the privileged position of Muslim population of towns in the Bosnian *eyālet*.

(c) *The Period of Reforms in Turkey and Risings in Bosnia*

The new Turkish reforms could not but be met with indignation by Bosnian Muslims, interfering as they did with the established military structure and being directed against the janissaries and the *sipāhī* army. In several campaigns against the insurgents in Serbia, Bosnian *beys*, *ag͟has* and the urban population took part in large numbers; however, the Bosnian army suffered a heavy defeat at Mišar (1806). A short time after, several risings of Serb peasantry occurred in Bosnia but were soon put down. Far greater efforts were needed for the final suppression of the rebellion of the Drobnjaks in Herzegovina. Bosnian Muslims also took part in the suppression of the rising in Serbia in 1813.

The transit trade improved during the period of Napoleonic continental blockade. Bosnian roads were chiefly used at the time for the transport of cotton, undertaken by Serbian and Jewish traders, many of whom grew rich in consequence. Muslim tradesmen in towns were dependent for their prosperity on the preservation of privileges and special rights. Sarajevo, the most important town, had acquired a large measure of independence in regard to viziers; there were frequent cases of serious differences and quarrels between the citizens and the vizier, which at times led to armed resistance. With the appointment and arrival of D͟jalāl al-Dīn Pas͟ha in 1820 law and order was restored at a great sacrifice of life. The abolition of the order of Janissaries was the cause of another rising of the people, particularly in Sarajevo, which was suppressed by ʿAbd al-Raḥmān Pas͟ha. The general dissatisfaction and resistance to the reforms continued none the less. In 1246/1831, when attempts were made to carry the reforms into effect and reorganise the army, a rebellion broke out headed by Bosnian Muslim nobles under the leadership of Ḥusayn-ḳapudan Gradaščević. The insurgents demanded complete autonomy for Bosnia and Herzegovina and the right to elect their own vizier; Bosnia had to pay a yearly tribute to the Sultan. The demands, if met, would have safeguarded the privileges of the nobility and the existing military structure. However, at the very start of the conflict the *ḳapudans* of Herzegovina, led by ʿAlī Ag͟ha Rizvanbegović, separated themselves from the movement. Despite the victory of Ḥusayn-ḳapudan over the imperial troops and of the understanding reached with the Grand Vizier, the initial great successes soon came to nothing because of personal ambitions of the leader (elected to the viziership in the early part of D͟jumādā I 1247/8-17 October 1831) and the rivalry between Bosnian leaders. The insurrection was put down (1832) and Herzegovina proclaimed a *pas͟halıḳ* to be governed by ʿAlī Pas͟ha Rizvanbegović (1833).

After the suppression of the insurrection the hereditary *ḳapudanlıḳs* were abolished (1835) and replaced by *müsellimliks*. Many former *ḳapudans*, *aʿyān*, and *sipāhīs* as well (after the abolition of their order) were appointed *müsellims* and given posts of commanders. The iron hand in a velvet glove was the means used by the Ottoman Porte in dealing with Bosnian nobles and stubborn malcontents. Nevertheless, the conflicts still continued, particularly between the citizens of Sarajevo and the viziers. The resistance was finally broken by ʿUmar Pas͟ha Latas, a former Austrian petty-officer, born in Lika (Croatia). Sent to Bosnia (1850-1852) with special powers at the head of considerable forces, ʿUmar Pas͟ha succeeded in breaking the great political influence of Bosnian nobility and carrying the reforms into effect. He had ʿAlī Pas͟ha put to death, and abolished the *pas͟halıḳ* of Herzegovina. Bosnia was divided into six *ḳāʾimaḳāmlıḳs* and Herzegovina into three *ḳāʾimaḳālıḳs*. The town of Sarajevo became the official residence of the vizier.

Further reforms were made in the administration of the *eyālet* of Bosnia during the tenure of office of the Vizier Topal ʿOt͟hmān Pas͟ha (1861-1869). The country was divided into seven *sand͟jaḳs*. The *wilāyet* Council was set up in 1866—an advisory body of representatives, on denominational basis. A start was made with modernisation of living conditions, health service and communications (the first railway—Banjaluka-Novi—was opened in 1872). In the sixties of the century the *wilāyet* printing-office was set up and a number of schools opened.

The reforms and measures taken favoured the development of certain branches of national economy. Commerce and trade improved, but the guilds were endangered owing to the development of the market. Many urban Serb families rose to prosperity and, as a result, the influence of Serbian citizens began to make itself felt in rural districts.

Yet the reforms were not far-reaching enough to deal with the essence of agrarian structure and its problems. With the abolition of the order of *sipāhīs* the *ʿus͟hr* (tithe) was made a tax of the state, and to indemnify the *sipāhīs* for loss of income a pension scheme was introduced in lieu of the rents. However, to recoup themselves for their losses, the *sipāhīs* proceeded to convert into *čiftliks* the remaining peasant free-holdings. By the middle of the 13th/19th century the process had been completed; thus feudal land-tenure and tenantry came to be

associated with Christian peasants, for the Muslim peasantry had remained in possession of their *čiftliks*. The burden of heavy taxation was meant to be borne largely by the peasant. Moreover, the amount of rates and other dues exacted from the *kmets* (tenants) was not fixed but collected arbitrarily. Such conditions were a cause of general discontent among the peasantry, and provoked frequent rebellions.

Ṭāhir Pas̲h̲a, Vizier of Bosnia, undertook (in 1848) to settle the agrarian question. Under his new scheme *čiftlik* owners were to collect a third part of the annual crop, and forced labour was to be abolished except in Herzegovina, where the *kmets* were allowed to hand over less than a third of the crop. Certain obligations of the *čiftlik* owner in the district of Sarajevo, *e.g.*, to provide his *kmet* with seeds, oxen and dwellings, were to apply to all Bosnian districts. However, *čiftlik* owners proceeded to collect the third of the crop everywhere, insisted on forced labour and failed to perform their own obligations. This caused much discontent among the peasants; nor were the *čiftlik* owners satisfied. Several unsuccessful attempts had to be made before the question was finally settled—after the passing of the Agrarian Act (during the Ramaḍān of 1274)—by decree proclaimed in the month of Ṣafar 1276/September 1859, enacting the customary practices in regard to *kmets*. No provision was made, however, for a uniform system of taxation and other dues applicable to the whole of Bosnia and Herzegovina. The regulations of the decree in regard to this system of land-tenure remained in force until 1918.

The unsatisfactory conditions gave rise to a series of peasant risings about the middle of the 19th century. The great rising of 1875 when masses of Christian peasants, *kmets* of *ag̲h̲as* and *beys*, joined hands, was given a political colouring by the participation of the Serbian town population, particularly following the entry of Serbia and Montenegro into war against Turkey. True, the rising in Herzegovina was a mass movement, while in Bosnia it was only the frontier districts that were involved. The rising called forth the intervention of the Great Powers. The Treaty of San Stefano stipulated that Turkey should grant autonomy to Bosnia and Herzegovina.

Under the terms of the Congress of Berlin, Bosnia and Herzegovina was mandated to Austria-Hungary. The Austro-Hungarian troops sent to occupy the country met with unexpected resistance from Bosnian Muslims. The rebels were led by men of the lower classes—since prominent Bosnians were unwilling to take sides after the withdrawal of Turkish authorities and the army—who incited the people to rise against the invader and set up a government of the people in Sarajevo. The occupation began on July 29th and was completed on October 20th, 1878. Drastic measures were taken to break down the strong resistance offered at some places, particularly around and in the town of Sarajevo.

Bibliography: Historical studies relating to the period of Turkish rule in Bosnia and Herzegovina are far from being complete though much progress has been made of late. Most of the relevant historical material dealing with the period has not yet been published. The collecting and editing of the material is in charge of the Oriental Institute of Sarajevo. For the early part of the period of particular importance are the Turkish cadastral registers (with *ḳānūn-nāmas*), kept in the Başvekâlet arşivi in Istanbul, *waḳf-nāmas* (reported on by F. Spaho, H. Kreševljaković, G. Elezović, H. Šabanović, and others), and documents stored in the archives of Dubrovnik (reported on by Ć. Truhelka, F. Kraelitz, V. Skarić, G. Elezović, H. Šabanović, J. Radonić, and others); also important are the *ḳāḍī sid̲j̲ills* of the 17th century with fragmentary records from the 16th century, and public records material (Oriental Institute, K̲h̲usrew-bey Library, etc.). Some public records of the *wilāyet* of Bosnia (from the middle of the 19th century) are kept in the Oriental Institute of Sarajevo. Valuable information concerning the later part of the period is to be found in the unpublished chronicle entitled *Taʾrīk̲h̲-i Diyār-i Bosna*, written by Ṣāliḥ Ṣidḳī Ef. Hadžihusejnović, known by the name of Muweḳḳit, at the second half of the 19th century, the autograph of which is kept in the Oriental Institute of Sarajevo.

The more important collections of sources are the following: Ć. Truhelka, *Tursko-slovjenski spomenici dubrovačke arhive*, Glasnik Zem. muzeja Bosnia and Herzegovina 1911; H. Šabanović, *Najstarije vakufname u Bosni*, *Prilozi za orijentalnu filologiju*, ii (1951), iii-iv (1952); *Monumenta Turcica historiam Slavorum Mer. illustrantia*, I, *Kanuni i kanun-name*, Vol. 1 (edited by Oriental Inst. of Sarajevo), Sarajevo 1957; J. Matasović, *Fojnička regesta*, *Spomenik Srpske Akademije Nauka*, lxlii (1930); inscriptions in oriental languages discovered in Bosnia have been published by M. Mujezinović, in *Prilozi za orijentalnu filologiju*, ii 1951(), iii-iv (1952-53), and others. Among the more important travel-books containing valuable information and data are those by Kuripešić (1530) and Ewliya Čelebi from the middle of the 17th century. The sources concerning the beginning of the Rising in 1875 have been published by H. Hadžibegić, *Turski dokumenti o početku ustanka u Hercegovini i Bosni* 1875, *Prilozi za orijentalnu filologiju*, i (1950).

General histories of Bosnia: S. Bašagić, *Kratka uputa u prošlost Bosne i Hercegovine*, Sarajevo 1900; M. Prelog, *Povijest Bosne u doba osmanlijske vlade*, i-ii, Sarajevo 1912, 1913. Both are out of date. V. Ćorović, *Historija Bosne i*, Belgrade 1940 (published first book only, to 1482); *Istorija naroda Jugoslavije i*, Belgrade 1953, 514-576 (to 1482 also). An outline of the history of Bosnia and Herzegovina under Turkish rule is to be found in *Istorija naroda Jugoslavije*, Book ii (in print); the 15th, 16th and 17th centuries are by N. Filipović, the 18th century by H. Kreševljaković, and the history of culture by H. Ṣabanović. Unpublished Turkish historical material has been used, particularly cadastral registers, and references given concerning sources and bibliography.

3. Islamic culture in Bosnia and Herzegovina

The islamisation of part of the population of Bosnia and Herzegovina, one outcome of the Turkish conquest, was to lay its impress on the country's pattern of life and culture. The style of living, both public and private, of the Muslims in Bosnia and Herzegovina during the period of Turkish rule was very much the same—particularly in towns—as in the other provinces of the Ottoman Empire. The mainstays of Islamic culture in Bosnia and Herzegovina were town settlements, for the manifest features of the culture were predominantly urban in scope and character. The way of living of Muslim peasantry had some definite particularities of its own. Owing to europeanisation however the elements of oriental culture—particularly in Christians—tended to disappear in the post-Turkish period, and did so to an ever-increasing extent after the country became a constituent part of Yugoslavia. Nevertheless, the characteristic elements of oriental culture have not disappeared even to-day, and what is more, not even among Christian population, to say nothing of the Muslims. Many features of oriental ways of life are still very much in evidence, such as the style of living, furniture, cooking, drinking habits and certain old customs. Oriental practices are still in frequent use in the goldsmith's craft, carpet weaving and many other branches of applied arts.

The most lasting traces of the influence of Islamic culture are to be found in the field of architecture and town-planning. Some principles of oriental town-planning have found ready application because of prevalence of terraced sites. Many Bosnian towns still show the former typical lay-out with a division into two quarters, viz., the *Čarshu* (shopping or commercial centre) and the *Maḥallas* (the residential quarters).

In town-planning and building generally over the period of Turkish rule three stages can be distinguished: (a) the initial period until about the end of the 16th century, (b) the second until the end of the 17th century, and (c) the third until the end of the Turkish rule in Bosnia and Herzegovina. During the initial period of development of Muslim town settlements it was the Governor-Generals and high Turkish dignitaries who erected places of worship and public buildings, the representative examples of monumental architecture. From this period date the finest monuments of the Islamic style of architecture in Bosnia and Herzegovina, *e.g.*, the Aladža mosque (1550) at Foča, the G͟hāzī K͟husrew-bey mosque (1530) and the ʿAlī Pas͟ha mosque (1561) in Sarajevo, the Ferhād Pas͟ha mosque (1579) in Banjaluka, the G͟hāzī K͟husrew-bey Medresa (1537) called "Seldžukija" and later "Kuršumlija" with G͟hāzī K͟husrew-bey's *ḥammām* (before 1557) and the Brusa *bezistan* (1551) in Sarajevo, and many others. With the growth and rapid development of guilds in the second period, it was largely the traders and merchants who were responsible for the erection of public buildings. The examples dating from this period are less monumental in appearance except for a few edifices erected by Governor-Generals or some high Turkish dignitaries, as for example the Hadži-Sinan's Tekiye (1640) in Sarajevo. The architecture of the third period shows signs of decadence and, towards the latter part, of the penetration of European ideas as well as imitation of styles prevalent in the towns of Turkey. There are also signs of direct influences. The period nevertheless has produced many interesting examples of technical ingenuity. The development of the town of Travnik, as the official residence of the Vizier, is typical of the period. The Süleymaniyya mosque (the present building—dating from 1816) has been constructed over a *bezistan*. A number of ancient mosques were restored during this period. In the construction of monumental public buildings the Islamic architects displayed the fundamental features of the Ottoman artistry, though not all of the latter's forms and characteristics found expression in Bosnia and Herzegovina. Smaller mosques and public buildings, as well as dwelling-houses were built by native master builders, hence certain individual features of this style of architecture. In the post-Turkish period the examples of Islamic architecture show unmistakable signs of decadence. The Austro-Hungarian Governments attempted to develop the characteristics of Islamic architectural art by copying the Moorish style. The buildings in this style contrasted with both the earlier examples of Islamic architecture in Bosnia and Herzegovina and those of the latter period of the Austrian rule, besides being in disharmony with Bosnian inland scenery and unsuited to climatic conditions. Buildings in this style proved a failure. The most representative example of this style is the Sarajevo Town Hall. The Bosnian and Herzegovian style of architecture, as applied to dwelling-houses, held its own a while longer before it finally disappeared.

A very large number of words and idioms of Turkish, Arabic and Persian origin are in everyday use in Bosnia and Herzegovina, and to a greater extent than in other areas where Serbo-Croat is spoken. The early literary style also made full use of such borrowings. With the development and

under the influence of standard Serbo-Croat, since 1878, and more so since 1918, words and phrases of Turkish origin have been falling out of use in everyday speech. During the period of Turkish rule a cursive Cyrillic alphabet was in use in private correspondence among Bosnian and Herzegovinian Muslims, particularly among native Muslim nobles. Arabic characters were used in the writing of Serbo-Croat literary texts done by Bosnian and Herzegovinian Muslims. The same characters were used in certain Serbo-Croat religious texts written during the period of Austrian rule and that of pre-war Yugoslavia. Some religious books printed in these characters are still available. The orthography was rather arbitrary at first but gradually became standardised. Since 1930 however, the characters have hardly ever been used even in religious texts.

No comprehensive study has so far been made of the literary production, in Serbo-Croat or oriental languages, of Bosnian or Herzegovinian Muslims.

In their devotion to folk-songs and popular poetry the Muslims of Bosnia and Herzegovina differed little from their Christian compatriots. The earlier epic compositions of Bosnian and Herzegovinian *guslars* have all the basic characteristics of traditional Serbo-Croat epic poems. The difference merely lies in a different religious and political attitude, a more frequent use of Turkish idioms, and a tendency away from heroic poems towards ballads. *Hasanaginica*, a popular Bosnian poem, is well known in the world of literature. Popular epic poems of the earlier type are preserved in the south of Bosnia and Herzegovina. A later type of popular Muslim epic poetry developed among the people of a western frontier district called Krajina. Such poems were recited with a *tamburica* (mandolin) accompaniment, and differed in several respects from the popular poems of the *guslars*. Popular lyrics of Bosnian and Herzegovinian Muslims, when compared with those of their compatriots, likewise show—and to a higher degree—a number of characteristic features of their own. The most familiar and popular among these are the love poems called "*sevdalinkas*". Apart from oriental influences of language, motifs, and music apparent in their composition, the *sevdalinkas* are essentially typical poems of Bosnian and Herzegovinian Muslims, liked and enjoyed throughout Yugoslavia.

Judging by the results of studies published so far, those Bosnian and Herzegovian Muslim poets who wrote in oriental languages did so mainly in Turkish, to a lesser extent in Persian, and in a few instances in Arabic. Among Turkish writers, there were several of Bosnian origin, some of whom were noted poets, as for example Derwīsh Pasha, son of Bāyazid Agha (killed in 1012/1603), born in Mostar (Herzegovina), and the well-known stylist Meḥmed Nergisi (died 1044/1634), born in Sarajevo. Not only were they born in Bosnia and Herzegovina but also held office for rather a long time, the former as Pasha of Bosnia and the latter as Müderris and Ḳāḍī. Likewise of Bosnian origin was Aḥmed Sūdī (died 1005/1596-7), the well-known commentator on the Persian classics. One of the most copious writers of poetry in the Persian language, who also wrote in Turkish, was the sheykh Fewzī of Mostar (died about 1160/1747). Aḥmed Waḥdetī (died 1007/1598-9) of Dobrun near Višegrad, as well as some other poets of Bosnian origin, deviated from Muslim orthodoxy. Ḥasan Ḳā'imī of Sarajevo (died 1103/1691-2) and Üsküfī Bosnevī, also called Havāyī (died about 1061/1650-1), born in Tuzla Donja, as well as a number of other Bosnian and Herzegovinian poets, wrote both in Turkish and Serbo-Croat. The latter compiled a Serbo-Croat dictionary written in Turkish verse. In the 13th and 14th/19th and 20th centuries up to the present time there were a number of poets who wrote religious poems in the spirit of old traditions. Of this poetry worthy of note are the poems in praise of the birth of Muḥammad (*mewlūd*), the compositions of the early period being mere versions imitative of the Turkish texts, latterly followed by some original writings.

The early prose of the Muslim writers of Bosnia and Herzegovinia mostly in Arabic, is largely concerned with Islamic theological subjects, *sharīʿa* laws, State administration, and history. Many of the writers, natives of Bosnia and Herzegovina, lived and worked in Istanbul and other parts of the Ottoman Empire, as for example ʿAbd Allāh Bosnevī—died in 1054/1644—a writer of mystic-philosophical tracts and commentator on the *Fuṣūṣ al-Ḥikam* by ʿIbn al-Arabī. Noted as a writer on law and politics was Ḥasan Kāfī, born in Prusac (Akhisar), whose literary merit gained him a lite-long *ḳāḍīlik* in his native place, where he died in 1025/1616. In addition to his other writings, Kāfī was the author of the well-known work *Niẓām al-ʿĀlam*. As many as forty authors might be mentioned who were active in the field of religious and law studied during the Bosnia and Herzegovina literary period. A number of well-known Ottoman historians were descended from Bosnian Muslim families (*e.g.*, Ibrāhīm Pečewī); however, the historiography in the Turkish language in Bosnia and Herzegovina is of a later growth. A noted Bosnian historiographer of the 12th/18th century, who write in Turkish, was the ḳāḍī ʿUmar of Novi, the author of *Ghazawāt-i Ḥekīm-oghlu ʿAlī-pasha*, a work dealing with historical events in Bosnia from the beginning of Muḥarram 1149/1736 to the end of Djumādā I of 1152/1739. The first printing of the work was done by Ibrāhīm Müteferriḳa (1154/1741); it was later reprinted and translated into English and German. During the transitional period between the end of the 12th/18th and the beginning of the 13th/19th centuries, a few prominent chroniclers (Muṣṭafā Basheski, Ṣāliḥ Ṣidḳī) are on record, who wrote accounts of contemporary events. Among the historians dealing with the latter period of Turkish rule and the events following the Austrian occupation of the country are the following: Ṣāliḥ Ṣidḳī Ef. Hadžihusejnović (died 1305/1888), Muḥammad-Enweri Kadić (1271/1855-1349/1931), a collector of historical material which he transcribed himself (28 books—a copy of the manuscript is housed in the Ghāzī Khusrew-bey Library, Sarajevo). The transition from the old historiography to be noted in the work of the shaykh Sejf al-Dīn Ef. Kemura (died 1335/1917). Likewise, certain characteristics of the earlier islamic studies and some conceptions of the earlier historiography are also manifest in the works of Dr. Safvet-bey Bašagić (1870-1934), the first modern historian of the Turkish period and the first oriental scholar in Bosnia and Herzegovina, who was a poet as well.

However, since 1878, and particularly since 1918, the literary activities of Bosnian Muslims—apart from the romantic school of thought which still clings to earlier beliefs (with Dr. S. Bašagić as the outstanding representative)—have tended more and more to become merged into Serbian and Croat literatures. A. F. Džabić (died 1918), *muftī* of Mostar and fighter for religious autonomy, attained

prominence in Turkey as professor of Arabic language and literature. He also brought out a collection of choice poems of Muḥammad's contemporaries.

The nurseries of Islamic education and culture in Bosnia and Herzegovina, as in every Turkish provinces, were the *mektebs* and *medreses* and religious institutions (mosques, *tekiyes*, and the like). As a rule adjacent to mosques, the *mektebs* provided primary education mainly consisting of instruction in the reading of the Ḳur'ān, writing and basic religious principles. *Medreses*, the secondary and higher schools, were also set up on the Turkish model. The earliest *medrese* on record in Sarajevo dates from the first quarter of the 10th/beginning of the 16th century. By the *waḳfnāme* of 943/1537 the G͟hāzī K͟husrew-bey-Medrese with its own Library was founded by G͟hāzī K͟husrew-bey, the *sandjaḳ-beyi* of Bosnia. The building was completed in the following year and is still standing opposite the entrance gate to the harem of the K͟husrew-bey Mosque. The Medresa Library has since been made into an independent public institution of G͟hāzī K͟husrew-bey's *waḳf*, which has helped to extend its scope. The present inventory comprises the original stock of volumes, in oriental languages as well as a large number of additional copies, manuscripts and Turkish documents acquired from *waḳfs*, *medreses* and private libraries. The number of *medreses* went on increasing, yet the most famous among them was the G͟hāzī K͟husrew-bey Medrese, which is now used as a secondary school for the study of theological subjects. Various dervish orders were engaged in mystic teachings and studies of the Persian language. The first dervish *tekiye* appears to have been erected before the final downfall of Bosnia. Interesting structural details shows the *k͟hānaḳāh* built by the G͟hāzī K͟husrew-bey. The expenses of unkeep, religious teaching and education were defrayed by the *waḳf*.

The main development of publicly provided education and educational building dates from the viziership of Topal ʿOt͟hmān Pas͟ha with the setting-up of the first *rüs͟hdiyye* and the *mekteb-i ḥuḳūḳ* (administrative law-school), followed by the opening of the public reading-club and the Printing Office. Under the provisions of the Education Act (1286/1869) the responsibility for educational services and maintainance of schools lay with the government; private schools or those of denominational character were not interfered with but were subject to State control. The provisions of the Act were not wholly carried out in Bosnia and Herzegovina, though *ṣibyān mektebi* and *rus͟hdiyyes* were established, as well as some technical and training schools. According to official returns there were towards the end of the Turkish rule 917 *mektebs*, 43 *medreses* and 28 *rus͟hdiyyes*. In addition to the above there was in Sarajevo a military school of the lower grade, a training college for *mekteb* teachers, and a trade school.

Without interfering with denominational schools the Austro-Hungarian authorities began by introducing their own system of State education. Religious instruction in State schools was obligatory. *Mektebs* as well as *medreses* continued as religious schools. Under the statutory regulations of 1909 attendance of Muslim children at *mekteb* schools was compulsory, and no Muslim child could enter a secondary school without previously attending a *mekteb*. Certain measures were taken to reform the *mekteb* schools but in the majority of cases were not implemented. In 1909 there were about 1,000 old *mekteb* (*ṣibyān mektebi*) as well as ninety-two schools of the reformed type (*mekteb-i ibtidāʾī*). The *rus͟hdiyyes* were counted among the elementary schools for Muslim children and were retained as such—with their programmes reformed—only in county boroughs and the district townlet of Brčko. The *medreses* served as training schools for humbler religious functionaries, and in 1887 a college was established for the students of the *s͟harīʿa* law and future *s͟harīʿa* court judges. The *waḳf* Board founded in 1892 a *mekteb*-teachers' training college. Muslim pupils of the State grammar school of Sarajevo had the choice of being taught Classical Greek or Arabic.

During the successive Yugoslav governments after the World War I only the State primary schools were given recognition, though the small number of such schools could not cope with all the children of school age. Religious instruction was provided for all children attending the primary schools. The *mektebs* became preparatory or non-educational institutions for the teaching of Ḳur'ān reading. Religious instruction was also given in all secondary schools. A State *s͟harīʿa* secondary school was opened at Sarajevo in 1918. The *s͟harīʿa* judges' training college continued in existence until 1937 when the High School of *s͟harīʿa* and Islamic theology—of faculty grade—was established. The *waḳf* Board bore the cost of running the *mekteb* teachers' training college and the *medreses*—now secondary schools for the study of, mainly, theological subjects. Preliminary reforms concerning the medresas were introduced in 1933, and a definite programme was adopted in 1939 whereby they were to be of the comprehensive type, similar in character to secondary schools of the lower grade. The G͟hāzī K͟husrew-bey Medrese was an exception in that it provided senior secondary courses. A number of Bosnian and Herzegovinan Muslims are known to have graduated from various eastern universities. The rôle of granting scholarships to Muslim pupils and students, as well as bearing the cost of upkeep and running of boarding schools and providing other educational facilities, which had been confined to the *waḳf*, was gradually taken over—in the field of secular education, at any rate—by various Muslim societies, such as "Gajret", "Uzdanica", and others.

In the new Yugoslavia religious bodies and societies are separated from the State, but the latter may render assistance to religious communities. Religious instruction may be given only in the immediate vicinity of places of worship (under the provisions of the Religious Communities Act of 1953); however, the religious communities are free to open schools for the training of religious functionaries and staff. The *mektebs*, attendance at which was considered compulsory for Muslims by the Islamic religious community, were in existence until 1952, when they were abolished in the whole of Bosnia and Herzegovina.

During the Austro-Hungarian administration and in pre-war Yugoslavia, the study of Islamic branches of knowledge concerned with religion and oriental languages was closely associated with the activities of the above mentioned schools and colleges. At the same time, the Zemaljski Muzej of Sarajevo was engaged in collecting oriental manuscripts and records from Turkish archives. Among the staff of the museum there were a number of workers who studied oriental literary and historical records. It was here that conditions were created for the development of modern scientific studies and work

in this field (Č. Truhelka, V. Skarić, F. Spaho, R. Muderizović, and others).

Over the past years after the World War II increasing attention has been devoted in Bosnia and Herzegovina to oriental studies concerned with Islamic peoples. Thus the grammar school of Sarajevo provides courses of oriental as well as western-classical type. In the University of Sarajevo (founded in 1949) there is a chair in oriental philology (Turkish, Arabic and Persian languages and literature), and the chair in history also offers Turkish courses, besides giving special attention to studies bearing on the history of Yugoslav peoples during the period of Turkish rule. The Sarajevo Oriental Institute, founded in 1950, has a valuable collection of oriental manuscripts and Turkish historical material taken over from the Zemaljski Muzej of Sarajevo. Besides publishing its year-book, the Oriental Institute has been engaged in editing a systematized collection of Turkish records and sources bearing on the history of Yugoslav peoples (*Monumenta turcica historiam Slavorum Meridionalium illustrantia*). Thus a wide field of studies—concerned with Turkish, Arabic and Persian languages, the history of Yugoslav peoples during the period Turkish rule, and many other Islamic branches of knowledge—once within the scope of religious institutions and bodies, is now under secular control.

4. The Islamic religious community in Bosnia and Herzegovina since 1878.

The Sultan's sovereign rights over Bosnia and Herzegovina were recognised until 1908, when the province was annexed by Austria-Hungary. Nevertheless, the position of Bosnia and Herzegovina within the Dual Monarchy remained undefined, largely because of the dualist constitution of Austria-Hungary.

Bosnia and Herzegovina were under a dual control exercised by the Austro-Hungarian Ministry of Finance, both before and after the annexation. Each of the two powers had definite rights regarding administrative policy, the building of railways and matters concerned with the country's trade and finances.

The Austro-Hungarian system of government in Bosnia and Herzegovina was bureaucratic and police-ridden throughout the period. A military commander was responsible for the government, the number of departments being four, and later six. A Governor's "civil adlatus", was appointed in 1882, who was in effective control of the Civil Service. For administrative purposes the country was divided into six *okrug*s (departments)—Banjaluka, Bihać, Mostar, Sarajevo, Travnik, and Tuzla—and these in turn into *srez-e*s (districts) and *ispostava*s (the smallest administrative units). Only in 1906—the administration of justice was separated from the government of the country. Following the annexation, a Constitution with a "*Sabor*" (Assembly) was granted in 1910. The *Sabor* consisted of seventy-two deputies and twenty appointed (*ex officio*) members, the latter being partly religious representatives (among Muslims: the *reʾīs al-ʿulamāʾ*), the Director of *wakf* Administration, and three *muftīs*), and partly high officials. The deputies were elected to three "curiae" according to their ranks, the first of which was of two classes, the Muslim owners of large estates belonging to the first. The curiae were organised by electoral districts on a denominational basis. The constitution restricted within narrow limits the powers of the assembly in respect of the Government, at the same time imposing many restrictions on the authority of the latter in respect of the Austro-Hungarian Ministry of Finance.

In 1912 the Governor was given additional powers concerning the Civil Service. The Assembly was adjourned and did not sit during the World War I.

Despite the fact that the Austro-Hungarian government introduced a modern system of administration, developed trade (and mining and timber industries in particular), built roads, railways, and established schools and a number of scientific institutions, the framework of society remained in many respects unchanged. True, the Austro-Hungarian authorities were by this means able to win over to their side the greater part of the Muslim nobility, yet the unsolved agrarian question led to the stagnation of agriculture and told heavily upon the peasantry and in particular upon the kmets (mostly Orthodox Christians). Nor was the solution of the agrarian problem brought any nearer by the passing of the Facultative Redemption of Land Act, 1911, whereby only minor changes were effected in the existing relations.

From 1882 to 1903 the leading rôle in the direction of Austro-Hungarian policy in Bosnia and Herzegovina was played by B. Kallay, the minister of finances of the Dual Monarchy, otherwise a well-

known historian. In order to keep Bosnia and Herzegovina as a *corpus separatum* within the Dual Monarchy and to check the spread of Serbian and Croatian nationalism, Kallay attempted to create a "Bosnian nation" and a "Bosnian language". This policy, however, failed to attract a sufficient number of partisans among the native population, for the Serbs and Croats had become nationally conscious, and the nationally "undeclared" majority of the Muslims looked on Turkey as their mother country. Moreover, many Muslim families had settled in Turkey and Muslim leaders had always stressed the sovereign rights of the Ottoman Sulṭān over Bosnia and Herzegovina. Only a small part of the Muslim intellectuals and landowners adopted the cause of "Bosnian nationalism".

The Serbian political movement directed its main efforts towards achieving autonomy in Church matters and freedom to conduct Serbian community schools. The idea found supporters among the great mass of the Serbian population and the new-born intelligentsia, but it was the Serb *gazdas* (moneyed men) who thrust themselves forward as leaders. There was general discontent among the latter because their usurious trade practices were obstructed by the predominance of Austro-Hungarian moneyed interests and trade capital. The efforts of the movement proved successful, and autonomy was granted in matters of religion and denominational instruction in 1905.

Muslim opinion became increasingly suspicious of certain measures taken by the Austro-Hungarian authorities. In order to gain control over Muslim religious institutions, the Government, in 1882, created the office of *re'īs al-ʿulemā'*, the supreme religious head of Bosno-Herzegovinian Muslims, as well as the highest religious authoritative body (*ulema medžlis*) presided over by the *re'īs al-ʿulemā* with four members. This organisation went so far as to control the rights of the *Waḳf* Board. Dissatisfied and alarmed, the Muslims presented a petition to the Emperor (in 1886) asking to be granted autonomy in matters concerning the administration of the *waḳf*s. A resolute struggle for the achievement of autonomy, religious and educational, for all Muslims in Bosnia and Herzegovina began in 1899 under the leadership of A. F. Džabić, the *muftī* of Mostar. The struggle became linked with the Orthodox (Serb) movement. Džabić insisted on demanding maximum concessions but was outvoted. In 1900 a draft statute for the Islamic religious community was presented to the Minister Kallay, wherein a special emphasis was paid on the Sulṭān's sovereignty over Bosnia and Herzegovina, a principle which the Austro-Hungarian authorities were unwilling to accept. When Džabić, the *muftī* of Mostar, left for Istanbul to consult the Sultan, he was forbidden to re-enter Bosnia and Herzegovina. From 1906 onward the movement took a more organised and definite shape. An Executive Committee of the Muslim people's organisation was elected, presided over by ʿAlī Bey Firdūs. While championing the interests of the propertied classes, the organisation at the same time entered into negotiations with the Government for the granting of religious autonomy. The negotiations hung fire, for the Austro-Hungarian authorities refused to lend an ear to the slightest hint about the Sultan's sovereign rights over Bosnia and Herzegovina. Following the annexation, the negotiations were brought to a satisfactory conclusion with the Emperor's sanction of the Statute concerning Autonomous Government of Moslem Religious Affairs in Bosnia and Herzegovina *Vakf-Mearif*. Under the statute the supreme administrative authority as regards *waḳf*s and endowments of schools and colleges was vested in a *Vakf-Mearif* Assembly (*Sabor*) consisting of eight nominated (*ex officio*) members (the *re'īs al-ʿulemā'*, six *muftī*s and the Director of the Vakf Board) and twenty-four members elected by district board committees. The president of the *Sabor* was the *re'īs al-ʿulemā' ex officio*. The *Vakf-Mearif* Committee was both the administrative and the executive organ of the *Sabor*. Other minor bodies of the *Vakf-Mearif* Board were the district committees, elected by district assemblies, and, among the latter, the *džemat* assemblies and *džemat medžlis*. The highest religious authority was exercised by the *Ulema Medžlis*, consisting of four members, with the *re'īs al-ʿulemā'* at its head. The *Re'īs* and members of the *Ulema Medžlis* were elected by a separate electoral body consisting of six *muftī*s and 24 elected members. Three (elected) candidates for the post of *re'īs* were submitted by electoral body to the Emperor, one of whom was appointed *re'īs* by decree. The *re'īs* entered upon his duties only after obtaining the authorisation (*menshūra*) for the performance of religious duties from the *sheykh al-Islām* of Istanbul. The relevant petition had to be conveyed to Istanbul through the Austro-Hungarian Embassy. A vacancy in the *Ulema Medžlis* was filled by appointment, on the part of the joint Ministry of Finance, of one of two elected candidates. Each *okrug* (department) had its *muftī*, who was selected by the Government from among candidates submitted by the *Ulema Medžlis*. The salaries of higher religious functionaries and civil servants came from the provincial budget. The statute also settled the question of Muslim denominational schools, as well as the rights of religious functionaries in respect of *sharīʿa* judges.

With the incorporation of Bosnia and Herzegovina into Yugoslavia the question of the Islamic religious community was in the forefront again. Moreover, there were Muslims in Yugoslavia outside of Bosnia and Herzegovina. However, the statute of 1909 remained in force in Bosnia and Herzegovina until 1930. There was a separate Muslim religious organisation covering Serbia, Macedonia and Montenegro. The putting into effect of the agrarian reform hit some Muslim property owners much harder than it did the *waḳf*s in Bosnia and Herzegovina, for most of the latters' property consisted rather of town sites than land in the countryside. Nevertheless, the decentralization of the *waḳf* administration in Bosnia and Herzegovina, as well as disordered financial management and malpractices caused serious damage to *waḳf* property.

Following the abolition of the parliamentary régime in Yugoslavia a law was passed in 1930 concerning the Islamic religious community and its Constitution in the Kingdom of Yugoslavia. Thus the former autonomous Muslim religious communities were united under one head—the *re'īs al-ʿulemā'*—and one supreme authoritative body composed of the *re'īs* and the two presidents of the *Ulema Medžlis*. The official residence of the *re'īs al-ʿulemā'* and the seat of the Board of the Islamic religious community were transferred to Belgrade; however, there existed, in addition, two *Ulema-Medžlis* and two *Vakf-Mearif* Councils with their administrative committees, whose central offices were in Sarajevo and Skopje. Lower in authority were the *muftī*s, the district *Vakf-Mearif* board with

a *sharīʿa* judge at its head, and the *džemat-medžlis* presided over by the *Džemat Imam*. The main features of the Act and Constitution are to be seen in the fact that the majority of posts were held by appointment, and also, that the office of *reʾīs al-ʿulemā* took precedence of the *Ulema-Medžlis*. The *reʾīs* was, in fact, the head and symbol of a unified Islamic religious community in the State, while the administration was dual (Sarajevo and Skopje). Special enactments regulated the election of candidates for the post of *reʾīs*, of *Ulema-Medžlis* members and of *muftīs*. The electoral body was expected to choose three candidates for the office of *reʾīs*, one of whom was then appointed by royal decree on the recommendation of the minister of justice and that of the prime minister. Also nominated by royal decree were the members of the *Ulema-Medžlis* and the *muftīs*, on the recommendation of the minister of justice.

With the passing of a new law and Constitution in 1936 changes were brought about which, however, did not interfere with the unity expressed by the function of the *reʾīs* or with the dualism of the other governing bodies. The chief organs of the Islamic religious community were now the following: the *Džemat-Medžlis*, the District *Vakf* Commission, the *Ulema-Medžlis* in Sarajevo and Skopje, the *Vakf-Mearif* Assembly (Sabor) in Sarajevo and Skopje, with the assembly committees, *vakf* boards, and the *reʾīs al-ʿulemā* with a select or full Council. The official residence of the *reʾīs* was in Sarajevo. The function of *muftī* was dispensed with. The main feature of the regulations was the selectivity of governing bodies and functionaries. For the election of members to the *Ulema-Medžlis* each Assembly selected an electoral body of ten members, who in turn formed one electoral body for the election of three *reʾīs* candidates. As before, one of the candidates (usually the one with the majority of votes) was appointed *reʾīs* by royal decree on the recommendation of the minister of justice. It was through this organization that the Yugoslav Muslim Organization, the party led by M. Spaho, secured its position in the religious community.

In the new Yugoslavia, the position and privileges of the Islamic religious community have been safeguarded by provisions made in the Constitution and regulated by the 1953 Law concerning the legal position of the different religious communities. Religious organisations are separated from the State, the holding of religious beliefs being regarded as a private matter. Religious communities may conduct schools for the training of religious functionaries and staff. The State may also lend its aid to religious communities.

The Islamic religious community in Yugoslavia is governed by the provisions of the Constitution of the Islamic religious community in the Federal People's Republic of Yugoslavia, made and passed by the Supreme *waḳf* Assembly in 1947. Some of the regulations have since been changed and others added. The Constitution has effected the unity of the religious organisation of Muslims in Yugoslavia not only through the function of the *reʾīs al-ʿulemā*, but also through the establishment of the Supreme *waḳf* Assembly, allowing at the same time for the federal structure of the State in that separate *Ulema-Medžlis* and *waḳf* assemblies have been set up in the four republics where Muslims form a considerable part of the population. The supreme authority is vested in the *reʾīs* and four members from the four *waḳf* assemblies. The *reʾīs al-ʿulemā* and the four members of the supreme authority are elected by the Supreme *Waḳf* Assembly (see YUGOSLAVIA.

BOSNA-SARĀY [see SARAJEVO]

BOSPHORUS [see BOGHAZ-IČI]

BOṢRĀ (Bostra), a town of southern Syria in the fertile plain of the Nuḳra, in the province of Ḥawrān (Hauranitidis of the *Notitia dignitatum*), the Idumea of the Bible. Situated in 32° 30′ N., 36° 28′ E., and called today Boṣrā Eski Shām (to distinguish it from Boṣrā al-Ḥarīrī on the southern edge of the Ladjāʾ, 12½ miles from Ezra), Boṣrā is 19 miles north of the present frontier of Jordan on the road joining Darʿa on the west to Salkhad on the east. It is close to two intermittent streams, the Wādī Zaydī and the Wādī Buṭm, tributaries of the Yarmūḳ. The name Boṣrā is attested in the sense of 'citadel' (De Vogüé, *Inscr. Palm.*, 25). The town, fortified since its foundation, seems to have been a strongpoint towards the north of the 'Arab', *i.e.* Nabataean, kings. Damascius (*Vita Isid.*, § 199), writing in the 6th century, describes it as an ancient fortified town provided with ramparts by the Arab kings. The book of Maccabees (I, v, 26) makes it dependent on the great fortified region of Perea and calls it Bossora. The extensive Nabataean cemeteries which surround it are evidence that it belonged to the kingdom of Nabatene. Two inscriptions from the neighbouring town of Salkhad (Salcha of the Romans) bear, for the eighth decade of the first century, the name of king Malkhū (Malchus of Damascius) (Littmann, *Semitic Inscr.*, in *Syria*, iv, A, nos. 23 & 28). The use of Nabataean was kept after the Roman conquest (*ibid.*, 12, 102, 103, 106). Certain Nabataean inscriptions include a Greek text.

When Boṣrā had been introduced into the Roman empire, after the annexation of the old Nabataean kingdom, by Cornelius Palma in 105-6 A.D. (Pauly-Wissowa, s.v. *Bostra*, ii, 359, 11 f.) it was reorganised on the initiative of Trajan. Writers on Roman history differ as to the date of its foundation. B. Ritter (*Erdkunde*, xv, 969) sees it as a town of Roman foundation. Damascius assigns to Alexander Severus the honour of incorporating it as a town. The latter did indeed confer on Bostra the title of Colonia Bostra concurrently with that of Nova

Trajana Alexandrina (222-35 A.D.). Malalas takes its foundation back to Augustus.

It is certain that the town of Bostra was enlarged at the time of its incorporation into the Roman Empire, as a study of its plan shows. Though it remained a stronghold in the 4th century—the most important in the province of Arabia, with Gerasa and Philadelphia '*murorum firmitate firmissimas*' (Ammianus Marcellinus, xiv, 8_{13})—the withdrawal towards the south of the true line of defence made of it no longer simply a garrison town, station of the Third Cyrenaican Legion (*Notitia Dignitatum*, Ptolemy, v, 17, 7), but an important centre, soon to become Christian, and seat of the government of the province of Arabia under the name of Néa Trajanè Bostra. The Era of Bostra (105 A.D.) testifies to its importance. Thanks to the trade routes which attached it to Philadelphia and the Persian Gulf and those which gave it access to the Mediterranean across Palestine, it was also an important centre of commerce dependent on Damascus, to the north, to which it was joined by two roads. It had extensive markets, of which the ruins subsist; it had its own coinage: that struck by the emperor Philip 'the Arab', who was a native of Bostra, gives to it the title of Metropolis as well as that of Colonia (Butler, *Syria*, A iv, Bosra, cap. II, xvi, nos. 42, 43). Philip the Arab stationed a squadron of cataphractaries there.

At the time of the first form of the Manichean controversy Titus, bishop of Bostra (about 360), took up (*Part. graeca* xviii, 1069-1264) a doctrinal position and engaged in activity which placed him in the front rank of the ecclesiastical writers of his time by his knowledge, his philosophical training, and his secular activity. Before him Beryllus (222-33), under the influence of Origen, had testified against the heresy by returning to orthodoxy. Byzantine Bostra played the part of a frontier market where Arab caravans and pastoralists alike came to buy provisions under the watch of the troops stationed there.

As an administrative centre Bostra included a large population of functionaries and civic officials. It was the centre of a bishopric subordinate to the patriarchate of Antioch. An edict of Anastasius (Butler, *op. cit.*, no. 561) secured the stability of offices there by ridding them of corruption and devoting to them revenues derived from the annona and the grain trade, as also from the 'twelfth'. Romano-Byzantine inscriptions are testimony of the administrative importance of the town. It was the residence of the governor of the Provincia Arabia, who besides the titles of *hégémôn* and *dux* (Gr. δοῦξ) bore the military title of *scholasticos* (488). As a municipium the town had its praeses (*prohédros*) and a college of four *synarchontes* to which was joined a council (*bouleutai*). For the time when Christianity had not yet triumphed dedicatory inscriptions are to be found to the official Gods of the Empire and to those of Ḥawrān with their original or Hellenised names (D. Sourdel, *Cultes du Hauran*, Paris 1952). Later, during the Christian epoch, numerous inscriptions mention the reconstruction or restoration of churches dedicated to the Virgin and Sergius or anonymous patron saints, and also of two monasteries of which at least one, dedicated to Saint Cyricus, was for girls. To judge by funeral inscriptions the population had kept its old Semitic basis, sometimes partially Romanised, with infusions of new blood from Italy, Asia Minor, Corinth, and even (thanks to the transfer of a garrison) from Pannonia. By virtue of its archbishopric Bostra for a long time kept a basilica, of which substantial remnants remain, and a bishop's palace of which nothing much is left. The convent possibly dedicated to Saint Sergius stood not far from there. It had a big church of which the walls and the apse are still standing. It is there that folklore places the sojourn of the monk Baḥīrā [*q.v.*], he who, as is well known, was one of the christian witnesses to the Prophet's mission. (His name, which is still unexplained, may conceal that of Pa<u>kh</u>ūrū attested by a Nabataean inscription from Sal<u>kh</u>ad [Littmann, *Nabat.* 24_6—and likewise, Bartholomew of Edessa, *P.G.*, 104, 1429].) The Muslim epic legend later made of the taking of this town, 'the first Byzantine centre conquered by the Arabs', a sign of the divine mission of Islam (Pseudo-Wāḳidī, *Kitāb Futūḥ al-<u>Sh</u>ām*, Cairo 1954, 16-7).

The Arab conquest and then the establishment of the Umayyad power brought about its decline, in spite of the advantages accruing from its position on the pilgrim route, by depriving it of its status of provincial capital and permanent major frontier garrison. It preserved a certain prestige because of two legends, that of Baḥīrā and that of the 'kneeling' of the camel bearing the 'Syrian' copy of the Ḳur'ān (Nöldeke-Schwally, *Gesch. des Qorans*, ii, 112 ff.). This seems to have made of it the site of a pious folklore which is attested by the accounts of pilgrimages (*e.g.*, al-Harawī, ed. J. Sourdel-Thomine, 17) and the names of its mosques: al-ʿUmarī (Sauvaget, in *Syria*, xxii, 41), Fāṭima, <u>Kh</u>iḍr, al-Mabrak, and the popular tales attaching to them. Numerous inscriptions bear witness to their restoration from the time when the Sal<u>dj</u>ūḳ princes of Damascus exercised suzerainty over Boṣrā and devoted themselves to strengthening it against the Fāṭimids whose possession (in theory) it still was. The spoliation of the town by Abū <u>Gh</u>ānim's Carmathians had made this needful. The ʿUmarī mosque, anterior to 128/745 (date of a restoration by ʿU<u>th</u>mān b. al-Ḥakam, Ar. inscr. Littmann, no. 30), was renovated in 508/1114, then rebuilt in 618/1221 under the Ayyūbids with the supervision of an Egyptian architect. In 526/1132 the mosque of <u>Kh</u>iḍr was restored by the *amīr* Gümü<u>sh</u>tekin. The 'very old' Mabrak mosque had a Ḥanafī *madrasa* built beside it in 530/1136 (Sauvaget, in *Syria*, xxiv, 231).

The Ayyūbid governors made the town richer by another Ḥanafī *madrasa* in 630/1233 (Littmann, *op. cit.*, no. 38). The college mosque known as the 'Dabbā<u>gh</u>a' dates from 655/1257. The Mabrak mosque was—and still is—surrounded by a celebrated cemetery which formed a pair with the 'Martyr's cemetery' to the south of the town. Inscriptions attest the construction and restoration at this time of other monuments now lost.

The period of these constructions was that when the town regained under the Ayyūbids a major importance due to its military rôle, whether in face of the Crusaders or in the course of the conflicts between Saladin's successors. The great witness of this military function is the citadel of Boṣrā. Under the governors representing the Atabeks of Damascus, the old Roman theatre on an esplanade to the south of the town outside the ramparts had been adapted for defence by a wall and three flanking towers. Between 481/1089 and 649/1251 the princes who successively held Boṣrā under their sway enlarged this citadel which ended by becoming one of the chief military monuments of the Muslim world. In

1956 it still remained the most complete authentic document on the successive techniques of fortification from the Fāṭimid period to the Mamlūk. After the Mongol invasion of 659/1261, which left the fortress badly damaged, Baybars sent a mission from Egypt which restored, made even bigger, and strengthened this monument (A. Abel, *La citadelle eyyubite de Bosra Eski Cham*, in *Annales archéologiques de Syrie*, vi (1956), 95-138, XI pl.). This restoration, by using up a huge quantity of material, no doubt completed the destruction of the old Roman hippodrome which once stood to the south of the theatre. The extensive ruination and depopulation consequent on the brief Mongol invasion seem to have plunged the town once more into obscurity. The restoration of the citadel 'outside the walls' only partially concerned it (al-Maḳrīzī, *Hist. des Sultans Mamelukes*, tr. Quatremère, i, 141). However, the town enjoyed a certain importance in the 15th century, for it furnished the Mamlūk administration in Syria with several notable personages bearing the family name of al-Buṣrāwī. It remained the place through which pilgrims passed on the old Roman road from Damascus to Philadelphia-ʿAmmān. Its Birkat al-Ḥādjdj still bears their graffiti.

The development of Egyptian trade by the Red Sea and the fact that the Holy Cities, becoming more and more impoverished, lived principally on Egyptian aid, deprived it, however, of the character of trading centre which it had had originally. The Ottoman invasion and conquest turned it into a minor provincial centre, the exile of obscure functionaries who did not always possess the means to defend the town.

The administrative centre of Ḥawrān was transferred to Mzeyrib and Merkez in the 10th/16th century.

In the 11th/17th century the ʿAnazeh Bedouins, with their flocks, pushed to the edge of Ḥawrān. The threat of their pillaging expeditions hung over the whole region on dwellers and travellers alike. The pilgrims then adopted the western route by Ṣanamayn and Mzeyrib which has remained till today the '*darb al-ḥadjdj*' and alongside which the Hejaz Railway was built at the beginning of the present century.

Today the agricultural centre of Boṣrā earns its living by the cultivation of the fine wheat fields of the Nuḳra when the rain is sufficient. It enjoys also an excellent water supply which allows the maintenance, in confinement, of a fair number of livestock. It has kept its fine vines and still produces a small quantity of very good wine.

The town is of enormous archeological interest. Since the beginning of the 19th century travellers have been struck by the sight of its Roman ruins and have paused with interest before its gradually crumbling ramparts and its citadel. The Princeton Expedition (1904-5, 1909) published a great number of inscriptions in Greek and Latin (Littmann, David Magie Jr., and Duane Reed Stuart), Nabataean (Littmann), and Arabic (Littmann). The efforts of the members of the Institut Français de Damas and of the Institut Français d'Archéologie de Beyrouth have contributed in *Syria*, in the publications of the Institut de Damas, and more recently in the *Annales Archéologiques de Syrie*, to the increase in our knowledge of the town. Restorations, due principally to the work of J. Sauvaget, have been successfully carried out to the ʿUmarī mosque. The Syrian Service of Antiquities has made extensive excavations.

The exact study of ancient and medieval hydrological techniques, of the nature of the monuments and their chronological assignment, and, above all, of the successive levels of construction, still remains to be carried out within the framework of a master plan.

(A. Abel)

BOSTĀNDJĪ (Būstāndjī, from Persian *būstān* "garden"), the name applied in the old Ottoman State organisation to people employed in the flower and vegetable gardens, as well as in the boathouses and rowing-boats of the Sultans' palaces. As long as the law of *devshirme* (forcible recruiting, [*q.v.*]) remained in force, these were recruited in accordance with its provisions. The *bostāndjīs* formed two independent *odjaḳs* [*q.v.*], of which one was in Istanbul and the other in Edirne (Adrianople), commanded by the *bostāndjī-bashī*. Only the strongest and most vigorous of those forcibly recruited were accepted in the two *odjaḳs* of the *bostāndjīs*, either directly or from the *odjaḳ* of the *ʿadjamī-oghlāns* [*q.v.*]. There were nine grades in the *odjaḳ* of the *bostāndjīs*. New recruits wore round their waists a belt made of the fringe of State cloth (*beylik*), while *bostāndjīs* of the highest rank wore a green belt known as *muḳaddem*. After a specified length of service the *bostāndjīs* were promoted to the *odjaḳ* of the Janissaries. Each man received on promotion the sum of 1,000 *aḳčes* for his equipment. At the end of the 17th and in the 18th century there were cases of *bostāndjīs* assigned to the mounted *odjaḳ* of *ḳapī-ḳulus* [*q.v.*]. *Bostāndjīs* were employed both inside and outside the palace. Others worked directly in flower and vegetable gardens, in boathouses or in connexion with them. There were also *bostāndjīs* in Sultans' estates, as, for example, in Amasya, Manisa, Bursa and Izmit. Apart from the services mentioned above, the *bostāndjīs* of Istanbul, were entrusted with duties such as guarding the palace, transporting material for the construction of palaces and mosques for the Sultans, working in boats used for the transport of timber from the environs of Izmit (v. *Ḳānūnnāme-i Āl-i ʿOthmān*, ed. ʿĀrif Bey, *TOEM*, appendix 2, 25).

Two different classes are shown in the paybooks of

the *bostāndjis*, the *ghilmān-i bāghče-i khāssa* (boys of private gardens) and *ghilmān-i bostāniyān* (garden boys). In a paybook dated 984/1576 those employed in the Sultan's private gardens are shown as 20 *bölüks* [*q.v.*], and those working in the vegetable gardens as 25 *djemā'ats* [*q.v.*]. At that time there were 645 working in the private gardens and 971 in the vegetable gardens. Paybooks for 1174/1760 and 1192/1778, show 20 *bölüks* in the private gardens and 64 *djemā'ats* in the flower and vegetable gardens outside. *Bostāndjis* were also concerned with keeping order in the places where the gardens in which they were employed were situated. There was a *djemā'at* in each district, commanded by an officer known as *usta* (master). The *ustas* performed functions analogous to those of police commanders of the districts. These *ustas* were appointed from among the four *baltadjis* [*q.v.*] of the *odjak* of the *bostāndjis*. Terms such as "the *usta* of Kadi-Köyü or the *usta* of Bebek", seen in some documents refer to the *ustas* of the gardens in these districts. The retinue of each *usta* consisted of 20 to 30 *bostāndjis*, in accordance with the importance of the district. The *bostāndjis* of the boathouses and the rowing-boats were specially chosen for these jobs, and pulled the oars of the 24-oar private boat of the Sultan, under the command of the *hamladji-bashi* (chief oarsman), when the Sultan wanted to travel by sea or to have a sea trip. Thévenot says that *'adjami-oghlāns* sat by the right oars, and Turkish youths by the left oars, but this is not certain.

A record of the revenue of the flower and vegetable gardens run by the *bostāndjis* was presented every year in November to the Sultan through the *bostāndji-bashi*, and the money paid into the privy purse. Of this money, one purse (500 piastres) was bestowed on the *bostāndjis* and one purse given to the *wakf* of the Dā'ūd Pasha mosque. In this way, when the revenue was presented, property tenable on a life tenure was bestowed on the twelve most senior *bostāndjis* who were then promoted to the mounted *odjek* of the *kapi-kulus* or to the rank of *müteferrika* [*q.v.*].

When the occasion arose, *bostāndjis* were sent on expeditions, *e.g.*, in 1152/1739, 3,000 of them were dispatched by ship to Bender to fight against the Russians (v. Şubḥī, *Ta'rikh*, 127).

The numbers of the *bostāndjis* varied from time to time. At the beginning of the 16th century these numbered 3,396, at the middle of the century 2,947 and at the end 1,998. At the beginning of the 18th century there were 2,400 *bostāndjis*.

The independent *odjak* of *bostāndjis* at Edirne had its own organisation. It numbered considerably fewer people than the Istanbul *odjak*: 445 at the beginning of the 17th century, 751 at the end of the century, 751 at the beginning of the 18th century. There were 10 *bölüks* of *bostāndjis* working in the Sultan's private gardens at Edirne, apart from whom there were *bostāndjis* employed in three other gardens. *Bostāndjis* wore a hat known as *barata*. Those recruited originally among the *devshirme* conscripts were celibate. Later marriage was allowed. Apart from their commanders, the *bostāndji-bashis*, *bostāndjis* had officers known as *kedkhudā* of *bostāndjis*, *khāṣṣeki-agha*, *hamladji*, *kara-kulak*, *bash-tebdil* and *oda-bashi*. Four senior members of the *odjak* were known as *baltadjis*. At times the *bostāndjis* took part in mutinies and lost, in consequence, the confidence of the Sultans. For this reason, Aḥmed III was obliged to make changes among them. Among the murderers of Selīm III there was a *bostāndji* known as Deli (mad) Muṣṭafā. *Bostāndjis* were also opposed to the military reorganisation measures, known as the *niẓām-i djedīd* and *segbān-i djedīd*. When the *odjak* of the Janissaries was abolished and the organisation of the new Ottoman army, *'asākir-i manṣūre* (victorious army), was extended, these took over the task of keeping order in the districts previously entrusted to the *bostāndjis*; the latter officials' functions being now restricted to gardening and acting as night watchmen. As from Muḥarram 1242 (August 1826), *bostāndjis* were incorporated in the new organisation. According to the new law, 1,500 persons chosen among the *bostāndjis*, commanded by a major, *biñbashi*) were entrusted with the task of guarding the palace and its environs (Orta-Köy and Dolmabahçe). These formed the nucleus of the corps of guards, known in Ottoman times as *khāṣṣa 'askeri*. A ministry, known as the Ministry of *bōstāniyān-i khāṣṣa* (*bostāndjis* of the Sultan) was formed to look after them. The *odjak* of *bostāndjis* at Edirne was at the same time abolished.

Bibliography: Eyyūbī Efendī, *Kānūn-nāme* (in a private library); Na'īmā, *Ta'rikh*, iv, 386; Rāshid, *Ta'rikh*, iii, 85, 89; Şubḥī, *Ta'rikh*, 127; Luṭfī, *Ta'rikh*, i, 200; a document referring to the reign of Muṣṭafā II (Başvekalet Arsivî, Emīrī's classification, no. 14954); reports by Ḥāsib Efendī, Minister of the Sultan's *bostāndjis*, and the *bostāndji-bashi*, 'Othmān Khayrī Agha, concerning the organisation of the *odjak* of *bostāndjis* (Başvekalet Arşivi); law concerning the *odjak* of *bostāndjis* (Başvekalet Arşivi, cupboard no. 3, case no. 92); Artisans' Register (*Ehl-i Ṣan'at Deftexi*) (Başvekalet Arşivi, Kāmil's classification); Chalcondyle, *Hist. Thévenot, *Relation d'un voyage fait au Levant* (1663), 114, etc.; Gibb-Bowen, 1/i, index.

(I. H. Uzunçarşili)

BOSTĀNDJI-BASHI, the senior officer of the *odjak* [*q.v.*] of the *bostāndjis* [*q.v.*]. His retinue consisted of *bostāndjis* of several classes. His residence was at Yali-Köşkü on Seraglio Point in Istanbul. As the person responsible for the maintenance of order on the shores of the Golden Horn, the Sea of Marmora and the Bosphorus, he used to patrol the shores in a boat with a retinue of 30 men, as well as inspecting the countryside and forests round Istanbul. When the Sultan travelled by rowing-boat, the *Bostāndji-bashi* was entitled to hold the rudder (*Kānūnnāme-i Āl-i 'Othmān*, *TOEM*, Appendix 2, 24). He had consequently the opportunity of speaking to the Sultan in private and of passing on to him such information, true or false, as he chose. Important State officials, including the Grand Vizier, had, therefore, an interest in conciliating the *Bostāndji-bashi*. Whenever the Sultan went out of the Palace, the *Bostāndji-bashi* was allowed to hold his arm or his stirrup.

The *Bostāndji-bashi* was invariably promoted from the *odjak* of *bostāndjis*, which would not allow an outsider, not even a member of the *odjak* in Edirne, to get the post. In 1072/1661, during the Vizierate of Fāḍil Aḥmed Pasha, Meḥmed IV did not on one

occasion find enough animals to hunt during a journey from Edirne to Istanbul. Incensed, he dismissed the *Bostāndjī-bashī* Shaʿbān Āghā, replacing him by Bodur Sīnān Āghā, the *Bostāndjī-bashī* of Edirne. Veteran *bostāndjī*s objected, however, on the grounds that it was not customary to appoint a commander from another *odjaḳ* (Silāḥdār, *Taʾrīkh*, i, 223).

*Bostāndjī-bashī*s used to entertain the Sultan every spring at a banquet at Kāghıtkhane (the Sweet Waters of Europe) in Istanbul (Wāṣif, *Taʾrīkh*, i, 13). When *Bostāndjī-bashī*s were appointed to an outside post they were usually given the rank of *Ḳapīdjī-bashī* or *Sandjaḳ-beyi*. Those favoured by the Sultan were appointed to the rank of *Beyler-beyi*. Later, when the rules of organisation became more lax, there were cases of *Bostāndjī-bashī*s becoming Grand Viziers. Such were the Pashas Dervīsh, Ḥasan, Topal Redjeb, Khalīl, Moldovandjī ʿAlī, Ḥāfiẓ, Ismāʿīl and ʿAbd Allāh.

*Bostāndjī-bashī*s, apart from commanding *bostāndjī*s proper, were also in charge of the *odjaḳ*s of Topkapı, Yalı-Köşkü, Sepetçiler, Soğuk-Çesme, Bagcılar, Islemeciler, Bamyacılar, Kuşhāne, Gülhāne, Incili, Dolap-Degirmen, Balıkhane, Mezbele-Keşan etc. According to Enderūnī ʿAṭā, this responsibility was passed on to the *Bostāndjī-bashī* by busy palace officials, such as the *silāḥdār* (Chief Armourer), the *Čukhadār* (Master of the Wardrobe), the *ḳapī-āghāsī* (Chief White Eunuch) or the *kedkhudā* (intendant) of the *ḳapīdjī*s (Imperial Warders). The *Bostāndjī-bashī* also commanded a group of *khāṣṣekī*s (members of the Sultan's bodyguard). Among the *odjaḳ*s commanded by the *Bostāndjī-bashī*, that of *Balīkhane* (fish market) had an evil reputation. Ministers and Grand Viziers sentenced to be exiled or executed were taken there. The fate of the Grand Viziers detained in this *odjaḳ* was indicated by the colour of the sherbet offered to them by the *Bostāndjī-bashī*. A white sherbet meant exile, while a red sherbet meant death.

When the *Bostāndjī-bashī* was dismissed or transferred, he was usually replaced by the *kedkhudā* (intendant) of the *bostāndjī*s or the *agha* (commander) of the *khāṣṣekī*s. There were, however, exceptions to this rule. It was customary for newly appointed *Bostāndjī-bashī*s to be invested with their robe of honour (*khilʿat*) in the presence of the Grand Vizier (ʿIzzī, *Taʾrīkh*, 110). There is a register in existence of the coastal residences of the *Bostāndjī-bashī* in Istanbul.

The *Bostāndjī-bashī* of Edirne was responsible for the maintenance of law and order in Edirne and its environs. Edirne, as the second capital of the State, was not subject to the Wālī of Rūmelī, the government of the city being directly in the hands of the *Bostāndjī-bashī*. The *Bostāndjī-bashī*s enjoyed great revenues and were in a position to commit great abuses. New recruits were, for example, sometimes farmed out against payment.

Bibliography: Silāḥdār, *Taʾrīkh*, i, 223 & ii, 347; Wāṣif, *Taʾrīkh*, i, 13; Rāshid, *Taʾrīkh*, iii, 89, 144; v, 90; Rāshid and Čelebī-zāde, *Taʾrīkh*, 61, 371; ʿIzzī, *Taʾrīkh*, 246, 287; for other works see *bostāndjī*, bibliography.

(İ. H. Uzunçarşılı)

BOSTĀNZĀDE, the name of a family of Ottoman *ʿulemāʾ* who achieved some prominence in the 16th and early 17th centuries. The founder of the family was (1) Muṣṭafā Efendi, born in Tire, in the province of Aydīn,
in 904/1498-9, and known as Bostān (or Būstān); his father was a merchant called Meḥmed (thus in the text of ʿAṭāʾī and on the tombstone preserved in the Türk-Islam Eserleri Müzesi in Istanbul; the heading Muṣṭafa b. ʿAlī in ʿAṭāʾī is no doubt an error due to confusion with his namesake Muṣṭafā, known as Küçük Bostān; ʿAṭāʾī 132. cf. Hüseyin Gazi Yurdaydin in *Bell.* xix, 1955, 189, n. 136). After studying under various teachers in his native town and in Istanbul, he held a succession of teaching and judicial appointments, and in 954/1547 became Ḳāḍīʿasker of Anatolia and shortly after of Rumelia. His appointment was terminated in 958/1551, in connexion with an unfavourable ruling given by him in a case in which the Grand Vezir Rüstem Pasha was interested. Though exonerated by subsequent enquiries, he was not reinstated, and died on 25th Ramaḍān 977/3 March 1570 (thus the tombstone; ʿAṭāʾī says 27th Ramaḍān 977; *ʿOthmānlī Müellifleri* puts his death in 968). He was the author of several works of Ḳurʾān commentary and theology, some of which have survived in manuscript in Istanbul libraries. Recently it has been suggested that he was the author of the *Suleymānnāme* previously attributed to Ferdī (Yurdaydın, *Bell.* xix, 1955, 137 ff.).

Bibliography: ʿAṭāʾī, *Dhayl al-Shaḳāʾiḳ*, 129 ff.; Yurdaydın, loc cit. 189 ff.; *ʿOthmānlī Müellifleri*, i, 253; *Sidjill-i ʿOthmānī*, iv, 346.

(2) Bostānzāde Meḥmed Efendi, the son of the preceding, was born in 942/1535-6 and graduated, *i.e.*, obtained his *mulāzemet* [*q.v.*], at the early age of 21. After holding various teaching appointments, in 981/1573 he abandoned the teaching in favour of the judicial branch of the *ʿIlmiyye* profession, and became Ḳāḍī of Damascus. His subsequent promotions were rapid; after serving as Ḳāḍī in Bursa and Edirne, he became Ḳāḍī of Istanbul in 984/1576, Ḳāḍīʿasker of Anatolia in 985/1577, and of Rumelia in 988/1580. The following year he was retired and in 991/1583 sent as Ḳāḍī to Egypt, where he stayed for three years. In 995/1587 he was reappointed Ḳāḍīʿasker and in 997/1589 became Shaykh al-Islām. In 1000/1592 he was retired (on the circumstances see Naʿīmā *anno* 1000), but returned to active duties as Ḳāḍīʿasker of Rumelia and, in 1001-1593, for the second time became Shaykh al-Islām. He remained in office until his death in 1006/1598. In addition to poems in Arabic, Persian, and Turkish, he prepared a translation of the *Iḥyā al-ʿUlūm* and a commentary on the *Multaḳā*. Ḥādjdji Khalīfa mentions a *fetwā* in verse declaring coffee licit (*Mīzān al-ḥaḳḳ*, ch. VI; tr. G. L. Lewis, 60, 62).

Bibliography: ʿAṭāʾi, 410; Rifʿat, *Dawḥat al-Mashāʾikh* 33; *ʿIlmiyye Sālnāmesi* 410; *ʿOthmānlī Müellifleri*, i, 256; *Sidjill-i ʿOthmānlī*, iv, 133; Hammer-Purgstall, index.

Other eminent members of the family of the Shaykh al-Islām Meḥmed Efendi were his younger brother (3) Muṣṭafā Efendi (946/1539-40—1014/1605-6), who rose to the posts of Ḳāḍīʿasker of Anatolia and Rumelia (ʿAṭāʾī, 506-7; *SʿO*, iv, 381); his sons (4) Muṣṭafā (980/1572-3—1010/1601), who taught at the Ṣaḥn-i Thamān [*q.v.*] and then became Ḳāḍī of Üsküdār (ʿAṭāʾī 449), and (5) Yaḥyā (d. 1049/1639) who became Ḳāḍī of Istanbul and then

Ḳāḍī'asker of Rumelia. Yaḥyā Efendi was the author of an ethical work called *Mir'āt al-Akhlāḳ*, dedicated to Sulṭān Aḥmed I, and a work on the miracles of the Prophet, called *Gül-i Ṣadberg* (*'Othmanlī Müellifleri*, i, 257; *Sidjill-i 'Othmānī*, iv, 636; Hammer-Purgstall, index. (B. LEWIS)

BOTANY [see NABĀT]

BOTLIKH [see ANDĪ]

BOUGIE [see BIDJĀYA]

BOZANTI (Pozantı) lies on the Çakıt Çay (called Pozantı Suyu in its higher reaches), about 13 km. to the N.N.E. of the celebrated pass through the Taurus mountains which is known as the Cilician Gates (Pylae Ciliciae: the Darb al-Salāma of Ibn Khurradādhbih, and now, in Turkish, Külek Boğazı). It is the Podandos (Ποδανδός, Ποδενδός, Ποδυανδός, Ποδανδέυς, 'Ρεγεποδανδός) of the Romans and the Byzantines, the al-Badhandūn, (Badandūn, Budandūn) of the Arab geographers. The mediaeval Western sources present the name in a number of different forms, *e.g.*, Podando, Poduando, Opodanda, Botentron, Bothentrot, etc. After the rise of Islām, and with the repeated incursions of the Muslims through the Pylae Ciliciae into Asia Minor, Bozantı became, for the Byzantines, a military strong-point of great importance. It was included in the Κλεισοῦρα of Καππαδοκία ἡ μικρά, but seems to have been raised later to the rank of an autonomous Κλεισοῦρα. It was at Bozantı that the 'Abbāsid Caliph al-Ma'mūn died in 218/833, while on campaign against the Byzantines. Bozantı, with the decline of the Byzantine empire and the advance of the Turks westwards into Asia Minor, began to lose some of its former importance. It came, in the course of time, under the rule of the Saldjūḳ sultans of Rūm and, still later, of the Ottomans. The Ottoman conquest of the Mamlūk sultanate in Syria and Egypt (922-923/1516-1517) meant that the Taurus mountains ceased to denote a frontier of major political significance. Bozantı now lost what remained to it of its earlier rôle as a border town guarding the northern exit of the Cilician Gates. Ewliyā Čelebī gives a brief description of a post-station (*menzil-gāh*) called "Sulṭān Khānī", which seems to be in fact Bozantı, but he makes no mention of this latter name. Bozantı, in the mid-19th century, possessed a *khān*, a post-station and a customs-house. It was then a small village of unimposing appearance, belonging to the *ḳaḍā'* of Ṭarsūs in the *sandjaḳ*, and *wilāyet*, of Adana. Bozantı, under the Turkish Republic, is included n the present province of Adana

BOZDJA-ADA, the Turkish name for Tenedos, an island inhabited mainly by Greeks and commanding the approaches to the Straits. By the Treaty of Turin (1381) Venice and Genoa agreed to demilitarise Bozdja-Ada. The Venetians removed the population to Crete and it was still uninhabited in Clavijo's time. Meḥemmed II built a castle on Bozdja-Ada; Ewliyā calls it *metīn*. Ships sheltered at Bozdja-Ada while awaiting favourable weather for entering the Straits and it is often mentioned in accounts of naval campaigns. The Venetians captured it in Ramaḍān 1066/July 1656 and held it for just over a year. The Greeks seized it in 1912. The London settlement of 1913 provided, at Germany's insistence, that Bozdja-Ada should be returned to Turkey but owing to the outbreak of war Greece retained control. By the Treaty of Sèvres Bozdja-Ada and Imroz (Imbros) were ceded to Greece (art. 84) but demilitarised (art. 178). By the Treaty of Lausanne they were returned to Turkey but given "a special administrative organisation composed of local elements", the police were to be recruited locally and the islands were excluded from any Greco-Turkish arrangements for exchange of populations.

Bibliography: There are many incidental references to Bozdja-Ada in the chronicles and brief descriptions by Clavijo, Buondelmonti, Tafur, Evliyā Čelebī, Spon, Covel, Grelot and Tournefort. (C. F. BECKINGHAM)

BSHARRĀ or Bécharré, one of the oldest villages in northern Lebanon, 1400 metres above sea-level. It is situated at the bottom of an amphitheatre at the entrance to the Ḳadīsha gorge, a hollow ravine of many caves and hermitages, where traces of very ancient monastic settlements are to be found. The Arab geographers refer to the district under the name of Djubbat Bsharrīyya or Bsharrā. At the time of the Crusades it was one of the fiefs of the County of Tripoli, under the name of Buissera. A stronghold of the Maronite mountain, it depended under the Mamlūk domination from the *niyāba* of Ṭarābulus; the *muḳaddam* appointed by the sultan of Cairo seems always to have been a Maronite Christian; the only exception was the *muḳaddam*, 'Abd al-Mun'im Ayyūb II, who at the end of the 15th century, at a time when very lively Monophysite propaganda was being carried on around Ṭarābulus, was converted to Monophysism, though not without this provoking a revolt among his subordinates. Bsharrā controls the road from Ba'labakk which crosses the Pass of 'Aynata and leads to Ṭarābulus.

This is the 'Road of the Cedars' which the Sultan Ḳāytbāy used at the time of his journey of inspection (9th/15th century), and by which during the 18th and early 19th centuries, armed bands from the Biḳʿa, supported and helped by the Ottoman authorities, were passing on their way to harry the Maronites. These last had also to defend themselves against the Turkish governors of Ṭarābulus.

The little town to-day has 4,000 Maronite inhabitants whose houses are scattered over a hillock where vines and mulberries are cultivated in terraces. A little above Bsharrā, there is a clump of trees, a remnant of the famous cedars of Lebanon, which since 1843 has been placed under the care of the Maronite Patriarch.

BTEDDĪN (a dialectal contraction of Bayt al-Dīn derived from the Syriac Bēth-Dīnā), a place with 800 inhabitants, situated 800 ms. above sea-level and 45 kms. from Bayrūt; the terraces surrounding it grow chiefly vines and olives. Bteddīn constitutes with Dayr al-Ḳamar, a Maronite administrative enclave in the Druze region of Shūf. It owes its fortune to the fact that the *amīr* Bashir II Shihāb [*q.v.*] (1788-1840) chose it as his residence in 1807 and brought the water of the Safa there by means of a viaduct between 1812 and 1815. Hence a certain number of administrative buildings were constructed in the village as well as the palace, a remarkable oriental blend of styles, the work of an Italian architect and Syrian labourers. Built on a rocky escarpment dominating a deep ravine, this palace was from 1814 on a resort of poets (Nicholas the Turk), and Lamartine, who visited it in 1832, has left us a long description of it.

At the end of the Egyptian occupation in 1840, the palace fell into ruins and a serious fire damaged these in 1912; it was partly restored in 1940. In 1948 the ashes of the *amīr* Bashīr the Great were transferred there from Istanbul. To-day Bteddīn is the summer residence of the President of the Republic of Lebanon.

BŪ [see KUNYA]

BŪ ḤMĀRA, a Moroccan agitator who got himself recognised as sultan in north-east Morocco from 1902 to 1909. His real name was Djīlālī b. Idrīs al-Zarhūnī al-Yūsufī, and he was born about 1865 in the mountains of Zarhūn. He had been a member of the corps of engineering students which Mawlāy al-Ḥasan had tried to establish, and then he became a minor civil servant. He was accused of dishonesty and imprisoned, and then became an exile in Algeria. He returned thence in the summer of 1902, and thanks to frauds and alleged miracles managed to pass himself off as a *sharīf* and even as Maḥammad b. al-Ḥasan, the elder brother of Mawlāy ʿAbd al-ʿAzīz [*q.v.*], who was then living in seclusion at Meknes. Many sections of the tribe of Ghiyāṭa in the Taza region recognised him as sultan, and were soon followed by other tribes in the neighbourhood. He was installed at Taza, which he made the capital, in the autumn of 1902. He was generally known as Bū Ḥmāra (Abū Ḥimāra) because it was his custom to ride a she-ass, or as al-Rūgī, from the name of a pretender of the Ruwāga tribe who had been in revolt in 1862 and had been quickly captured. He incited a revolt against the sultan on account of his relations with Europeans.

ʿAbd al-ʿAzīz sent two expeditions against him which were beaten successively in the last weeks of 1902, when Fez was threatened. But the Sharīfian troops ended by beating him near Fez on January 29th 1903, and reoccupied Taza for a time on 7 July. Bū Ḥmāra, wounded and humiliated, reorganised his forces and retook Taza in November. From there he made contact with two other agitators: Raysūlī, who was active in the Tangier area, and the Algerian Bū ʿAmāma, who was fighting against the French in the south of the department of Oran. With the latter he besieged Oudjda for many months from the end of 1904 to June 1905 without result. Beaten, he sought refuge near Melilla in the Ḳaṣbat Salwān and got into touch with the Spaniards, showing them the possibility of mining concessions in the region, which brought him discredit in the eyes of the neighbouring tribes. He however succeeded in reoccupying Taza in June 1908, and, taking advantage of the troubles at the time of the accession of Mawlāy ʿAbd al-Ḥāfiẓ to power, he threatened Fez yet again. The new sultan launched several expeditions against him, one of which succeeded in capturing him about 100 kms. north of Fez, on 22 August 1909. Shut in a cage prepared for this event, he was led into Fez and exposed to the scorn of the inhabitants, but after some days the sultan, weary of his bravado and fearing a European intervention in his favour, had him shot on 15 September 1909. His body was half burnt.

(R. LE TOURNEAU)

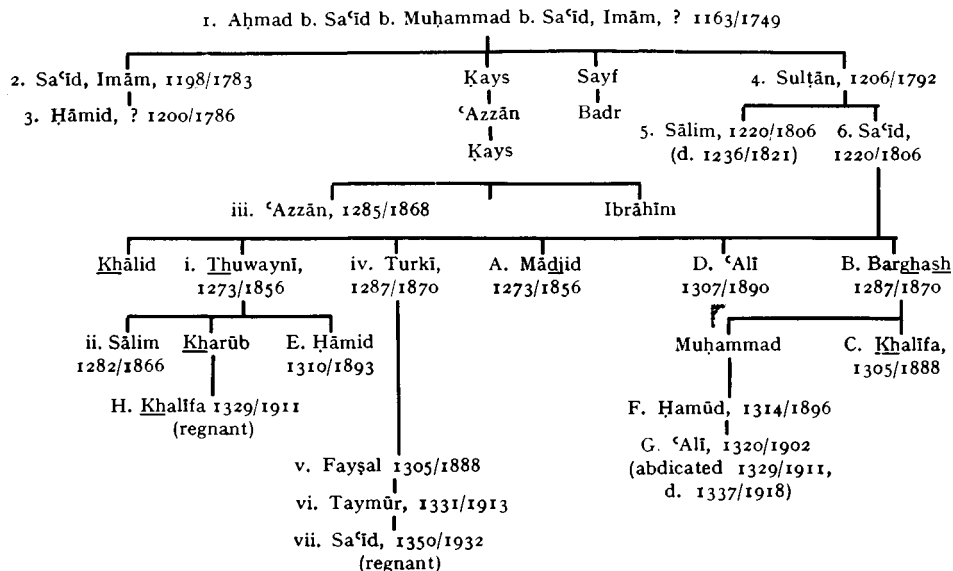
BŪ SAʿĪD, the reigning dynasty of ʿUmān and Zanzibar, of Azdī origin. The founder, Aḥmad b. Saʿīd, became Wālī of Ṣuḥār under the Yaʿrubī Imām of ʿUmān, Sayf b. Sulṭān II. He defended Ṣuḥār successfully against Nādir Shāh's general, Muḥammad Taḳī Khān Shīrāzī, who came to terms. Within a few years, by force, diplomacy and treachery, Aḥmad made himself master of ʿUmān. The Shāh was preoccupied with a Turkish war and did nothing to retrieve his position. The date of Aḥmad's formal assumption of the title of Imām is uncertain; it cannot be 1154/1741 as usually stated, and there is some evidence for 1163/1749. He naturally favoured Turks against Persians and helped the former to defend Baṣra in 1189/1775. He fostered commerce and helped to suppress Indian pirates. His son Saʿīd succeeded him in 1198/1783 but was unpopular and withdrew to al-Rastāḳ, leaving power to his son Ḥāmid, but retaining the title of Imām. No subsequent member of the dynasty used this title; later rulers were called Sayyid, though

generally known as Sulṭān to foreigners. Saʿīd was still living in 1226/1811 but died during the next ten years. Ḥāmid (d. 1206/1792) was succeeded by his uncle, Sulṭān, who captured Čāhbār, Hormuz, Ki<u>sh</u>m, Bandar ʿAbbās and Baḥrayn. Persia agreed to lease Čāhbār and Bandar ʿAbbās to the Bū Saʿīd, who already held Gwādar. In 1213/1798 he concluded a treaty permitting the British to build and fortify a factory at Bandar ʿAbbās and promising not to allow the French or Dutch to establish factories in his realm so long as they were at war with Britain. In his last years he was in constant danger from Wahhābī attacks. He was killed in a sea fight near Lingah (1219/1804). The ensuing struggle for power was won by Badr b. Sayf with Wahhābī support but he was murdered by Saʿīd b. Sulṭān who ruled jointly with his brother Sālim until the latter's death (1236/1821) and then alone.

Saʿīd was the greatest of his dynasty but in Arabia his position was often insecure, either because of family dissension or Wahhābī attacks. The former resulted in the temporary independence of Ṣuḥār [*q.v.*] under the family of Ḳays b. Aḥmad, while the Wahhābīs were sometimes bought off and sometimes restrained by the fear of British intervention. Saʿīd was a firm ally of the British and assisted their expeditions against the Ḳawāsim in the Persian Gulf. Under strong British pressure he restricted the slave trade (1238/1822) and the export of slaves from Africa was forbidden from 1263/1847. Saʿīd's greatest achievement was the extension of his African dominions into a commercial empire supported by sea power. The conquests of the Yaʿrubī Imāms in Africa had mostly been lost during the Persian invasion of ʿUmān. Saʿīd at his accession controlled only Zanzibar, part of Pemba, perhaps Mafia and Lamu, and Kilwa, which had been lost and regained. He gradually asserted his authority over the Arab and Swahili colonies from Maḳdi<u>sh</u>ū (Mogadishu) to Cape Delgado; the most serious opposition was at Mombasa [*q.v.*]. The Hamitic and Bantu tribus hardly recognised his authority on the mainland. Even on the principal islands Saʿīd merely received tribute from the chiefs of the Wahadimu (the Mwenyi Mkuu), the Wapemba (the Diwani) and the Watumbatu (the <u>Sh</u>eha). In the middle years of the century the coast from Vanga to Pangani was, except for Tanga, held jointly by Saʿīd and the King of Usambara, who sent representatives whom Saʿīd confirmed in office. Saʿīd's attempt to obtain Nossi Bé was foiled by the French. In 1270/1854 he ceded the Kuria Muria Islands to Britain.

On Saʿīd's death (1273/1856) his son <u>Th</u>uwaynī remained in control at Masḳaṭ and his other son Mā<u>d</u>jid at Zanzibar. By the decision of Lord Canning, to whom the dispute was referred, Mā<u>d</u>jid kept Zanzibar and paid annual compensation, specifically stated not to be tribute, to <u>Th</u>uwaynī. Mā<u>d</u>jid's successor was Bar<u>gh</u>a<u>sh</u> who had tried to seize power on Saʿīd's death and again a few years later. The influence of of the British representative, Sir John Kirk, became paramount and in 1290/1873 the slave trade was prohibited. German penetration in E. Africa resulted in the appointment of an Anglo-Franco-German Commission to delimit Bū Saʿīdī territory. By its decision Bar<u>gh</u>a<u>sh</u> was recognised as ruler of Zanzibar, Pemba, islets within 12 miles of them, the Lamu archipelago, the coast from Tungi to Kipini to a depth of 10 miles, Kismayu, Barawa, Marka, Maḳdi<u>sh</u>ū and War<u>sh</u>ay<u>kh</u>. Lamu was later ceded to the British East Africa Co. and the Somali ports to Italy. In 1307/1890, in accordance with another Anglo-German agreement, Bū Saʿīdī possessions north of the Umba River were purchased by Germany, and almost all the rest became a British protectorate. The mainland territories were then leased. In 1309/1892 the administration was reorganised and a British First Minister (Gen. Lloyd Mathews) was appointed. <u>Kh</u>ālid b. Bar<u>gh</u>a<u>sh</u> attempted to seize power in 1310/1893 and in 1313/1896; his second revolt led to the bombardment of the palace by a

GENEALOGICAL TABLE OF THE ĀL BŪ SAʿĪD DYNASTY

Arabic numerals indicate rulers of ʿUmān and Zanzibar, Roman numerals rulers of ʿUmān only, and letters rulers of Zanzibar only. The dates are those of the accession of each ruler.


British warship. In 1314/1897 the legal status of slavery was abolished. The British minister was Regent during the minority of ʿAlī b. Ḥamūd (1320/1902-1323/1905). In 1331/1913 responsibility for Zanzibar was transferred from the Foreign to the Colonial Office.

Thuwaynī, who had kept ʿUmān under the Canning award, was assassinated. His son Sālim was suspected of complicity and expelled after a short reign by ʿAzzān b. Ḳays, who was himself killed in a civil war. In 1288/1871 Turkī agreed to partition ʿUmān with ʿAzzān's brother Ibrāhīm. The latter retained Ṣuḥār, but lost it to Turkī two years later. During these disorders the Persians resumed the lease of Bandar ʿAbbās (1285/1868) and recaptured Čāhbār (1288/1872). In 1290/1873 the slave trade was prohibited under British pressure. About 1319/1901 a dissident movement began in the interior under ʿĪsā b. Ṣāliḥ. In 1331/1913 Sālim al-Kharūsī was elected Imām and in 1333/1915 Masḳaṭ was attacked by the rebels and saved only by an Indian detachment. Sālim was murdered in 1338-9/1920; his successor, Muḥammad b. ʿAbd Allāh, made an agreement with Sayyid Taymūr by which the tribes of the interior enjoy autonomy. Modern ʿUmān includes Ẓufār and is bounded by the territories of the Sulṭān of Ḳishm, the Shaykh of Raʾs al-Khayma and the desert. An enclave on the coast around Fudjayra constitutes a separate Trucial state.

Bibliography: The chief Arabic authority for the period to the death of Sayyid Saʿīd is the chronicle of Ibn Razīḳ, translated by G. P. Badger as *History of the Imâms and Seyyids of ʾOmân*, Hakluyt Society, 1871. The Arabic text has not been published and is now Camb. Univ. Add. MS. 2892. Ibn Razīḳ is, however, careless about dates, some of which can be corrected from an anonymous MS, B.M.; Add. 23,393. On the dates of Imâm Aḥmad, C. F. Beckingham in *JRAS*, 1941. ʿAbd Allāh b. (C. F. BECKINGHAM)

BUʿĀTH, the site of a battle about 617 A.D. between most sections of the two Medinan tribes of Aws and Khazradj. It lay in the south-eastern quarter of the Medinan oasis in the territory of the Banū Ḳurayẓa. The battle was the climax of a series of internal conflicts. The Aws, whose position had deteriorated, were joined by the two chief Jewish tribes, Ḳurayẓa and al-Naḍīr, and by nomads of Muzayna; their leader was Ḥuḍayr b. Simāk. The opposing leader ʿAmr b. al-Nuʿmān of Bayāḍa was supported by most of the Khazradj, and by some nomadic Djuhayna and Ashdjaʿ, but ʿAbd Allāh b. Ubayy [*q.v.*] and another Khazradj leader refused to join him. The Awsite clan of Ḥāritha also remained neutral. In the fighting, the Aws were at first forced back, but eventually routed their opponents. Although the leaders of both sides were killed, the war ended with an uneasy truce rather than a definite settlement.

BUCHAREST [see BÜKRESH]

BUDAPEST [see BUDÎN]

BUDAYL B. WARḲĀʾ, chief of the Banū Khuzāʿa, a tribe living near Mecca, who served Muḥammad as spies, kept him informed of the enterprises of the Ḳuraysh, and, after the agreement at Ḥudaybiya (6/628), were his allies. Budayl appears for the first time in the camp at Ḥudaybiya, to tell Muḥammad that the Meccans are armed to resist him. On his return he carried the Prophet's proposals to Mecca, where he had a *dār*. The Banū Khuzāʿa took refuge there during their war with the Banū Bakr, when the Ḳuraysh took the side of the latter, their clients, against the former. This was a breach of the treaty of Ḥudaybiya, by which the Banū Khuzāʿa had been recognised as allies of Muḥammad, and thus gave the latter an opportunity to attack Mecca. Budayl hurried to Medina to make an arrangement with Muḥammad and on the way met Abū Sufyān [*q.v.*] who was on the way to Medina on a similar errand. Apparently they both came to an arrangement with Muḥammad in Medina regarding the terms of a peaceful surrender of Mecca, for which they offered their services. Muḥammad advanced against Mecca at the head of 10,000 men with the declared purpose of avenging the Banū Khuzāʿa. On the day before his arrival at Marr al-Ẓuhrān (middle of Ramaḍān 8/beginning of June 630) Budayl went out with Abū Sufyān to reconnoitre. If the two had not been secretly in agreement, the Umayyad would not have been able to persuade the chief of the Khuzāʿa, who was the cause of the campaign, to go with him at such a critical moment. After they entered the Prophet's tent, they are both said to have paid him homage and adopted Islām. The conversion of Budayl cannot have taken place earlier, because he is mentioned among the "Muslims of the conquest (*fatḥ*)" of Mecca. It was granted him that his house in Mecca should be recognised as a place of asylum for the belligerents. After the capitulation of Mecca, Budayl accompanied Muḥammad with his adherents to Ḥunayn. He was not present at the siege of Ṭāʾif because he had to guard the booty taken at Ḥunayn, in the camp of Djiʿrāna. He is not mentioned again and must have died before the Prophet, *i.e.*, between the years 9 and 11 (630 and 632).

Bibliography: Ṭabarī, i, 1335, 1621-1628, 1634; Ibn Saʿd, ii, Part 1, 70 ff., 98; Aghānī, vi, 97; Balādhurī, *Futūḥ*, 35 ff.; Ibn Hishām, 807; Ibn Ḥadjar, *Iṣāba*, no. 614; Ibn al-Athīr, *Usd al-Ghāba*, i, 170; Caetani, *Annali*, ii, Part 1, year 8, nos. 21, 39, 40, 43, 46, 61, 67. (H. LAMMENS)

BUDD (pl. *bidada*; Pers. *but*) is used in Arabic in three different senses; it denotes either a temple, a pagoda, or Buddha, or an idol (not necessarily the Buddha). The principal instance of the use of the word in the sense of pagoda occurs in a passage in the *Merveilles de l'Inde* (ed. trans. M. Devic, 5; *Mémorial J. Sauvaget*, i, 192); this sense appears

to be the rarest, although given as the primary sense in the *LA*.

Budd denotes the Buddha in authors such as al-Djāḥiẓ (*Tarbī*ʿ, ed. Pellat, 76), al-Masʿūdī, al-Bīrūnī, al-Shahrastānī; al-Masʿūdī, speaking of the temple called "the house of gold" at Mūltān (*Tanbīh*, 201; cf. al-Bīrūnī, *India*, trad. Sachau, i, 368, ii, 18; Reinaud, in *JA*, 1844-5), says that the appearance of the first Buddha among the Indians dates back 12,000 times 33,000 years. Al-Bīrūnī, though possessing such a good knowledge of Brahmanism, knew little about Buddhism; the reverse is true of al-Shahrastānī (ed. Cureton, 416; ed. in the margin of Ibn Ḥazm, iii, 240), who defines the Buddha: a person of this world, who is not born, does not marry, does not eat or drink, and does not grow old or die; the first Buddha, who appeared 5,000 years before the *hidjra*, was called Shākmīn (= Čakya Muni); al-Shahrastānī also knowns of, under the name of Būdīsʿiyya (?), the Bodhisattvas, who are inferior to the Buddhas; they are men who seek the path of truth and attain their elevated rank by the practice of ten virtues and the avoidance of ten sins. The heresiographer, who adds that Buddhists believe in the eternity of the world and in the retribution of one's acts in another life, states that Buddhas appear in various forms in the palaces of the kings of India, and compares them with al-Khaḍir [*q.v.*] as envisaged by Muslims. Although Muslims possessed only rudimentary ideas about Buddhism, it is noteworthy that they adapted to their own religious history, by dint of making Adam come down in Ceylon, the Buddhist tradition which relates "Adam's peak" [see SARANDĪB] to the person of the Buddha (see *Akhbār al-Ṣīn wa'l-Hind*, ed. trans. Sauvaget, 36).

Finally, the word *budd* is often used in the sense of idol. We should probably read *budd Kuwayr* "idol of Kuvera" in al-Djāḥiẓ (*Tarbī*ʿ, 40), and Ibn Durayd (apud *LA*) renders *budd* by *ṣanam*. The author of the *Akhbār al-Ṣīn wa'l-Hind*, 24, calls *budd* an idol worshipped in India to which courtesans were sacrificed. The idol of Somnath was well known among the Muslims (see Saʿdī, *Būstān*, ed. Platts, 238 ff.; Eng. trans. R. Levy, London 1918, 67 ff.; Fr. trans. Barbier de Meynard, 334); al-Dimashḳī, *Cosmographie*, ed. Mehren, 170-1, describes it accurately and gives the name of *budd* to the principal object of worship, which consisted of two stones representing the male and female organs of generation.—On the legendary founder of the religion of the Sabaeans, Būdhāsaf/Yūdāsaf = Bodhisattva, see BILAWHAR WA-YŪDĀSAF.

Bibliography: in the article.

(B. CARRA DE VAUX*)

BUDHAN, SHAYKH, of Djawnpūr, a holy man belonging to the order known as Shaṭṭāriyya [*q.v.*], (*Akhbār al-Akhyār* 193; *Adhkār-i Abrār* 284 ff.). He was descended from Shaykh ʿAbd Allāh Shaṭṭārī (d. 890/1485, in Māndū), who himself was the seventh descendant of Shaykh Shihāb al-Dīn ʿUmar b. Muḥammad al-Suhrawardī and came to India from Persia towards the end of the 9th/15th century (for him see *Akhbār al-Akhyār*, 171; *Adhkār-i Abrār*, 161, 286; *Maʿāridj al-Wilāya*, f. 538; Muftī Ghulām Sarwar, *Khazīnat al-Aṣfiyā*ʾ, Lāhore 1283, 947; ʿAbd al-Ḥayy, *Nuzhat al-Khawāṭir*, Ḥaydarābād-Deccan 1951, iii 95 f.). Shaykh ʿAbd Allāh was the first to introduce the Shaṭṭārī *mashrab* in India. Shaykh Budhan received his literary education from, and was initiated into the Shaṭṭārī order by, Shaykh Ḥāfiẓ Djawnpūrī, a vicegerent (*khalīfa*) of the above Shaykh ʿAbd Allāh and in his turn practised the teachings of the order, handed them down to others, and led seekers of Truth to the Shaṭṭārī path. Shaykh Rizḳ Allāh Mushtāḳī, the paternal uncle of the famous Shaykh ʿAbd al-Ḥaḳḳ of Delhi, was instructed in the method of 'the remembrance of God' (*dhikr*) by him. Shaykh Budhan, who flourished under Sulṭān Sikandar Lodhī (regn. 894-923/1489-1517) is described by Khweshgī as "a saintly and blessed person" (*mardī buzurg wa mutabarrak*). He died in Pānīpat and was buried there. His *khalīfa*, Shaykh Walī (d. 956/1549), carried on his work in the town of Badolī and left several *khalīfa*s.

(MOHAMMAD SHAFI)

BŪDHĀSAF [see BILAWHAR WA YŪDĀSAF]

BUDĪN (Budūn, Bedīn, Bedūn, Budīm, from the Slav Budin), the Latin and Hungarian Buda, the kernel of that part of the present Budapest which is situated on the right bank of the Danube, was conquered three times by the Turks in the second quarter of the 16th century (1526, 1529 and 1541). It was declared an Ottoman possession on 29 August 1541, and made the centre of that part of Hungarian territory which was converted into an Ottoman province (*Budīn wilāyeti*).

The Hapsburgs, who were the Central European power most concerned with the expansion of the Turks, and who laid claim to the Hungarian throne, made in 1542 an unsuccessful attempt to recapture Budīn. No further attack was launched for the next fifty years. It was only at the turn of the 16th and 17th centuries, at the time when the Ottoman Empire was at war with the Hapsburg Empire (Nemče), that the coalition armies led by the House of Hapsburg again repeatedly laid siege to Budīn (1598, 1602, 1603). These attacks were, however, repelled by the defenders of the fortress (the most violent attack, that of 1602, was driven back under the leadership of Ḳāḍīzāde ʿAlī and Lāla Meḥmed). Following this, the Turks enjoyed undisturbed possession of Budīn for a fairly long period and the fortress had to face hostile armies only after Ḳara Muṣṭafā's defeat under the walls of Vienna in 1683. While the siege of 1684 failed against the resistance of the defenders (Siyāwush Pasha and Sheyṭān İbrāhīm Pasha), the next siege brought victory to the attacking armies. ʿAbd al-Raḥmān Pasha, the defender of the castle, was killed in action, and Budīn, termed at the time the "place of the Ghāzīs" and the "strong wall of Islām", passed into the hands of the Holy Alliance on 2 September 1686.

The fortress of Budīn was built on the castle hill running along the Danube from north to south. The foundations of the fortress were laid in the 13th century by Béla IV; it was developed by subsequent Hungarian Kings, and converted, especially by Sigismund of Luxemburg and Mathias Corvinus, into a central royal residence in renaissance style, rich in artistic buildings.

The fortress was protected by high ramparts erected on the upper slopes of the steep castle-hill. During the Turkish occupation the southern part of the castle-hill, with the medieval royal palace and its

dependencies inside the walls, formed the closed inner fortress (*ič ḳalʿe*); it was here that the gun-foundries (*ṭopkhāne*) and magazines were placed. The rest of the castle-hill was called the middle fortress (*orta ḥiṣār*) and served to some extent as the residence of the civilian inhabitants as well. The town (*varoš*), situated at the foot of the castle-hill, next to the Danube, formed the outer fortress (*dīsh ḥiṣār*) which was surrounded by a simpler town wall and fortified with bastions at the gates. To protect Budīn from sudden attacks, guard-houses had been erected at some distance, around the northern thermal springs (Barutkhāne or Bunar Ḥiṣār, Weli Bey meterisi), further in the neighbourhood of the present Csatárka (Čardaḳ) and on the Gellért-Hill (Gürz Ilyās tepesi).

Although Budīn was always considered by the Ottomans an important fortress of the Empire, and a former royal city of great repute, they cared little for the development of the castle and the town. Some of the more active Turkish provincial governors, especially in the 17th century, fortified or reconstructed some points here or there on the castle-hill; a record of these activities was preserved for a considerable length of time in topographical denominations (Welī Bey ḳulesi, Murād Pasha ḳulesi, Siyāvush Pasha ḳulesi, Ḳaraḳash Pasha ḳulesi, Ḳāsim Pasha ḳulesi, Maḥmūd Pasha ḳulesi etc.). The governors, however, were able to do but little towards the fortification of Buda, because their building activities lacked co-ordination and guidance from a central authority and because they were not permitted by the Turkish Governments to remain long at the same place. Not less than 75 persons, several of them repeatedly, enjoyed the rank of Pasha of Budīn during the 145 years of occupation, so that the average length of their office was scarcely a year and a half. Thus there was never a general modernisation of the castle, and its system of fortification remained on the same basis at the termination of the Turkish rule as it had been centuries before under the Hungarian Kings. Both material supplies and general equipment were at all times antiquated and deficient. (Pieces of ordnance a hundred years old were found in the artillery stations at the recapture of the fortress).

The Turkish régime did not leave behind it any architectural works of artistic value, and this applies not only to structures of a military character but to other kinds of buildings as well. The medieval Royal Castle and the buildings of the town, taken by the Turks in 1541 intact, exceeded the modest needs of the conquerors and were thus easily able to meet the requirements of a provincial headquarters. Slight alterations were needed to make the churches suitable for Muslim religious services (the Church of Our Lady under the name of Sulṭān Süleymān Djāmiʿi or Büyük djāmiʿ, the Church of the Royal Castle under that of Saray djāmiʿi or Enderūn djāmiʿi, the Church of Saint George under that of Orta djāmiʿ, the Church of Mary Magdalen under that of Fetḥiyye djāmiʿi etc.); other public buildings could be used as barracks, while the empty office buildings and the derelict private houses provided homes for the officials.

Still, even the little building activity that was manifested in the transformation or refurnishing of various buildings (e.g., minarets added to the churches), the Muslim-style bathing establishments added to the thermal springs (erected, at the very beginning of the Turkish period by Weli Bey and Ṣoḳollu Muṣṭafā) as well as the new constructions necessitated by conflagrations, earthquakes, etc. succeeded in giving the town, in the course of one century and a half, a new exterior sufficient to make it appear a new-style Muslim city in the eyes of any visitor coming down the Danube from the west. As regards appearance and general atmosphere, Budīn was indeed a Turkish and Muslim city.

Being at a great distance from the Turkish capital, a centre in the borderlands, it was usual for the Governments to appoint persons of distinction to be the heads of the province of Budīn, persons "who were prominent among their contemporaries". Important special tasks were entrusted to the Pashas of Budīn, the guardians of that western borderland of the Empire, which was at the same time the most important frontier zone. At the beginning of the period of occupation, when the Ottoman dynasty enjoyed preponderance over the Hapsburg dynasty, their task was to maintain this preponderance, whereas after the Peace of Zsitvatorok (1606) by which the Hapsburg rulers—called up to then Kings of Vienna (Beč ḳirali)—had become exempt from the obligation to pay a yearly tribute, and when Turkish preponderance disappeared, the Pashas of Budīn were given the task of concealing the weakening of the Empire. To this end the Pashas utilised and inspired controversies among local elements and supported the movements of the discontented Hungarians against the Hapsburgs. The dealings of the Turks with the Vienna Court of the Hapsburgs and the Court of the Princes of Transylvania resulted in a number of inter-state agreements, the ground for which had been prepared by the Pashas of Budīn (Peace of Zsitvatorok in 1606, the agreements of Vienna in 1616 and Komárom in 1618, the peace treaties of Gyarmat in 1625 and Szöny in 1627 and 1642).

The population of the town underwent a radical change under Turkish rule; it is to be noted that Budīn was not a populous city before the Turkish occupation, the number of inhabitants being probably below 5,000. A part of them had already left Budīn during the civil wars, while a still greater part, viz. the employees of the Royal Household, the soldiers and officials as well as the persons in the employment of the Church, emigrated after the Turks had taken Budīn. The oldest known list of Turkish tax-assessments enumerates among the inhabitants of Budīn 238 Christian (*gebr*), Hungarian, 75 Jewish and 60 gipsy (*ḳipṭī*) heads of families. As the military personnel of the Turkish garrison (about 2,000 men at the beginning), the employees of the Turkish offices, and the Muslim religious functionaries outnumbered the original or native population at the ratio of 5 to 1, the change in the population was far-reaching from the very first days of the occupation onwards. Budīn had thus become a Turkish military town, the population of which was nevertheless far from being Turkish in origin; most of the people in Budīn with Muslim names were but newly converted Slavs from the Balkans. (This is clearly evident in the case of the gipsies, the majority of whom bore the theophoric name N. b. ʿAbd Allāh). Turks of pure extraction formed a minority in the population of Budīn, as did the Hungarians, Jews, Albanians, Greeks etc. and they remained in the minority throughout the period of occupation.

The spiritual life of the town was not remarkable. The magistrates and public offices were occupied by the "men of the pen" (*ehl-i ḳalem*): viz. the officials of the administrative authorities, the

Pasha's divan, the local financial administration, the school-masters and the employees of the mosques. We know of religious works (mostly copies only) written in Budīn, and we are also aware of certain exponents of religious life at the very beginning of the epoch. Both the names and locations of several dervish establishments are known; the names and memory of a number of *bābās*, together with the mystery clinging to their persons, lived for a long time, the memory of one of them, that of *Gül-Baba* [*q.v.*], having survived the age of the Turkish occupation by many centuries. We even possess some sparse data concerning secular intellectual life. We know that folk-singers and minstrels recited epic poems to the frequenters of coffee-houses and of *londjaköshk*s, in which poems the history of past centuries and the daily fights of the neighbouring borderland were commemorated; it is further known that Budīn's beauty was glorified in meditative songs by local poets (Wüdjūdī and perhaps others as well). In the towns and the border provinces traditional Turkish folk songs were sung and new ones probably composed. Of works in prose we know the rather sketchy biography of Ṣoḳollu Muṣṭafā, the ablest Ottoman governor of Budīn (1566-1578): it was most probably compiled in Budīn in Ṣoḳollu Muṣṭafā's lifetime. There is only one among Budīn's literary figures who achieved universal repute: Ibrāhīm Pečewī [*q.v.*], the historian. He was employed by the local *defterkhāne* for some time, lived for many years in Budīn, and, after having left it, returned there on many occasions because of his family connexions.

The spiritual life of the Christians (oriental and western) and of the Jews was, as far as can be judged from the sporadic records, rather primitive.

The Turkish occupation meant a radical change in the town's economic life as well. The markets had to satisfy the new needs of the new inhabitants of the town, the soldiers of the army of occupation, who brought with them some tradesmen of their own. The craftsmen dealing in household articles and clothing imported not only patterns and fashions but also a quantity of various materials, such as cloth from Bosnia, Djanbolu, Salonica, frieze carpets, finished leather-goods, household articles, vessels, arms etc. These articles were certainly more numerous on the local market than the scarlets, velvets, muslins and fabrics imported from the West.

Industrial development adapted itself to the new requirements. While the artisans from the Balkans (tailors, shoemakers, barbers, tinsmiths, gunsmiths), manufactured clothes, boots, vessels and arms that suited Balkan and Turkish taste, the market of Budīn could offer similar articles (Hungarian apparel, Hungarian boots) manufactured in the Hungarian style for the Hungarian inhabitants of the countryside. However, only one or two of the new industries succeeded in taking root, e.g. the production of simple broadcloth (*shayaḳ*) as made by the Jewish women in Budīn, and further the dressing of skins. The Turks had methods of skin-dressing that were different from, and superior to, the methods employed by the tanners who worked in Hungary before their arrival; the new type of leather industry was then adopted not only in the towns inhabited by the Turks but also in the country, as is evidenced by the topographical term "tabán" (the Turkish *debbāghkhāne*) still preserved in many Hungarian townlets.

During the sieges of 1684 and 1686, Budīn fell completely into ruin, its medieval buildings, together with those built in the Turkish era, were destroyed, and its Turkish and Muslim inhabitants were either captured or emigrated at the termination of the hostilities. The Buda of later times and the Budapest of our time have hardly anything to show in the way of records and remnants from the Turkish era.

Bibliographical references

There are scattered data concerning the external history of the town in the writings of the Turkish and Hungarian authors of the epoch (Djelālzāde about the occupation in 1541, Pečewī and the Hungarian Miklós Istvánffy on the fights around 1600, Rāshid and, more extensively, Silāḥdār, especially as regards the siege in 1684). All this has been adequately summed up by M. Cavid Baysun (*IA*, ii, Istanbul 1942, 748-60). A great amount of topographical data will be found in the works of Ewliyā Čelebi and Silāḥdār, as well as in the military maps made during the years of the reconquest. The best Hungarian works are *A magyar nemzet napjai a mohácsi vész után* (The Days of the Hungarian Nation after the Catastrophe of Mohács), by Pál Jászay, Pest 1846; *Buda és Pest visszavivása 1686-ban* (The Retaking of Buda and Pest in 1686) by Árpád Károlyi, Budapest 1886, second edition in 1936; bibliographical material for the lives of the Pashas of Buda in Antal Gévay's *Versuch eines chronologischen Verzeichnisses der Türkischen Statthalter von Ofen* (in J. Chmel's *Der österreichische Geschichtsforscher*, Vienna 1841, ii, 56-90). All these contributions were summed up by Lajos Fekete who, in his work: *Budapest a törökkorban* (Budapest during the Period of the Turks) — published in Budapest in 1944 as the third volume of *Budapest története* (The History of Budapest)—also utilised Turkish archive material containing many additional data about the composition of the population and its material and spiritual life (G. Flügel, *Die Arabischen, Persischen und Türkischen Handschriften der kk. Bibl. in Wien*, vol. ii, 441 ff.: *Türkische Rechnungsbücher*). BUDJĀḲ, southern Bessarabia (the name Bessarabia formerly denoting only Budjāḳ). In Turkish *budjāḳ* (*budjghaḳ* in the Turkish of the Kumans who had settled here earlier) means 'corner'.

This area, from 638/1241 on, had formed part of the empire of the Golden Horde [see BATU'IDS]. When it was in decline, the area was occupied temporarily by the *voyvode* of Wallachia (ca. 746/1345), and later by the *voyvode* of Boghdān [*q.v.*] around 802/1400. As a result of the joint action of the Ottoman and the Crimean Tatars

first Aḳ-Kirmān and Kili in 889/1484, and then the whole of Budjāḳ in 945/1538, came under direct Ottoman rule (see BOGHDĀN). Budjāḳ formed the Ottoman *sandjaḳ* of Aḳ-Kirmān [*q.v.*], the boundary running from Solkuča on the Botna through Gradishte to Kili (Chilia); the Crimean Khān who had co-operated with Süleymān I during the 945/1538 campaign settled the Noghāy tribes in Budjāḳ (the Manṣūrs, the Orāḳs, the Ḳasāys, the Mamāys, the Or-Meḥmeds, the Ṭatmūz, the Yedicek, the Djamboyluḳ) (cf. *Al-Sabʿ al-sayyār*, 106), thus reinforcing the earlier Tatar inhabitants. In 1067/1657 Ewliyā Čelebī reported (v, 106) that these Tatars formed 200 villages and were very wealthy; the villages towards Bender contained some Tatars or were composed entirely of Wallachs; the villages of Ismail were wholly Tatar. Toward 978/1570 Bender and Aḳ-Kirmān were centres of *sandjaḳ*s under the *beglerbegi* of Özü [*q.v.*], whose seat was at Aḳ-Kirmān or Silistre. The Tatars of Budjāḳ were under the administration of a *Yalï-aghāsï* appointed by the Crimean Khān, and later under the second heir to the Khānate (the *Nūr al-Dīn*), who resided at Khān-ḳïshlasï, south of Bender.

In the struggles against the Ḳazaḳs (Cossacks) and Poland in 1620s, the *beg* of the Noghāys, Ḳantimūr distinguished himself, and the Ottomans supported him against the Crimean Khān and made him *beglerbegi* of Özü, in an endeavour to wrest control of the Noghāy Tatars from the Khān. In 1111/1699-1113/1701 the Noghāys of Budjāḳ (6000 families) threw off their obedience to the Khān and asked to be made Ottoman subjects; on this occasion the Porte did not encourage them, and Dewlet Gerey (Girāy) forcibly transferred 700 to 800 families to the Crimea (*Al-Sabʿ al-sayyār*, 262-66).

In 1184/1770 Budjāḳ was temporarily invaded by the Russians, and thereafter Orthodox Christian Gagauz Turks and Bulgars began to immigrate from Dobrudja [*q.v.*] into Budjāḳ. By the Treaty of Bucharest (28 May 1812) the Porte ceded Budjāḳ to Russia, and the majority of the Tatars emigrated to the Dobrudja, Bulgaria and Anatolia.

BUDJNŪRD (BODJNŪRD). 1. Town in Khurāsān situated at the northern foot of Mt. Alādāgh, 57° 17′ E. Long. (Greenw.) 37° 29′ N. Lat., alt. 698 m.

We find no information about the town before the time of the Ṣafawids, when the Shadlū tribe of Kurds was settled in this area by Shāh ʿAbbās I. It is uncertain whether Budjnūrd was called Būzandjird before this time, but the ruins of an old citadel (*arg*) and other structures indicate that the town is old.

2. District of which Budjnūrd is the capital. The population of the *shahristān* has been estimated ca. 150,000 (1950), composed of Turkomāns, Kurds and Persians.

BUDŪḤ [see SUPPLEMENT].

BUDUKH [see SHĀH DAGH].

BUGHĀ AL-KABĪR (the elder), a Turkish military leader who played a political rôle during a troubled period under the ʿAbbāsid caliphate. Under al-Muʿtaṣim and his successors, he distinguished himself in several expeditions against rebellious tribes in the region of Medina in 230/844-45, in Armenia in 237/851-52, and against the Byzantines in 244/857. Absent at the time of the assassination of al-Mutawakkil in 247/861, he returned subsequently to Sāmarrā and, making common cause with the other Turkish officers, compelled the succession of al-Mustaʿīn in 248/862. He died in the same year.

His son, Mūsā b. Bughā, came also to occupy an important place in the political scene at Sāmarrā, and to direct for a time the *barīd* service.

BUGHĀ AL-SHARĀBĪ (the cup-bearer), also called AL-ṢAGHĪR (the younger) a Turkish military leader who bore the title *mawlā amīr al-muʾminīn*, and who is not to be confused with his contemporary of the same name, Bughā al-Kabīr. After having fought, under al-Mutawakkil, against the rebels of Ādharbaydjān, he led the plot against this caliph, whom he suspected of wishing to reduce the influence of the Turkish officers, and had him assassinated. With his ally Waṣīf, he subsequently held power under al-Muntaṣir and al-Mustaʿīn. Al-Muʿtazz, however, ascending the throne in 252/866, sought to rid himself of this ancient enemy, the murderer of his father, and after relieving him of his functions and privileges, succeeded in 254/868 in having him imprisoned and put to death.

BUGHRĀ KHĀN [see ḲARAKHĀNIDS].

AL-**BUGHṬŪRĪ**, MAḲRĪN B. MUḤAMMAD, Ibāḍite historian and biographer born in the village of Bughṭūra (also: Buḳṭūra) in the western region of the Djabal Nafūsa [*q.v.*]. According to the *Kitāb al-Siyar* of Abu 'l-ʿAbbās Aḥmad b. Abī ʿUthmān al-Shammākhī [*q.v.*], an important historical and biographical Ibāḍite work of the 10th/16th century, al-Bughṭūrī was a pupil of two scholars of Ibāḍite history and biography, namely Abū Yaḥyā Tawfīḳ b. Yaḥyā al-Djanāwunī and Abū Muḥammad ʿAbd Allāh b. Muḥammad b. ʿAbd Allāh b. Masḳūd (also called al-Madjūlī). While studying with the first of these masters, in the village of Idjnāwun (also Djanāwun, today Djennāwen in the Djādū region), al-Bughṭūrī wrote during the month of Rabīʿ II 599/December 1202-January 1203 his principal work on the biographies of celebrated Ibāḍites born in the Djabal Nafūsa. This work, known by the names of *Kitāb siyar mashāyikh Nafūsa*, *Siyar Nafūsa*, or perhaps more often *al-Siyar*, is lost today; it constitutes one of the principal sources of the *Kitāb al-siyar* of al-Shammākhī, who has given us substantial extracts from it, especially in the middle part of his work (143-344). The copy of the work which al-Shammākhī had at his disposal, was probably made in the first years of the 8th/14th century by Yaḥyā b. Abi 'l-ʿIzz al-Shammākhī of Tighermīn, a famous Ibāḍite copyist and scholar of the Djabal Nafūsa.

Bibliography: Abu 'l-ʿAbbās Aḥmad al-Shammākhī, *Kitāb al-Siyar*, Cairo 1301/1883,

passim (especially 212, 542-3, 548 and appendix, 578); T. Lewicki, *Une chronique ibāḍite*, in *REI*, 1934, cahier I, 74-5 and *passim*; idem, *Études ibāḍites nord-africaines*, Part I: *Tasmiya šuyūḫ Ǧabal Nafūsa wa-qurāhum*, Warsaw 1955, 15, 28, 69, and *passim*. (T. Lewicki)

BUGI [see celebes].

BUḤAYRA (Ar.), lake, is probably the diminunitive, not of *baḥr* "sea", as one would expect, but of *baḥra*, which is applied to a depression in which water can collect. Thus, in North Africa, *bḥēra*, pl. *bḥāyr* denotes a low-lying plain, in eastern Algeria, northern Tunisia and part of southern Morocco; its most common meaning, however, is that of "vegetable garden, field for market gardening" or "field for the cultivation of cucurbitaceous plants (melons in particular)" (see W. Marçais, *Textes arabes de Tanger*, Paris 1911, 227). (Ed.)

The word *buḥayra* (lake) underlies a toponym which is often encountered in Spain and Portugal in the forms Albufera (Valencia, Alicante, Majorca), Albuferas (Almería), Albuera (Cáceres and Badajoz), Albojaira (Almería), and Albufeira, a coastal town in Algarve, Portugal; a diminutive of the diminutive appears also in Albufereta (Alicante). The most important of these lakes is that at Valencia [see balansiya], about 9 kms. from the town, the last remnant which is left (about 35 sq. kms.) of the inland sea which used to cover the deep valleys of the Turia and the Júcar in prehistoric times. It was one of the biggest lakes in Spain, but of late years its area has been diminished in order to provide more rice fields on the north-western and southern shores. Nowadays its diameter is only 6 kms.

Ibn Mardanīsh [*q.v.*] drowned his sister's two sons there when he saw himself abandoned by his people, just before the loss of his throne and his death. When Valencia was divided, James I (the Conqueror d. 1276) reserved the estate of Albufera for himself. At the beginning of the 19th century the crown relinquished this fine property to Godoy, and Napoleon offered it to Marshal Suchet before it became a national patrimony once more.

The word *buḥayra* meant an irrigated garden in Almohad times. The battle in which the Almohads were routed by the Almoravids in 524/1130 is known by the name of the Battle of the *buḥayra* of Marrākush; the *buḥayra* of Seville, subsequently called Huerto del Rey, was improved by Yūsuf I, son of ʿAbd al-Muʾmin. (A. Huici Miranda)

BUḤAYRA (Beḥera), name of the western province of the Egyptian delta. This was first a pagarchy (*kūra*) of small extent, limited to the north-eastern portion of the outskirts of Alexandria; the name may be an allusion to the lake of Abūḳīr, called also *buḥayrat al-Iskandariyya*, and Yāḳūt was well aware that this last name applied to a series of neighbouring cantons of the town.

At the time of the division into provinces in Fāṭimid times, Buḥayra was an extensive region, situated west of the Rosetta branch, and reaching from the point of the delta right to Alexandria but excluding it. The great port was rarely associated administratively with this province, of which the capital was and remained Damanhūr.

The region of Ṭarrāna, and further north the wādī Naṭrūn, possessed natron deposits, which were worked in the Middle Ages.

ʿUmarī and Ḳalḳashandī give precise information on the Arab (in the strict sense) population of Buḥayra.

During Mamlūk times risings of Arab tribes and Bedouin of the Western Desert are frequently recorded. These rebellions began towards the end of the 9th/15th century; there were terrible punishments: summary executions, the enslavement of women and children, and confiscation of flocks. In the Ottoman period the troubles quite often provoked punitive expeditions, and the province was far from being quiet during the French occupation, as one sees from the massacre of the small French garrison of Damanhūr. After the departure of the French great importance was accorded to the Bedouin of the district, in whose favour an imperial firmān was promulgated, confirming their ownership of their territories. But their turbulence, of which the Mamlūk bey Muḥammad Alfī momentarily took advantage, could scarcely be overcome. Muḥammad Alfī made no attempt to conciliate the Arabs of the province in his struggle against Muḥammad ʿAlī.

al-**BUḤAYRA** al-**MAYYITA** (or al-muntina) [see baḥr lūṭ].

BUHLŪL al-Madjnūn al-Kūfī, the name of a lunatic of al-Kufā. We first meet him in the *Bayān* of al-Djāḥiẓ (ed. Hārūn, ii, 230-1), who depicts him as a simpleton exposed to the rough jokes of passers-by, and definitely as a Shīʿī (*yatashayyaʿ*). It is possible that he met Hārūn al-Rashīd at al-Kūfa in 188/804, as Ibn al-Djawzī reports (*al-Adhkiyāʾ*, ed. 1277, 180 ff.; see *JRAS*, 1907, 35), and perhaps he even addressed some remonstrances to him (al-Shaʿrānī, *Ṭabaḳāt*, 58); but it is certain that legend, as far back as the 4th/10th century and maybe even before, seized on his name to make of it a kind of prototype of the "wise fools" (*al-ʿuḳalāʾ al-madjānīn*) and to attribute to him a number of anecdotes, some pious and edifying stories, in addition to some didactic verse (see Chauvin, *Bibl. ar.*, vii, 126 ff.; MSS. Berlin, *passim*; Bibl. nat. de Paris, 623, n° 3653) It is likewise claimed that he produced some traditions (al-Dhahabī; Ibn Taghrībardī) but it is probable

that he has been confused with various characters similarly possessing the name of Buhlūl, and among whom are to be found genuine traditionists (see particularly Ibn Ḥadjar, *Lisān al-Mīzān*, s.v.). One of them, who lived in Ifrīḳiya and who died in 183/799, was named Buhlūl b. Rās͟hid, which perhaps explains the persistent tradition (see Ibn Tag͟hrībardī, i, 518; *ZDMG*, xliii, 115) which identifies Buhlūl with al-Sabtī, legendary son of Hārūn al-Ras͟hīd (see Chauvin, *Bibl. ar.*, vi, 193, and bibl. quoted).

Buhlūl's tomb in Bag͟hdād has been described by Niebuhr (*Reisebesch.*, ii, 301 ff.; Le Strange, *Baghdad*, 350), and an inscription dating from 501/1100-8 designates him as the sultan of the *madjdhūbs* and as an "obscure, dim soul" (*nafs muṭammasa*). People called him Buhlūldāna, "the wise fool", and they made of him the kinsman and the buffoon of al-Ras͟hīd, and they told stories in the coffee houses about his wit and subtlety. The culmination of the development of the legend of Buhlūl was reached when he became the hero of erotic tales as in *al-Rawḍ al-ʿĀṭir* (ed. 1315, 9) of al-Nafzāwī (8th/14th century), who makes him a contemporary of al-Maʾmūn (see also Meissner, *Neurab. Geschichten*, v and 73-83).

The word *buhlūl* is given in Arabic dictionaries with the meaning of "merry, jolly" (*ḍaḥḥāḳ*), "a generous and distinguished man", and it is still this sense which Redhouse (*Turkish and English Lexicon*, 416a) and Dozy offer (following Bocthor), although the latter does not fail to call attention to the meanings of "booby", "idiot", etc. which are already encountered in Ibn Baṭṭūṭa (ii, 89) and Ibn K͟haldūn (*Muḳaddima*, ed. Quatremère, i, 201 ff.). Currently, and particularly in North Africa, it has the general meaning of "simpleton", "ninny", etc., and H. Wehr, *Wörterbuch*, gives "wag, clown, buffoon". Owing to the fact that *bahālīl/bahlūlāt* still sometimes denotes an intense hilarity (see Doutté, *Marabouts*), D. B. Macdonald (*EI*[1], s.v.) infers that the present use of the word rests also on its literal sense and not on the existence of an historical Buhlūl. It is of course possible that there may be some confusion with *hubālī/buhālī*, which have the same meaning, but it is probable that the modern meaning proceeds from the proper name.

Bibliography: Add to the references given in the text, Brockelmann, *S I*, 350. (Ed.)

AL-**BUḤTURĪ**, Abū ʿUbāda al-Walīd b. ʿUbayd (Allāh), Arab poet and anthologist of 3rd/9th century (206-284/821-897), born at Manbidj (some state his birthplace to be the neighbouring village of Ḥurdufna), into a family belonging to the Buḥtur, a branch of the Ṭayyiʾ; not only did he never completely sever connexions with his native town, where the fortune amassed during his long career as court poet allowed him to acquire property, but he took advantage of his tribal origin to make useful connexions for himself.

After having dedicated his first poetic efforts (223-6/837-40) to the praise of his tribe, he sought a patron, and found him in the person of the Ṭāʾī general Abū Saʿīd Yūsuf b. Muḥammad, known as al-T͟hag͟hrī [*q.v.*], at whose house he met for the first time the poet Abū Tammām, who also claimed to be a Ṭāʾī. Abū Tammām, attracted by his youthful talent, apparently recommended him at first as a panegyrist to the notables of Maʿarrat al-Nuʿmān, who made him an allowance of 4,000 dirhams, but nothing remains of his output during this period. In any case al-Buḥturī was not slow in joining Abū Tammām in the retinue of his patron Mālik b. Ṭawḳ, governor of Mesopotamia, and then in following him to Bag͟hdād, where, by attending the courses of the most celebrated scholars (notably Ibn al-Aʿrābī) and by striving to acquire the manners of the capital, he prepared himself to extol important personages in the hope of getting close to the caliph.

However, he had scarcely any success with Ibn al-Zayyāt, and instead allied himself to a family of his own tribe, the Banū Ḥumayd, some members of which were established in Bag͟hdād, and he dedicated several odes to their chief, Abū Nahs͟hal; then he left ʿIrāḳ at the same time as Abū Tammām, in 230/844, to return to al-T͟hag͟hrī, then at Mosul.

Contrary to all expectation he does not seem to have grieved at the death of Abū Tammām (231/845), from whom nevertheless he had received his first encouragement, and part of his poetic training; this was the first instance of the ingratitude and opportunism of which he gave ample proof later.

No sooner had al-Mutawakkil succeeded than he returned to Bag͟hdād, and thanks to the good offices of Ibn al-Munadjdjim won the favour of al-Fatḥ b. K͟hāḳān, who introduced him to al-Mutawakkil, probably in 234/848. Thus it was that a brilliant career as court poet began for al-Buḥturī.

In spite of a passing coldness in their relationship caused by inevitable jealousies, he enjoyed the constant patronage of al-Fatḥ, to whom he dedicated his *Ḥamāsa* and a number of panegyrics; he also praised numerous great figures of the empire, but it was for the caliph that he kept the greater part of his poetic ouput; he lived on familiar terms with him, enjoying his confidence, supporting government policy even when this clashed with his personal views which had a S͟hīʿī bias, and proclaiming the virtues and rights of the ʿAbbāsids. The verse of this period contains many allusions to political happenings—the rebellion at Damascus (236/850), the revolt in Armenia (237/851), the rising at Ḥimṣ (240/854), the caliph's visit to Damascus (244/858), the building of al-Mutawakkiliyya (245-6/859-60), etc.

Whereas heretofore the erotic prelude to his *ḳaṣīdas* had been dedicated to a conventional Hind, there now appeared in his verse a woman of flesh and blood, ʿAlwa bint Zurayḳa, who lived at Aleppo and had a country house in the district, at Biṭyās; without doubt he used to see her during his journeys in Syria, for his stay in ʿIrāḳ was never uninterrupted, and it is possible that he had a great passion for her, although he mocked her in a somewhat indecent poem.

After having been concerned, as al-Masʿūdī reports of him, in the assassination of al-Mutawakkil and al-Fatḥ (247/861), he thought it prudent to retire to Manbidj, but he reappeared soon afterwards with a panegyric of al-Muntaṣir, and afterwards addressed his praises to the *wazīr* Aḥmad b. al-K͟haṣīb, against whom, incidentally, he did not hesitate to incite al-Mustaʿīn some time later. He tasted fame once more under al-Muʿtazz, to whom he dedicated numerous poems, in which are echoes of the unrest which was watering the provinces of the empire with blood, but which by no means prevented him from welcoming al-Muhtadī as if nothing had happened, and from becoming temporarily a poet of piety to humour the new caliph. His fame declined under al-Muʿtamid, whose fiscal policy caused him some anxiety over his fortune, and his last poem dedicated to a caliph is in praise of al-Muʿtaḍid (279/892). He then left ʿIrāḳ and became court

poet once again with Khumārawayh b. Ṭūlūn, and finally then returned to his birthplace where he died, after a long illness, in 284/897.

At the beginning of his career, al-Buḥturī wrote, almost exclusively, vainglorious poetry or poems about his desert wanderings (a notable example is the famous poem of the jackal, ii, 110), but as soon as he became court poet the panegyric became the main form of his work. In this style he respected, except perhaps at the end of his life, the tripartite form of the *ḳaṣīda*, painting a conventional portrait of his various patrons; however, the panegyric is successfully heightened by splendid descriptions (in particular of the palace) where, thanks to a fine sense of poetic imagery and picturesque detail, al-Buḥturī stands unchallenged; it was only later that he devoted an entire poem to describing a palace, the Īwān of Chosroes (see ʿAbd al-Ḳādir al-Maghribī, in *MMIA*, 1956, 77-88, 241-52, 427-36, 577-85). Though the ideas he expounded were generally without originality, his style, characterised by a simple vocabulary and musical and sonorous verse, is his great virtue, and puts him above the other court poets with whom at first he had to compete. He excelled equally in elegy but scarcely succeeded with invective, with him a mere corollary of panegyric, and most often addressed to a former prospective patron who had not fulfilled his hopes; and as a matter of fact, according to one story, on his deathbed he advised his son to destroy all his satires. Occasional poems are few in his *dīwān*; likewise, love themes are only found in the prologues to the *ḳaṣīdas*, and it was as a mere concession to fashion that he sang the praises of a few ephebes.

Western critics, who, after all, have taken little interest in al-Buḥturī, class him among the neo-classic poets, and this label suits him perfectly. For their part, Eastern critics consider him, with Abū Tammām and al-Mutanabbī, as one of the most important poets of the ʿAbbāsid era; the comparison between him and his master Abū Tammām is a favourite subject for discussion, after having been a point of controversy even while al-Buḥturī was alive; in his own opinion his best works were inferior to the best work of Abū Tammām, while he thought his own most mediocre poems to be better than the worst of Abū Tammām. This theme is treated in detail in two works which tend respectively to favour Abū Tammām and al-Buḥturī: the *Akhbār Abī Tammām* of al-Ṣūlī, Cairo 1356/1937, and *al-Muwāzana bayna Abī Tammām wa 'l-Buḥturī* of al-Āmidī (Cairo 1363/1944).

Al-Buḥturī had this in common with most of his fellows, that he begged ceaselessly and rejected no means of getting money; this greed for gain destroyed his moral fibre and led him to dissimulate in order to follow slavishly the fluctuations of the religious policy of the caliph who was his patron.

His success as court poet earned him bitter enemies among his competitors (though he seems always to have been on good terms with the Shīʿī poet Diʿbil [*q.v.*]); naturally it also brought him into contact with all the eminent figures of the empire, *wazīrs*, generals, governors, courtiers, secretaries, and scholars. His contacts also allowed him to be conversant with many political facts, of which one hears echoes in the *dīwān*; this last, independently of its literary value, presents an undeniable documentary interest (cf. M. Canard, *Les allusions à la guerre byzantine ches les poètes Abū Tammām et Buḥturī*, in A. A. Vassiliev, *Byzance et les Arabes*, i, Brussels 1935, 397-403). Indeed it forms a useful supplement to the chronicles of the time to which it often adds details, whether in giving the full names of personalities, or in describing monuments, or in mentioning occurrences which historians appear to have overlooked.

The *Dīwān* was published at Constantinople in 1882, then at Beirut and Cairo in 1911, but these editions are rather faulty and incomplete, so that a new publication taking into account the various MSS. (notably that in the Bibliothèque Nationale in Paris) would be most welcome. A commentary compiled by Abu 'l-ʿAlāʾ al-Maʿarrī, *ʿAbath al-Walīd*, was published at Damascus in 1355/1936.—Of the *Ḥamāsa* only one MS. (University of Leiden) has been discovered, which is evidence of the lack of success of this anthology, in which the verses are grouped according to their themes and not according to their genres, as in that of Abū Tammām; there have been three editions: Leiden 1909, Beirut 1910, Cairo 1929.—A third work attributed to al-Buḥturī, *Maʿānī al-Shiʿr* (or *al-shuʿarāʾ*), is lost.

Bibliography: *Aghānī*, xviii, 167-75; Ibn al-Muʿtazz, *Ṭabaḳāt al-Shuʿarāʾ*, London 1939, 186-7; Masʿūdī, *Murūdj*, index; Ibn Khallikān, tr. de Slane, iii, 657-66; Yāḳūt, *Muʿdjām al-Udabāʾ*, xix, 248-58; Abu 'l-ʿAlāʾ al-Maʿarrī, *Risālat al-Ghufrān*, *passim*; Margoliouth, *The Letters of Abu 'l-ʿAlā*, Oxford 1898, *passim*; Ḥuṣrī, *Zahr al-Ādāb*, index; *Fihrist*, Cairo edn., 235; Ibn Rashīḳ, *ʿUmda*, *passim*; *ZDMG*, 1893, 418-39, 715-17; G. Kanʿān, *al-Buḥturī*, Ḥamāt n.d.; Ṭahā Ḥusayn, *Min Ḥadīth al-Shiʿr wa 'l-Nathr*, Cairo n.d. (? 1932), 113-33; M. Ṣabrī, *Abū ʿUbāda al-Buḥturī*, Cairo 1946; ʿA. Achtar (unpublished). (CH. PELLAT)

BŪḲ, the generic name for any instrument of the horn or trumpet family. Wind instruments played by means of a cup-shaped mouthpiece may be divided into two classes, *viz.*: 1. the horn or conical tube type; and 2. the trumpet or cylindrical tube type.

1. The horn type. Whether the *ṣūr* and *nāḳūr* mentioned in the Ḳurʾān (vi, 73; lxxiv, 8; lxxviii, 18) were horns, as Aḥmad b. Ḥanbal (d. 241/855) and al-Djawharī (d. ca. 396/1005) say respectively, the early Persians and Arabs certainly knew of a conical tube instrument of the animal horn type. An example may be found in Greek art of the 14th century B.C. in which an Asiatic warrior is displayed sounding such as instrument, whilst a Greek warrior is sounding a straight trumpet (Gerhard, *Apulische Vasen*, pl. ii). The Arabs appear to have known the crescent-shaped horn as the *ḳarn* (Seybold, *Glossarium Latino-Arabicum*, 519), cognate words being found in the Akkadian *ḳarnu* and the Hebrew *ḳeren*. This instrument is still used by the perambulating darwīshes in Persia. According to Turkish tradition the *darwīsh borusu* (*būrīsi*) (dervish horn) was invented by Manūčihr the legendary Persian king (Ewliyā Čelebī, i/ii, 238). For a design of the instrument see Advielle, 9, and Lavignac, 3075, by whom it is wrongly called a *nafīr*. Actual specimens may be found in museums, *e.g.*, the Crosby Brown Collection, New York, no. 2454. There is a large Hispano-Moorish horn of ivory of the 4th-6th/10th-12th century in the Victoria and Albert Museum, London (no. 2953/1862). Much larger instruments were also in use. Ibn

Baṭṭūṭa (d. 779/1377) describes such an instrument of the Sūdān made from an elephant's tusk (*Voyages*, iv, 411), hence the term oliphant horn. An Andalusian Arab, Al-Shaḳundī (d. 629/1231), speaks of a monster horn (*ḳarn*) known as the *abū ḳurūn* ("father of horns") as related by Al-Maḳḳarī (*Analectes*, ii, 144), which would be comparable to the monster horn (*būḳ al-kabīr*), the height of a man, referred to by Muḥammad al-Ṣaghīr (*Tadhkirat al-Nisyān*, 45).

A horn made out of a shell was known to the Arabs of the Peninsula in the 2nd/8th century. Al-Layth b. al-Muẓaffar says that it was used by millers, and that it was a spiral conch resembling the *minḳāf*, apparently something like the *shankh* of India (Day, *Music and Musical Instruments of Southern India*, 151). It was probably the instrument which the Arabs called the *būḳ*. It was not a warlike instrument in the early days of Islām, as the Arabs did not use horns in battle at that time (Ibn Khaldūn, *Muḳaddima*, xvii, 44). A poet quoted by Al-Aṣmaʿī (d. 828) says that the *būḳ* was used by the Christians for that purpose, and, according to Al-Djawharī, the Arabs borrowed that usage from them. In fact the word *būḳ* appears to have been derived from the Greek βωκάνη or the Latin *buccina* (Dozy, *Suppl.*), although in the *Tadj al-ʿArūs* the Persian word *būrī* is considered to be the etymological original, an "obviously improbable" derivation (Lane, *Lexicon*). In the 4th/10th century the Ikhwān al-Ṣafāʾ refer to the *būḳ* to illustrate their discussion on acoustics (Bombay ed., i, 89). From that time the *būḳ* began to play an important part in martial and processional music in all Islāmic lands (see Ṭabl-Khāna). In the *Alf Layla wa Layla* (ed. Macnaghten, i, 80, ii, 382, 403) it is in constant use for those purposes, whilst the *nafīr* or trumpet is only mentioned once (ii, 656). Yet it should be understood that the term *būḳ* was used for all instruments with a conical tube, whether crescent-shaped or straight, irrespective of the material of its facture,—shell, horn, or metal. Incidentally, the metal horn (Turkish *pirindj boru*) is claimed to have been introduced by the Saldjūḳs of the 5th/11th century (Ewliyā Čelebī, 1/ii, 238). In view of the use of metal instruments by both Persia and Byzantium much earlier, that statement cannot be accepted. The *būḳ* is mentioned in Persian as early as Firdawsī (d. 411/1020) and one supposes that the instrument was little different from the straight horns depicted on the Ṭāḳ-i Bustān sculptures (590-628 A.D.), and is still the type to be found there (Advielle, 9: Lavignac, 3075). In Moorish Spain the *būḳāt* of Al-Ḥakam II (d. 369/979) were mounted with gold. It was this monarch who, having devised the boring of the tube with finger holes and the insertion of a beating reed at the blowing end instead of a cup-shaped mouthpiece, introduced an instrument of the saxophone type (see Mizmār). The Spanish *albogue* is its lineal descendant.

The Turkish and Persian equivalent of the *būḳ* was the *borū* (*būrī*) (Ḥādjdjī Khalīfa, i, 400; Meninski, s.v. *būḳ*; Ewliyā Čelebī, 1/ii, 238; Toderini, i, 238). The word is to be found in modern Egyptian and Syrian Arabic (Amery, *English-Arabic Vocabulary*, s.v. *bugle*; Ronzevalle, *MFOB*, vi, 29). It has become the Balkan *bore* and *boriye* (cf. the Sanskrit *bhariyā* and the Ghanaian *buro*). The *burghū* or *būrghū*, a Čaghatay word, was a huge horn introduced into the Islamic armies during the Mughal and Tatar regime. Ibn Ghaybī (d. 1435) says that it was longer than the *nafīr*. The name survives in the *buruga* of India (Day, 153; Lavignac, 358) where it is another name for the *karnā*. Another instrument of the same group mentioned by Arabic authors is the *shabbūr*. Al-Djawharī says that it is a non-Arabic word, which Ibn al-Athīr Madjd al-Dīn (d. 1310) has rightly surmised was borrowed from the Hebrew *shōphar*. Firdawsī includes the *shaypūr* among the ancient martial instruments of the Persians. The existence of the Arabic word *shafur*, as mentioned by A. X. Idelsohn (*Jewish Music*, 495, and J. Reider (*JQR*, Jan. 1934), must be accepted with reserve. Fétis mentions a modern Arabian trumpet under the name *shabbūr* (*Hist. gén.*, ii, 157), but see Mahillon (i, 182; and the *Saturday Review*, June 1882, 696).

2. The trumpet type. The chief instrument of the cylindrical tube class was the *nafīr*, although the name is frequently given to the straight instrument of the horn type (see Host, *Nachrichten von Marokos og Fes*, pl. xxxi). The name *nafīr* in this connexion occurs first in the 5th/11th century under the Saldjūḳs, although the type may have been known earlier. Kurt Sachs (*Reallexikon der Musikinstrumente*, s.v.) erroneously derives the word from *nafakha* ('to blow'). Originally the term *nafīr* meant 'a call to war', and so a trumpet used by such was called a *būḳ al-nafīr*, *i.e.*, 'a military horn or trumpet'. Ibn al-Ṭiḳṭaḳa, in *al-Fakhrī* (30) speaks of a large *būḳ* similar to the *būḳ al-nafīr*, from which we may reasonably deduce that the ordinary *būḳ* was smaller or shorter than the *nafīr*. The bright incisive tone of the *nafīr*, which was due to its cylindrical tube, was better for signalling purposes than the hoarse sound of the *būḳ* with its conical bore. The difference between them may well be illustrated by the verbs used to describe their sounding. We read for instance that the *būḳ* player 'blew' (*nafakha*) his horn, whilst the *nafīr* player 'cried out' (*ṣāḥa*) with his trumpet. For the respective numbers of the *nafīr* and *būḳ* used in the Islamic army bands, see Ṭabl-Khāna. In the time of Ibn Ghaybī the length of the *nafīr* was 168 cm. (= 2 *gaz*).

The *karnā*, according to Ibn Ghaybī, was a trumpet folded in the centre of its tube into a 'S' shaped figure. Some of them were of enormous length. The Persian dictionaries give the form as *karranāy*, and it is thus vocalised in the *Shāh-nāma* of Firdawsī. It is generally acknowledged (Buhle, 28; Schlesinger, xxvii, 326, 353; Galpin, 200) that the cylindrical bore instruments were borrowed from the East. Perhaps those *buccins Turcs* and *cors sarrasinois* which the Crusading chroniclers record included the *nafīr* and *karnā*. Richard Cœur de Lion, in the Third Crusade (1189-92), was well equipped with *tubae, litui, corni* and *buccinae*, but at Messina in Sicily, we read of a *trumpa* which was different from the *tuba*. Could this have been the *nafīr* of the Hohenstaufen Saracen troops on the Island? Yet if the Occident was indebted to the Orient for the cylindrical *nafīr*, the compliment was returned, since we know that Morocco, under Sulṭān al-Manṣūr (1576-1602) had a *ṭrunbaṭa* (= Spanish *trompeta*) which was made of brass and was as long as the *nafīr* (*Tadhkirat al-Nisyān*, 117; the translator writes *negir*). Turkey also knew of the European trumpet (*tūrumpata borusu*) as well as the English trumpet (*ingiliz borusu*), the latter being the modern wreathed instrument (Ewliyā Čelebī, 1/ii, 238). Both Niebuhr and Villoteau give designs and descriptions of the 17th-19th century instruments.

BUḲA, one of the leaders of the group of the Oghuz of Khurāsān which, after the capture and death of its leader Arslan b. Saldjūḳ (427/1036?), was expelled from the province by Ghaznawid troops on account of its depredations, and continued its pillaging across central and western Iran as far as the borders of Armenia and Upper Mesopotamia, where it was annihilated by the Bedouin and Kurds in 435/1044. See *EI*[1], s.v., the article SALDJŪḲIDS, and Cl. Cahen, *Le Maliknameh et l'histoire des origines seldjukides*, in *Oriens*, 1949, 57.

(Cl. Cahen)

BŪḲA, a place, no longer extant, in northern Syria, whose name is very probably a word of Syriac origin meaning "mosquito", from which fact H. Lammens has inferred that the region was a marshy one. It figures in the Arabic texts of the first centuries of Islam. Nothing is known of its more ancient history, but it is mentioned in the narratives of the conquest by Abū ʿUbayda of the provinces of Antioch and Ḳinnasrīn, and appears to have had a certain importance in Umayyad times. Then it was near the territory of the Djarādjima, placed by al-Balādhurī in the Djabal al-Lukkām (Amanus) between Bayās and Būḳā. It was one of the places chosen for the establishment under Muʿāwiya or al-Walīd of the Zuṭṭ [*q.v.*] from Sind, who arrived there from ʿIrāḳ and installed themselves with their buffaloes. Later its defences were strengthened by the caliph Hishām, who built a fortress there. The Byzantines besieged it in 338/949-50, during a raid on Syria by Leo Phocas, and it then belonged to the territory of the ʿAwāṣim [*q.v.*], but the mentions made of it in the 6th/12th century by Ibn Shaddād and Yāḳūt seem to reflect an earlier state of things. Although it is not known in what circumstances it fell into ruins or was abandoned, by the time of the Crusades it had lost its previous importance, and H. Lammens (*EI*[1]) could establish only by conjecture, based on literary data, the site which it presumably occupied in the ʿAmk [*q.v.*] depression, not far from the lake of Antioch.

Bibliography: Balādhurī, *Futūḥ*, 149, 159, 162, 167, 168; *BGA*, indices; Ibn Shaddād, *apud* Ch. Ledit, *Machriq*, xxxiii (1934), 179 ff.; Yāḳūt, i, 762; G. Le Strange, *Palestine under the Moslems*, London 1890, 424; M. Canard, *Histoire de la dynastie des H'amdanides*, i, Algiers 1951, 227, 229, 762. (J. Sourdel-Thomine)

BUḲʿA or Baḳʿa, denotes according to lexicographers a region which is distinguishable from its surroundings, more particularly a depression between mountains, and *baḳʿa* was applied especially to a place where water remains stagnant. The word appears frequently as a toponym, as well as its diminutive *buḳayʿa*. (J. Sourdel-Thomine)

BŪḲALĀ, a term employed in Algerian Arabic (cf. βαύκαλις) to denote a two-handled pottery vase used by women in the course of the divinatory practices to which it gave its name. The operation consisted, basically, of the woman who officiated improvising, after an invocation, a short poem which was also called *būḳāla* and from which portents were drawn. These practices, which seem to have enjoyed a certain vogue during the period when piracy was at its height (women wanted to have news of their men who were at sea), developed into a parlour game. They were recently the subject of an excellent study by S. Bencheneb, in *AIEO*, Algiers 1956, 19-111 (with numerous texts in translation). (Ed.)

BŪḲALAMŪN [see abū ḳalamūn].

BUKAREST [see Bükresh].

al-**BUḲAYʿA** in particular denotes a little plain situated north of the Biḳāʿ [see Buḳʿa] and south-east of the Djebel Anṣariyé, at an average altitude of 250 m. It is characterised by an abundance of springs which there give birth to the Nahr al-Kabīr. It was known in the time of the Crusades by the name Boquée and was dominated by the Ḥiṣn al-Akrād [*q.v.*] whose ruins still overlook it today (see M. van Berchem and E. Fatio, *Voyage en Syrie*, Cairo 1914-5, 42; R. Dussaud, *Topographie historique de la Syrie*, Paris 1923, 92; J. Weulersse, *Le pays des Alaouites*, Tours 1940, index *s.v.* Bouqaïa).

The name Buḳayʿa is found likewise in Transjordania, where it denotes a small inland plain to the north of the plateau of al-Balḳāʾ in the neighbourhood of Ṣuwayliḥ (see F. M. Abel, *Géographie de la Palestine*, i, Paris 1933, 91).

(J. Sourdel-Thomine)

BUKAYR b. MĀHĀN, Abū Hāshim, propagandist of the ʿAbbāsids at the end of the Umayyad caliphate, was a native of Sidjistān and had at first been secretary of the governor of Sind al-Djunayd b. ʿAbd al-Raḥmān. In 102/720-1 he was converted to the anti-Umayyad cause by Maysara

al-ʿAbdī and Muḥammad b. Khunays, and he put at the disposition of their party the fortune which he had amassed in business in Sind. After the death of Maysara he was entrusted with the direction of the movement in 105/723-4 and he was unusually active in gaining supporters among the population of Khurāsān. In 107/725-6 he also sent many emissaries to this region, who with one exception, ʿAmmār al-ʿAbādī, were at once taken and put to death by the governor Asad b. ʿAbd Allāh. Later, in 118/736, he appointed ʿAmmār b. Yazīd as chief over other agents who had been first imprisoned and then succeeded in freeing themselves. ʿAmmār established himself at Marw, took the name of Khidāsh, and met with some success, but having adopted the doctrines of the Khurramīs [q.v.] was in his turn imprisoned, tortured, and put to death by the governor Asad. This situation disturbed the *imām* Muḥammad, who was not content with the explanation offered in 120/738 by the delegate of the Khurāsānīs, Sulaymān b. Kathīr [q.v.], and despatched Bukayr himself to repudiate publicly the doctrines of Khidāsh. Bukayr was badly received the first time but the second time succeeded in convincing the ʿAbbāsid partisans. Afterwards, in 124/741-2, having returned to ʿIrāḳ and being held responsible for political meetings which took place in a house at Kūfa, he was imprisoned. There he won over to his cause ʿĪsā b. Maʿḳil, from whom, according to an unreliable tradition, he bought a slave, the future Abū Muslim [q.v.]. Set at liberty, he went to Khurāsān in 126/743-4 to announce the death of the *imām* Muḥammad to the partisans of the ʿAbbāsids, and to make them swear allegiance to his son Ibrāhīm. He returned to ʿIrāḳ with the money he had collected in Iran. He died soon afterwards, in 127/744-5, after nominating as his successor Abū Salama Ḥafṣ b. Sulaymān [q.v.], a choice which Ibrāhīm later accepted.

BUKAYR B. WISHĀḤ, Governor of Khurāsān at the beginning of the caliphate of ʿAbd al-Malik b. Marwān. A former lieutenant of ʿAbd Allāh b. Khāzim [q.v.], this Tamīmī of the tribe of the Banū Saʿd made himself noticed during the troubled time which was marked by the insurrections of the Tamīm, both when he commanded the troops of Muḥammad b. ʿAbd Allāh b. Khāzim at Harāt and when he was the delegate of the governor in Marw after the recapture of the town from the rebels. In 72/691-2 the triumph of the Umayyad caliph ʿAbd al-Malik, who had firmly established his power in ʿIrāḳ and Arabia, gave him the opportunity to be nominated in his turn titular governor at Marw, and to substitute by force his authority for that of Ibn Khāzim, who had refused to pass over to the Umayyads and was soon to be killed while fleeing towards Tirmidh. But as troubles continued in the region, where the Tamīm were engaged in a veritable civil war, Bukayr was deposed, and, nominated in compensation governor of Ṭukhāristān, was obliged to cede his place, without doubt in 74/693-4, to the Ḳurayshite Umayya b. ʿAbd Allāh b. Khālid, sent by the caliph and perhaps, according to some sources, earmarked for this post since 72/691-2. In circumstances of which the details vary according to the accounts, the evicted *amīr* afterwards profited by the absence of the new governor, who was away in 77/696-7 fighting against Bukhārā, to arouse for his own ends the inhabitants of Marw, and to compel Umayya to return as quickly as possible to lay siege to the rebellious city. The capitulation which followed was made with honourable conditions for Bukayr, but he continued to intrigue and in the same year was treacherously assassinated by one of his enemies.

BUKHĀRĀ, a city in a large oasis in present day Uzbekistān on the lower course of the Zarafshān River. The city is 722 ft. (222.4 m.) above sea level and is located at 64° 38′ E. long. (Greenw.) and 39° 43′ N. Lat.

We have few references to the city in pre-Islamic times. In the time of Alexander the Great there was another town in Sogdiana besides Marakanda (Samarḳand) on the lower course of the river but it probably did not correspond to the modern city of Bukhārā. The oasis was inhabited from early times and towns certainly existed there.

The earliest literary occurrence of the name is in Chinese sources of the 7th century A.D., but the native name of the city, *pwγʾr*, found on coins, indicates on palaeographic grounds that the name may have been used several centuries earlier. The derivation of this word from Sanskrit *vihāra* "monastery" is not improbable in spite of linguistic difficulties, since there was a *vihāra* near Numidjkath, a town apparently the predecessor of Bukhārā, and which merged into the latter (cf. Frye, *Notes* in *HJAS*, below).

The native dynasty was called Bukhār Khudāt (or Bukhārā Khudāh) by the Islamic sources; on the coins we have *pwγʾr γwβ*, Sogdian for "Bukhārā king", indicating that the local language was at least a dialect of Sogdian. Although the names of several of the pre-Islamic rulers occur on inscriptions and in later sources (cf. Frye, *ibid.*) it is only after the Arabic conquests that the history of the city can be reconstructed.

The accounts of the first Arab raids across the Oxus River are partly legendary and require critical examination. The first Arab army is said to have appeared before Bukhārā in 54/674 under ʿUbayd Allāh b. Ziyād. The ruler of Bukhārā at that time was the widow of the late ruler Bīdūn, or Bandūn. (In Ṭabarī, ii, 169, in place of her Ḳabadj Khātūn is mentioned as the wife of the reigning king of the Turks. Perhaps this name is to be read Ḳayikh or Ḳayigh, as the Turkish tribal name?). According to Narshakhī (ed. Schefer, 7, trans. Frye, 9) she ruled for 15 years as regent for her infant son Ṭughshāda (Ṭabarī, ii, 1693, has Ṭūḳ Siyāda; cf. discussion by O. I. Smirnova, *K imenii sogdiyskogo ikhshida Tukaspadaka*, in *Trudî Akad. Nauk Tadzhikskoy SSR*, Stalinabad 1953, 209). This same Bukhār Khudāt appears again in al-Ṭabarī as a youth in 91/710 when Ḳutayba b. Muslim, after overthrowing his enemies, installed him as prince of Bukhārā. The rule of Islam in Bukhārā was first placed on a firm footing by Ḳutayba. In Ramaḍān 121/Aug.-Sept. 739, Ṭughshāda was murdered in the camp of the governor of Khurāsān, Naṣr b. Sayyār. During his long reign several rebellions against the Arab suzerainty took place and the Turks invaded the country several times. In 110/728-9 the town of Bukhārā itself was lost to the Arabs and they had

to besiege it but regained it the next year (al-Ṭabarī, ii, 1514, 1529).

The son and successor of Ṭughshāda, called "Ḳutayba" in honour of the conqueror, behaved at first like a good Muslim. When in the year 133/750, the Arab Sharīk b. Shaykh raised a revolt in Bukhārā against the new dynasty of the ʿAbbāsids, the rebellion was put down by Ziyād b. Ṣāliḥ, lieutenant of Abū Muslim, with the help of the Bukhār Khudāt. Nevertheless the latter was a short time later accused of apostasy from Islam and put to death by order of Abū Muslim. His brother and successor Bunyāt (although another brother Skān, reading uncertain, may have ruled a few years between) met the same fate during the reign of the caliph al-Mahdī (probably in 166/782), for the Caliph had him put to death as a follower of the heretic al-Muḳannaʿ. After this period the Bukhār Khudāts appear to have been of little importance in the government of the country but they an influential position because of their great estates. In the early years of the reign of the Sāmānid Ismāʿīl, mention is made of the Bukhār Khudāt who was deprived of his lands but allowed the same income (20,000 *dirhams*) from the state treasury, as he had previously derived from his estates. It is not known how long the government fulfilled this obligation.

Besides the native prince there was of course in Bukhārā, at least from the time of Ḳutayba b. Muslim, an Arab *amīr* or *ʿāmil* who was subordinate to the *amīr* of Khurāsān whose headquarters were in Marw. On account of its geographical situation Bukhārā was much more closely connected with Marw than with Samarḳand. The Bukhār Khudāt had even a palace of his own in Marw (al-Ṭabarī, ii, 1888, 14; 1987, 7; 1992, 16). In the 3rd/9th century, when the *amīrs* of Khurāsān transferred their seat to Nīshāpūr, the administration of Bukhārā remained separate from that of the other parts of Transoxania. Till 260/874 Bukhārā did not belong to Sāmānid territory but was under a separate governor immediately responsible to the Ṭāhirids. After the fall of the Ṭāhirids (259/873) Yaʿḳūb b. Layth was recognised only for a brief period in Bukhārā as *amīr* of Khurāsān. The clergy and populace applied to the Sāmānid Naṣr b. Aḥmad who was ruling in Samarḳand and he appointed his younger brother Ismāʿīl governor of Bukhārā. Bukhārā was henceforth ruled by the Sāmānids until their fall. Ismāʿīl continued to live in Bukhārā after the death of his brother Naṣr in 279/892 when the whole of Mā warāʾl-nahr (Transoxania) passed under his sway, and also after his victory over ʿAmr b. Layth in 287/900 when he was confirmed by the Caliph in the rank of *amīr* of Khurāsān. The city thus became the seat of a great kingdom although it never equalled Samarḳand in size or wealth during this period. It was in Bukhārā that the New Persian literary renaissance bloomed.

The Bukhārā of the Sāmānid period is described in detail by the Arab geographers and we also owe much to Narshakhī and later editors of his work. A comparison of these accounts with the descriptions of the modern town (particularly detailed is N. Khanikov, *Opisanie Bukharskago Khanstva*, St. Petersburg 1843, 79 ff.) shows clearly that in Bukhārā unlike Marw, Samarḳand, and other cities, only an expansion of the area of the town and not a shifting from one place to another, may be traced. Even after destruction Bukhārā has always been rebuilt on the same site and on the same plan as in the 3rd/9th century.

As in most Iranian towns, the Arab geographers distinguish three main divisions of Bukhārā, the citadel (NP *kuhandiz*, from the 7th/13th century known as the *arg*), the town proper (Arabic *madīna*, Pers. *shahristān*), and the suburbs (Arabic *rabaḍ*) lying between the original town and the wall built in Muslim times. The citadel from the earliest times has been on the same site as at the present day, east of the square still known as the "Rīgistān". The area of the citadel is about one mile in circumference with an area of ca. 23 acres. The palace of the Bukhār Khudāt was here, and, as Iṣṭakhrī shows (306), it was used by the early Sāmānids. According to Muḳaddasī (280), the later Sāmānids only had their treasuries and prisons there. Besides the palace there was in the citadel the oldest Friday mosque, erected by Ḳutayba, supposedly on the site of a pagan temple. Later this mosque was used as a revenue office (*dīwān al-kharādj*). The citadel was several times destroyed in the 6/12th and 7/13th centuries, but was always rebuilt.

Unlike most other towns, the citadel of Bukhārā was not within the *shahristān* but outside. Between them, to the east of the citadel, was an open space where the later Friday mosque stood till the 6th/12th century. One may determine what part of the modern town corresponds to the *shahristān* for, according to Iṣṭakhrī (307), there was no running water on the surface of either the citadel or the *shahristān* because of their height. According to the plan given by Khanikov, this high-lying portion of the town is about twice as large as the citadel. It had a wall around it with seven gates, the names of which are given by Narshakhī and the Arab geographers.

According to Narshakhī (text, 29, trans., 30) at the time of the Arab conquest the whole town consisted of the *shahristān* alone, although there were scattered settlements outside which were later incorporated into the city. Narshakhī gives us a fairly detailed account of the topographical details of the *shahristān*. A new Friday Mosque was built by Arslān Khān Muḥ. b. Sulaymān in 515/1121 in the *shahristān*, probably in the southern part of it where the Madrasa Mīr ʿArab, built in the 10th/16th century and the great minaret still stand.

It was not till 235/849-50, according to Narshakhī, that the *shahristān* was linked with the suburbs to form one town and surrounded by a wall. In the 4th/10th century another wall had been built enclosing a greater area; it had eleven gates, the names of which are given by Narshakhī and the Arab geographers.

Besides the palace in the citadel there was one in the Rīgistān from pre-Islamic times. The Sāmānid Naṣr II (301-331/914-943) built a palace there with accomodations for the ten state *dīwāns*, the names of which are given by Narshakhī (text, 24, trans., 26). During the reign of Manṣūr b. Nūḥ (350-365/961-76) this palace is said to have been destroyed by fire, but Muḳaddasī tells us that the Dār al-Mulk was still standing on the Rīgistān and he praises it highly. During the Sāmānid period there appears to have been another royal palace on the Djū-i Mūliyān Canal to the north of the citadel.

In the reign of Manṣūr b. Nūḥ a new *muṣallā* was built as the Rīgistān could not contain the multitude of believers. The new area of prayer was built in 360/971 at one-half *farsakh* (ca. 2 miles) from the citadel on the road to the village of Samatīn.

In the 4th/10th century the town was over-crowded and insanitary, with bad water and the like Muḳaddasī and some of the poets (al-Thaʿālibī,

Yatīma, iv, 8) describe the town in the most scathing fashion.

Narshakhī and the Arab geographers give information on the villages and country around the city. Iṣṭakhrī (30) gives the names of the canals which led from the Zarafshān to water the fields. According to Narshakhī some of these canals were built in pre-Islamic times and many of the names have survived to the present. Traces also survive of the long walls which were built to protest the city and surrounding villages from the incursions of the Turks. According to Narshakhī (text, 29, trans., 33) these walls were begun in 166/782 and completed in 215/830. The town itself was not in the centre but in the western half of the area enclosed within the walls. After the time of Ismāʿīl b. Aḥmad the walls were no longer kept in repair. At a later period the ruins of these walls were given the name Kanparak, and as Kampīr Duwāl ("wall of the old woman") traces survive to the present on the borders of the steppes between the cultivated areas of Bukhārā and Karmīna.

On the fall of the Sāmānids (389/999) the town lost much of its earlier political importance and was governed by governors of the Ilek Khāns or Ḳarakhānids. In the second half of the 5th/11th century Shams al-Mulk Naṣr b. Ibrāhīm built a palace for himself to the south of the city and prepared a hunting ground; it was called Shamsābād, but fell into ruins after the death of his successor Khiḍr Khān. A *muṣallā* was made of the hunting ground in 513/1119.

Even during the period of decline Bukhārā retained its reputation as a centre of Islamic learning. In the 6th/12th century a prominent family of scholars known as the Āl-i Burhān [see BURHĀN] succeeded in founding a kind of hierarchy in Bukhārā and making the area independent for a time. After the battle of Ḳatwān (5 Ṣafar 536/9 Sept. 1141) the Ḳarā Khitāy ruled Bukhārā through the *ṣadr* (pl. *ṣudūr*) or head of this family. The *ṣadr*s maintained good relations with the pagan overlords and in 1207 took refuge with them when they were driven out of Bukhārā by a popular (Shīʿī ?) rising (ʿAwfī, *Lubāb*, ii, 385). In the same year the city passed under the rule of Muḥ. b. Takash Khwārizm Shāh. He renovated the citadel and erected other buildings.

According to Ibn al-Athīr (xii, 239) Bukhārā submitted to the army of Čingīz Khān on 4 Dhu 'l-Ḥidjdja 616/10 Feb. 1220. The citadel was not taken until 12 days later. The town was sacked and burned with the exception of the Friday Mosque and a few palaces. Bukhārā soon recovered and is mentioned as a populous town and a seat of learning under Čingīz Khān's successor.

In 636/1238 a peasant revolt occurred under the leadership of one Maḥmūd Ṭarabī who posed as a religious leader. After initial successes, mainly against the aristocracy, the revolt was suppressed by the Mongols (cf. Djuwaynī, i, 86, trans. J. A. Boyle, 109). Little is known of early Mongol rule in Bukhārā; *mulla*s and *sayyid*s, like the clergy of other religions, were exempted from all taxation. A Christian Mongol princess even built a *madrasa* called the Khāniyya in Bukhārā at her own expense (cf. Djuwaynī, iii, 9, trans. Boyle, ii, 552).

On 7 Radjab 671/28 Jan. 1273 Bukhārā was taken by the army of Abāḳā, Mongol Īl-Khān of Persia, and the city was destroyed and depopulated. It was rebuilt and again ravaged in Radjab 716/19 Sept.-18-Oct. 1316 by the Mongols of Persia and their ally the Čaghatāy prince Yasāwūr. Bukhārā seems otherwise to have been of no importance in the political life of Transoxania under the rule of the house of Čaghatāy or later under the Tīmūrids. The *Kitāb-i Mullāzāda* of Muʿīn al-Fuḳarāʾ, written in the 9th/15th century, gives information about the town in this period (cf. Frye in *Avicenna Commemoration Volume*, Iran Society, Calcutta 1955). Bahā al-Dīn Naḳshband (d. 791/1389) and his order of dervishes [see NAḲSHBANDIYYA] flourished in Bukhārā. Ulugh Bēg (d. 853/1449) built a *madrasa* in Bukhārā in the centre of town.

Towards the end of the year 905/summer 1500 Bukhārā was taken by the Uzbeks under Shībānī Khān and remained with them till the Russian Revolution except for two brief periods, after 916/1510 when Shībānī was killed, and in 1153/1740. The dominions of the Uzbeks were regarded as the property of the whole ruling family and divided into a number of small principalities. Samarḳand was usually the capital of the Khān (usually the oldest member of the ruling house), but the prince who was elected Khān retained his hereditary principality and frequently resided there. Two princes of the house of Shībān, ʿUbayd Allāh b. Maḥmūd (ruled 918-946/1512-1539), and ʿAbd Allāh b. Iskandar (ruled 964-1006/1557-1598) had their capital in Bukhārā. Through them Bukhārā became again a centre of political and intellectual life. The princes of the next dynasty, the Djānids or Ashtarkhānids, also ruled from Bukhārā while Samarḳand lost its importance.

The materials for the history of Bukhārā during the Uzbek period are mostly in manuscripts, such as the *Taʾrīkh-i Mīr Sayyid Sharīf Rāḳim* from 1113/1701, the *Badāʾiʿ al-Waḳāʾiʿ* of Wāṣifī, and the *Baḥr al-Asrār fi Manāḳib al-Akhyār* of Amīr Walī (on these works see Storey, 381 ff.). A. A. Semenov has translated into Russian two important works on Uzbek history of special value for Bukhārā, the *Ubaydalla-name* of Mīr Mukhammed Amīn Bukhārī, Tashkent 1957, and *Mukimkhanova istoriya* of Mukhammed Yūsuf Munshī, Taskent 1957.

From the 10th/16th century there was trade intercourse between Russia and the Uzbek principalities. In the 17th and 18th centuries all merchants and emigrants from Central Asia whose settlements were to be found as far as Tobolsk were known to the Russians as "Bukhartsi". The same name was also extended to the inhabitants of Chinese Turkistan which was called "Little Bukharia".

The reign of Khān ʿAbd al-Azīz (1055-91/1645-80) was regarded by native historians as the last great period of their history. After him various princes made themselves independent and the Khān in Bukhārā ruled only a small portion of his former kingdom, and even there the authority was rather in the hands of an Atālīḳ ruling in his name.

In 1153/1740 Nādir Shāh conquered Bukhārā but after his death it regained its independence but under a new dynasty, for the Atālīḳ Muḥ. Raḥīm of the tribe of Manḳīt had himself proclaimed Khān. His career has been recorded by Muḥ. Wafā Karmīnagī under the title *Tuḥfat al-Khānī*. His successor Dāniyār Bēg was content with the title of Atālīḳ and allowed a scion of the house of Čingīz Khān to bear the sovereign title. His son Murād or Mīr Maʿṣūm, however, claimed the royal title for himself in 1199/1785 and called himself *amīr*.

Under his successor Ḥaydar (1215-1242/1800-26) the observance of religious ordinances was much more harshly enforced than under his predecessors. He was the last ruler of Bukhārā to strike coins in his own name till the last *amīr*. His successor Naṣr

Allāh (1242-1277/1827 1860) succeeded in strengthening the power of the throne against the nobles and in extending his domains. The native chroniclers agree with European travellers in describing Naṣr Allāh as a bloodthirsty tyrant. Instead of tribal levies a standing army was created.

In 1258/1842 the capital of the rival Khānate of Khoḳand was taken but the conquest could not be held. When Naṣr Allāh's successor Muẓaffār al-Dīn (1860-1885) ascended the throne the Russians had already secured a firm footing in Transoxania. After being repeatedly defeated the Amīr had to submit to Russia and give up all claims to the valley of the Sīr Daryā which had been conquered by the Russians. He had to cede a part of his kingdom, with the towns of Djizaḳ, Ura-tübe, Samarḳand, and Katta Ḳurghān (1868) to the Russians. In 1873, however, Bukhārān territory was increased in the west at the expense of the Khānate of Khīwa. In the reign of ʿAbd al-Aḥad (1885-1910) the boundary between Bukhārā and Afghānistān was defined, England and Russia agreeing that the river Pandj should be the boundary.

The relationship between Bukhārā and Russia was also defined during the same reign. Beginning 1887 a railway was built through the *amīr*'s domains but the station for Bukhārā, ten miles away, is now a town called Kagan. In 1910 Mīr ʿĀlim succeeded his father after having been educated at St. Petersburg. He ruled until the Revolution drove him to Afghānistān where he lived in Kābul till the end of World War II. Since the Revolution Bukhārā has become part of the Uzbek SSR with its capital in Tashkent. It has become a large cotton producing area vying with Farghāna and other parts of Central Asia in cotton production.

The archeological and topographical investigation of Bukhārā has made great progress from the 1930s, and the work of Shishkin, Pugačenkova, Sukhareva, and others, has greatly added to our knowledge. The existing architectural monuments of Bukhārā which are of importance are: 1) the "so-called" mausoleum of Ismāʿīl Sāmānī from the 4th/10th century; 2) the *minaret-i kalān*, 148 ft. (45.3 m.) high (6th/12th century); 3) Mosque of Magaki Attar (the last construction of which dates from 1547); 4) Mosque of the Namāzgāh (*muṣallā*), dating from 1119 A.D.; 5) Mausoleum of Sayf al-Dīn Bukhārzī (d. 1261); 6) Mausoleum at the site of Čashma Ayyūb (end of 14th century); 7) Madrasa of Ulugh Bēg, restored in 1585; 8) Masdjid-i kalān, 16th century with the older minaret nearby; 9) Madrasa Mir ʿArab, (of 1535)?; 10) Masdjid Khwādja Zayn al-Dīn, many times restored. Other monuments exist in great numbers outside the town, mostly in ruins.

Bibliography: References to Bukhārā down to the Mongol Invasion, with extensive bibliography, can be found in R. N. Frye, *The History of Bukhara*, Cambridge, Mass. 1954 (a translation of Narshakhī's work). A bibliography of Russian works on Bukhārā can be found in O. A. Sukhareva, *K istorii gorodov bukharskogo khanstva*, Tashkent 1958. On the early coinage see Frye, *Notes on the Early Coinage of Transoxiana*, New York 1949, with additional notes in the *American Numismatic Soc. Notes* 4 and 7. On the name and pre-Islamic history see Frye, *Notes on the History of Transoxiana*, in *Harvard Journal of Asiatic Studies*, 19 (1956), 106 ff.

AL-**BUKHĀRĪ, MUḤAMMAD** B. **ʿABD** AL-**BĀḲĪ** ABU 'L-MAʿĀLĪ ʿALĀʾ AL-DĪN AL-MAKKĪ, Arabic writer who in 991/1583 composed a treatise on the eminence of the Abyssinians (after al-Suyūṭī and others), entitled *al-Ṭirāz al-Manḳūsh fī Maḥāsin al-Ḥubūsh* and existing in numerous manuscripts. The work has been translated by M. Weisweiler, *Buntes Prachtgewand* ..., Hanover 1924; extracts from the text in *Bibliothecae Bodleianae cod. mss. or. cat.*, ii, 1363. An extract, by Nūr al-Dīn al-Ḥalabī (d. 1044/1635; see AL-ḤALABĪ, NŪR AL-DĪN) was printed in Cairo, 1307.

Bibliography: Flügel, in *ZDMG*, v, 81, xvi, 696-709; Brockelmann, ii, 504, S ii, 519.

(C. BROCKELMANN)

AL-**BUKHĀRĪ, MUḤAMMAD** B. **ISMĀʿĪL** B. IBRĀHĪM B. AL-MUGHĪRA B. BARDIZBAH ABŪ ʿABD ALLĀH AL-DJUʿFĪ, a famous traditionist, b. 194/810, d. 256/870. He has the *nisba* Djuʿfī because his great-grandfather al-Mughīra was a *mawlā* of Yamān al-Djuʿfī, governor of Bukhārā, at whose hands he accepted Islām. Al-Bukhārī began to learn traditions by heart at the age of ten, and seems to have been a very precocious boy, for he is credited with having been able at an early age to correct his teachers. He had a remarkable memory, and companions of his are said to have corrected traditions they had written down from what he recited by heart. At the age of sixteen he made the Pilgrimage to Mecca with his mother and his brother, and when they returned he remained for a time in the Ḥidjāz. He travelled widely in search of traditions, visiting the main centres from Khurāsān to Egypt, and claimed to have heard traditions from over 1000 *shaykhs*. In later life he suffered opposition in Naysābūr from Muḥammad b. Yaḥyā al-Dhuhlī who was jealous of the large numbers who went to hear him. Because al-Bukhārī held that although the Ḳurʾān is uncreated this does not apply to the recitation of it, he was accused of heterodoxy and had to leave Naysābūr for Bukhārā. There the governor, Khālid b. Aḥmad al-Dhuhlī, asked him to bring his books to him, but he refused, saying it was an indignity to convey learning to people's houses, so if the governor wished to learn he should come to his mosque or his house. The governor asked him to hold sessions specially for his children, but al-Bukhārī refused to give them preferential treatment. He was therefore expelled and went to Khartank, a village about two parasangs from Samarḳand, where he stayed with relatives. It is said that, being oppressed by the hostility he had experienced, he was heard one night praying that God might take him, and died within a month.

His most famous work is the *Ṣaḥīḥ* which took him sixteen years to compile. It is said that he selected his traditions from a mass of 600,000, and that he did not insert a tradition in the book without first washing and praying two *rakʿas*. This famous collection of traditions is arranged in 97 books with 3450 *bābs* (chapters). There are 7397 traditions with full *isnāds*, but if repetitions are omitted the total is 2762. This work, which claims to contain only traditions of the highest authority (*ṣaḥīḥ*), is of the *muṣannaf* (classified) type which arranges the material according to the subject-matter. As certain traditions contain material on more than one subject it is not surprising that they should appear in more than one *bāb*. The work in the main is arranged according to the various matters of *fiḳh* [*q.v.*], but it

also contains other material, such as on the beginning of Creation, on paradise and hell, on different prophets and, in greater detail, on Muḥammad, on Ḳurʾān commentary, etc. Although al-Subkī includes al-Bukhārī among the Shāfiʿī *faḳīhs* this is not accurate, for he did not hold consistently the doctrine of any particular school. The titles of the *bābs* are meant to indicate the subject-matter and teaching of the traditions they contain, but al-Bukhārī has sometimes been criticised because the contents of the traditions do not always seem to be relevant to the title. Some *bābs* have a title but no traditions, which may mean that al-Bukhārī drew up the scheme of his book and left blanks when he had no sound traditions to illustrate a particular subject, hoping that he might yet find some relevant material of sufficient authority. There have been many commentaries on the whole or part of the *Ṣaḥīḥ*, notable among which are those of al-ʿAynī, Ibn Ḥadjar al-ʿAsḳalānī and al-Ḳasṭallānī. While the *Ṣaḥīḥ* was considered in al-Bukhārī's time as just one among others, it was soon recognised as outstanding, and by the 4th century it came to be placed along with Muslim's *Ṣaḥīḥ* at the head of collections of Sunnī tradition. In time, although criticisms have been made on matters of detail, it was accepted by most Sunnīs as the most important book after the Ḳurʾān; but in the West there was a tendency to prefer Muslim's *Ṣaḥīḥ*. Al-Bukhārī wrote his *Taʾrīkh*, which gives biographies of the men whose names appear in *isnāds*, when a young man, saying he wrote it on moonlight nights at the Prophet's tomb. Other smaller works are detailed by Brockelmann. In his lifetime al-Bukhārī was recognised as an outstanding traditionist, noted for his minute knowledge of detail and his perspicacity in detecting defects in traditions.

Bibliography: Al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, ii, 4-34; al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya al-Kubrā*, ii, 2-19; Ibn Khallikān, 541; al-Dhahabī, *Tadhkirat al-Ḥuffāẓ*, ii, 122-124; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, ix, 47-55; Ibn al-ʿImād, *Shadharāt*, ii, 134-136; Aḥmad Amīn, *Ḍuḥā al-Islām* (Cairo, 1371/1952), ii, 110-119; F. Sezgin, *Buhârî'nin kaynakları hakkında araştırmalar* (Recherches concernant les sources de Buḫārī), Ankara Üniversitesi Ilâhiyat Fakültesi Yayınlarından xiii, 1956; Brockelmann, I, 163-166, S I, 260-265.

(J. ROBSON)

BUKHĀRLÏK (or Bukhāriots of Siberia). A small ethnic group, Muslim (Sunnī of the Ḥanafī school), made up of the descendants of merchants and caravaneers originating from Turkestan and established in western Siberia since the 16th century, when the commercial relations between the Emirate of Bukhārā and Siberia were flourishing.

The Bukhārlïk live in contact with the Tatars of Siberia [*q.v.*] to whose Islamisation they have contributed, and with whom they are gradually mingling. They live principally near Tobolʾsk, Tümen and Tara, and an isolated group of Bukhārlïk are found close to Tomsk.

In 1926, the Soviet census numbered 12,012 of them. The Bukhārlïk speak the local Tatar dialects, but with the difference that they preserve in their own speech a large number of Persian terms. They employ the Tatar of Ḳazan as their literary language.

(A. BENNIGSEN)

BUKHL (Ar.; also vocalised *bakhl*, *bakhal*, *bukhul*) and *bakhīl* (pl. *bukhalāʾ*; less often *bākhil*, pl. *bukhkhāl*) mean respectively 'avarice' and 'avaricious, miserly'. Just as in the ancient poems the virtue of generosity is constantly sung, so avarice furnishes a theme for satire which is widely exploited by the poets, though it seems that this fault, at least in its most sordid forms, was scarcely widespread among the ancient Arabs. It is however a fact that it is castigated in a number of Ḳurʾānic verses aimed at combating avarice in the full sense (xvii, 102/100; lvii, 24) or simple hoarding (ix, 35, civ, 1 ff.), or at the encouragement of generosity in general (ix, 77/76; lix, 9) and almsgiving in particular (iii, 40/38, 175/180; iv, 127/128; lxiv, 16 f.); moreover, numerous *ḥadīths* against avarice are attributed to the Prophet (especially *ayyᵘ dāʾⁱⁿ adwaʾᵘ min al-bukhl?*). These condemnations and exhortations, however, seem to result less from an absolute moral principle than from the necessity in which the newly-founded Islamic community found itself of receiving spontaneous gifts and then of collecting regularly the contributions of its members (see ṢADAḲA, ZAKĀT, and cf. *bāb al-zakāt* in the *ḥadīth*-collections).

After the conquests the Arabs were brought by the entry into Islam of new racial elements into contact with peoples of a somewhat different temperament, and when, brought before the bar, they had to put up a defence, shrewder minds did not fail to single out the generosity of the Arabs in order to contrast it with the avarice of the non-Arabs. It is doubtless not by mere chance that, under the ʿAbbāsids, it is the Khurāsānīs who supply the anthologies with anecdotes about misers. The relationship: generosity = Arabs/avarice = non-Arabs takes practical shape in the polemics of which al-Djāḥiẓ gives several specimens in his remarkable *Kitāb al-bukhalāʾ*, the first and probably the only attempt in Arabic literature to analyse a character and portray him through anecdotes, though with political undertones. This psychological analysis which had its origin in al-Djāḥiẓ, was ignored by later writers who, in their *adab*-books and then in the popular encyclopedias, confined themselves to reproducing the Ḳurʾānic verses, *ḥadīths*, anecdotes, and poems about misers (see for example Ibn ʿAbd Rabbih, *ʿIḳd*, *passim*; al-Abshīhī, *Mustaṭraf*, i, 233), not omitting, however, to mention that history knows but four [*sic*] Arab misers: al-Ḥuṭayʾa, Ḥumayd al-Arḳaṭ, Abu 'l-Aswad al-Duʾalī, and Khālid b. Ṣafwān.

(CH. PELLAT)

BUKHT-NAṢ(Ṣ)AR, the Nebuchadnezzar of the Bible. The Ḳurʾān does not mention him. He is a very complex figure in Muslim tradition and here we can record only the outstanding points. It retains in the first place the main Biblical features, using to an unusual degree the texts of the prophets Jeremiah and even Isaiah, and establishing a connexion between Bukht-Naṣar and Sennacherib, whom it makes the great-grandfather of the former. It also confuses him sometimes with later rulers such as Cyrus and Ahasuerus. To these Biblical extracts, often much corrupted and simplified, are added features borrowed from the Jewish Haggada (for example, Bukht-Naṣar was one of the universal monarchs, cf. Babylonian Talmud, *Megilla* 11a; he was tormented to death by a mosquito which got into his skull, this being a transfer of the rabbinical legend about Titus, the destroyer of the Second

Temple) and some elements of a folklore character (an obscure Babylonian man of the people, for a long time hopelessly ill, he believed that he heard his future glory proclaimed and achieved it by his intelligence and a remarkable concurrence of circumstances). In the second place he is found forming part of the epic cycle of the ancient kings of Persia (the deformation of the name of which Bukht-Naṣar is the result seems to indicate some imaginary Iranian etymology); he is then reduced to the rank of satrap (*marzbān*) of Bishtāsb or of his father (Luhrāsb), or even of Bahrām, the son of the first named. In the third place he is said to have led an expedition against the Arabs (to which Ḳur'ān xxxi, 11 ff. would refer). There is perhaps here a memory of Nabonidus's settlement at Taymā' (cf. above, art. AL-ʿARAB) combined with that of Arab infiltrations into the region of the Euphrates. Al-Masʿūdī and al-Bīrūnī know an era of Bukht-Naṣar (cf. the article of Carra de Vaux in *EI*[1]). Al-Bīrūnī sought also to disentangle the chronological difficulties raised by the confused traditions of which he had knowledge.

Bibliography: Ibn Ḳutayba, *Maʿārif*, 23-4; Ṭabarī, i, 643 ff.; Masʿūdī, *Murūdj* and *Tanbīh*, index; Pseudo-Balkhī, *al-Bad' wa'l-ta'rīkh*, ii, 140-54, iii, 46-8, 93-5; Thaʿlabī, *ʿArā'is al-madjālis*, 192-205; Bīrūnī, *Āthār*, 25, 27, 301 (*Chronology*, 28, 31, 297); P. Tannery, *Recherches sur l'histoire de l'astronomie ancienne*, Paris 1893, 158, 162. (G. VAJDA)

BUKHTĪSHŪʿ, the name borne by several physicians of a celebrated Christian family originally established at Djundaysābūr. It was from there that Djurdjīs b. Djibrīl b. Bukhtīshūʿ, who was director of the hospital of this town and well known for his scientific writings, was called to Baghdād in 148/765 to attend the caliph al-Manṣūr, ill with a stomach complaint. By successful treatment he won the confidence of the sovereign, who asked him to remain in the capital, but he wished to revisit his native land in 152/769.

Bukhtīshūʿ b. Djurdjīs, to whom his father had left the direction of the hospital at Djundaysābūr at the time of his departure for Baghdād, was called in his turn to the capital when the future al-Hādī was gravely ill, but the hostility of al-Khayzurān, who favoured the physician Abū Ḳuraysh, prevented him from establishing himself there. Nevertheless, in 171/787, Hārūn al-Rashīd, suffering violent pain, had him brought back to Baghdād and appointed him physician-in-chief, a post which he held until his death in 185/801.

Afterwards Djibrīl b. Bukhtīshūʿ, whom his father had recommended to Djaʿfar the Barmakid in 175/791, succeeded in 190/805 in winning the confidence of the caliph, following a successful treatment of one of his slaves, but he fell into disgrace during the last illness of Hārūn at Ṭūs, because he did his duty as a doctor with too much frankness. He was condemned to death by the caliph because of the accusations of a bishop, but was saved by al-Faḍl b. al-Rabīʿ, who stayed the execution of the sentence, and he then became al-Amīn's physician. At the time of al-Ma'mūn's triumph he was imprisoned, not to be set at liberty until 202/817, when al-Ḥasan b. Sahl had need of his services. Three years later he was again in disgrace, and was replaced by his son-in-law Mīkhā'īl, but was recalled in 212/827 because Mīkhā'īl was unable to cure an illness of the caliph. He was reinstated, and his goods, confiscated after his fall, were restored, but he had not long to enjoy the prince's favour for he died the same year, and was buried at al-Madā'in in the monastery of Sergius.

His son Bukhtīshūʿ, who took his place, accompanied al-Ma'mūn on his expeditions into Asia Minor, then, under the caliphate of al-Wāthiḳ, was exiled to Djundaysābūr. Recalled during the caliph's last illness, he arrived in the capital too late, but remained there highly esteemed for twelve years, under al-Mutawakkil, until his exile to Baḥrayn. He died in 256/870.

Bukhtīshūʿ had a son, ʿUbayd Allāh, who was a finance official of the caliph al-Muḳtadir, and whose fortune was confiscated after his death. His widow married a physician, and his son Djibrīl followed in the footsteps of his fathers, but received his training only in Baghdād, where he had betaken himself penniless after his mother's death. Having treated an envoy from Kirmān successfully, he was called to Shīrāz by the Buwayhid ʿAḍud al-Dawla, but returned to Baghdād, which thereafter he only left for short periods of consultation, declining even the offer of the Fāṭimid al-ʿAzīz who wished to establish him in Cairo. He was, however, retained at Mayyāfāriḳīn by the Marwānid Mumahhid al-Dawla Abū Manṣūr who had summoned him there, and he died on 8 Ramaḍān 396/8 June 1006.

Abū Saʿīd ʿUbayd Allāh b. Djibrīl, a friend of Ibn Buṭlān [*q.v.*], lived at Mayyāfāriḳīn and died in the second half of the 5th/11th century, leaving some known works, in particular a dictionary of medico-philosophical terms and a treatise on love.

Another member of the family, Bukhtīshūʿ b. Yaḥyā, was physician to the caliph al-Rāḍī and was held responsible for the death of prince Hārūn in 324/936.

BŪḲĪR [see ABRĪḲĪR].

BUKOVINA [see KHOTIN].

BUḲRĀṬ [see SUPPLEMENT].

BÜKRESH (BUCHAREST) a town in Wallachia on the Dâmboviṭa river about fifty km. north of the Danube. It is mentioned for the first time in 769/1368 by the name of Cetatea Dâmboviṭei, a name used side by side with Bucharest until the 15th century, when it became the seat of the Wallachian princes. Vlad the Impaler issued documents from there in 863/1459 and 865/1461 and Radu the Handsome, the prince installed by Meḥemmed II in 866/1462, established himself in that town, protected by a Turkish garrison from Giurgiu. For more than two centuries the history of Bucharest was linked to the relations of the Roumanian princes with the Porte. Those princes who rebelled against Ottoman suzerainty preferred Târgovişte, less exposed to Turkish raids. At the end of the 16th century, Bucharest witnessed the massacre of Michael the Brave's creditors and Sinān Pasha's occupation. Sorely tried by the revolts against the Turks, as well as by epidemics and fires, the city had a turbulent history. With the Treaty of Berlin (1877) the last vestiges of Ottoman suzerainty disappeared. The peace conference convened at Bucharest in 1913 relieved Turkey of the greater part of her European possessions.

Information on the population during the earliest periods is lacking. The sources mention the presence of Greek, Armenian and native merchants. Towards 1050/1640 Bucharest had 12,000 houses; fifteen years later only 6,000 are mentioned, and Ewliyā Čelebi speaks of 12,000 houses and 1,000 shops. During the 17th century the population of Balkan origin increased, and became quite significant in the 18th. Popular revolts broke out, inspired by members of corporations discontented with the competition of foreign traders protected by the Phanariot princes. At the end of the 17th century the town had 50,000 inhabitants. The number varied between 20,000 and 60,000 for the end of the 18th and between 50,000 and 100,000 for the first half of the 19th.

Absorbed for three centuries in the Ottoman Empire, Bucharest acquired an oriental imprint which became stronger under the Phanariots during the 18th century, when the town became an important centre for the study of Greek. The princes initiated the publication of religious books for Christians in the Ottoman Empire, and monastic revenues provided for the monasteries of Athos, Constantinople, Trebizond and the Holy Land. The Austrian and Russian occupations introduced the first occidental influences and a knowledge of French, which, in the first half of the 19th century, supplanted Greek. Under the impact of ideas engendered by the French Revolution, the town became the centre of the struggle for the political unity of Roumania which led to the union of Moldavia and Wallachia (1859).

(N. Beldiceanu)

BUḲŪM, al- (sing. Baḳmī), a tribe in Western Arabia, traditionally held to be descended from al-Azd. Although considered a Ḥidjāzī tribe, the Buḳūm range over the region east of al-Ṭā'if and in the vicinity of the lava fields of Ḥarrat Ḥaḍn and Ḥarrat al-Buḳūm, where the boundaries between the Ḥidjāz and Nadjd are not clearly defined. The tribe is estimated to have close to 10,000 people, of whom less than half are nomads. For at least several centuries a majority of the Buḳūm have been engaged in oasis cultivation in the district of Wādī Turaba (also Taraba), with the town of Turaba (N. 21° 14′, E. 41° 37′) being their main centre of population. The Buḳūm are subdivided into two sections: al-Maḥāmīd and Āl Wāziʿ.

During the early period of Wahhābī expansion, the Buḳūm were partisans of the Sharīf Ghālib in his wars against Nadjd. From 1228/1813 the Buḳūm defended their territory against the troops of Muḥammad ʿAlī, the Ottoman Viceroy of Egypt, during which campaign a woman named Ghāliya notably distinguished herself. The Buḳūm finally surrendered and Turaba was occupied in 1230/1815. In the early years of the present century the loyalty of the Buḳūm was divided between ʿAbd al-ʿAzīz Ibn Saʿūd and the Sharīf Ḥusayn, the Maḥāmīd having declared for the Sharīf, while Āl Wāziʿ fought for Ibn Saʿūd. The Maḥāmīd surrendered to Ibn Saʿūd after his victory at Turaba in 1337/1919, and members of both sections of al-Buḳūm participated in the later Saʿūdī campaigns in the West.

In 1959 the chief of the Maḥāmīd was Ḥusayn b. Muḥyī, while Muḥammad b. Ghannām was chief of Āl Wāziʿ.

(F. S. Vidal)

BŪLĀḲ, a small town quite close to the Cairo of Mamlūk and Ottoman times, and its port on the Nile for traffic with Lower Egypt. It was built on the sand which the Nile left when its bed shifted one to one-and-a-half kilometres westwards between the time of Saladin and the 8th/14th century [see al-ḳāhira]. It was separated from Cairo by the Nāṣirī canal, dug in 725/1325 by the sultan Muḥammad b. Ḳalā'ūn, who encouraged people of affluence to build their villas (*manẓara*) at Būlāḳ, to which were added later mosques, *ḥammāms*, etc. The customs transferred there from Cairo. About 1800 Būlāḳ had some 24,000 inhabitants, 24 mosques (including that of Abu 'l-ʿAlā, a place of pilgrimage and *mawlid*), 'okelles', dépôts for agricultural products, shipyards, etc. Muḥammad ʿAlī built workshops and foundries there, designed to modernise Egyptian life.

Būlāḳ is well known for its printing works, the first established in Egypt after the short-lived ones of Bonaparte's expedition. A small Egyptian team, trained at Milan, returned in 1821 with presses. In 1822 the Būlāḳ Printing Press was able to work at full capacity, under the direction of Nicolas al-Masābkī, of Lebanese origin (d. 1830). Owned by the state, modernised several times, it was transferred to private ownership in 1862 (to ʿAbd al-Raḥmān Rushdī Pāshā, then in 1865 to a son of the Khedive Ismāʿīl). The state took it over again in 1880, and it was further developed after 1894 under English directorship, then under Egyptian once more. It was founded for army needs (manuals, etc). and for the administration (official journal, *al-Waḳā'iʿ al-Miṣriyya*) and was an important factor in the modern Renaissance. It printed on its own account or on that of individuals translations and numerous classical works in Arabic, Turkish, and Persian, and some books in European languages. The rapid growth of the private presses which made Cairo the centre of the Arabic book trade eventually deprived it of the virtual monopoly which it enjoyed.

At the present time Būlāḳ is no longer anything more than a quarter of modern Cairo.

BULANDSHAHR (Baran), an ancient town in India situated in 28° 15′ N. and 77° 52′ E. on the main road from Agra and ʿAlīgarh to Meerut. Population (1951) was 34,496. Its old name was Baran (by which it is even now sometimes called but only in the *nisba* Baranī) given to it by its legendary founder, one Ahībaran. Its antiquity is

established by the discovery of inscribed copper-plates of the 5th century A.D. and coins of much older dates. It came to be called Bulandshahr ("hightown") from its elevated position near the bank of the Kālī Naddī, which flows past the town. This name is clearly Muslim and appears to have been given to the town sometime during the Mughal period, although Sudjān Rāy's *Khulāṣat al-Tawārikh* (compiled as late as 1107/1695-6) still mentions it as Baran. It was conquered by Maḥmūd of Ghazna in 409/1018 when the Hindū Rādjā, Har Datt, offered submission and accepted Islam with 10,000 of his followers. The town was restored to Har Datt whose descendants forsook Islam and Čandrā Sēn, the last of the line, was killed while defending the town in 590/1193 against Ḳutb al-Dīn Aybak, a general of the Ghūrī Sulṭān Muḥammad b. Sām, who bestowed it as an *iḳṭāʿ* on Iletmish [*q.v.*], his son-in-law and successor. Djaypāl, a kinsman of Čandrā Sēn, accepted Islam and was rewarded, for betraying the garrison to the invaders, with the headmanship of the town. His descendants still flourish in Bulandshahr. During the reign of Muḥammad b. Tughluḳ [*q.v.*] it was the centre of a peasants' rebellion; this was ruthlessly suppressed by the king who laid waste the country all around and perpetrated horrible atrocities on the residents of Baran. In 802/1399 the rebel *amīr* Iḳbāl Khān (Faḍl Allāh Balkhī) took refuge here when he rose against Sulṭān Nāṣir al-Dīn Maḥmūd (644/1246-665/1266). In 810/1407 the town was occupied by Sulṭān Ibrāhīm Shāh Sharḳī of Djawnpūr (805/1402-840/1436) but he had to vacate it hastily on learning that Muẓaffar Shāh I of Gudjarāt was about to attack Djawnpūr.

Thereafter nothing is heard of the town as it continued to enjoy a period of peace and tranquillity during Mughal rule. Awrangzīb's proselytising zeal won a large number of converts, mostly among the Rādjpūts, in and around Bulandshahr. During the 12th/18th century when the entire country was disturbed the Marāthās overran and captured Bulandshahr and administered it from Koil (ʿAlīgarh). With the fall of the fort of ʿAlīgarh, Bulandshahr came into the possession of the British in 1218/1803. During the upheaval (Mutiny) of 1857 the town was badly disturbed and Walīdād Khān of Mālāgarh drove out the British garrison and assumed the reins of government. He and his confederates, the Gudjdjars and Muslim Rādjpūts, proved irreconcilable enemies of the British and surrendered the town only after a five months' resistance.

This town is familiar to students of Indo-Pakistan history as the birth-place of Ḍiyāʾ al-Dīn Baranī [*q.v.*], the scholar-historian of the 9th/14th century. There are some very old mosques and tombs including a *dargāh* that of Khwādja Lāl Baranī, which was built in 590/1193 to commemorate the Muslim victory. A small town at the commencement of the British rule, it is now a thriving centre of trade and commerce.

BULĀY, the Arabic transcription of Poley, the old name of a stronghold in the south of Spain the site of which (as has been shown by Dozy, *Rech.*[3], i, 307, on the strength of information supplied by a charter of 1258) is the modern Aguilar de la Frontera, a small town in the province of Cordova, 12 miles N. W. of Cabra and of Lucena. The town, which played a considerable part in the rising of the famous ʿUmar b. Ḥafṣūn [*q.v.*] against the Umayyad amīrs of Cordova, is again mentioned in the 6th/12th century by the geographer al-Idrīsī. The ruins of a fortress which dates from the Muslim period can still be seen there.

(E. Lévi-Provençal)

BULAYDA (Blida), a town in Algeria 51 kms. S.-W. of Algiers, at the southern end of the plain of the Mitīdja. There was no ancient settlement on the site. It has been identified with the town Mitīdja known in the Middle Ages, which was ruined at the time of the campaigns of the Banū Ghāniya (beginning in the 7th/13th century). According to tradition the place which in 942/1535 was called Bulayda (little town) was founded by a religious personage known as Sīdī Aḥmad al-Kabīr. He, after many wanderings, came to stay in the valley of the Wādī al-Rummān, nowadays the Oued el-Kebir. He was joined by his disciples, then by Andalusians coming from Tipasa fleeing from the attacks of the Kabyles of the Chenoua. Sīdī Aḥmad al-Kabīr obtained from the Ulād Sulṭān who occupied the region the land necessary to build homes for the new arrivals. The *beylerbey* of Algiers, Khayr al-Dīn, made of this settlement a veritable city, by providing it with a mosque, *ḥammām*, and public bakery. Bulayda prospered quickly thanks to the Andalusians, who planted orange orchards around it and applied there methods of irrigation of their own country.

Under Turkish domination Bulayda formed part of the *dār al-sulṭān*, that is to say the region administered directly by the *bey* of Algiers, who was represented there by a *ḥākim* of Turkish origin. A detachment of janissaries had a garrison there. The population, composed of the descendants of the Andalusians, Moors, Jews, and Mozabites, was renowned for its urbanity and love of pleasure. A saying attributed to Sīdī Aḥmad b. Yūsuf praises it and calls it Urīda (little rose). The town offered a pleasant sojourn to the élite of Algiers, who possessed country houses there. Officials of the Regency who were interned there found their exile easy to hear. It suffered many earthquakes, of which the most severe almost entirely destroyed it in 1827. It was shaken again by a tremor in 1865.

After the occupation of Algiers by the French, Blida remained for some time independent under the administration of its *ḥākims*. It was effectively occupied in 1839.

BULBUL, the nightingale. To the nightingale belongs a large place in Oriental literature, particularly Persian and Turkish literature. The characteristics of the bird are its beautiful voice and its tuneful and harmonious song. In the season of roses it laments the whole night long; the hours before dawn are enlivened by its singing. It is in love with the rose. This love is its most outstanding characteristic. Its other characteristics are grouped around this.

In Persian literature the nightingale is treated according to the poets' inclination. In some it sings of figurative love which has no aim, in others of figurative love which is a stage on the path to real love. To understand its meaning in Ṣūfī writing, we must look at the *Manṭiḳ al-Ṭayr*, written in the year 583/1187-8 by one of the important Ṣūfī writers of Persian literature, Farīd al-Dīn ʿAṭṭār (died 627/1230). In this work the nightingale's main characteristic is that it is drunk and ready to lose its material substance because of the perfection of its love for the rose (see Garcin de Tassy, *Le langage des oiseaux*).

The Persian poet Khwadjū Kirmānī (679-752/1280-1351), in a work entitled *Rawḍat al-Anwār*, represents the bird of the meadow (*murgh-i čaman*) as a bird tried by passion and desire, that sings at night and drives away sleep; then he likens the nightingale and the rose to the fabulous lovers Wāmiḳ and ʿAdhrā. In a *ḳiṭʿa* of Saʿdī of Shīrāz (died 690 or 691/1291-1292), who speaks of the nightingale fairly often especially in his *ghazal*s, the poet treats the moth as the real lover. Ḥazīn-i Lāhidjī (died 1180/1766) makes clear the contrast of the nightingale and the moth, saying, "The nightingale complains because it has only just learnt of love. We have never heard a sound from the moth". Mawlānā Rūmī-i Barizī has a work too (*tadhkira* of Shāh Muḥammad Ḳazwīnī) which contains disputes between nightingale and rose, candle and moth. The Persian poet Zamān-i Yazdī also confronts the nightingale and the moth.

Ḥāfiẓ (died 791/1389) raises the nightingale somewhat towards real love in this verse: "Settling on the cypress branch last night the nightingale chanted the lesson of spiritual stations with the Pahlawī warcry". One of the poets of the circle of Maḥmūd of Ghazna, Farrukhī-i Sīstānī (died 470/1077), also imagines the nightingale on a cypress branch: "Nightingales are *khāṭib*s reciting *khuṭba*s upon trees". "Now the nightingale recites the *Tawrāt* upon the cypress.

In one of his *ḳaṣīda*s Manūčihrī (died after 423/1041) gives its song a religious significance, saying "On the rose branch the nightingale performs the *ṣalāt*". In Anwarī (died after 580/1184) a characteristic of the nightingale is its eloquence; "The nightingale catching the scent of spring has grown eloquent, the rose entering the garden has grown fresh".

The Persian Ṣūfī poet Muḥammad Shīrīn Maghribī (died 809/1046) likens the soul to the nightingale, fallen into the cage of flesh. Here the cage of flesh is the spirit, that has fallen from the world of unity into the world of elements. Another Ṣūfī poet, Kamāl Khudjandī (died 803/1400), brings out another characteristic of the nightingale in the verse: "Kamāl recites no *ghazal*s unless he has fallen in love with a face of roses. The nightingale does not sing when it is not drunk". Saʿdī too in one of his *ghazal*s puts spring and the nightingale side by side: "The trees are in bud, the nightingales are drunk, the world has grown young, the lovers are lost in joy and merrymaking". He views the nightingale essentially as the harbinger of spring. The giver of bad news is the owl. Hilālī-i Čaghatāy (died 939/1532) also makes this contrast in the verse: "The nightingale nests in the garden, the owl in the ruins, everyone makes his home according to his desires". It is appropriate in this connexion to mention the proverb: "Of the nightingale's seven chicks only one becomes a nightingale" (Dihkhudā, *Amthāl wa Ḥikam*).

The nightingale has provided an opportunity for more delicate and refined conceits among poets writing in the 'Indian style'. In this literature with its generally Ṣūfī colouring, the nightingale occupies a position between figurative and real love. The seventeenth century poet Shawkat Bukhārī sings thus of the nightingale in one of his *ghazal*s: "How long will the beloved fail to recognise the lovers that are its prisoners? As the nightingale sorrows and sheds its tears its nest comes to resemble a basket of roses. The rose branch is a seat that gives rest to the nightingale's aching head".

The idea that the nightingale is hunted and caged because of its beautiful voice has passed into literature; thus in a verse of Begdilī (1134-1195/1722-1781): "Because of its lament it is captured and deprived of its freedom".

The bird is encountered in the oldest Turkish literary texts. In various Turkish dialects the nightingale is called as follows: in the *Kutadgu Bilig*, *sanvač*, *sınvač*, *sanduvač*. In other dialects *sadugač* (*gec*, Kaz.), *sandigač* (Tel.), *sandvač* (Rab.), *sandulač* (Ş.S.). In his Dictionary, Shaykh Sulaymān Bukhārī Čaghatāy mentions this as a bird like the nightingale and explains that it is the canary. The verse in *Kutadgu Bilig* (1069/1070) "The nightingale sings in the flower garden in thousands of voices (*hazār destān*) as though reciting the Mazāmir night and day" (v. 78) recalls the Pahlawī warcry and the *Tawrāt* just as we found in Persian literature.

Entering the Islamic period, Turkish literature in time lost the *sanduvač* and used in its place the words *ʿandalīb*, *hazār* (only in classical literature), and *bülbül* (in both classical and folk literature). In folk literature the nightingale is the lover of the rose, it is a stranger, in spring time it sings at night and before the dawn (Ḳaradja Oghlān). In both folk and classical literature the nightingale in the cage is like the soul in the body. The characteristics of the nightingale in Turkish *Dīwān* literature may be seen in the *mathnawī* "The rose and the nightingale" composed by Faḍlī for Sulṭān Süleymān's son Muṣṭafā (960/1553). According to this work the nightingale "is a heart-sore and agitated dervish, love is its nature. Its voice is lovely, its ways are pure and charming. It is a witty fellow, a drinker. Love is the place of its frequenting. Love has set a polish on the mirror of its heart. Its dress is a dervish's cloak of felt (*namad*) so that the mirror inside the felt may not grow rusty". After numerous adventures the nightingale and the rose are united. In this work Faḍlī uses the nightingale to express a purely Ṣūfī idea. In this allegorical treatment the nightingale is the heart, the rose the spirit.

When we come to *Dīwān* literature of the seventeenth century, the nightingale is a lover consumed by the fire of love. This is embodied in the poetic concept that the rose resembles fire in its colour, and kindles the nightingale and burns it to ashes. The nightingale is the colour of ash. There is a pun

between *gül*, rose, and *kül*, ash. The elimination of the material existence of the lover (tossing up his ashes) is an idea that comes from Ṣūfism. Consequently the likening of the nightingale to ashes has become so firmly established that the word *khākistar*, ash, has come to mean nightingale.

The *ghazal*s with the *redīf* "*bulbul*" by Nā'ilī (died 1634) and Neshātī (died 1674) are both major works of the literature of that period, tending towards the Indian style. The last verse of Nā'ilī's *ghazal* reveals to us the Ṣūfī connexion of the nightingale and the rose.

In the 12th/18th century Nedīm (died 1143/1730) mentions this bird in a number of his poems. In a *ghazal* with the same *redīf* he writes: "Do not suppose that the nightingale's nest is filled with bloody tears. That nest is a pot of red ink made ready to write down the secrets of longing. Do not fancy that the cup-bearer of spring poured dew upon the rose; he filled the nightingales' cup with *rakī*".

After the *Tanẓīmāt*, in the poets of the *Andjuman-i Shuʿarā'* who imitated older literature, the nightingale shows no new development. Like Maghribī among Persian poets, one of these, Hersekli ʿĀrif Ḥikmat (1839-1903), in a poem entitled *Ḥasb-i Ḥāl*, treats the nightingale from an entirely Ṣūfī point of view. Redjā'īzāde's poem with the *redīf* "*bülbül*" bears the somewhat shallow marks of his melancholy temperament and slender poetic gift. In these there is nothing new. But ʿAbd al-Ḥakk Ḥāmid [*q.v.*] in the *naẓīre* he wrote to Hersekli's *Ḥasb-i Ḥāl*, and in the poem *Walking through Hyde Park*, produces new ideas appropriate to his age with regard to the nightingale: "In the morning it recites the *adhān*. Its nest in the darkness is a sublime symbol for patriotism. Its songs have become the model for love-*kaṣīdas*. The form of its expression is as new as modern literature (*tedjeddud edebiyyāti*). It is God's poet. Its *kaṣīdas* are read from the page of nature" (*Naẓīre-i Ḥasb-i Ḥāl*).

(Ali Nihat Tarlan)

BULDUR [see BURDUR].

BULGARIA, a country in the Balkans. It drew its name from the Bulgars, a people of Turkic origin, who first invaded the Dobrudja [*q.v.*] under Asparukh or Isperikh in 679 A.D. and founded an independent state in the Byzantine province of Moesia. Adopting Orthodox Christianity from Byzantium (865) and identifying themselves with the native Slavs who had previously settled Bulgaria, the Bulgars built up a strong empire in the Balkans which extended from the Danube to the Adriatic Sea under Czar Symeon (893-927).

The first Islamic accounts of Bulgaria belonged to this period through the reports of Muslim al-Djarmī (about 231/845), Hārūn b. Yaḥyā (349/960) and Ibrāhīm b. Yaʿkūb (349/960). Hārūn reported (in Ibn Rusta, ed. De Goeje, 127) that the Christianised Slavs, *al-Ṣakāliba al-Mutanaṣṣira*, had adopted Christianity after Sūs, the ruler of the Bulgars. Incorporated into the Byzantine empire between 1018 and 1186 Bulgaria was organised in two themes, the theme of Bulgaria with its centre at Skoplje (Üsküb) and that of *Paristrion* or *Paradunavon* with its centre at Silistria.

The invasion and settlement of the Cumans in the lower Danube prepared the way for the creation of the so-called second Bulgarian empire under the Assenids (1185-1279).

In 1262 Michael VIII, the Byzantine emperor, took Anchialus and Mesembria from the Bulgarians and settled in the Dobrudja the Anatolian Turks who had taken refuge in Byzantium with ʿIzz al-Dīn Kaykāwūs II [*q.v.*]. Most of them returned to Anatolia in 707/1307 and those who remained were thought to be the ancestors of the Gagauzes [*q.v.*]. (P. Wittek, *Yazījioghlu ʿAlī on the Christian Turks of the Dobruja*, in *BSOAS*, xiv/3).

Terter I (1279-1300) recognised Noghay's [*q.v.*] overlordship (1285) and gave his daughter in marriage to his son Čaka, who later took refuge in Trnovo and seized his father-in-law's throne (1300), but soon was killed by Terter II (1300-1322).

In the contemporary Arabic sources (Baybars, *Zubdat al-Fikra*, in I. H. Izmirli, *Altınordu* ..., Ist. 1941, 221; Abu 'l-Fidā', 295) Bulgaria is shown as the land of the *Ūlak*, and the Bulgarians are considered as the same people as the *Ūlak*. We know that Kalojan had called himself *imperator totius Bulgarie et Vlachie* (G. Ostrogorsky, *Hist. of the Byzantine State*, 358). It appears that the Christianised Cumans in Bulgaria, must have been shown under the general term of Vlach.

The Shishmanids (1323-1395) came to the Bulgarian throne with Shishman, a Cuman magnate in Vidin.

The Anatolian *ghāzī* Turks came in contact with the Bulgarians when Aydinoghlu Umūr [*q.v.*] allied himself with Cantacuzenus. First in 742/1341 Umūr aided him agaist Ivan Alexander, the Bulgarian Czar, and, then, on 5 Rabīʿ I 746/July 7, 1345 destroyed Momčilo, the Bulgarian adventurer who had been dominating the Rhodope region (P. Lemerle, *L'Emirat d'Aydin*, Paris 1957). The Ottomans replacing Umūr in his alliance with Cantacuzenus appeared to come into contact with the Bulgarians first in 753/1352 when these came to support his rival John V. After the conquest of Edirne [*q.v.*] in 762/1361 Lālā Shāhīn seemed to be active in the direction of Zaghra (Berrhoea) and Filibe [*q.v.*] (different dates in the chronicles: 763/1362, 765/1364, 766/1365), but the Byzantine-Bulgarian clash in 765/1364 is thought to be connected with an Ottoman-Bulgarian agreement. In 766/1365 Czar Ivan Alexander divided his realm between his two sons: Stratsimir got the Vidin region and Shishman the Czardom of Trnovo. Dobrotič in the Dobrudja and Varna were actually independent [see DOBRUDJA]. The same year Hungary seized Vidin, threatened Trnovo, and Amadeo of Savoy not only occupied Ottoman Gallipoli but also Mesembria, Sozopolis and Anchialus for Byzantium in 767/1366. With Ottoman auxiliary forces Shishman tried to recover Vidin (769/1368), and gave his sister Thamar in marriage to Murād I. According to the Ottoman chronicles (see Saʿd al-Dīn, i, 84-87) the Ottomans reached the main Balkan passes by taking Ḳizilaghač-yenidjesi, Yānbolī (Iambol), Ḳarīn-ovāsī (Karnobat), Aydos (Aitos), Sözebolī (Sozopolis) under Tīmūrtāsh in about 770/1368. İhtiman and Samakov under Lālā Shāhīn in 772/1370 and 773/1371. Filibe on the one side and the Yānbolī-Ḳarīn-ovāsī region on the other were then the main *ūdj*s [*q.v.*] where the *akīndjī*s, Yürüks [*q.v.*] and Tatars were settled in large numbers. Nish was taken by the Ottomans only in 787/1385 (Neshrī, Taeschner ed. i, 58). Sofia was still in Shishman's hands in 780/1378 (C. Jireček, *Gesch. der Bulgaren*, Prague 1876, 339). It seemed to surrender between this date and 787/1385. In 789/1387 when Murād I found that his vassals Shishman in Bulgaria and Ivanko in Dobrudja were not on his side against the Serbians he hastily sent an army under ʿAlī Pasha to

secure his rear. Our information on this expedition comes from Neshrī and Rūḥī who both used here a detailed and well informed source, and there is no need to change its chronology (cf. F. Babinger, *Beiträge zur Frühgesch. der Türkenherrschaft in Rumelien*, Munich 1944, 29-35). In the winter of 790-1/1388-9 ʿAlī Pasha took Provadia (Pravadi), Venčan, Madera and Shumnī (Shumen) and passed the winter in the latter. In the spring of 791/1389 he sent Yakhshī Beg against 'the son of Dobrudja' in Varna, then went to meet the Sultan in Yānbolī. Shishman came there, too, and made his submission to Murad I. But on his return he did not surrender Silistre (Silistria) to the Ottomans as he promised. Upon this ʿAlī appeared before Tirnova (Trnovo), Shishman's capital; 'The infidels brought him the keys of the city' which meant submission. Accepting the submission of several other towns on his way ʿAlī came and laid siege to Nikebolī (Nikopol, Nicopolis) where Shishman had taken refuge. He asked pardon which was granted. ʿAlī was to join Murād's army.

After the battle of Kossovo Bāyazīd was detained in Anatolia while Mirčea, supported by Sigismond, took Silistria and the Dobrudja and made a succesful raid on the *aḳindjis* of Karin-ovasī, in 793/1391. Only in 795/1393 was Bāyazīd able to come and take Trnovo by force (6 Ramaḍān/17 July) and he also subjugated the Dobrudja and Silistre. But still Shishman was left in his stronghold, Nikebolī, as a vassal. He then appealed to Sigismond; this caused Bāyazīd's [*q.v.*] invasion of Transylvania and the battle of Argesh against Mirčea (26 Radjab 797/17 May, 1395). We find in a newly discovered document (Topḳapı Sarayı Archives, Istanbul, no. 6374) the following 'Crossing Arkhish river Yildirim Khān came before the fortress of Nikebolī the ruler of which was a lord named Shishman. He was paying tribute to the Sultan in the same way as the *Voyvode* of Wallachia. The Sultan asked him to send ships, which he furnished. As soon as the Sultan was on the other side he fetched Shishman, beheaded him, and seized Nikebolī and transformed it into an Ottoman *sandjaḳ*.' The Slavic sources (see J. Bogdan, *Archiv f. slav. Philo.*, xiii, 496) dated Shishman's death as 12 Shaʿbān 797/3 June 1395 which fits in with this Ottoman evidence.

The battle of Nikebolī (24 Dhu 'l-Ḥidjdja 798/28 September 1396) sealed the fate of Bulgaria. After his victory Bāyazīd invaded Stratsimir's Vidin too. He settled in Vidin, Silistre and Nikebolī the powerful *Ūdj-begis* against Hungary and Wallachia. In 847/1443, when a Hungarian army advanced into Bulgaria, the Bulgarian *reʿāyā* and *voynuḳs* in the region of Sofia and Radomir joined the invaders, who appointed a 'Vladika' in Sofia for them. They were soon repressed by the Ottomans (see İnalcık, *Fatih Devri*, Ankara 1954, 20).

During this period, and especially after 805/1402, Bulgaria became strongly ottomanised. In Eastern Bulgaria the Muslim population was definitely in the majority as the surveys of 1520s show (see Ö. L. Barkan, *İktisat Fakültesi Mecmuası*, vol. xi, map). In 859/1455 in Filibe there were 600 Muslim households as against 50 non-Muslim. Bulgaria was divided into the *sandjaḳs* of Čirmen, Sofya, Silistre, Nikebolī and Vidin in the *eyālet* of Rūmeli [*q.v.*]. In the 11/17th century the *sandjaḳs* of Nikebolī and Silistre were included in the *eyālet* of Özü which was created against the Cossacks. Its capital was Özü and Silistre. The *sandjaḳ* of Silistre included Pravadi, Yānbolī, Harsova, Varna, Akhyolī (Anchialus), Aydos, Ḳarin-ovasī and Rūsī-ḳasrī (Rhousokastron) in 924/1518. Bulgaria was put under typical Ottoman administration with the *timār* [*q.v.*] system (see the laws and regulations in Ö. L. Barkan, *Kanunlar*, Istanbul 1943, 255-289). Most of the members of the pre-Ottoman military class were integrated in the Ottoman military organisation (see my *Fatih Devri*, 136-184), *pronijars* as *timār*-holders, *woiniks* as Ottoman *voynuḳs* [*q.v.*]. As to the bulk of the Bulgarian population, they were given the status of *dhimmī reʿāyā* [*q.v.*]. But among them many groups enjoyed financially a special status as *derbenddji* (guardians at the mountain passes) or suppliers of rice, meat etc. for the palace or the army [see *ʿawāriḍ*], and the *Dewshirme* [*q.v.*] was also extensively applied in Bulgaria.

As Istanbul and the army was dependent for a great proportion of their food supply on Bulgaria the government put restrictions on the export of the Bulgarian meat and rice. In 973/1565 the appointed sheep owners in western Bulgaria were ordered to provide 174,290 sheep for the army (A. Refik, *Türk İdaresinde Bulgaristan*, Istanbul 1933, document no. 3). The rice production in the upper Maritsa (Merič) valley brought to the state as *muḳāṭaʿa* [*q.v.*] a yearly revenue of about one million *akča* (20 thousand gold ducats) in about 888/1483 (T. Gökbilgin, *Edirne ve Paşa Livası*, Istanbul 1952, 131). Timber from Shumnī, Hezargrad, Tirnova (Trnovo) and iron from Samakov were supplied for the construction of the warships at Akhyolī in 979/1571 (A. Refik, doc. 19, 22). An industry of cloth and felt developed in Filibe, Shumnī and Islimye (Sliven) in this period which was exported in other parts of the empire (A. Refik, doc. 18). Bulgaria experienced neither an enemy invasion nor an insurrection from 1450 to 1595. The Bulgarian towns, especially Filibe, Sofya and Silistre, developed as miltary and commercial centres on the main routes in Rūmeli [*q.v.*]. In these cities new Muslim districts sprang up around *Djāmiʿ*s, *ʿimārets*, *bedestāns* and bazaars with rich *waḳfs* (see Ewliyā Čelebī's detailed description in 1061/1651, vol. III, 301-421, and H. J. Kissling, *Beiträge zur Kenntnis Thrakiens im 17. Jahr.*, Wiesbaden 1956). According to the Ottoman census in 1520 (see Ö. L. Barkan, *JESHO*, vol. I, Part 1, 1957, 32) the *sandjaḳs* of Silistre. Čirmen, Nikebolī, Vidin and Sofya had about 125 thousand households altogether excluding the population in the places belonging to Pasha in Bulgaria.

From the end of the 16th century onwards the rate of several taxes was raised and the complaints of the Bulgarian *reʿāyā* from the exactions of the local officials and soldiers began (A. Refik, doc. 37, 38, 41, 42, 46, 47). In 1014/1605 the *reʿāyā* of the Sofya region complained that the agents of the Patriarch were trying to raise the rate of dues from 6 *aḳča* to 12 for the *reʿāyā* and from 60 to 400 for the local priests (A. Refik, doc. 38). The first important uprising in Bulgaria took place at Veliko-Trnovo in 1003/1595 when Michael, Wallachian Prince, made successful raids in Bulgaria. Sinān Pasha [*q.v.*] put down the insurrection and thousands of Bulgarians took refuge in Wallachia. Also from this time on the Bulgarian *haydūd*s or *eshḳiyā*ʾ begin to be mentioned more frequently in the Ottoman sources (A. Refik, doc. 52, 54, 75). Now almost with every enemy invasion the *reʿāyā* were joining them and when they withdrew large groups of *reʿāyā* followed them in spite of the assurances on the part of the Ottoman government (for example in 1100/1688 the *reʿāyā* of the region of

Vidin, Kutlofdja, Pirot and Berkofdja (A. Refik doc. 59) in 1150/1737 the *reʿāyā* of the region of Izinbol (Znepolje) (A. Refik, doc. 81, 82); in 1208/1793 those of the region of Ismail and Stanimaka). In 1245/1829, seventy or eighty thousand Bulgarians followed the Russian army to settle in Bessarabia; in 1861 ten thousand of them left their home for the Crimea.

In the second half of the 18th century the *aʿyān* were particularly powerful in Bulgaria. As *multazims* [*q.v.*] and hereditary possessors of the large state lands, *čiftliks* [*q.v.*], they became real masters of the country since the government had to rely on them to collect the taxes of the *reʿāyā* and most powerful of them such as Trestenik-oghlu Ismāʿīl, Bayraḳdār Muṣṭafā [*q.v.*] in Rusdjuḳ, Ḥadjdjī ʿUmar in Hezargrad even maintained private armies to which the Sultan had to have recourse at critical moments (A. Refik, doc. 90). The Rhodopes and the Balkan mountains sheltered an increasing number of bandits called *Kîrdjalî* in this period. Profiting from this anarchy a soldier of fortune, Pazwand-oghlu or Pāsbān-oghlu ʿOthmān [*q.v.*] rebelled, and then, as the Pasha of Vidin, ruled over Western Bulgaria between 1212/1797-1221/1807 (Djewdet, *Taʾrīkh*, vii, 237, 240, 250, viii, 146-48). Under Maḥmūd II [*q.v.*] the *aʿyāns* were eliminated and the central authority was established in Bulgaria. In the period of the *Tanẓīmāt* in 1263/1846 Bulgaria was reorganised as the *eyālets* of Silistre, Vidin, Nish with the provincial councils in which the Bulgarian representatives were admitted. But the administrative reforms did not prevent unrest among the Bulgarians. An insurrection in the Nish region in 1257/1841 and a more violent one in the Vidin region in 1266/1850 broke out partly because of the provocation of the revolutionists in Serbia and Wallachia, and partly because of the abuses of the *čiftlik* system maintained there by the Muslim *aghas* or *gospodars* (see my *Tanzimat ve Bulgar Meselesi*, Ankara 1943).

Many observers in the middle of the 19th century (N. V. Michoff, *La population de la Turquie et de la Bulgarie*, 3 vols. Sofia 1915-1929) came to the conclusion that one third of the population of Bulgaria was Muslim. Out of this about 400 or 500,000 were the *Pomak* (*Pomatzi*), the native Bulgarians who had adopted Islam in the 16th and 17th centuries in the central and western Rhodopes. Muslims were in the majority in the cities of Filibe Vidin, Shumnî, Rusdjuḳ, Razgrad, Varna, Plevne, Osman-bazar, Eski-djumʿa, Yeni-zaghra and in the minority in those of Gabrovo, Nish, Sofya, Tîrnova, Karnobat (Ḳarîn-ovasî) by 1293/1876. After the Crimean war the Ottoman government had settled in Bulgaria 70 or 90,000 Čerkes and about 100,000 Tatars (in A. H. Midḥat, *Midḥat Pasha*, Cairo 1322/1904, 35: 350,000 immigrants). Tension between these and the native Bulgarians was exploited by the Bulgarian revolutionists who had finally organised a Central Committee of Revolution in Bucharest in 1286/1869. In 1281/1864 the new administrative reform was for the first time applied in Bulgaria. The *sandjaḳs* of Rusdjuḳ, Varan, Vidin, Tulči (Tulča), Tîrnova (Trnovo) formed the *wilāyet* of Tuna and those of Sofya and Nish that of Sofya. Midḥat Pasha [*q.v.*], first governor of the *wilāyet* of Tuna, made it the most progressive province of the empire (A. H. Midḥat, 24-56). Although the tax revenue of the *wilāyet* increased fifty per cent under his administration, the peasantry had to pay more and do forced labour for the construction of the new routes. In 1287/1870 the struggle for an independent Bulgarian church resulted in the establishment of the Exarchate which was regarded as a national victory. In the same period the increased activities of the Bulgarian revolutionists, *ḳomitadjîs*, supported actively by the Russians, resulted in the great insurrection of 1293/1876 (April-May). Bulgaria became the main field of operations of the Ottoman-Russian war of 1293/1877. It caused an exodus of the Muslim population to the south. With the Treaty of San-Stefano Russia attempted to create under her protection a great Bulgaria from the Danube to the Aegean Sea. But the great powers replaced it by the Treaty of Berlin which created a principality of Bulgaria, *Bulghāristān Emāreti*, under the Sultan's suzerainty, and the autonomous Province of Eastern Rumelia (*Rūmeli-i Sharḳī Wilāyeti*). It united with the Principality as a result of a revolution in Filibe in 7 Dhu 'l-Ḥidjdja 1302/18 September 1885 (A. F. Türkgeldi, *Mesail-i Mühimme-i Siyasiyye*, Ankara 1957, 193-246). At the time of the revolution of 1326/1908 in Istanbul Prince Ferdinand declared the independence of Bulgaria and assumed the title of Czar (7 Ramaḍān 1326/3 October 1908).

(H. İNALCIK)

BULGHĀR, in Islamic literature the name of a Turkic people by whom two states, one on the Volga, the other on the Danube, were founded in the early middle ages.

Early history: The original Bulghārs seem to have arrived in the south Russian steppes with one of the Hunnic waves. They are mentioned for the first time by Joannes Antioch. (Müller, *Fragm. Hist. Graec.* iv, 619) in the year 481 A.D., when they helped the Emperor Zeno in his fight against the Goths. The centre of the Bulghār country was then the steppes in the vicinity of the Kuban river and the Maeotis (Azov Sea), but some of their hordes dwelled also in the region of lower Danube and in the Caucasus. In the Byzantine chronicles

their original country, Kuban, is known as Great Bulgaria (Theophanes, Nicephorus). After the death of Khān Kuvrat in 642 A.D. the unity of these Bulghārs was brought to an end, probably under the pressure of the growing power of the new Khazar kingdom. One section of the Bulghārs remained in their ancient settlements on the Kuban and in the Maeotis till the 10th century. At this time this country was called by Constantine Porphyr. (*De adm. imp.*, 12, 42) "Black Bulgaria" and the Russian chronicles give them also the name of "Black Bulgars". This section of the Bulghārs did not play any great part in history and was probably absorbed by the successive waves of Magyars, Pechenegs and Kumans. By far the greatest group of Bulghārs, under Khān Isperukh, left their home country in 678 for the Balkans and the Danube, where they founded a state among the South Slavonic tribes. In a comparatively short time the numerically weak group of Turkic Bulghārs was assimilated and absorbed by the more numerous Slavs. In Islamic sources this state and its inhabitants are known as Burdjān.

The third and smallest group had retreated along the Volga to the north (this fact is now confirmed by archaeological data) and settled down by the confluence of the rivers Kama and Volga. There they subjugated the Finnish aboriginal population and founded a new state. This group are the Bulghār of Arabic, Bulkār of Persian sources, and this name is applied also to the country and to the capital of their state.

Sources: Our outstanding authority on the Bulghār is Ibn Faḍlān, who in 309-10/921-922 took part in an embassy sent by the Caliph al-Muḳtadir billāh to the Bulghār king. A little earlier is the source preserved in Ibn Rusta, *Ḥudūd al-ʿĀlam*, Gardīzī, al-Bakrī and Marwazī. Some decades younger than Ibn Faḍlan are the accounts of al-Iṣṭakhrī, al-Masʿūdī and al-Muḳaddasī, and from the second half of the 4th/10th century we have the report of Ibn Ḥawḳal. Beside these main sources we find some few remarks in other Arabic and/or Persian works, such as those of al-Bīrūnī, Bayhaḳī, Ibn al-Nadīm etc. In the 6th/12th century Bulghār was visited by Abū Ḥāmid al-Andalusī and two centuries later by Ibn Baṭṭūṭa; but the report of the latter is not free from the suspicion of invention. The historians of the Mongol epoch, such as Ibn al-Athīr, Abu 'l-Fidā', Rashīd al-Dīn, Djuwaynī and others, inform us about the end of Bulghār state. European sources are represented only by the Russian chronicles, which are valuable for the time before the Mongol invasion and after. As our sources come chiefly from the 4th/10th century, the following picture of the internal state of affairs in Bulghār is drawn from these and applies to later times only indirectly.

Territory and population: The centre of the Bulghār kingdom was formed by the triangle between the Volga and the Kama and the country south of the confluence of both these rivers. As to the frontiers of the Bulghār territory, our sources leave us entirely in the dark, and chapter 51 in the *Ḥudūd al-ʿĀlam* (erroneously captioned Burṭās) is totally useless in determining its neighbours. Nevertheles- we can gather some indications about these neighbours and their relation to the Bulghār kingdom. To the north lived various Finno-Ugrian tribes, as Wīsū (in Russian sources V'es, today Veps) and Yūra (Russ. Yugra); both of them at different times were under Bulghar domination, at least nominally. In the east, the Basdjirt (Bashkirs) were subject tot he Bulghārs, and to the south-east some Pecheneg and Ghuzz tribes led their nomadic life quite independently of the Bulghārs. Between the Bulghārs and the Khazars, in the forests, dwelled the more primitive Burṭās/Burdās, probably ancestors of the Mordva; they were subject to the Khazars and the object of frequent raids by the Bulghārs and in later times also incorporated in the state of the latter. According to al-Iṣṭakhrī it was 15 days' journey from the land of the Khazars to the land of the Burṭās and thence another 15 days' to the limits of this people, probably to the north-west. To the west lived various Slavonic (Russian) tribes, but the limits of their eastern colonisation are uncertain. That some of these were in the 10th century subject to the Bulghārs is evident from the fact that the Bulghār ruler is frequently called by Ibn Faḍlān *malik al-Ṣaḳāliba* (king of the Slavs).

The Bulghārs were divided into many hordes and groups, known under different names to Islamic authors. Barṣūla, Ishkil (or Askil) and Bulkār are the three main groups named in Ibn Rusta and his epigons and Ibn Faḍlān mentions, apart from Askil, the tribe of Suwār and a group or a large clan, called al-Barandjār, who were already Muslims and had a wooden mosque. In the forests dwelled the subjugated Finnish tribes and in the towns (at a later period) a mixed population formed by merchants and craftsmen from Russia, Khazaria, Central Asia and even from Baghdād.

Political institutions: The Bulghār ruler bore the title *yiltuwar* (in Ibn Faḍlān *b.ltwār*), a Turkic title known also in the form *älteber* from the Orkhon inscriptions. This title indicates the status of a lesser prince, vassal of a *khāḳān*, in this instance of the Khazar *khāḳān*, and shows also that the Bulghār country originally formed only part of a greater empire and that their ruler was not entirely independent. The Bulghārs paid to the Khazars a sable-fur from each house as a tax, and their dependent status was manifested also by the fact that a son of the Bulghār king lived at the court of the Khazar *khāḳān* as a hostage. These feudal relations were probably loosened by the Bulghār alliance with the caliph in Baghdād, but it seems that only the fall of the Khazar empire in 965 allowed them to become an absolutely independent state. The changed position of the Bulghār ruler after the alliance with the Caliphate is expressed also in the change of the old title *yiltuwar* to the new one *amīr* as a symbol of the cessation of the former allegiance to the Khazar *khāḳān*.

The state of Bulghār did not form a political unity, since the tribal leaders (Ibn Faḍlān calls them *mulūk*) did enjoy a large independence and freedom; this is apparent from Ibn Faḍlān's report of the refusal of the *malik* of the tribe Askil to obey an order of the king. Although the Russian chronicles mention continuously only one Bulghār state, we read *sub anno* 1183 of a war waged by one Bulghār prince, allied with the Komans, against the Great Town of Bolgary and in the Mongol epoch that another state, that of Zhukotin (Djuke-Tau), was founded.

In Ibn Faḍlān's time the relation of the ruler to his people was still quite patriarchal. He used to ride through the capital (a town of tents) alone, unaccompanied by a bodyguard or escort; at the sight of their ruler his subjects rose from their seats and bared their heads. The ruling class was formed, besides the family of king and the tribal leaders, of 500 important families.

Economy and trade: Until the first half of

the 10th century the Bulghārs led a nomadic life, like other Turkic peoples in the Russian steppe, and cattle-breeding was their chief occupation and the foundation of their economy. This is clearly shown in the earlier sources, for according to Ibn Rusta the taxes were paid in horses. Ibn Faḍlān already found the society in a state of change from nomadism to settled life. Many customs of the former way of life were then still surviving, *i.e.*, no permanent capital served as the seat of the ruler, who wandered from one place to another and lived in a large tent. Al-Iṣṭakhrī mentions that the inhabitants spent the winter in wooden houses and the summer in tents. In the latter part of this same century Bulghār was already a flourishing agricultural and trading centre.

The chief products were millet, wheat and barley (Ibn Rusta, Ibn Faḍlān) and these formed also the main food together with horse-meat. From the produce of their fields the people paid no sort of taxes to the king. According to archaeological finds agricultural technique was on a fairly high level of development, which permitted also the export of crops; in 1024 the Russians of Suzdal', where there was a famine, brought wheat from Bulghār and thus saved their lives.

Although agriculture predominated, cattle-breeding still played an important rôle in the economy. It formed the basis for various branches of manufacture, mainly tanning, and also for export. At a later period Bulghār leather (the modern Russian leather *yuft'*) and the Bulghār shoes (Pers. *mūza-i bulghārī*) were particularly well-known, especially in the East. Archaeology has brought to light many other industrial products such as copper-ware, ceramics, jewels and implements of a comparatively high degree.

The main source of the country's wealth was, however, international trade. The river Volga is one of the most ancient trade-routes in the world and the favourable site of the town of Bulghār at the cross-roads of east-west and north-south trade was fully exploited. The Bulghārs themselves traded mainly in the north and in a lesser degree also in Central Asia, but the importance of Bulghār was due in the first place to its function as a meeting-place of foreign merchants, Russians, Khazars, and Muslims. The king levied a duty of 10% on all water-borne merchandise: for instance the Russian merchants paid from every ten slaves one slave as tax. The chief caravan-route led to Central Asia (Khwārizm) and to Kiev. From northern countries the Bulghārs imported furs of martens, sables, beavers, foxes and squirrels, and exchange with these northern peoples, such as the Wīsū and Yūra, was made by dumb barter (see Ibn Faḍlān, Bīrūnī, Marwazī, Abū Ḥamid, Ibn Baṭṭūṭa). The Russians, too, brought furs and as another chief item slaves, who were re-exported to Central Asia by the caravan-route or to the Caspian provinces by the Volga. Al-Muḳaddasī, 325, gives a long list of Bulghār exports: furs of many different kinds, horse and goat skins, shoes, *ḳalansuwas*, arrows, swords, armour, sheep, cattle, falcons, isinglass, fish-teeth, birch wood, walnuts, wax, honey and Slavonic slaves. Many of these items are mentioned also by other sources and as Ibn Rusta, al-Iṣṭakhrī, Abū Ḥāmid etc.

From Islamic countries the chief imports were textiles, arms, luxury goods and ceramics.

The unit of currency was, as in other parts of Eastern Europe till the 12th century, the fur (especially that of foxes, martens and squirrels). There was also silver money current which had been imported from Muslim countries, this money being used to buy the goods of the Russians and Slavs. From the beginning of the 4th/10th century there were struck in Bulghār imitations of Sāmānid dirhams with the name of the original mint and original date, but with the name of the Bulghār amīr Mīkā'īl b. Djaʿfar (probably the son and successor of Djaʿfar b. ʿAbd Allāh, the ruler in Ibn Faḍlān's time). From 337/948-49 we have the first dirham from a Bulghār mint (Suwār), struck in the name of Ṭālib b. Aḥmad, and further coins till the year 357/968. Other coins bear the names of Mu'min b. Aḥmad (366/976-77), struck in Suwār and Bulghār, and of Mu'min b. al-Ḥasan (between 366/976-77 and 370/980), struck in the same mints (see Vasmer, *Wiener Num. Ztschr.* 57, 1924, 63 f.). Besides the names of the rulers there also appear on the coins the names of ʿAbbāsid caliphs.

At the time of his visit Ibn Faḍlān did not notice any towns or villages, as the Bulghārs led a nomadic life. It seems that the building of the fortress, which was one of the principal tasks of the Baghdādī embassy, laid the foundation of the future town of Bulghār. The non-existence of towns in Bulghār prior to the embassy is confirmed on the one hand by the silence of the Ibn Rusta group of sources about these, and on the other hand by the use of the name Bulghār: this name signifies to Ibn Rusta and Ibn Faḍlān always the country or the people, never the town. Al-Iṣṭakhrī is the first author who mentions the existence of the towns Bulghār and Suwār, with wooden buildings and mosques and 10,000 inhabitants. This account is then repeated by all subsequent authors with some small additions (*Ḥudūd al-ʿĀlam*: 20,000 inhabitants; Gardīzī: 500,000 families). The Russian chronicles know a number of Bulghār towns, but owing to their lack of details it is impossible to ascertain their locations. The most important of these towns was *Velikiy gorod Bolgary* (the Great town of Bolgary), which is mentioned many times in the chronicles.

During the past half-century the Russians have undertaken numerous archaeological excavations on the sites of the ancient towns in Bulghār territory. The ruins near the village of Bulgarskoie, a distance of 6 km. from the Volga, show a high culture in the 13th and 14th centuries. All the buildings such as palaces, mosques, baths as well as the walls were of stone; the town had a circumference of about 6 miles and was surrounded by suburbs to the north and west. It must have had a population of some 50,000 souls at this time. The more recent discoveries in Bilyar and Suwār are richer than those in Bulgarskoie and it seems that Bulghār (*i.e.*, the ruins at Bulgarskoie) was the capital only in the 10th and 11th centuries and then in later times its rôle was transferred to Bilyar in the central part of the country, on the river Cheremshan. Which of these two was the "Great town of Bolgary" of the Russian chronicles is difficult to tell.

Religion: According to our oldest sources (Ibn Rusta, ca. 300/912, but with an older account) Islām was well established amidst the Bulghārs and there were some wooden mosques on their territory. This is fully confirmed by Ibn Faḍlān, who during his visit found many Muslims, mosques, and a *khaṭīb* and *mu'adhdhin*. The early Arabic sources are silent about the beginning of islamisation in Bulghār and only the 12th century traveller Abū Ḥāmid relates a legendary account, connected with a popular etymology of the name Bulghār; this

legend, however, is not known to the later Tatar traditions. One of the purposes of the Baghdādī embassies and especially that of Ibn Faḍlān, was the strengthening of Islām, the introduction of Islamic law, the building of a mosque and a *minbar* and the islamisation of the whole country. It seems that this task was successfully accomplished. It was from Central Asia that Islām first reached Bulghār; the manner in which the *adhān* was performed clearly followed the *madhhab* of Abū Ḥanīfa, then ruling amongst the Central Asian Turks. Because Ibn Faḍlān followed the Shāfiʿī *madhhab*, a disputation arose between him and the Bulghār *muʾadhdhin*, backed by the king. The Bulghārs remained true to their Ḥanafī *madhhab* throughout the whole of their history. In towns there were mosques and Friday mosques, and the *Ḥudūd al-ʿĀlam* confirms that the inhabitants of Bulghār and Suwār were zealous fighters for the faith. According to Masʿūdī (*Murūdj*, ii, 16) a son of the Bulghār king had made the pilgrimage to Mecca during the reign of al-Muḳtadir; another proof of the religious zeal of their rulers was the presentation to the mosques of Sabzawār and Khusrawdjird, of a gift in 415/1024 by the Bulghār amīr Abū Isḥāḳ b. Ibrāhīm b. Muḥammad b. B.l.t.wār (see *Taʾrīkh-i Bayhaḳ*, ed. Tehran, 63). It seems that the Bulghārs exercised a decisive influence on the conversion of nomadic Turkic tribes, such as Pechenegs and Kumans, to Islām, and they also nursed hopes of spreading the Muslim faith in Russia, in the 10th century still pagan. In the year 986 an embassy was sent to Kiev in order to convert prince Vladimir to Islām and some time later this same ruler, searching for a suitable religion for himself and his people, invited Bulghār Muslims to explain to him the principles of their faith and to take part in a religious disputation between the representatives of the chief religions.

This northernmost Islamic country posed some ritual problems, owing to the short days and long nights during the winter and *vice versa* during the summer. To perform the daily five prayers in a short day was not an easy task and it was impossible to hold to the prescribed times; similar problems arose in Ramaḍān. This peculiarity of high latitudes, unknown in other Islamic lands, soon attracted the attention of Muslim writers and led to lengthy discussions as to what should be the right solution of these problems. As late as 1860 the Ḳazan historian Mardjānī wrote a treatise concerning this problem (see Togan, *Ibn Faḍlān*, 170, where there are further references).

Language and literature: The language of the Bulghārs, like that of the Khazars, has left very few remnants, mainly in toponymy and onomastics, and, beginning with the 12th century, also a fair number of epitaphs. The linguistic affinity of their language remained a problem a long time. Al-Iṣṭakhrī, 225, tells us that the language of the Bulghārs resembled the speech of the Khazars, but both are unlike the languages of Burṭās and Rūs. (An analysis of Kāshgharī's account of the Bulghār language together with a discussion of the whole problem is to be found in Pritsak, in *ZDMG* 109, 1959, 92-116). It is however, now established that the Bulghār language belongs to the so-called "Bolgarian" group of the Western (or West-Hunnic) branch of Turkic languages, the other groups being Ghuzz, Kipčāḳ and Ḳarluḳ. The "Bolgarian" group consists, apart from the Khazarian, of the following languages: 1) Proto-Bulgarian—the language of the Proto-Bulgarian inscriptions and of the so-called "List of Princes" of the Bulgars of the Danube, found in an ancient Russian chronicle (see O. Pritsak, *Die bulgarische Fürstenliste*, Wiesbaden 1955); 2) Kuban-Bulgarian; remnants of this language are found in loan-words in Hungarian, and 3) Volga-Bulgarian, the language of the epitaphs, written in Arabic script, found on the territory of Bulghār. The degree of affinity between this language and that of the modern Čuvash has not yet been satisfactorily investigated and explained. As the Čuvash have been very little affected by the highly developed Muslim culture of the Bulghārs, it is improbable that they are descendants from these; a greater right to claim such descent belongs to the modern Ḳazan Tatars.

With the sole exception of the above mentioned tomb-inscriptions, dating from the 12th until the 14th centuries, we do not possess any remnants of literary activity of the Bulghars. Ibn al-Nadīm mentions in his *Fihrist* that the Bulghārs, prior to their islamisation, used the script of the Chinese and of the Manichaeans, but no sample of this writing has come down to us. Abū Ḥāmid reports a *Taʾrīkh Bulghār*, a work of Ḳāḍī Yaʿḳūb b. Nuʿmān al-Bulghārī from the beginning of 12th century; in the year 989/1581 Sharaf al-Dīn Husām al-Dīn al-Bulghārī composed in the Tatar language a *Risāla-i Tawārīkh-i Bulghāriyya*, which contains nothing but fabulous stories about the propagation of Islam and the lives of saints; it was printed in Ḳazan in the year 1902.

History: The scarcity of our sources does not permit us to follow the course of Bulghār history closely. The Bulghārs came into the light of written history only at the time of Ibn Faḍlān's visit; at this period their ruler was *yiltawar* Almush b. Shilkī, who subsequently changed his title and name into *amīr* Djaʿfar b. ʿAbd Allāh. The coins supply the name of his son and successor Mīkāʾīl b. Djaʿfar and also the names of another three rulers: Ṭālib b. Aḥmad, Muʾmin b. Aḥmad and Muʾmin b. al-Ḥasan (for the dates see above, section on economy). The Bulghārs remained till the fall of the Khazar khāḳānate a vassal state of the latter. In the year 964 the country in the Volga basin was devastated by the Kievan prince Svyatoslav; an echo of this is found in Ibn Ḥawḳal's story of the conquest of Bulghār, Burṭās and Khazar in the year 358/968-69. This is, however, not the date of the Russian expedition but that of the year in which Ibn Ḥawḳal received the information of these events. This invasion had no lasting effects on the prosperity of Bulghār; similarly the second Russian campaign, led by Vladimir, the son of Svyatoslav, in the year 985 did little damage. On the contrary, the Bulghār gained by the downfall of Khazar *khāḳānate*; as the Russian armies after their victory retreated, the place of the mighty Khazars was occupied by the Pecheneg nomads, representing no real danger to the Bulghārs. For a short period the relations between the Russians and Bulghār improved, as is shown by the trade treaty concluded in the year 1006 on equal terms. Yet both these states were in the same way interested in the fur trade in the north and this led to continuous fighting since the second half of the 11th century; Bulghār history is from this time a history of their wars with the Russians.

In 1088 the Russian town of Murom was captured by the Bulghārs, but remained in their hands only for a short time. After this event they were on the defensive and on many occasions—in the years 1120, 1164, 1172, 1183, 1220—the town of Bulghār was

besieged by the Russians. Only two instances of a Bulghār offensive are mentioned: in 1107 they unsuccessfully attacked the town of Suzdal' and in 1218 they sacked the town of Ust'yug, situated far in the north. The further fighting with the Russians was interrupted for nearly two centuries by the Mongol invasion.

Abū Ḥāmid, who visited the town of Bulghār and the Volga basin in the first half of the 12th century, says nothing about political history except the statement, that in the town of Saḳsīn on the lower Volga there lived a Bulghār *amīr* and stood a Bulghār mosque.

When the Mongols were returning to the east after the victory over the Russians on the river Kalka (1224) they were ambushed by the Bulghārs and suffered heavy losses (Ibn al-Athīr, xii, 254). This was avenged in a most sanguinary fashion; in 1229 the Bulghār vanguard on the river Yāyik (Ural) was put to flight, and, in 1236 according to Muslim sources, in 1237 according to Russian chronicles, the Mongols attacked the Bulghār state and destroyed the capital with all its inhabitants.

From then on the country of Bulghār formed part of the kingdom of the "Golden Horde", the Mongol empire in the Eastern Europe [see BATU'IDS]. The capital Bulghār appears to have risen to a flourishing condition in a relatively short time again; the archaeological finds show a high culture dating just from this period, and the majority of the epitaphs is dated in the Mongol epoch. The subsequent history of the country and the capital is very little known and we are not even told when and why the town was abandoned by its inhabitants. It was not affected by Tīmūr's campaign of the year 1395, but Bulghār was soon afterwards, in 1399, destroyed by the Russians. The town probably suffered more from the rise of Ḳazan (called also Noviy Bulgar, New Bulghār), which was founded just before this time by Batu-Khān, than from these wars. The selection of this town as capital of an independent Tatar state, founded by Ulugh Muḥammad (died 1446), sealed the fate of the town of Bulghār. Its importance as the greatest market on the central Volga passed first to Ḳazan and then to the Russian town of Nižniy-Novgorod (today Gorkiy).

The word Bulghār still remained in use in literature, though only as the name of a country, and as late as the 19th century the Tatars called themselves Bulghārs.

Bibliography: Muslim sources: Ibn Rusta; Ibn Faḍlān; al-Mas'ūdī, *Murūdj*; al-Iṣṭakhrī; Ibn Ḥawḳal; al-Muḳaddasī; *Ḥudūd al-'Ālam*; al-Bīrūnī; Gardīzī; al-Bakrī; Abū Ḥāmid al-Andalusī, *Tuḥfa* (ed. BULGHĀR-DAGH [see TOROS].

BULGHĀR-MA'DEN [see TOROS].

AL-**BULḲĪNĪ**, family of Egyptian scholars of Palestinian origin, whose ancestor Ṣāliḥ settled at Bulḳīna in al-Gharbiyya.

(1) 'UMAR B. RASLĀN B. NAṢĪR B. ṢĀLIḤ, SIRĀDJ AL-DĪN ABŪ ḤAFṢ AL-KINĀNĪ, born 12 Sha'bān 724/4 August 1324, died 10 Dhu 'l-Ḳa'da 805/1 June 1403. He studied at Cairo under the most famous scholars of the day, including Ibn 'Aḳīl [*q.v.*], whose daughter he married, and served as *nā'ib* during Ibn 'Aḳīl's brief tenure as Grand Ḳāḍī in 759/1358. Appointed Muftī in the Dar al-'Adl in 765/1363, he became the most celebrated jurist of his age (cf. Ibn Khaldūn, *Muḳaddima*, ch. 6, § 7 [Quatremère iii, 8]), but except for a short term as Shāfi'ite Grand Ḳāḍī at Damascus in 769/1367-8 (made notable by rivalry with his teacher Tādj al-Dīn al-Subkī) he was never promoted Grand Ḳāḍī, but only to the lesser (though lucrative) office of Ḳāḍi 'l-'Askar, in addition to a number of teaching posts. In later life, however, he was honoured with the title of Shaykh al-Islām, ranked along with or above the Grand Ḳāḍīs, and regarded by some as the "*Mudjaddid* of the eighth century". With his stupendous knowledge he was seldom able to finish any literary work, and besides a treatise on *Maḥāsin al-Iṣṭilaḥ* left only an uncompleted work, *al-Tadrīb*, on Shāfi'ite *fiḳh*. He was the founder of the family's *madrasa* in Ḥārat Bahā' al-Dīn Ḳarāḳūsh.

Bibliography: Sakhāwī, *Ḍaw' Lāmi'*, v, 85-90, 182; Ibn Taghrībardī, *Nudjūm* (Popper) v (= Cairo xii), index; vi, 156; *Manhal Ṣāfī*, index by Wiet, no. 1723 (with family table and additional bibliography); Ibn Ḥadjar, *Durar Kāmina*, ii, 267, 427; Suyūṭī, *Ḥusn al-Muḥāḍara*, i, 148 (135); Brockelmann II 93, S II 110; Ibn Hadjar, *Inbā' al-Ghumr* (BM. MS. Add. 7321), 143a, b.

(2) MUḤAMMAD B. 'UMAR, BADR AL-DĪN, 757/1356-791/1389, eldest son of (1), succeeded him as Ḳāḍi 'l-'Askar and Muftī Dār al-'Adl in 779/1377.

Bibliography: Ibn Ḥadjar, *Durar Kāmina*, iv, 105; Wiet no. 2288. His son, Taḳī al-Dīn Muḥammad: *Ḍaw'*, x, 171; Wiet no. 2350; and grandson, Walī al-Dīn Aḥmad, ḳāḍī of Damascus: *Nudjūm*, vii, 545; *Ḍaw'*, ii, 188; Suyūṭī, *Naẓm al-'Iḳyān* (Hitti), 90.

(3) 'ABD AL-RAḤMĀN B 'UMAR, DJALĀL AL-DĪN, 763/1362-824/1421, succeeded his brother Muḥammad as Ḳāḍī 'l-'Askar in 791/1389. He lived in luxurious style, had a retinue of 300 mamlūks, and in 804/1401 obtained the office of Shāfi'ite Grand Ḳāḍī, which he held with intervals until his death.

Bibliography: Sakhāwī, *Ḍaw'*, iv, 106-114; Ibn Taghrībardī, *Nudjūm* vi, 548-9 and index; Wiet no. 1381; Ḳalḳashandī, *Ṣubḥ*, ix, 180; for his extant works on Ḳur'ān and *fiḳh*, Brockelmann II, 112; S II, 139. His sons: Tādj al-Dīn Muḥammad, Ḳāḍi 'l-'Askar, *Nudjūm*, vii, 361; *Ḍaw'*, vii, 294-5; Suyūṭī, *Naẓm al-'Iḳyān*, 151; Wiet no. 2180; and Zayn al-Din Ḳāsim, *nāẓir al-djawālī*, *Ḍaw'*, v, 181-2; vii, 295; Wiet no. 1807; Ibn Ḥadjar, *Inbā' al-Ghumr*, BM. Or. 5311, 105a, Add. 23,330, 106a, 6, Add. 7321, 258a, b.

(4) ṢĀLIḤ B. 'UMAR, 'ALAM AL-DĪN ABU'L-BAḲĀ', 791/1389-868/1464, youngest son of (1), eight times Shāfi'ite Grand Ḳāḍī of Cairo from 825/1422 until his death, professor in various *madrasas*, and *nāẓir*

of the Baybarsiyya *khānkāh*. He was the teacher of al-Sakhāwī and of al-Suyūṭī in *fikh*. In addition to editing his father's *fatwās* and *Muhimmāt*, completing his *Tadrīb*, and writing his biography, he composed a *tafsīr* and other works on tradition and law.

Bibliography: Sakhāwī, *Ḍaw'*, iii, 312-4; iv, 40 (biography of his brother Ḍiyā' al-Dīn ʿAbd al-Khālik); Ibn Taghrībardī, *Nudjūm*, vii, 792-3 and index; Wiet no. 1197; Suyūṭī, *Ḥusn al-Muḥāḍara*, i, 205 (189); *Naẓm al-ʿIkyān*, 119; Brockelmann, II 96; S II, 114-5.

(5) MUḤAMMAD B. (TĀDJ AL-DĪN) MUḤAMMAD B. ʿABD AL-RAḤMĀN, BADR AL-DĪN ABU'L-SAʿADAT, 819/1417 or 821/1419-890/1485, grandson of (3), served as *nā'ib* for his uncle Ṣāliḥ, was appointed on his father's death in 855/1451 to succeed him as Ḳāḍi 'l-ʿAskar, obtained for 7000 dinārs the office of Shāfiʿite Grand Ḳāḍī in 871/1466, but held it for only four months, and greatly discredited the family by his extravagances.

Bibliography: Sakhāwī, *Ḍaw'*, ix, 95-100: Ibn Taghrībardī, *Nudjūm*, vii, 742; Ibn Iyās (Kahle), iii, 211. His brothers: ʿAlā' al-Dīn ʿAlī, *Ḍaw'*, v, 310 Shihāb al-Dīn Aḥmad, *Ḍaw'*, ii, 119; their sons, *Ḍaw'*, iv, 28; vi, 102; vii, 70.

Collateral branches descended from Abū Bakr b. Raslān and Muḥammad b. Muẓaffar b. Naṣīr, cousins of (1), held office as ḳāḍīs of al-Maḥalla, Alexandria, etc.; see table in Wiet no. 1723 (to be supplemented as above), and Sakhāwī, *Ḍaw'*, i, 253; iv, 228, 232; vi, 296; viii, 62.

(H. A. R GIBB)

BULUGGĪN B. **MUḤAMMAD** [see ḤAMMĀDIDS].

BULUGGĪN (in Arabic: Bulukkīn) B. **ZĪRĪ** B. MANĀD, first Zīrid of Ifrīkiya (4th/10th century). As a reward for distinction in the service of the Fāṭimids as *amīr* of the Ṣanhādja against the Zanāta he was nominated governor of Ifrīkiya by al-Muʿizz li-Dīn Allāh. As he was almost always on campaigns in the central Maghrib, he entrusted the administration of al-Ḳayrawān and eastern Ifrīkiya to a vice-*amīr* whose power continuously increased. The principal events of his life are as follows: Bulukkīn founded Algiers, Miliana, and Médéa (349/960), fought against Abū Khazar (358/968-9), and beat the Zanāta (360/971). His father Zīrī was killed by Djaʿfar b. ʿAlī b. Ḥamdūn al-Andalusī, the rebellious governor of Msila and the Zab (Ramaḍān 360/June-July 971). The new *amīr* of the Ṣanhādja ejected the Zanāta from the central Maghrib (end of 360/autumn 971) and obtained Msila and the Zab. On 20 Dhu 'l-Ḥidjdja 361/2 Oct. 972 he was invested, under the name of Abu 'l-Futūḥ Yūsuf, with the Fāṭimid west except for Sicily and Tripoli. He campaigned in the Maghrib (362-3/973-4), appointed ʿAbd Allāh b. Muḥammad al-Kātib governor of Ifrīkiya, fought the Kutāma (364-5/974-5), and gained Tripoli, Surt, and Adjdābiya (367/977-8). During his last campaign (368-73/979-84) he took Fez, Sidjilmāssa, and Baṣra, beat the Barghawāṭa, and died on the return journey on 21 Dhu 'l-Ḥidjdja 373/25 May 984. He was succeeded by his son al-Manṣūr.

Bibliography: Ibn ʿIdhārī (ed. Lévi-Provençal & Colin), i, 228-32, 239, 296, ii, 243, 293 (Dozy's ed. i, 237-40, 248, 305, ii, 259, 316), iii, 263; *idem*, tr. Fagnan, i & ii, index; Ibn al-Athīr, Cairo 1353, vii, 35, 45-8, 78, 120-1 (tr. Fagnan, index); Nuwayrī, ed. G. Remiro, ii, 101, 107-16; Ibn Khaldūn, *ʿIbar*, vi, 154-7 (*Hist. des Berbères*, iv, index); Ibn Khallikān, Cairo 1310, i, 93; *Mafākhir al-barbar*, 6, 8, 13, 16-8; Ibn Abī Dīnār, *Mu'nis*, 62-4, 71-5; Ibn Taghrībirdī, iv, 72; Ibn al-ʿImād, *Shadharāt*, iii, 53-4, 80-1; Maḳrīzī, *Ittiʿāẓ*, Cairo 1948, 142-5, 180, 186, 196, 198, 294; Ibn al-Khaṭīb, *Aʿmāl*, in *Centenario M. BULŪGH [see BĀLIGH].

BULUWĀDĪN [see BOLWADIN].

BŪNA [see AL-ʿANNĀBA].

AL-**BUNDĀRĪ**, AL-FATḤ B. ʿALĪ B. MUḤAMMAD AL-IṢFAHĀNĪ, ḲIWĀM AL-DIN, a historian who wrote in Arabic and is primarily known for his revision of the History of the Saldjūkids written by his compatriot ʿImād al-Dīn al-Iṣfahānī. Relieving it of certain stylistic embellishments, he dedicated it in 623/1226 to the Ayyūbid al-Muʿaẓẓam (ed. M. Th. Houtsma in *Recueil de Textes relatifs à l'histoire des Seldjoucides*, ii). He says that he had previously similarly treated the History of Saladin, *al-Bark al-Shāmī*, by the same author. He had also written a continuation to the (biographical) History of Baghdād by Khaṭīb Baghdādī (autograph MS. dated 639/1241-42, Paris Bibl. Nat. Arab. 6152). Finally he is the author of an Arabic translation of Firdawsī's *Shāh-nāma* which he also dedicated to al-Muʿaẓẓam in 624/1227 (ed. ʿAbd al-Wahhāb al-Aʿẓam, Cairo 1350). We know nothing more of his life, which he seems to have spent divided between Syria and ʿIrāḳ. The date of his death is unknown.

Bibliography: Houtsma, *op. cit.*, preface; Brockelmann, I, 321, and S I, 554 (where the author is incorrect in distinguishing a *Ta'rīkh Baghdād* from the *Dhayl* to that of Khaṭīb, cf. *ibid.* 563),

BUNDUḲIYYA [see BĀRŪD].

AL-**BŪNĪ** [see SUPPLEMENT].

AL-**BUNT**, Spanish Alpuente, a small *municipio* in the north-west of the province of Valencia, on the eastern slopes of the mountains forming the valley of the Guadalaviar-Turia; it belongs to the *partido judicial* of Chelva, 87 kilometres from the chief town. Situated at the junction of two mountains, Monte del Castillo and loma de San Cristobal, its castle stands on a crag sheer on all sides, which could only be reached by the steep and narrow ascent of an artificial covered way defended by a tower of dressed stone. In the ruins one can see traces of Roman and Arab masonry. It was reached by a drawbridge, some 40 metres long, which has perhaps given its name to the place.

It has no history before the time when, at the beginning of the *fitna* which put an end to the Umayyad caliphate, the Banū Ḳāsim, Kutāma Berbers, bound by a long-standing alliance with the Arab tribe of Fihr, became independent in their small, steep territory, which formed part of the *kūra* of Santiberia.

Of the four petty kings who ruled it, the first was ʿAbd Allāh b. Ḳāsim al-Fihrī, an ʿĀmirid *mawlā*, who took the title of *ḥādjib* and ruled as an independent sovereign. After the caliph al-Murtaḍā was routed before Granada and killed at Cadiz, his brother Abū Bakr Hishām sought refuge in Alpuente and, having been proclaimed by the Cordovans as caliph at the end of Rabīʿ II 418/June 1027, lived peacefully in this obscure place for over two and a

half years, welcomed and well-treated by the ʿĀmirid *mawlā*, who was a supporter of the Marwānid dynasty notwithstanding the harm which the last caliphs had done to his predecessors. When he at last decided to make his official entry into Cordova it was with a retinue as small and countryfied as the place from which he came; he was quickly deposed and it was thus that the Umayyad caliphate came to an end.

ʿAbd Allāh b. Ḳāsim, who ruled with the title of Niẓām al-Dawla and died in 421/1031, was succeeded by his son Muḥammad b. ʿAbd Allāh Yumn al-Dawla, who died suddenly in 440/1048, leaving a son six years old. The son was dethroned after a few months by his paternal uncle ʿAbd Allāh b. Muḥammad, who married the queen mother and lived on good terms with the neighbouring *reyes de taifas* until his death in 485/1092.

Alpuente next passed into the hands of the Almoravids and then into those of the Almohads. When the Almohads were expelled from Andalusia, the *sayyid* who was governor of Valencia, Abū Saʿīd Zayd, grandson of ʿAbd al-Muʾmin, allied himself with James I the Conqueror and offered Alpuente to him; afterwards, when he sought refuge at his court and turned Christian, he submitted Alpuente to the jurisdiction of the bishop of Segorbe, Don Guillén.

There is another Al-Bunt, a farm near Granada, where in 428/1037 Bādis, the successor of Ḥabbūs, and his brother Buluggīn treacherously killed the ʿĀmirid *fatā* Zuhayr, lord of Almería.

Bibliography: Ibn ʿIdhārī, *Al-Bayān al-Mughrib*, iii, 127, 145-6, 215; Ibn Ḥazm, *Djamharat al-ansāb*, 446; Ibn al-Khaṭīb, *Aʿmāl al-aʿlām*, 239-40; Lévi-Provençal, *Hist. de l'Espagne musulmane*, ii, 338; P. Madoz, *Diccionario geográfico*, ii, 197-8. (A. Huici Miranda)

BŪR [see baʿl].

al-**BURĀḲ**, the beast on which Muḥammad is said to have ridden, when he made his miraculous "night-journey". According to Sūra xxii, 1, the "night-journey" led the Prophet from the sacred place of worship, *i.e.*, Mecca, to the "remote place of worship". This latter place has been identified by B. Schrieke and J. Horovitz with a point in the heavens, and by A. Guillaume, recently, with a locality near Djiʿrāna on the border of the sacred precinct of Mecca. The addition of the phrase "the environs of which we have blessed" makes it probable, however, that the passage refers to a place in the Holy Land, namely Jerusalem (cf. Sūra xxi, 71, 81; Sūra vii, 137; Sūra xxxiv, 18: *allatī bāraknā fīhā*). Be this as it may, the "remote place of worship" has always been understood, in the indigenous tradition, as a reference to Jerusalem. It was accepted, moreover, that Muḥammad made the journey from Mecca to Jerusalem and back, not merely in a dream, but—accompanied by Gabriel—in the living flesh and within the space of a single night. The miraculous speed of such a feat was held to be explicable on the ground that Muḥammad rode a beast of exceptional fleetness. It was in this connexion that the legend of al-Burāḳ arose.

In one of the numerous *ḥadīths* that Ṭabarī, in his Ḳurʾān commentary, gives on the "night journey", Muḥammad's mount is described simply as a horse (xv, 6 f.). Most *ḥadīths* of the earlier times call it, however, al-Burāḳ and define it as "a beast (in size intermediate) between a mule and an ass", sometimes with the further detail that it is white. It is also declared to be long (Muslim, *Īmān*, 259), with a long back and long ears (Ibn Saʿd, i, I, 143), with shaking ears (Ṭabarī, *Tafsīr*, xv, 10), saddled and bridled (*ibid.*, 12). The *radjaz*-poet ʿAdjdjādj (d. 97/715) speaks, in connexion with Abraham, of the "bridled Burāḳ" (ed. Ahlwardt, xxxv, 49-52: if genuine, the oldest datable evidence). The earlier Prophets have themselves made use of this beast (Ṭabarī, *Tafsīr*, xv, 10; Ibn Hishām, 263). Its speed is said, as a rule, to be such that "with one stride it moved as far as its gaze reached". In Ibn Hishām, 264, in Ibn Saʿd, i, I, 143 and in Ṭabarī, *Tafsīr*, xv, 3 it is also described as a beast having "wings on its shanks, with which it drives forward its legs". These words are intended to mean, of course, only that al-Burāḳ could move its legs extremely quickly, and not that it was capable of flying. Genuine wings are first ascribed to it only in later texts. It is generally depicted in miniatures as a winged creature (see below). Grammatically al-Burāḳ is construed both as masculine and as feminine.

It is reported in some *ḥadīths* that al-Burāḳ at first resisted the attempt of the Prophet to mount him and was therefore brought to obedience by Gabriel. Muḥammad, after the arrival in Jerusalem, is said to have dismounted and tied the beast to a rock (*ṣakhra* Ṭabarī, *Tafsīr*, xv, 7), or "to the ring, to which the Prophets were wont to tie it" (Muslim, *Īmān*, 259; Ṭabarī, *Tafsīr*, xv, 10; Ibn Saʿd, i, I, 143 f.). Al-Burāḳ, in certain *ḥadīths* transmitted by Bukhārī and Muslim, serves as the steed for Muḥammad's actual "journey to heaven". The legends of the "night-journey" (*isrāʾ*) and of the "journey to heaven" (*miʿrādj*) became combined at an early date. Al-Burāḳ was also included in this confusion of legends and thus developed gradually into a flying steed. The ascent into heaven (*miʿrādj*), in the original form of the legend, occurred however by means of a ladder.

The etymology of the name Burāḳ is not yet fully elucidated. E. Blochet believed it to come from the Middle Persian *bārag*, "steed". J. Horovitz has rightly questioned this interpretation and has declared himself in favour of a derivation from the Arabic root *baraḳa*, "to lighten, to flash". According to this view, Burāḳ could be explained as a (rare) diminutive form. "The miraculous beast would thus have received its name "the little lightning-flash" on account of its fleetness or of its brilliant colour". Yet even this explanation is not wholly convincing. The possibility must also be envisaged that the name Burāḳ goes back to a pre-Islamic tradition now unknown to us. In general, much that is reported about the steed of the miraculous "night-journey" will derive from pre-Islamic tradition. It is, however, difficult to uncover the various links in all their detail.

The later development in the conception of the Burāḳ is to be discerned rather in figurative representations than in literary documents. This statement is also valid in relation to the fact that eventually al-Burāḳ received a human face. Horovitz has pointed to a *ḥadīth* of Ibn ʿAbbās, transmitted by Thaʿlabī (d. 1035), as the earliest literary evidence declaring that al-Burāḳ had "a cheek like that of a man". Balkhī, in his description of the ruins of Persepolis (beginning of the 6th/12th century), designates the monster in the gateway of Xerxes, "whose face resembles a human face", as Burāḳ. The earliest picture yet known of al-Burāḳ dates from the year A.D. 1314 (in a MS. of the *Djāmiʿ al-Tawārīkh* of Rashīd al-Dīn). None the

less, it is clear that the real development occurred within the sphere of the visual arts. The decisive stimuli arose out of those forms of representation which—from the figures guarding the gates of Assyrian palaces onwards—remained alive in the shape of centaurs, griffins or sphinxes and have again and again reappeared as artistic forms. The winged creatures, which in the course of time became petrified into a formal element no longer understood, obtained at last a new meaning in connexion with the legend of the *miʿrādj* of the Prophet. In illustrations to Persian poetry, and especially to the works of Niẓāmī, al-Burāḳ with his rider and with Gabriel as guide came to be a much cherished subject. The splendidly composed picture of the "journey to heaven" in the Niẓāmī MS. Or. 2265 of the British Museum constitutes the highest point of artistic achievement in this evolution.

BURĀḲ (or, more correctly, Baraḳ) **ḤĀDJIB**, the first of the Ḳutlugh Khāns of Kirmān. By origin a Ḳara-Khitayan he was, according to Djuwaynī, brought to Sulṭān Muḥammad Khwārazm-Shāh after the defeat of the Ḳara-Khitay on the Talas in 1210 and taken into his service, in which he rose to the rank of *ḥādjib* or chamberlain. According to Nasawī he had held this same office at the court of the Gūr-Khan or ruler of the Ḳara-Khitay. Being sent on an embassy to Sulṭān Muḥammad he was forcibly detained by the latter until the final collapse of the Ḳara-Khitay and was only then admitted into his service. When the sultan had met his death in flight before the Mongol armies and his son Djalāl al-Dīn Khwārazm-Shāh [*q.v.*] had taken refuge in India, another son Ghiyāth al-Dīn Pīr-Shāh succeeded in establishing himself in Persian ʿIrāḳ (winter of 1221-2). Here he was joined by Burāḳ, whom he appointed governor of Iṣfahān. On account of a quarrel with Ghiyāth al-Dīn's vizier, Burāḳ obtained permission to leave for India in order to enter the service of Sulṭān Djalāl al-Dīn. Attacked *en route* by the governor of Kirmān he not only defeated his assailant but made himself master of his territory, and he then renounced the idea of proceeding to India (1222-3). This is Djuwaynī's version; Nasawī represents Burāḳ as being appointed governor of Kirmān from the outset. When Sulṭān Djalāl al-Dīn appeared in Kirmān in 1224 he confirmed Burāḳ's appointment, though not without some misgivings. In 1226, whilst campaigning in the Caucasus, he received information that Burāḳ had risen in revolt. In his haste to deal with the rebel he travelled, according to Djuwaynī, from Tiflis to the borders of Kirmān in the space of 17 days. He then turned back, either because of Burāḳ's conciliatory attitude or because of the strong defensive measures he had adopted. In 1228 Ghiyāth al-Dīn, having quarrelled with his brother, came as a fugitive to Kirmān. His mother was forced to marry Burāḳ against her will and was then accused, together with her son, of complicity in a plot against his life. They were both put to death though Djuwaynī and Nasawī disagree as to the details. According to the former Ghiyāth al-Dīn was executed first; according to the latter he was kept a prisoner for a time after his mother's death and there was even a rumour that he had escaped to Iṣfahān. Djuwaynī relates that Burāḳ now approached the Caliph announcing his conversion to Islām and asking to be recognised as an independent sultan. The Caliph granted his request and gave him the title of *ḳutlugh sulṭān* ("Fortunate Sultan"). In 630/1232-3 the Mongol commanders operating in the Sīstān area called on Burāḳ to submit to the Great Khan. He excused himself from proceeding to Mongolia in person but sent his son Rukn al-Din instead. Rukn al-Dīn was still *en route* when he received the news of his father's death, which occurred in the late summer or early autumn of 1235.

(W. Barthold-[J. A. Boyle])

BURĀḲ (or rather Baraḳ) **KHĀN**, a ruler of the Čaghatay Khānate. A grandson of Mö'etüken, who fell before Bāmiyān, his father, Yesün-To'a, had been banished to China for his part in the conspiracy against the Great Khan Möngke. Burāḳ himself began his career at the court of Möngke's successor, Ḳubilay Khan (1260-94). When in March 1266 Mubārak-Shāh, the son of Ḳara-Hülegü, was elected to the Čaghatay Khānate, Ḳubilay dispatched Burāḳ to Mā warāʾ al-Nahr with a *yarlīgh* or rescript appointing him co-regent with his cousin. Burāḳ at first concealed the *yarlīgh* and then, having gained the support of the military, attacked Mubārak-Shāh, whom he defeated and captured at Khudjand in September 1266.

Although he owed his throne to Ḳubilay, Burāḳ was soon involved in hostilities with the Great Khan. He expelled the latter's governor of Chinese Turkestan and defeated the army which Ḳubilay sent to restore him. In his war against Ḳubilay's great adversary, Ḳaydu, the head of the House of Ögedei, who had now possessed himself of Semirečye, Burāḳ was less successful. He gained an initial victory but Ḳaydu obtained help from the Golden Horde; Burāḳ was defeated on the Sīr-Daryā and withdrew into Mā warāʾ al-Nahr, where he prepared to offer desperate resistance. However a reconciliation was effected between the two princes and at a *ḳurīltay* held on the Talas in the spring of 1269 there

was organised, under the suzerainty of Ḳaydu, a kingdom completely independent of the Great Khan. Ḳaydu and Burāḳ hailed each other as *anda* ("blood brother") and an agreement was reached that the princes should live in the mountains and on the steppes, keep their herds of horses out of the cultivated areas and not exact from the population anything beyond their legal dues. Two thirds of Mā warāʾ al-Nahr were left to Burāḳ but the government of the cultivated areas was placed in the hands of Masʿūd Beg, a governor appointed by Ḳaydu.

At the time of this *ḳuriltay* Burāḳ had expressed his intention of invading the territories of Abaḳa, the Il-Khān of Persia, and had been encouraged by Ḳaydu, who hoped to see the back of a dangerous rival. Masʿūd Beg was sent to Persia, ostensibly to collect the revenues due to Burāḳ and Ḳaydu, but in reality to spy out the land. Soon after his return Burāḳ crossed the Oxus and occupied parts of Khurāsān and Afghānistān. However he received little support from the troops sent by Ḳaydu and was soon left in the lurch. On 1 Dhu 'l-Ḥidjdja 668/22 July 1270 Abaḳa inflicted a crushing defeat on his opponent, who withdrew across the Oxus with only 5,000 men.

Accounts differ as to how Burāḳ passed the last year of his life. According to Waṣṣāf, he spent the winter in Bukhārā, where he adopted Islām and assumed the title of Sulṭān Ghiyāth al-Dīn. In the following year he undertook a campaign in Sīstān, but his plans were frustrated by the defection of several princes and he was obliged to throw himself upon the mercy of Ḳaydu, who caused him to be poisoned. According to Rashīd al-Dīn's more circumstantial account the defection of the princes took place immediately after Burāḳ's retreat across the Oxus. He appealed for help to Ḳaydu, who advanced very slowly at the head of a large army, his intention being not to assist Burāḳ, but to profit by the situation. Having in the meanwhile suppressed the revolt Burāḳ begged his *anda* to turn back, but Ḳaydu continued to advance. His troops finally encircled Burāḳ's camp and when they entered it the next morning they found that he had died during the night, of fright, as it was said. His death took place according to Djamāl Ḳarshī at the beginning of 670, *i.e.*, on or after the 9th August 1271. He was buried, by Ḳaydu's command, on a high mountain after the Mongol and not the Muslim fashion.

BŪRĀN, wife of the caliph al-Maʾmūn and daughter of the Persian secretary al-Ḥasan b. Sahl [*q.v.*]. According to some her real name was Khadīdja and Būrān simply an appellation. Born in Ṣafar 192/December 807, she was married from the age of ten to the caliph whom her father had faithfully served during the first part of his reign. The wedding celebrations, the splendours of which are described with relish by many authors, did not take place until Ramaḍān 210/December 825-January 826, on al-Ḥasan's estate at Fam al-Ṣilḥ, near Wāsiṭ, at a time when the former secretary had retired from public life, but when the caliph was still desirous of showing his attachment to the family. It was on this occasion that Būrān, according to tradition, interceded for Ibrāhīm b. al-Mahdī [*q.v.*]. Būrān died in Rabīʿ I 271/September 884, aged nearly eighty. She lived in the former palace of Djaʿfar the Barmakid, later known as the Ḳaṣr al-Ḥasanī, which her father had given to her and which after her death reverted to the caliphs.

BURAYDA, the present capital of al-Ḳaṣīm district of Saudi Arabia, is located at 26° 20′ N, 43° 58′ E, on the left bank of Wādī al-Rumah just west of where it flows into the sand of Nafūd al-Sirr. The city lies on a ridge of Nafūd Burayda, 25 km. north of its traditional rival, the city of ʿUnayza on the opposite bank of "the Wādī", as it is usually called in al-Ḳaṣīm. In the alluvial flats scattered among the dunes of Nāfud Burayda there are gardens and villages called collectively al-Khubūb (sing. *khabb*). These fertile plots were formed by the Wādī flood, from which they continue to derive their copious water supply.

The altitude of Burayda is 610 m. at the airstrip. North and west of the city there is excellent grazing and an ample supply of fine salt which once made the city a famous market for horses, camels, and even cattle. The livestock, the agricultural produce and water from al-Khubūb, and the central position of the city on the Baṣra—Medina route were all factors in developing Burayda into one of the great trading centres of Arabia. The mixed population, comprising settled elements of Ḥarb, ʿAnaza, Muṭayr, ʿUtayba, and Bani Tamīm, traded throughout the Arab world. Men from Burayda belonging to the corporation of ʿUḳayl became known from Cairo to Bombay as livestock dealers and caravan men.

The origin of the city is not clear. Yāḳūt mentions Burayda as a watering place of Banū Ḍabīna of the tribe of ʿAbs, and the modern Arab geographers, al-Khāndjī and Ibn Bulayhid, accept this toponym as the source of the present city's name. Without further evidence, this identification appears still unestablished. The date of the city's founding is confirmed by no sound evidence, although local tradition and Western travellers agree roughly that the 10th/16th century is a reasonable possibility. Caskel places the founding of Burayda in 950/1543-4, without citing his source. In any event, the city is first mentioned as a political power by the chief historian of modern central Arabia, Ibn Bishr, who gives a brief note on a battle between Burayda and ʿUnayza in 1107/1695-6.

The local history of Burayda is to a large extent the story of four families and their participation in the politics of central Arabia, either independently or as provincial governors. The first was Āl al-Duraybī (or perhaps al-Buraydī, v. Ibn Laʿbūn, 22), from al-ʿAnāḳir of Bani Tamīm, whose ancestor, Rāshid al-Duraybī, Corancez credits with the founding of Burayda. Little is known of this family other than the fact it carried on an internecine struggle with its cousins, Āl ʿUlayyān of al-ʿAnāḳir. The perennial feud with ʿUnayza caused Āl al-Duraybī to ask for military assistance from Āl Saʿūd in 1182/1768-9. This step soon brought Burayda into the Saʿūdī orbit, placed Āl ʿUlayyān in power, and made al-

Ḳaṣīm the cockpit of the long struggle between Āl Rashīd of Djabal Shammar and Āl Saʿūd.

Āl ʿUlayyān ruled Burayda from 1189/1775-6 to 1280/1863-4 as governors of Āl Saʿūd and, at times, under the Turko-Egyptian invaders from al-Ḥidjāz. Their unreliability brought about the appointment of Djalwī b. Turkī Āl Saʿūd as governor of al-Ḳaṣīm from 1265/1848-9 to 1270/1853-4 and the establishment of the family of Muhannā of Āl Abā al-Khayl of ʿAnaza as governors of Burayda from 1280/1863-4 to 1326/1908-9.

Neither Āl ʿUlayyān nor Āl Abā al-Khayl were able to place service to Āl Saʿūd above their ambitions for local supremacy. During the long war between Āl Saʿūd and Āl Rashīd they served both masters with equal duplicity.

When Āl Saʿūd finally regained al-Ḳaṣīm in 1326/1908-9, the redoubtable ʿAbd Allāh b. Djalwī Āl Saʿūd, son of the former governor, was installed in Burayda as governor of al-Ḳaṣīm in order to eliminate permanently the local intrigues in this strategic area. ʿAbd Allāh was succeeded by his cousin, ʿAbd al-ʿAzīz b. Musāʿad Āl Saʿūd, the present Governor of Ḥāʾil, and later by ʿAbd Allāh b. ʿAbd al-ʿAzīz b. Musāʿad, now Governor of the Northern Frontiers.

The anarchicai years preceding the consolidation of the kingdom by King ʿAbd al-ʿAzīz Āl Saʿūd discouraged the commerce of Burayda, and his subsequent conquests of al-Ḥasā and al-Ḥidjāz gave central Arabia unrestricted access to ports on both coasts, cutting into the entrepreneurial trade of al-Ḳaṣīm. Since 1374/1954-5 the destruction of the city's most famous landmarks, the great city walls and citadel of Āl Muhannā, and the construction of modern government buildings, schools, and hospitals have altered the formerly grim face of Burayda. Only the broad market square of al-Djarada and the winding, narrow streets of shops west of it recall the great trading centre of the past. The population remains fairly stable at an estimated 25-30,000, of whom perhaps half are residents of the hamlets of al-Khubūb.

BURAYDA B. AL-**ḤUṢAYB**, a Companion of the Prophet, was chief of the tribe of Aslam b. Afṣā who, together with about eighty families who were with him, accepted Islam when the Prophet halted at their settlement of al-Ghamīm on his way from Mecca to Medina. (According to Ibn Ḥadjar, however, he accepted Islam after the battle of Badr). Burayda did not join the Prophet in Medina until after the battle of Uḥud, but then he resided there and took part in all the Prophet's campaigns. In the year 9/630 he was sent to collect taxes from Aslam and Ghifār, and then again to call on them to join the campaign to Tabūk. After the Prophet's death, Burayda continued to reside in Medina until the foundation of Baṣra, where he moved and built himself a house. Later he campaigned in Khurāsān and settled in Marw where he died in the reign of Yazīd b. Muʿāwiya, 60-63/680-3. Some sources (Balādhurī and Ibn al-Athīr) state that he moved to Khurāsān in the year 51/671, with al-Rabīʿ b. Ziyād, as one of fifty thousand who moved from Baṣra and Kūfa together with their households on the orders of Ziyād b. Abīhi. According to Ibn Ḥadjar he died in 63/683.

(K. V. ZETTERSTÉEN-[W. ʿARAFAT])

AL-**BURAYMĪ**, an oasis in eastern Arabia, the principal town of which bears the same name and lies in Lat. 24° 14′ N, Long. 53° 46′ E. The town of Ḥamāsā lies west of al-Buraymī town and on the edge of the same grove of date palms. The only other centre in the oasis which might be considered a town, by virtue of its market, is al-ʿAyn, the south-easternmost of all the settlements. The oasis covers an area of roughly 6 km. by 9 km. and includes also the villages of Ṣaʿrā, Hīlī, al-Ḳaṭṭāra, al-Ḳīmī (pronounced locally al-Dzīmī), and al-Muʿtaraḍ. Cultivation has been revived at al-Djāhilī (pronounced locally al-Yāhilī), and members of Āl Bū Falāḥ, the ruling family of Abū Ẓaby [see ABŪ ẒABĪ], have an estate at al-Muwayḳiʿi. The oasis depends on water brought by underground aqueducts (*faladj*, see AL-AFLĀDJ) from the mountains of al-Ḥadjar not far to the east and from the imposing rocky ridge of Djabal Ḥafīt, rising in isolation above the plain immediately to the south.

Al-Buraymī is near the western end of the pass of Wādī al-Djizy, which leads to Ṣuḥār on the coast of al-Bāṭina; it also lies on the principal route from Dubayy through al-Ẓāhira [*q.v.*] to Ḍank, ʿIbrī, and Nazwā, the capital of Inner Oman and long the seat of the Imām of the Ibāḍīs. The inhabitants of the oasis, numbering about 10,000, belong in the main to the tribe of Nuʿaym (the two major divisions of which are Āl Bū Khuraybān and Āl Bū Shāmis), some of whose members are nomadic or semi-nomadic, or to the tribe of al-Ẓawāhir, a settled folk not found in any number outside the oasis. Other elements in the oasis belong to Banī Ḳitab, Banī Kāʿb, Āl Bū Ḥamīr, Āl Bū Falāsā, and Āl Bū Falāḥ.

The network of aqueducts running under the settlements has resulted in an interdependence of the villages, some of which are in a position to control the vital water supplies of others. Dates, alfalfa, vegetables, and fruit—including mangoes and sweet and sour oranges—are exported from the oasis, the principal port of which is Dubayy [*q.v.*]. The town markets do a good business in livestock and are redistribution centres for the tribes and communities of the interior.

Al-Buraymī has been identified as the place early Arab geographers and lexicographers call Tuʾām (*LA* gives the variant Tuʿām, and other variants are listed in Lane), described as a centre for the purchase of pearls (whence *tuʾāmiyya* as a synonym for *luʾluʾa* and *durra*). The accuracy of this identification seems open to question, with the possibility existing of confusion with some place actually on the Persian Gulf. Authors from eastern Arabia also give al-Djaww and al-Djawf [*q.v.*] as old names for the oasis.

Very little is known of the history of the oasis before the nineteenth century. According to local historians it was occupied by the army which the Caliph al-Muʿtaḍid sent overland from al-Baḥrayn in 280/893.

Between 1353/1934 and the outbreak of World War II, discussions took place between Saudi Arabia and the United Kingdom, acting on behalf of the Ruler of Abū Ẓaby, regarding the southern

and eastern bounderies of Saudi Arabia, but Buraymī was not then specifically at a point at issue. In 1371/1952, a Saudi Arabian official (*amīr*) arrived in the oasis and established himself in Ḥamāsa to assert Saudi sovereignty against that of Abū Ẓaby and Muscat. In 1373/1954 the United Kingdom and Saudi Arabia agreed to refer to arbitration the dispute arising out of this action and out of conflicting claims to over 70,000 sq. km. of territory to the south-west of al-Buraymī. Thanks to the arbitration, the geography, modern history, and demography of al-Buraymī have been recorded in great detail, both sides having submitted to the arbitral tribunal elaborate memorials in which these matters are treated. Saudi Arabia contended that the whole oasis is an integral part of its Kingdom. The British maintained that exclusive sovereignty in the oasis should be vested in the Ruler of Abū Ẓaby and the Sultan of Muscat. The British held that the traditional loyalty of Nuʿaym (predominant in al-Buraymī town, Ḥamāsā, and Ṣaʿrā) is to Muscat, and that of al-Ẓawāhir (predominant in most of the other settlements) is to Abū Ẓaby.

Following British charges of Saudi bribery and other misconduct, the British member of the tribunal resigned, whereby the arbitration lapsed in Muḥarram 1375/September 1955 without the tribunal having had an opportunity to pass an opinion on the charges or the merits of the case itself. In Rabīʿ I/October 1955 troops of the Trucial Oman Levies under the command of British officers occupied the oasis, which was partitioned between Abū Ẓaby and Muscat. The Sultan of Muscat appointed a *wālī* in al-Buraymī town, and the Ruler of Abū Ẓaby designated one of his brothers as his representative in the oasis. Ṣaḳr b. Sulṭān, the paramount shaykh of Nuʿaym, and other shaykhs with adherents went into exile in al-Dammām, the capital of the Eastern Province of Saudi Arabia.

(G. RENTZ and W. E. MULLIGAN)

BURDA, 1. A piece of woollen cloth used since pre-Islamic times, which was worn as a cloak by day and used as a blanket by night. That of the Prophet has become famous. As a reward for Kaʿb b. Zuhayr's [*q.v.*] poem, he made him a present of the *burda* he was wearing. It was bought from the son of the poet by Muʿāwiya and was preserved in the treasury of the ʿAbbāsid Caliphs until the occupation of Baghdād by the Mongols. Hülegü caused it to be burned but it was afterwards claimed that the real *burda* of the Prophet was saved and is still preserved in Constantinople.

Bibliography: Dozy, *Dictionnaire des noms de vêtements chez les Arabes*, Amsterdam 1845, 59-64; R. Basset, *La Bānat Soʿād*, Algiers 1910, 90-91 and the authors quoted. On the sacred relics in Istanbul, see Tahsin Öz, *Hirka-i Saadet Dairesi ve Emanet-i Mukaddese*, Istanbul 1953.

2. The name of a celebrated poem by al-Buṣīrī [*q.v.*]. According to the legend he composed it when he was cured of a paralytic stroke which had seized him by the Prophet's throwing his mantle over his shoulders as he had done on a previous occasion for Kaʿb b. Zuhayr. The fame of this miraculous cure spread and the poem, which was entitled *al-kawākib al-durriyya fī madḥ khayr al-barriyya*, came to bear the name *Burda*. Its verses are supposed to have supernatural powers. They are still employed at the present day as charms and recited at burials. No other Arabic poem has attained such renown. Over ninety commentaries have been written on it in Arabic, Persian, Turkish and Berber; the *takhmīs*, the *tathlīth* and the *tashṭīr* that have been made from it are innumerable. The poem begins with the usual *nasīb*, in the style of ancient Arabic poetry; the author then proceeds to regret his youth and confess his faults. His career is contrasted with that of the Prophet, whose miracles, related according to tradition, fill the following verses. The poem concludes with a supplication to Muḥammad and several verses in his honour. There is no trace of Ṣūfism. in it Among the chief commentaries may be mentioned the first in point of date, that of Abū Shāma ʿAbd al-Raḥmān b. Ismāʿīl al-Dimishḳī (596-665/1199-1266) copies of which are preserved in Paris (Bibl. Nat., no. 1620) and Munich (no. 547); that of Ibn Marzūḳ of Tlemcen (died 842/1499-1500) described by Dozy as "stupendus et horrendus"; that of Khālid al-Azharī (died in 905/1499-1500) which has been several times printed, occasionally with that of Ibrāhīm al-Bādjūrī (died 24 Dhu 'l-Ḳaʿda 1276/13 June 1860); that of Ibn Ashūr (Cairo 1296). The text was published for the first time at Leiden by Uri in 1761 under the title, *Carmen Mysticum Borda Dictum*, with a Latin translation. Since then it has often been reprinted, particularly in the East, and there is hardly a *Madjmūʿ* of edifying texts which does not contain it. In the West, von Rosenzweig's edition may be mentioned: *Funkelnde Wandelsterne zum Lobe des Besten der Geschöpfe* (Vienna 1824), with a German translation and notes. The best edition is that of Rolfs, published after his death by Behrnauer, *Die Burda, ein Lobgedicht auf Muhammad* (Vienna 1860), with translations into Persian, Turkish and German; it does not however contain the series of apocryphal verses given by von Rosenzweig. The *Burda* has been translated into various languages; without enumerating all the translations, we may mention, in addition to those mentioned above, that of de Sacy (at the end of the *Exposition de la Foi musul-*

mane by Pīr Alī Birgevi, translated by Garcin de Tassy, Paris 1822) and that of R. Basset, with a commentary (Paris 1894); that of Redhouse, *The Burda* (in W. A. Clouston, *Arabian Poetry for English Readers*, 322-341, Glasgow 1881); G. Gabrieli's Italian translation, *al-Burdatayn* (Florence 1901), 30-85, with notes.

Bibliography: R. Basset, *Les Manuscrits Arabes des Bibliothèques des Zaouias d'ʿAin Madhi et Temacin* . . ., Algiers 1886, 46-54; I. Goldziher, in *Revue de l'Histoire des Religions*, Vol. xxxi, 304 ff.; Brockelmann, I, 264-266. (R. Basset)

BURDJ (pl. *burūdj*, *abrādj*, and *abridja*), square or round tower, whether adjacent to a rampart or isolated and serving as a bastion or dungeon.

Special meanings: each of the twelve signs of the zodiac, considered as solar 'mansions'; more or less fortified country house standing alone amidst gardens (Eastern Maghrib); tower used as a lighthouse (*burdj al-manār*); tower used as a dovecote, especially for carrier pigeons (*burdj al-ḥamām*; see J. Sauvaget, *La poste aux chevaux dans l'empire des Mamlouks*, Paris 1941, no. 157); masonry pier of a bridge; mode (in music); slice, quarter of certain fruits having natural divisions (melons, oranges); row of grains in a head of corn.

In the diminutive feminine al-Buraydja was the name given by the Moroccans to the fortress of Mazagan (see al-Djadīda) during its occupation by the Portuguese.

The word certainly seems to be connected with the Greek πύργος and the Latin *burgus* (whence Germanic *burg*) and has also passed into Hebrew and Aramaic (see Fraenkel, *Aram. Fremdwörter im Arab.*, 235). But the borrowing must be very old, for it is to be found already in Sabaean inscriptions (see De Landberg, *Glossaire Datînois*, i, 148).

(G. S. Colin)

BURDJ

I. Military architecture in the Islamic Middle East

The different forms of towers which the word *burdj* signifies in its usual sense (especially in inscriptions) have always formed the principal elements in the fortifications which were erected in Islamic territories from the years following the Conquest and which were to remain of real importance until changes gradually arose in military ideas as a result of the development of heavy and field artillery. The importance of the protective role played, in the middle ages proper, by these lofty and massive edifices in defending town and citadel ramparts, in serving as defensive strongholds (donjons), or on occasion standing as isolated defensive works (watch-towers, signal towers), should not distract attention from the fact that towers less strictly military in their functions had long existed in the same regions, the buttress-towers which have sometimes happened to be confused with simple architectural devices. To this category—disregarding the minarets of mosques, which have a separate evolution of their own—belong the first specimens of Muslim towers preserved in the Middle East in the ruins of the Umayyad residences, which have a rectangular plan and have their exterior walls appointed with semicircular salients [see Architecture].

These castle-towers, and the towers of fortified enclosures (*ḥayr*), most frequently of modest dimensions, are disposed symmetrically so as to lend rhythm to the blind façades and to give height to the entrances, and are usually solid at the base, or else equipped at ground-floor level with strongholds to which access was not easy (entrances being blocked by partition walls or even opening into residential rooms), and are at times used as latrines; they differed greatly in effect from the defensive towers of the Roman and Byzantine camps, which were, on the other hand, conceived with chambers on all storeys and were easily accessible to the troops of the garrison who could, in the last resort, entrench themselves therein. They must rather be considered as the adaptation of those round buttress-towers which had been known in the Middle East for centuries, an adaptation that the fortress towers of Sāsānid Iran, less perfect in their arrangements than the *castra* of the *limes*, had always employed. Without being absolutely devoid of any military efficacy, since their upper platforms did allow of fire being brought on their assailants, or at least of a watch being kept on the approaches to a castle, and again without differing very much from the towers of the Umayyad forts erected at a similar period on the Byzantine frontier, they became indispensable accessories of princely buildings, secular as well as religious, whose appearance they enriched.

The essentials of this style, typical of the great Umayyad residences, were however soon to become more flexible. Indeed, the custom of strengthening walls in this way, of a particularly happy effect when it was a matter of avoiding the monotony of large surfaces in regular coursed brick, was not to disappear completely, for one finds it recurring in an ʿAbbāsid building of a function as unmartial as the great mosque of al-Mutawakkil at Sāmarrā, the perimeter wall of which is punctuated by forty-four semi-cylindrical brick towers; but especially it persists in the partially fortified residences, the tradition of which was to be cóntinued later by *ribāṭs* and caravanserais, and of which an excellent example is provided, at the end of the 2nd/8th century, by the ʿIrāḳī palace of Ukhayḍir, with numerous half-round towers (angle towers 5.10 m., intermediate towers 3.15 m. in diameter) each with a small firing chamber on the top to which access is given by a covered gallery itself equipped with loopholes, and a device providing for downward fire throughout the length of the gallery which almost amounts to continuous machicolation, (see Creswell, *A Short Account of Early Muslim Architecture*, in Bibliography).

We thus meet again classical flanking towers which in their turn had been retained in mediaeval Arab fortification, having played a part in the Byzantine defences, where their defensive equipment assured, whatever their size and shape (square, polygonal, circular), an increased protection of the sectors of the curtain walls included between their salients. Not only did the new conquerors retain this principle without improvements, most often they were content to keep up or to restore by makeshift means the remarkable circumvallation walls of the towns they had occupied, in the Syrian sites of Aleppo and Damascus as well as later in Asia Minor (Ḳayṣeri) or in Upper Mesopotamia (Āmid). There are, however, as many cases where it remains difficult, in spite of frequently copious epigraphical evidence, to establish a firm difference between previously existing work and later repairs of the Muslim era, which reflect the hazards of the much confused historical events. However, clear differences are evident between one region and another, and the provinces which had been longest under Byzantine occupation were to be also those where the tradition

of the older military architecture was to establish itself most distinctly, only rarely allowing the Saldjūḳ and Artuḳid creations to display originality in this field. Their towers, which are distinguishable only by a few details of structure and ornament, are similar to the preceding types with their superimposed vaulted casemates, with variations that are essentially related to the configuration of the terrain and to the particular problems to which the latter gives rise.

More interesting are the remains of the Fāṭimid era preserved in the Syro-Egyptian lands. Certainly there is often a straightforward accumulation of re-utilised materials, later integrated within more complex systems which render their study difficult.
Fig. 1. Ayyūbid flanking tower at the citadel of Damascus (from J. Sauvaget)

One can, however, make out in the Roman theatre at Boṣrā, which has been transformed into a citadel, a primary phase of construction (inscriptions of 481/1089 and 542/1147-8) in which towers mounted on high terraces support a rampart with two ranks of loopholes and a *chemin de ronde*. Also entirely Muslim are the towers, in an excellent state of preservation, which are adjuncts to the gates of Cairo: Bāb al-Naṣr, Bāb al-Futūḥ, Bāb Zuwayla. These were erected by Badr al-Djamālī in 480-5/1087-92, and are connected with the new enceinte built at the same time. These works, of moderate dimensions (height 8 m. approx.), some rectangular, others round, but all solid up to two storeys of their height, combine defensive possibilities in their two upper stages (super-imposing a platform adapted for firing on a square chamber covered by a cupola and furnished with loopholes) and solidity of basements (stone evenly coursed, rows of columns laid across to guard against the collapse of the walls in case of sapping), all set off by a restrained use of ornament. Here we see a straightforward employment, without quest for the novel, of formulas which were to continue in vigorous use until the revolution introduced in the military architecture of the Middle East by the improvements of the Ayyūbid period.

At this time the experience acquired by the builders during a permanent state of war with the Frankish kingdoms of Palestine, where the Western master-engineers had introduced their own traditions, together with the sudden rise of the Ayyūbid principalities, led to the erection of imposing fortifications which reflected the recent advances in ballistic technique. In the considerable works undertaken at the beginning of the 7th/13th century by al-Malik al-ʿĀdil (specially the citadels of Cairo, Boṣrā, Damascus and Mount Tabor) and al-Malik al-Ẓāhir (at the citadel of Aleppo and in the more important fortresses in north Syria) towers are seen to attain gigantic proportions; to strengthen their defensive sectors, but at the same time to make room for large airy quarters capable of housing permanently a large number of troops who would be assured of communication with the galleries of the enceinte, and with the magazines of the interior, by subterranean passages or covered stairs; and eventually to compensate, by the thickness of their walls and the quality of their construction (by then constructions in fine ashlar were normal), for the weakening which the multiplication of fortified chambers and gangways could have caused. This is shown for example by the two towers of the citadel of Damascus (dating from 606/1209-10) shown here in section. The first (Fig. 1), an asymmetrical salient of great size (rectangular plan of 27 m. by 13 m., walls 3.40 m. thick, projecting 8 m. from the curtain wall, attaining a height of about 25 m.), composed of three vaulted rooms, easily accessible and defended by five loopholes pierced in tunnel-vaulted recesses; its balcony, rising 18 m. above the level of the courtyard, is surrounded by a *chemin de ronde* equipped with loopholes (five in number, as in the lower rooms), leading to four machicolated brattices and bearing a crenellated parapet with 15 arrow-slits in the merlons, an arrangement completed by roughwallings in wood, thus showing the importance attached to the upper works in the general plan of the construction. The second tower (Fig. 2), which well deserves the name of donjon, is distinguished from the former only by its approximately square form (21 m. by 23 m.) and by the presence of a large central pillar, sufficiently massive for a small cell to have been contrived within it at its top storey. To these enormous rectangular bastions, where one occasionally notices, as in the donjon of Boṣrā (612/1215-6), the existence of reception chambers, must be added the less powerful salient towers, which could command the *chemin de ronde* without obstruction, and the isolated post-towers whose role is essentially one of surveillance.

After this the Mamlūk period, where no innovations in the means of attack and defence are at first apparent, was content to continue this splendid heyday of military architecture in Syria. The towers underwent the effects of a slow transformation which substituted small smooth blocks for the powerful courses and the rugged embossments of Ayyūbid masonry, and which delighted in showing off, by sheer virtuosity, a variety of constructional techniques, while enriching the whole with delicate relief

ornaments and equally extraneous polychromatic devices. Mention must, however, be made of a work so remarkable as the Tower of Lions (*burdj al-Sibāʿ*) at Tripoli, a coastal fortification of large dimensions (28.50 m. by 20.50 m.) and of an imposing appearance due to the equilibrium of its proportions and a sure

Fig. 2. Ayyūbid donjon at the citadel of Damascus (from J. Sauvaget)

feeling for ornament, agreeing perfectly with a complex interior composition which corresponds, in its two great upper rooms (Fig. 3), to variations imposed by the requirements of the defence (numerous firing ports, arrangements assuring the safety of the doors on the ground and other storeys) and the inclusion of living quarters (the cistern, mosque, and windows lighting the upper part). The style may be recognised as that of the end of the 9th/15th century, which saw also the erection by the sulṭān Ḳayt-bay of an impressive fortification over the entrance of the citadel of Aleppo in place of the towers of al-Malik al-Ẓāhir. About this time there appeared the embrasures for pieces of ordnance, and terrepleins to bear heavy cannon, which marked the vain attempt to adapt the tower to those very conditions of warfare which were to bring about its rapid disappearance.

Meanwhile, however, a somewhat weak synthesis, though more westernised in certain constructional details, had been conceived by Ottoman military architecture, which had been able to erect, in order to command the passage of the Bosphorus and maintain the investment of Con-
Fig. 3. Longitudinal section of a Mamlūk tower at Tripoli (from J. Sauvaget)

stantinople, the last specimens of fortresses where the utilisation of cannon was reconciled with adherence to the principles of mediaeval fortification. The towers of the two castles of Anadolu Ḥiṣārı (begun 793/1390-1) and Rumeli Ḥiṣārı (dated by its inscription of 856/1452), to which may be added those of the castle of Yedi Ḳule (erected shortly after this by Meḥemmed II Fātiḥ within the enceinte of his new capital of Istanbul), are characterised by the perfection of their system of defence (Fig. 4), realized at Rumeli Ḥiṣārı on a colossal scale (diameters of three donjons ranging from 23.80 m. to 26.70 m., thickness of walls varying from 5 m. to 7 m.), and by certain features (hollow cylindrical interiors divided into many storeys by joists, circular *chemin de ronde* surrounding, at the upper level, a covered drum with conical roof) which show the imitation of the flanking towers of the Genoan enceinte of Pera.

II. Military architecture in the Muslim West

1. The background.—The Muslim West found, in Barbary and in Spain, a tradition of fortification going back to the Late Roman Empire, and in Tunisia to the Byzantine reoccupation by Justinian. Roman fortifications of the Late Empire were numerous. Though simple in their lines, they had no regular plan as had the Roman camps except for the rather small *castella* situated on the plains; more often than not they were adapted to the shape of the area to be protected and to the configuration of the terrain. The buildings, when not composed of re-utilised materials, were constructed of a solid core between two rubble facings, sometimes levelled to course by brick snecks. The curtain walls were

sometimes as much as ten metres high, with crenellated parapets; their thickness was considerable, averaging three metres. Towers, set at intervals a bowshot apart—say 20 m.—abut the curtain walls; generally they were semicircular, 5-6 m. in diameter, less usually square or oblong, and most usually built on the outer side of the ramparts. The angle towers were often large bastions, solid at the base, containing at least one defensive chamber, and higher by one storey than the curtain.

The gates gave access to the interior of the enceinte by a direct passage with an open section between two covered rooms, which made it possible to overwhelm any opponent who might have forced his way into the building; these were flanked by towers with several tiers of defence. The solid mass of the gateway itself gave on to the interior of the ramparts. Town gates sometimes returned to the monumental arrangements of those of the Roman empire, opening by a double or triple passage.

No fortifications are known which could have been erected in the mediterranean provinces of Spain after the reconquest by Justinian; but the Byzantine fortresses of Africa are well known to us. The plans of the plains fortresses or *castella* are very regular in form. Only the square tower is used, exterior to the curtain and projecting markedly; it is always solid at the base. The construction is of stone with no additional brickwork. When older materials are not re-utilised, coursed rubble preponderates, strengthened by freestone lacing-courses. The curtain, less thick than in the 3rd/9th and 4th/10th centuries, bears a *chemin de ronde* with crenellated parapet which gives access to the towers' defensive chambers. The gate is no more than a simple passage, with straight corridor. In all this we see only the survival, and frequently the impoverishment, of the methods of the Late Empire.

2. Ifrīḳiyan fortification from the 3rd/9th to the 6th/12th century, and its continuations.—The Aghlabid fortresses.—Aghlabid fortification is known from vast complexes, the enceintes of Susa and Sfax, which go back to the 3rd/9th century in the main lines of their construction: *e.g.*, the ramparts of unprepared or roughly prepared rubble, with lacing-courses at the corners, and with freestone toothing. The curtain is flanked with oblong towers—canted with a batter in exceptional cases—one storey higher than itself. In Susa the *chemin de ronde* is in places carried on a deep arcading. Some small *ribāṭ*s are very similar to Byzantine forts.

Mixed with these local traditions are some Western influences, especially in the Susa *ribāṭ* and the primitive *ribāṭ* at Monastir. Their rectangular enclosures are flanked, at the corners and at the middle of each side, by bastions which are nearly all semicircular. Within there are some buildings against the four walls, leaving the large courtyard free. The influence of the Umayyad castles of Syria, themselves derived from the Roman *castella*, is noticeable here. The pyramidal form of some towers, imitated from the lower stages of minarets of the same period, reveals Egyptian influence.

Rammed earth (*pisé*) would have been used in some rapidly erected fortifications. In the ramparts of al-Ḳayrawān and in the government towns of al-ʿAbbāsiyya and al-Raḳḳāda it is probable that bricks of mud or baked earth replaced stone. The old traditions of the desert countries paved the way for other eastern influences coming from Mesopotamia and Persia.

All this Aghlabid fortification is a happy and lively synthesis of a still dominant local tradition and of importations from the East.

Fortification under the Fāṭimid and the Ṣanhādja dynasties.—Various ramparts in Ashīr and the *Ḳalʿa* of the Banū Ḥammād, built of rubble, continue, care in with less construction, the fortification technique of the preceding age. In mountainous country flanking towers are rarer. The palace of Zīrī at Ashīr is contained within a rectangular enceinte flanked at regular intervals by oblong towers, with an interior courtyard. Some innovations, however, were brought in at the creations of the Fāṭimids themselves. The outer wall of al-Mahdiyya is built of rubble, flanked with powerful towers, at least one of which is decorated with high niches, which were later to decorate the walls of the *manār* at the *Ḳalʿa* of the Banū Ḥammād, for the new plastic art applied to walls with great success in civil architecture was often transferred to fortresses. The only town gate which has been preserved is surmounted by a powerful high structure; its exterior face is framed by two battered towers, and the archway of the gate gives on to a long vaulted corridor braced with tie-beams, formerly cut off by iron-barbed folding-doors. Gateways in the Roman and Byzantine tradition were never as powerful as this.

It seems that there was in Fāṭimid construction the germ of a new military architecture; but, except in their new towns situated at some distance from the old centres of civilization, the Ṣanhādja dynasties rarely built great fortified works, and the Hilālī invasion was to stop the architectural development of Ifrīḳiya for a long period.

Thus under the Fāṭimid and Ṣanhādja dynasties, the new eastern influences, which seem to have been more noticeable in the Caliphs' own regions, were not able to supplant. the local traditions and the formulas derived from the Aghlabids.

3. The fortification of Muslim Spain and its expansion in Africa.

i) *The 3rd/9th century.*—Muslim fortification in Spain is understood here as not beginning until the middle of the 3rd/9th century, with the Conventual of Merida, built by the *Amīr* ʿAbd al-Raḥmān II. This castle, which guards the approach to the bridge over the Guadiana, forms an almost regular oblong. The curtain-walls are flanked with oblong towers which do not project far beyond them and are very closely spaced. Without doubt the architect was inspired by the counterfort towers which punctuate the walls of the great mosque of Cordova. At the entrance one finds the arch of horseshoe shape (the intradosial curve being greater than a semi-circle) which is as dear to Umayyad as to Visigothic art. Pilasters support the springing of the entrance arch and protect the hinges of the door-leaves. The construction is in freestone, which is employed by preference in Visigothic architecture and to which the initial phase of Umayyad art remains faithful. Here, however, it is a question of the reutilisation of stone from previous work, and the arrangement of it as headers and stretchers, dear to the Cordovan architects, is never regular.

ii) *The 4th/10th century.*—Under the Cordova caliphate, military architecture was rapidly developing, as indeed was all monumental art. There are many variations in the plans employed: in mountainous country the enceintes are adapted to the irregularities of the terrain, whereas in the plains they tend to a geometric regularity which is fully realised in works of the more modest dimensions.

The towers, oblong or very rarely polygonal, project more noticeably than those at Merida and are more widely spaced out. The enceinte is never doubled and has no keep, and no buildings are erected in the interior.

The gateway gives on to a straight passage of little depth. In the larger enceintes it opens between two towers, and in the smaller castles is protected by a bastion. The curtain is of varying height, from 7 to 10 metres, and bears a *chemin de ronde* with its exterior parapet capped, as on the towers themselves, with pyramidal merlons. This form of merlon, different from those which were employed in the Middle East and Ifrīḳiya, seems to be derived from the crenellated *chemin de ronde* of the Byzantine Empire, the capping of which was pyramidal in form.

The stone header and stretcher courses, regularly arranged, which are at their best in the great monuments of this dynasty, are employed in the finest fortresses. But usually a more economical material is preferred, a concrete of gravelly soil and lime, consolidated in formwork; this had very ancient Iberian origins and doubtless never ceased to be employed in the construction of provincial and popular buildings. In certain fortifications in mountainous sites rubble appears. Frequently also dressed stones, in varying proportions, are used together with the concrete cast in forms.

All the Umayyad fortresses succeed, in their simplicity, by the precision of their proportions—often very different from one fortress to another—and by the happy balance of their masses. The very spirit which is exhibited in military architecture is that which inspired the whole art of the caliphate, a twofold solicitude for originality without exclusiveness and for faultless harmony.

iii) *The 5th/11th to 7th/13th centuries in Spain.*—The 5th/11th century, under the *mulūk al-ṭawāʾif*, sees the emergence of the palace-fortresses which, in a complex of moderate dimensions, array a whole range of rooms against the ramparts. This type of isolated palace perhaps existed also in the preceding period. When one sees a *Mudejar* castle, like that of Santa Maria del Puerto, following the lines of the Sūsa *ribāṭ* (itself inspired by the Syrian Umayyad forts), one is tempted to believe that the fortress in question has had a Muslim ancestry within Spain itself, doubtless deriving from the founder of the dynasty who had tried to re-create in Andalusia something of his lost motherland. The castle of al-Ruṣāfa, which preserves the name of a palace of his ancestors, did manage to recapture the plan of the great rural residences of the Caliphs of Damascus.

Outside the *Castillejo* of Murcia stands a fortress of regular oblong plan with towers closely spaced; but living quarters fill the entire space between the ramparts and the patio, the voids of the towers are used to break up the largest rooms medially, and the courtyard is replaced by a garden of sunken parterres with crossing paths.

On the other hand, the enclosures of towns or of large fortresses no longer tend to a geometrical regularity as in the days of the caliphate; the trace of the curtain walls is adapted to the lie of the land. Sometimes they are still flanked by narrow, closely-spaced towers, but more frequently the bastions are of greater size, and, while defending a more or less regular interval, they strengthen the irregularities in the trace or the weaker part of the ramparts. Occasionally there is a double enclosure with inner and outer wall, and the more vulnerable points may be strengthened by barbicans. The *ḳaṣaba*, forming an acropolis above the town and containing the royal residence, has always its own single or double enceinte.

The bastion with superposed vaulted rooms makes its appearance at this time. These powerful works are arranged round the enceinte itself, and not as donjons or keeps. Muslim Andalusia brings in a new form at the same period, the *albarrana* tower, which projects in front of the curtain to which it is connected by a wall, through which usually runs an arcade. The vaulted bastions and the *albarrana*, which give excellent flanking protection, may be combined.

The gate, which opens sometimes between two towers, sometimes under the wing of a sharply projecting bastion, has always an angled passage; at the entrance and exit are two arches with springing on pilasters, which enclose the housing of the door-leaves. The portcullis is not found.

Freestone becomes increasingly rare, except in the gateways, and is sometimes combined in lacing courses with ashlar or concrete. This latter material almost always preponderates.

Thus, perhaps as a matter of necessity—for Christian pressure had become more and more formidable and had extended its conquests—the fortification of Muslim Spain made great progress in the 5th/11th and 6th/12th centuries.

iv) *The 5th/11th to 7th/13th centuries in Africa.*—The same type of Spanish fortification tended to spread, from the beginning of the 6th/12th century, in the African empire of the Almoravids and the Almohads, the rulers of Muslim Spain. The first Almoravid fortresses are of rubble, and still remain within the Mag͟hribī traditions in their coursework and in other details; but in fortification, as in mosques and palaces, Andalusian influences quickly asserted their superior sway. This is the great period of concrete enceintes with strongly projecting oblong towers, arranged at more or less regular intervals. In Africa the lines of this fortification tended to be simplified, as large vaulted bastions and *albarrana* towers do not appear. However, some innovations occur in the fortified gateway, where the opening is always framed by two towers, usually strongly projecting, and the gate itself constitutes a massive bastion which extends to the rear of the curtain and contains a passage with two or three bends, with an undefended gallery. The arch of the gateway, its jambs, and their framing, show a rich decorative treatment of carved stone. The great Almohad gateways of Rabat and Marrakes͟h are among the finest—certainly the richest—of fortified gateways of Islam.

4. Fortification in the Muslim West from the 8th/14th to the end of the 9th/15th century.—In spite of the fundamental unity of the architectural styles then current in Muslim Spain and the Mag͟hrib, the evolution of fortification was different in the Peninsula and in Africa. Spanish Islam was then confined to the small kingdom of Granada, a vassal of Castile but often in revolt against its suzerain, which depended on the shelter of a fortified frontier. A good number of the castles of this frontier imitated some of the Christian fortresses which confronted them. Built of stone, with a double enceinte and a donjon, they appeared as strangers, almost, in the Muslim fortification of the West. But soon Christian influences, far from revitalising the traditions of Muslim Andalusia, became degraded into bastard types. They are not found in the capital itself, nor in the works of rather later date.

We have here the forms created in the 5th/11th and 6th/12th centuries reproduced without much modification. The gateways with their sinuous passages are powerful works. At the Alhambra in the 8th/14th century, and at the castle of Gibralfaro at Malaga, large bastions, widely spaced, replace the smaller and closer towers of the common enceintes. Where the introduction of cannon gave no time for modifying the fortification, rudimentary cannon platforms were installed at the feet of the earlier works.

In North Africa, in the kingdoms of Fez and Tlemcen, Almohad traditions were maintained almost unchanged. Curtains and towers were made of concrete. The gateways, always imposing and with sinuous passages, were rather more often constructed of brick than stone. Ifrīḳiya, while admitting some Almohad influence, remained faithful to stone and to her traditional forms of detail.

Thus, in this long period, fortresses, as well as palaces and sanctuaries, scarcely went beyond a mere repetition of the forms of the past.

5. Fortification in modern times in the Muslim West.—The development of artillery brought about a profound transformation of ideas of fortification in all European countries; but North Africa created no new forms, being content to imitate more or less faithfully the models which Europe provided. Again, she admitted these importations only when it was necessary to defend herself against a European nation, as in the coastal regions. Everywhere else, however, the older mediaeval fortification continued to prevoid; the governments which divided Barbary had only to keep order among, or to bring to subservience, tribes who were without cannon.

In Morocco, the fine fortifications which the Portuguese erected in the 10th/16th century at different parts of the coast were imitated only accidentally at the Saʿdid *ḳaṣaba* of Agadir. All other coastal forts were the work of Europeans, often renegades, in the service of the sultans. In the 18th century the fine complex at Mogador, planned by a Frenchman, was the work of an English renegade and Italian architects. These European-inspired types of fortification were imitated in the 19th century by local master-builders.

In Algeria and Tunisia the Ottomans introduced a modernised type of fortification more or less inspired by European models, and fairly close to the works which were being erected here and there on the Moroccan coast. The gun bastions and the enceintes, often defended by ditch and counterscarp, were still high; low-built fortifications in the Vauban style were unknown in North Africa.

Thus the Muslim West, in its fortresses as in all its military organisation, showed its archaism. The few borrowings it made from Europe were overlaid on mediaeval traditions, but did not modify them.

6. The fortified Berber works.—North Africa, Morocco in particular, had fortified buildings also in several mountainous regions and in the oases bordering the Sahara. Some stone villages and trading stations, of a plan almost always irregular, had no enceinte as such except the constructions whose joint exterior wall formed the rampart; but almost everywhere this old architecture made way for buildings in pisé and mud-brick brought from the oases. Some villages, especially in the hills, are irregular in form and are made of an assembly of houses presenting a continuous front. But the architecture of the oases has its own very characteristic design and decoration. On the plains the fortified villages (*ḳuṣūr*) are of very regular plan; they are surrounded by an enceinte pierced with gates which are often of great size and protected by the means of angle bastions. The influence of Hispano-Moorish fortification is here very apparent.

The isolated residential castle, the Moroccan *tig̲h̲remt*, has a more distant origin. It has the form of a *castellum* with four angle-towers, less commonly with two. If the plans are in the Roman tradition, the plastic art is of a more ancient stock: the pyramidal towers, often with an entasis, derive without doubt from Pharaonic Egypt. The minarets of the early centuries of Islam in Barbary were also often truncated pyramidal towers. In the gates and on the wall cappings of some *ḳuṣūr* one finds in many cases in the Moroccan oases a rich ornament in mud-brick, derived from Hispano-Moorish geometrical elements. The older Berber buildings have taken in, at different times, forms of the Muslim middle ages which had been adopted by official works of fortification in the country.

Hence Barbary, Morocco in particular, is an astounding museum of fortifications inspired by very ancient traditions.

III. The tower in Islamic architecture in India

1. General. — The word *burdj* in Urdū, whence it has spread into other languages of India, means always 'tower' or 'bastion', including those towers on the walls of fortified palaces whose function is decorative and residential rather than functional in any military sense, those bastions which, taking the form of a protuberance in the trace, may in fact include several tower-like buttresses, and also those massive bastions within the enceinte, built after the introduction of cannon, as mountings for heavy pieces of ordnance.

The following accounts relate to the use of towers only; the history of Islamic fortification in India is treated in a separate article (see ḤIṢĀR). Minarets (Urdū *mīnār*) have a different development and are not considered here.

2. The Dihlī Sultanate from the 6th/12th to the 10th/16th century. — The earliest Muslim invaders had found a land already well provided with fortified works, of which Hindū India had a long tradition which remained active later wherever Islam had not spread; their earliest static military enterprise was the occupation and modification of existing works. In Dihlī, for example, it was the old fort of Pṛthvīrādj Čawhān, Ḳilʿa Rāy Pithorā, which was garrisoned first by Muslim troops, and within the citadel of which (Lālkot) the earliest Indian mosque, named Ḳuwwat al-Islām, was erected in 587/1191 by Ḳuṭb al-Dīn Aybak. The curtain here is flanked by closely spaced towers, defended by a broad ditch, with gates set in the re-entrant angles of powerful bastions formed

by a bulge in the trace with several small counterfort towers. Most of the standing fortification is probably of the period of ʿAlāʾ al-Dīn Khaldjī, c. 704/1304 (Beglar, *ASI Report* IV, 1874), probably following the trace of the Hindū work; the towers are for the most part counterforts of shallow projection. The walls of ʿAlāʾ al-Dīn's newer capital Ṣirī were built at about the same time to the north-east of the old capital (Campbell, *Notes on the history and topography of the ancient cities of Delhi*, in *JASB*, xxxv, I [1866] argues that Sirī was the name given to the 'Kutb citadel', *i.e.*, Lālkoṭ, and that the site now generally accepted as Sirī was built by Bahlōl Lōdī in the 10th/16th century; this is convincingly refuted by Cunningham, *ASI Report* I, 1871); some stretches of walling remain, with semicircular battered bastions spaced about a bow-shot apart, capped like the walls with merlons, and with a continuous
Fig. — Section of angle bastion at Tughlukābād

A — Battlements; B — Mural gallery; C — Exterior gallery (access from mural gallery in curtain); D — Inner vaulted corridor; E — Bolster plinth; F — Rock scarp.

chemin de ronde supported on an arched gallery. The principles employed are similar in the new capital, Tughlukābād, built in 720-3/1321-3 by Ghiyāth al-Dīn Tughluk, and its appendage ʿĀdilābād built by Muḥammad b. Tughluk in c. 725/1325: the walls of both, of rubble core faced with rough quartzite ashlar, are punctuated with strongly projecting semicircular bastions, and these and the walls, both of which are strongly battered, have three tiers of defence consisting of external gallery, main mural gallery, and battlements, the latter with two ranks of loopholes. The rock outcrop below the wall trace is scarped, over which is a bolster plinth faced with masonry to the base of the wall proper, forming both a continuous buttress and a protection against sapping (see Fig.). The bastions are most closely spaced around the citadel. Gates open between two bastions, and are often defended by barbicans. ʿĀdilābād is defended further by a bailey and outer wall. Within many of the towers are the remains of grain silos. The tomb of Ghiyāth al-Dīn forms a strong fortified outwork to the south of Tughlukābād, with similar bastions except for the absence of an outer gallery.

Besides ʿĀdilābād, Muḥammad b. Tughluk formed yet another 'city of Dihlī' with the building of Djahānpanāh (725/1325), the walls of which enclosed the ground between Kilʿa Rāy Pithorā and Sirī; these have semicircular counterfort bastions similar to those of ʿĀdilābād, though without the external gallery, and are at one point interrupted by a dam and sluice, called Sāt Palāh, obviously to retain water within the walls for the use of the defenders.

This reign saw the Dihlī diaspora and the transfer of the capital to Devagiri, renamed Dawlatābād [*q.v.*]. The three lines of defences between the pass and the acropolis consist of walls with regularly spaced battering round bastions, projecting less than in the contemporary northern work, and without exterior galleries. Bastions round the gates are larger and of greater projection, some being of the form of a half ellipse; a succession of rounded bastions forms a hornwork with two courts where the city is entered over the lower moat. The many modifications made during the Bahmanī period are referred to below.

Fīrūz Shāh Tughluk was responsible for building yet another 'Dihlī', his new capital of Fīrūzābād (755-71/1354-70), which was later sacked by Tīmūr and of which no traces remain beyond his citadel or *koṭlā*, much ruined. Walls and towers here have a strong batter; the towers are semicircular, and it is probable that they were crowned with open kiosks (*čhatrīs*). Traces of low barbicans outside the gates have angle towers of smaller dimensions, presumably for the use of sentries. The contemporary complex housing the Kadam-i Sharīf, which, protected by its sanctity, escaped the Tīmūrid sack, is protected by a strong bastioned curtain which shows the principles of Fīrūz's fortification better than the ruined *koṭlā*: walls and towers have lost the bolster plinth, and defence against sapping is effected by small box-machicolations. Many buildings of this period, especially tombs and *dargāhs*, are contained within fortified enclosures. At this time the *burdj* is developed as an ornamental feature: mosque enclosures and *ʿidgāh* walls regularly show angle and end bastions, capped by circular or square *čhatrīs* or by low domes, always with the typical Fīrūzid batter, which is imitated in those purely decorative buttresses, where the slope is carried up into a *guldasta* finial, which flank the gates of Fīrūzid mosques in Dihlī (Begampurī, Khirkī, Sandjar, Kalān *masdjids*: see Dihli, Monuments), of which echoes occur in the Lōdī buildings at Dihlī, and in Djawnpur [*q.v.*] and elsewhere. Fīrūz Shāh Tughluk is known to have restored many of the buildings of his predecessors, and, though he speaks of having restored the towers of the tomb built by Iletmish—*i.e.*, the tomb of Abu 'l-Fatḥ Maḥmūd Nāṣir al-Dīn at Malikpur—it is probable, from the style, that the corner towers are, at least in their upper stages, Fīrūz's work.

It seems that the later Tughluks and the 'Sayyids' created no new fortified works, except that it is recorded that Mubārak Shāh in 824/1421 replaced the walls of Lāhawr, destroyed by Tīmūr, by a mud fort. His own tomb (836/1433), however, lies in the fortified complex of the small town of Mubārakābād, yet another 'city of Dihlī', where the towers are small but otherwise differ little from preceding patterns. Sikandar Lōdī is said to have built a fort at Āgrā in 908/1502; but there had already been a fortress here, and the present fort is the work of Akbar, and it is thus difficult to assess how much of the trace is due to Sikandar.

3. The Deccan forts from the 8th/14th to the 11th/17th centuries. — Here again there were many fortified Hindū works which the Muslims found and later occupied, and to some extent modified even in their earlier years. Their first original production seems to have been at Gulbargā [*q.v.*], where the thick (16 m.) walls are doubled, with towers on the inner curtain. All towers are very solidly built, of semicircular form; many have barbettes added later for the use of artillery, and this modification is to be attributed to the ʿĀdil Shāhīs of Bīdjāpur, since an inscription on the Kālā pahāṛ Burdj claims that in 1066/1655 'Muḥammad ... rebuilt every *burdj*, wall and gate' (Haig, *EIM*, 1907-8). Within the enceinte, on high ground, stands a large isolated masonry bastion, the mounting for a large piece of ordnance. In Bīdar [*q.v.*], already a Bahmanī outpost, whither the capital was transferred by Aḥmad Shāh al-Walī, there had been a double line of Kākatīya fortifications in 722/1322 (Ḍiyā al-Dīn Barnī, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind., 449) when it first fell into Muslim hands; in the rebuilding of 832-5/1429-32 Persian and Turkish engineers are known to have been employed, as in a further rebuilding in the time of Muḥammad Shāh III (867-87/1463-82) by his *wazīr* Maḥmūd Gāwān, after the introduction of gunpowder in the Deccan. The older round bastion is largely superseded by the polygonal variety, although some round and square towers remain; large trapstone blocks with fine joints in the older work give way to smaller rubble set in deeper beds of mortar in the repairs and restorations. The towers are solid at the base, defended by chambers at the same level as the curtain battlements and by their own battlements one stage higher; like the curtain, they are further defended by heavy box machicolations. At the angles of the irregular trace, and also standing free within the enceinte, are large and massive bastions, some of imported trapstone and others of the local red laterite, built as mountings for heavy pieces of ordnance; these may be, as in the Kalyānī Burdj, defended by two or more successive machicolated curtains, and may provide room for the accommodation of a large number of troops. The walls of Bīdar town are of the Barīd Shāhī period (built 962-5/1555-8); the 37 bastions include the massive Muṅḍā Burdj of two defended stages, approached by steps built on the back wall of the bastion itself, which mounted a long-range gun. The disposition of the bastions is here, as in the case of the fort curtain, variable: they are closest at those points in the curtain most vulnerable to attack. The Čawbārā in Bīdar town, presumed to be part of Aḥmad Shāh's defences, is a tall conical watch-tower, 23 m. high, commanding a view of the entire plateau and lowlands, with a massive circular plinth with guard-rooms and an internal stairway. There was much activity in the construction of military works in the Deccan in the heyday of the Bahmanī dynasty [*q.v.*]: Dawlatābād, Bīdjāpur, Ńarnāla, Gāwilgaṛh, Eličpur, Narnālā, Parenda, Naldrug, Panhālā, Warangal, Golkoṅḍā, Mudgal, Rāyčur, etc. At Dawlatābād the old defences were strengthened and heightened, in smaller stone or brick, and one striking example of this is the building up of a bastion in the second court of the entrance hornwork by filling in the old embrasures, which were the same height as those of the curtain, adding a high upper storey while maintaining the batter of the walls, and building a projecting arcaded oriel supported on corbels of re-utilized Hindū work as a further watch chamber. There are thus two upper defensive chambers, pierced with embrasures for small cannon, over the solid base. At Parendā—like most Deccan forts, attributed by local tradition to Maḥmūd Gāwān but in fact probably earlier—the towers on the fausse-braye and curtain are defended by heavy bartizans. At Ḳandahār (Yazdani, *Hyd. Arch. Dept. Report*, 1331-3 F./1921-4 A.D., 3) are circular bastions on the fausse-braye but rectangular bastions on the curtain, with inscriptions of 998/1588 giving Turkish names as the responsible engineers. At Kalyānī polygonal and round towers on the curtain have the merlons replaced by box machicolations on corbels, while a conspicuous bastion within the barbican has a mural chamber defended by bartizans, with a barbette on the battlements, which have two tiers of loopholes. The old Kākatīya fort of *Golkoṅḍā* [*q.v.*] ceded to the Bahmanīs in 766/1364, has three successive curtain walls which show a variety of towers: square, cylindrical, conical, polygonal—the mantlet before the citadel gate has a *burdj* in the form of a half-tetradecagon—and scalene, and, on a later enclosure, a 'ninelobed' bastion of strong projection, each of whose 'lobes' is a quarter-circle on the exterior face. This last feature is found also at Naldrug. At Bīdjāpur [*q.v.*] the city walls, of the time of ʿAlī ʿĀdil Shāh I (completed 973/1565), which are of uneven quality since each noble was responsible for one section, have some 96 bastions, mostly semicircular, with embrasures protected by stone hoods. Many are later modified to take heavy guns (inscriptions of Muḥammad and ʿAlī II), one, the Farangī or Tābūt Burdj built to accommodate several large *djindjāls*. On high ground, well within the walls, is the Ūprī or Ḥaydar Burdj, a massive cavalier oval in plan and some 24 m. high, built (insc. 992/1583) to mount a large (over 9 m. long, 15 cm. bore) piece of ordnance. The Sherza Burdj, one of the largest, is built out from the curtain, to which it is connected by a broad passage forming a 'head and neck'.

Later fortifications in the Deccan, constructed or rebuilt during the Marāṭhā supremacy, generally follow the patterns of the Muslim period.

4. North India from the 10th/16th to the 12th/18th century. — Bābur's conquest in 932/1526 brought no new style of building in its early days, although his interest in the Hindū fortress of Gwāliyar communicated itself to his successors who developed the palace-fort *par excellence*. His son Humāyūn began yet another city of Dihlī, called Dīnpanāh, but this was razed by the Afghan usurper Shēr Shāh, who commenced building his own capital of which now little but the citadel remains, constructed on a site identified with the ancient Indraprastha and known as the Old Fort (Purānā Ḳilʿa, Ḳilʿa-i kuhnā). The walls and widely spaced bastions of the trapezoidal trace are of roughly

coursed rubble, while the gates, each flanked by two strongly projecting bastions, are of fine polychrome ashlar. The towers are semicircular, solid to a height of 5 m., with several tiers of superposed rooms and galleries, with small box machicolations; one gate has an internal machicoulis, a rare feature in India. Humāyūn's re-occupation of the Purānā Ḳilʿa added nothing, and Mug̲h̲al building of forts starts with Akbar. Sikandar Lodī's fort at Āgrā had fallen into ruin, and was razed and rebuilding started in 972/1564. There are semicircular bastions on the inner and outer curtains, the same height as the walls; the inner ring is much higher than the outer, reaching 30 m. Outer and inner bastions are concentric, and both have crenellated battlements defended by two or more ranks of loopholes, some protected by stone hoods for downward firing. The inner Dihlī gate on the west is defended by two magnificent half-octagonal bastions, with a blind arcade at ground-floor level finely decorated with marble and polychrome ashlar, a wide arch in each face on the first floor with an exterior balcony, and a defended chamber above with two ranks of loopholes. The battlements above have some merlons equipped with stone hoods, and others are pierced. Each of these towers is topped by a *čhatrī*. The work throughout the walling is in red sandstone ashlar over a rubble core. Akbar's new city (979-1571) of Fatehpur (Fatḥ-pur) Sikrī is undistinguished in its fortification: the outer single curtain is incomplete, and its half-round bastions are simply bulges in the trace. The citadel was enclosed rather than fortified, though boasts one large bastion, the Sangin Burd̲j̲, semi-octagonal with an internal hall, for a guard which was probably ceremonial rather than defensive. The new city was soon abandoned, and Akbar moved back to Āgrā, which was later occupied by his son D̲j̲ahāngīr. From his time presumably dates the Mut̲h̲amman Burd̲j̲ (later called Saman ['jasmine'] Burd̲j̲), a half-octagon projecting on the river side of the fort surmounting a semicircular buttress; it is of two storeys with open arcades on each face, with fine *pietra dura* decoration. Some of this work is probably of the time of S̲h̲āhd̲j̲ahān, whose principal buildings were, however, at Dihlī [*q.v.*] and Lāhawr (Lahore) [*q.v.*]. The New Fort at Dihlī (Lal Ḳilʿa) was commenced in 1048/1638 and completed within ten years. The nearly rectangular trace has semicircular bastions at regular intervals, defended by one tier of loopholes at about half their height and by two rows in the battlements; the merlons are decorated by cusping. Each tower is surmounted by a *čhatrī*. Similar towers on the barbicans are of the time of Awrangzīb. The north and south bastions on the river front are larger, two storeys in height above the level of the courtyard, crowned by *čhatrīs* S̲h̲āh Burd̲j̲, Asad Burd̲j̲); between them is a larger half-octagon, the Mut̲h̲amman Burd̲j̲, originally known also as Burd̲j̲-i Ṭilā on account of a gilded copper dome; the five sides which overlook the river are filled with marble screens. Lāwhr fort, built by Akbar at about the same time as Āgrā fort (Abu 'l-Faḍl, *Āʾīn-i Akbarī*, Blochmann's trans., i, 538) has a similar S̲h̲āh Burd̲j̲, also called Mut̲h̲amman Burd̲j̲ insc. showing completion 1041/1631-2, of great size (45 m. diameter). Manucci in his *Storia do Mogor* says of these works: 'At each place [Dihlī, Āgrā, Lāhawr] there is a great bastion named the Xaaburg [S̲h̲āh Burd̲j̲] . . . they are domed and have architectural adornments of curious enamel work, with many precious stones. Here the King holds many audiences for selected persons, and from it [sic] he views the elephant fights. . . .' (Irvine's trans., ii, 463). Certainly also the Mut̲h̲amman Burd̲j̲ in Dihlī was used for the emperor's daily *dars̲h̲an* (ceremonial showing himself to the people).

These Mug̲h̲al *burd̲j̲*s had no pretence of being fortified works, and thus what started as a grim military work was transformed into a vehicle for Mug̲h̲al art. The walls of S̲h̲āhd̲j̲ahān's Dihlī were bastioned, certainly; but these were so rebuilt in the British period that it is not possible to recapture the Mug̲h̲al arrangements.

Bibliography: S. Toy, *The strongholds of India*, London 1957, describes some Muslim fortifications as sites, little information on towers; historical details unreliable, no history of fortification. Reviewed and expanded by J. Burton-Page, *The study of fortification in India and Pakistan*, in *BSOAS*, xxiii/2, 1960. For the buildings of the Dihlī Sultanate: A. Cunningham, *ASI Report*, i, 1871; J. D. Beglar, *ASI Report*, iv, 1874; H. Waddington, *ʿĀdilābād: a part of the 'fourth' Delhi*, in *Ancient India*, i, 1946; J. A. BURD̲J̲ [see NUD̲J̲ŪM].

BURD̲J̲IYYA. The Burd̲j̲iyya regiment was second in importance only to the Baḥriyya [*q.v.*] regiment throughout the history of the Mamlūk sultanate. It was created by Sulṭān al-Manṣūr Ḳalāʾūn, who selected for this purpose 3,700 of his own Mamlūks and quartered them in towers (*abrād̲j̲*, sing. *burd̲j̲*) of the Cairo citadel. Hence its name. The sources mention the creation of this unit only when they sum up Ḳalāʾūn's career at the end of his rule, without specifying any date. It was composed of Mamlūks belonging to Caucasian peoples (*al-D̲j̲arkas wa 'l-Āṣ* = Circassians and Abk̲h̲āzīs). Al-Maḳrīzī (*K̲h̲iṭaṭ*, ii, 214, ll. 22-26) mentions Armenians (*Arman*) instead of the *Āṣ*. The K̲h̲iṭāʾiyya and Ḳipčāḳīs mentioned by him in the same passage as performing duties pertaining to the *K̲h̲āṣṣakiyya* [*q.v.*] do not seem to have belonged to the Burd̲j̲iyya.

During the reign of Sulṭān Ḳalāʾūn (678-89/1279-90) and that of his son al-As̲h̲raf K̲h̲alīl (689-93/1290-93), the participation of the Burd̲j̲iyya in the affairs of the state was not very conspicuous. Immediately after K̲h̲alīl's murder, however, they are mentioned as the main body supporting *amīr* Sand̲j̲ar al-S̲h̲ud̲j̲āʿī, while the main supporters of his rival, *amīr* Kitbug̲h̲ā, were the Wāfidiyya [*q.v.*] Tatars and the S̲h̲ahrazūrī Kurds. Kitbug̲h̲ā defeated Sand̲j̲ar, ascended the throne after having deposed the boy-king al-Nāṣir Muḥammad b. Ḳalāʾūn (694/1294) and retaliated against the Burd̲j̲iyya by expelling part of them from the citadel and quartering them in different parts of the

capital: Maydān al-Lūḳ, al-Kabsh and Dār al-Wizāra.

This was the first blow inflicted upon the regiment. Kitbughā, however, was soon deposed and replaced by Lādjīn (696/1296) and the Burdjiyya recovered their former position. They became extremely powerful after having murdered Sulṭān Lādjīn (698/1298) under the leadership of their commander Kurdjī Muḳaddam al-Burdjiyya. During the second reign of al-Nāṣir Muḥammad b. Ḳalā'ūn (698-708/1298-1308) the leaders of the regiment gradually became *de facto* rulers of the Mamlūk sultanate. In the struggle between the *amīrs* Baybars al-Djashnakīr and Sallār over the Mamlūk throne, the Burdjiyya naturally were on the side of the first, who was one of their number, whereas the second was supported by the Ṣāliḥiyya (the remnants of the Baḥriyya regiment created by al-Ṣalih Nadjm al-Dīn Ayyūb) and by the Ẓāhiriyya (the Mamlūks of al-Ẓāhir Baybars). Baybars defeated Sallār without difficulty and succeeded al-Nāṣir Muḥammad as sultan (708/1308).

Under al-Muẓaffar Baybars, the Burdjiyya reached the peak of their power, but their success was short-lived, for al-Nāṣir Muḥammad soon ascended the throne for the third time (709-741/1309-1340) and dislodged the Burdjiyya from their powerful position. As al-Nāṣir subsequently ruled for more than thirty years without interruption, the Burdjiyya gradually degenerated, and after his reign they are hardly mentioned by the sources.

Orientalists usually call the first and second periods of Mamlūk rule "the Baḥrī and Burdjī periods". This terminology is hardly ever used by the Mamlūk sources, which call the early part of that rule, as well as the whole Mamlūk rule, *Dawlat al-Turk*, and its latter part *Dawlat al-Djarkas*.

BURDUR, a town in S.W. Asia Minor, distant about 4 km. from the south-eastern shore of the lake which bears the same name, *i.e.*, the Burdur Gölü. The view that the old Limobrama (interpreted as ? Limnobria: "the lake town") was situated at or near the modern Burdur is of doubtful value (cf. Ramsay; Pauly-Wissowa, s.v. Limobrama; and Honigmann). The present name of the town, Burdur ("Buldur" in the speech of the local Turkish inhabitants and in the accounts of various travellers who have visited this region; also "Purdur' (Πουρδούρ) amongst the Orthodox Christians who lived here formerly), points towards an identification with the Polydorion (Πολυδώριον) of mediaeval times. As to the lake of Burdur, it is the old 'Ασκανία λίμνη in Pisidia. Burdur, in the course of the long conflict between the Byzantines and the Turks in Asia Minor during the 11th-12th centuries, passed into the hands of the Saldjūḳ sultans of Rūm. The town came thereafter under the rule of the Begs of Ḥamīd early in the 14th century and, still later, of the Ottoman sultans in the 15th century. The population of Burdur included in former times a considerable number of Orthodox Christians, who spoke Turkish as their language (Cuinet noted that the town contained 4,000 Greeks and also approximately 1,000 Armenians). Burdur, under Ottoman rule, was at first a *ḳaḍā'* of the *sandjaḳ* of Ḥamīd in the *eyālet* of Anadolu and, subsequently, a *sandjaḳ* in the *wilāyet* of Ḳōnya. It is now the administrative centre of the present Turkish province of Burdur. The town had, in 1955, a population of almost 20,000 inhabitants.

BURGAS (BURGAZ, near Zossopolis, ancient Appolonia) 42° 30′ N., 27° 28′ E., after Varna Bulgaria's major port and fifth largest town. Burgas is the centre of a district, a resort with a recently modernised harbour, textile, fishing and salt industries situated on Burgas gulf with a population of 43,684 in 1376/1956 (district 72,795). The name derives from Greek *Pyrgos*. Murād I took Burgas district circa 778-9/1367-8 (B. de la Brocquière, 168-70 cited in Jorga, *GOR*, i, 207; I. H. Uzunçarşılı, *Osmanlı Tarihi*, i, 61, 69; I. H. Danişmend, ... *Kronoloji*, i, 47-8). Burgas played a minor role in Ottoman history, serving as a

naval base for Balkan campaigns and as a shipbuilding centre notably after the battle of Lepanto, 979/1571 (Uzunçarşılı, *op. cit.*, ii, 230, iii[1], 21). An Ottoman reform commission studying modern fortifications visited its castle in 1198/1784 (*ibid.*, iv[1], 483) and it was a Russian staging point in their advance on Edirne in 1245/1829. The exiled Polish poet Adam Mickiewicz resided there briefly in 1272/1855. Burgas played little part in the late 19th century Bulgarian independence movement culminating in 1326/1908 and 1332/1913.

Burgaz is also the name of one of the Prince's islands (ancient Antigone) off Istanbul (G. Schlumberger, trs. N. Yüngül, *Istanbul Adalari*, Istanbul 1937; Cuinet, iv, 684-7; E. Mamboury, *The Tourists' Istanbul*, Istanbul 1953) and of 10 villages in western Turkey (*Türkiye'de Meskun Yerleri Kılavuzu*, i-ii, Ankara 1946-7, ii, 181), and appears in Arababurgaz, Çatalburgaz and Lüleburgaz, none of which is described here.

BURGHUSH, Sp. Burgos, capital of the province of the same name, in a valley on the banks of the Arlanzón. It has 80,000 inhabitants and is one of the most interesting towns of Spain because of the monuments there, which show the importance of the place in the Middle Ages, when it was known as *Caput Castellae*. It was repeopled in 268/882 by Count Diego Rodríguez and attacked in 308/920 by ʿAbd al-Raḥmān III, who destroyed it once more in 322/934, after having besieged Ramiro II at Osma. As far back as 328/939-40 the famous Fernán González was already count of Burgos and declared himself independent of León. His borders stretched to Castile, the Asturias de Santillana, Cerezo, Lantarón, and Álava. At the close of the reign of ʿAbd al-Raḥmān III Burgos, like León and Pamplona, paid him tribute. In the middle of the 6th/12th century Burgos was, according to Idrīsī, a large town with many markets and a lively trade, a flourishing city. The river divided it into two parts, each being bounded by ramparts; in one half the majority of the population was Jewish. Among its monuments is the celebrated Hospital del Rey, contemporary with that liberally endowed by the Almohad caliph Yaʿḳūb al-Manṣūr at Marrākesh.

(A. HUICI MIRANDA)

BURGHŪTHIYYA take their name from Muḥammad b. ʿĪsā the secretary, who was called Burghūth (Ar. = flea). They hived off from the Nadjdjāriyya [*q.v.*], holding with them that God has a nature (*māhiyya*), that His attributes only tell what He is not (generous says that He is not stingy) and He always knew what would happen. Peculiar to the Burghūthiyya is the doctrine that God always speaks from His self or essence, *i.e.*, that speech is an attribute of His essence, though a report says that according to them His speech is action (*lahu kalām fiʿli*) whence it was concluded that the Ḳurʾān was not the word of God. He must not be called "doer" or "creator" for both these words can be used of man in a bad sense; "you create a lie" (*Sūra* 29, 16/17). Secondary acts (*muwalladāt*) are the work of God through the nature of things. God is empty space and (at the same time) a body in which the (created) things occur (Ibn Abī Ḥadīd, i, 295). Man is a combination of accidents, capacity (*istiṭāʿa*) occurs together with part of the act and, if a limb moves, the limbs at rest have some share in causing the movement just as the moving one has some share in keeping the others at rest. He who "acquires" an act cannot be called the doer of it. If Burghūth is the Muḥammad b. ʿĪsā of *Maḳālāt* 552, he is important for the development of theology, for he taught that God cannot compel a man to any particular act, to become a believer or an unbeliever. This does not conflict with his being called a *djabrī* for al-Ashʿarī, too, was so called.

BURGOS [see BURGHUSH].

AL-BURHĀN, "decisive proof", "clear demonstration". The term is Ḳurʾānic and signifies a "brilliant manifestation", a "shining light" come from God (iv, 174), a "manifest proof" (xii, 24), which may take the form of that supreme argument of authority which is the miracle (xxviii, 32). In correlation, *burhān* is also the decisive proof which the infidels are called upon—in vain—to furnish as justification of their false beliefs (ii, 111; xxi, 24; xxiii, 117; xxvii, 64; xxviii, 75).

The first connotation of *burhān* is not properly right discursive reasoning; it is rather the manifest evidence of an irrefutable proof. But consequently, it designates also the mode of argumentation, and the argument itself which leads to that certitude. Thus it can take on several meanings according to the rules admitted in apodeictic demonstration (*ḳaṭʿī*).

1. In the initial development of *fiḳh*, *burhān* refers to the quality of certitude which is proper, especially in al-Shāfiʿī, Ibn Ḥanbal and Dāwūd, to reasoning (*istidlāl*) "in two terms", from greater to lesser or from lesser to greater, in order to prove the radical distinction between or the identity of two comparable "things" and to conclude: "certainly", "it is so" (*inna*, rather than *anna*). That is the *burhān innī*. It is based upon an argument of authority, which can be either a scriptural text or the eye-witnessing of an obvious fact.

The form of argumentation (cf. Massignon, *Passion d'al-Ḥallāj*, 578): reducing to the absurd (*ibṭāl*), exposing a defective comparison (*muṭālaba*), indicating an internal contradiction (*muʿāraḍa*), establishing the obvious univocality of a term (*taḥḳīḳ*). The certitude thus obtained is considered

more reliable than that obtained by rational investigation of motive or cause (*ʿilla*).

2. The investigation of the *ʿilla* was, on the contrary, one of the characteristics of the Ḥanafī school, where the juridical argument took the form of a syllogism. In the logic of the *falāsifa*, use of the *ʿilla* became recourse to a universal mean term. *Ḳiyās* [*q.v.*], reasoning by analogy from the "sources of the law", was transformed into an Aristotelian syllogism, and *burhān* came to designate syllogistic demonstration. Aristotle's *Posterior Analytics* were translated as *Kitāb al-Burhān*, in the *Fihrist* of Ibn al-Nadīm, by al-Fārābī and by the *Ikhwān al-Ṣafāʾ* etc. Ibn Sīnā concluded his treatise on logic (*Nadjāt*, 60 ff.) with a discussion of *burhān*. The adjective *burhānī* is applied frequently to apodeictic demonstration, to the syllogism "composed of propositions which are certain" (*yaḳīniyyāt*).

The typical form of *burhān* (*al-burhān al-muṭlaḳ*) is a syllogism in which the obviousness of the premisses is either immediate or mediate. This reasoning may be of two modes: 1) *burhān al-lima*, where an extra-mental causal nexus is grasped, by the mean term, between the premisses and the conclusion; b) *burhān al-inna*, where, starting from a fact, the obviousness of the conclusion arises, without causal reference, from the nexus between the premisses and the mean term. The latter mode, says Ibn Sīnā, "gives the reason for the judgement, not the reason for the being" (*Ishārāt*, 84). Mlle Goichon suggests another reading: *in* instead of *inna*; thus it would mean "a conditional argumentation". However it is indeed the *burhān innī* of the early jurists which is evoked here, and the "victorious presence of the fact" (Massignon). But transposed into a logic of Aristotelian terms, the "decisive proof" of the reasoning in two terms becomes an inductive syllogism which states, as opposed to a syllogism of causal inference which explains. One may compare this analysis (although there is no complete identity) with the Aristotelian distinction between the knowledge of the reason and the knowledge of the fact (*Posterior Analytics*, 78a, 22-27). Ibn Sīnā and after him al-Djurdjānī (*Taʿrīfāt*), emphasise that in every *burhān* the mean term of the syllogism is the *ʿilla* which connects the major to the minor premiss. If this mean term has an explanatory value and a causative scope *in the actual nature of things*, we have to do with the *burhān al-lima*; if on the other hand it is only an affirmation of the mind which states a fact, without making explicit the *raison d'être* of the major premiss nor the inclusion in it of the minor, we are then dealing with a *burhān innī*. If we keep the reading *in*, the passage could be interpreted: if such a fact exist, it follows that.

The later *ʿIlm al-kalām*, which undertook to refute the *falsafa* but which was thoroughly influenced by it, lost sight of the testimonial evidence which the fact, as an argument of irrefutable authority, brought to the *burhān innī* of the ancients. It took it to be the simple affirmation of existence of the *quia*, whilst the *burhān al-lima* alone remained explanatory of *propter quid*. In his commentary of al-Īdjī, al-Djurdjānī wrote: "The reasoning (*istidlāl*) which moves from effect to cause is called *burhān innī*; that which proceeds from cause to effect, is causal inference (*taʿlīl*) and *burhān limī*".

Whether it refers to the extra-mental cause or not, whether it proceeds by *lima* or by *inna*, *burhān* thus becomes a syllogistic demonstration: to the extent to which Aristotelian logic, adopted by the later *ʿilm al-kalām* as well as by the *falsafa*, circumscribes in this sense the rules of human reasoning. But going back beyond the *Kitāb al-Burhān* (*Posterior Analytics*), and primarily with reference to Ḳurʾānic texts, it still retains its original sense of "overwhelming proof", whatever way leads to certitude, discursive reasoning by a universal mean term, or testimonial proof by the argument from authority.

BURHĀN, *takhalluṣ* of Muḥammad Ḥusayn b. Khalaf al-Tabrīzī, compiler of the Persian dictionary *Burhān-i Ḳāṭiʿ*, completed in 1062/1651-2 at Ḥaydarābād and dedicated to Sulṭān ʿAbd al-Allāh Ḳuṭb Shāh, ruler of Golconda. A new revised, annotated and illustrated edition of the *Burhān-i Ḳāṭiʿ* was published in Tehran in 4 vols., 1330-5 s./1951-6 (ed. Muḥammad Muʿīn). A Turkish translation was presented to Sulṭan Selim III by the historian ʿĀṣim [*q.v.*]. (ED.)

BURHĀN. The ruling family in Bukhārā in the 5th/11th and early 6th/12th centuries, known by the title *ṣadr al-ṣudūr* [*q.v.*].

BURHĀN ʿIMĀD SHĀH [see ʿIMĀD SHĀH].

BURHĀN SHAH I [see NIẒĀMSHĀH].

BURHĀN SHĀH II [see NIẒĀMSHĀH].

BURHĀN AL-DĪN, ḲĀḌĪ AḤMAD, a poet from eastern Asia Minor (revealing in his work characteristics of the Ādharī dialect) and a man of learning, also a stormy petrel, who was, in succession, *ḳāḍī*, *wazīr*, *atabeg* and *sulṭān*. He was born on 3 Ramaḍān 745/8 January 1345 in Ḳayṣariya (now Kayseri), his father being Shams al-Dīn Muḥammad, a *ḳāḍī* of the third generation, descended in the male line from the Oghūz tribe of Sālūr, which dwelt originally in Khwārazm. Burhān al-Dīn received a thorough education in the customary branches of learning, first from his father, and thereafter in Egypt, Damascus and Aleppo, and returned in 766/1364-1365 to the town of his birth, where the ruling prince Ghiyāth al-Dīn Eretna found such satisfaction in the young man of 21 years that he raised him to the office of *ḳāḍī* (in the place of Shams al-Dīn Muḥammad, who had died one year before) and even bestowed on him his daughter in marriage. Burhān al-Dīn, none the less, took part secretly in the revolt of the Begs during which his father-in-law was slain (767/1365-1366). He had, under the succeeding but incompetent princes of the House of Eretna an active rôle as *wazīr* and *atabeg*, until, in 783/1381-1382, he proclaimed himself Sultan of the lands subject to the House of Eretna (cf. *IA*, fasc. 32, 309), with his residence in Sīwās and with the usual prerogatives of sovereignty (the minting of coinage

and the mention of his name in the Friday Prayer or *khuṭba*).

The eighteen years of his rule as Sultan are filled with ceaseless conflict against rebellious Begs at home and with wars against such powerful neighbours as the Karamānids and the Ottomans. Always incredibly venturesome and courageous, he gave battle to a superior Egyptian force and was defeated (789/1387); he soon turned, however, to the same Mamlūks of Egypt for aid against the Aḳ-Ḳoyunlu, who were pressing forward from the East, and then fought in alliance with the Aḳ-Ḳoyunlu against the rebellious Begs of Amāsiya and Erzindjān. The decisive moment came after he had ordered the execution of Shaykh Mu'ayyad, the rebellious governor of Ḳayṣariyya — an act which brought down on himself the anger of the Aḳ-Ḳoyunlu Ḳara-Yülük ʿOthmān Beg. Burhān al-Dīn died in a hostile encounter with the Aḳ-Ḳoyunlu chieftain at Ḳara-Bel (according to Saʿd al-Dīn, however, it was in the mountains of Kharput, to which Burhān al-Dīn had fled before the Ottoman Sulṭān Bāyazīd I). Some accounts written with a different motivation (Ibn ʿArabshāh, Schildberger) state that Burhān al-Dīn fell into the hands of Ḳara-Yülük and was executed in Dhu 'l-Ḳaʿda 800/July-August 1398. Other dates are also found in the sources. The inscription on the still extant tomb of Burhān al-Dīn at Sīwās bears no date. At Sīwās, too, lie buried both the son of Burhān al-Dīn, Muḥammad Čelebi (died 793/1391) and also his daughter Ḥabība Saldjūḳ-Khātūn (died 850/1446-1447), so-called because the grandmother of her father was, on the male side the granddaughter of the Saldjūḳ Sulṭān of Rūm Kay-Kā'ūs II (van Berchem, *CIA*, iii, 50).

It is astonishing that Burhān al-Dīn, in the course of a life passed in the ceaseless unrest of politics and war, still found enough time and inner repose to be able to have an active rôle as a man of learning and a poet. His juridical works (written in Arabic) are the *Tardjīh al-tawḍīḥ* (composed in Shaʿbān 799/May 1397) and the *Iksīr al-saʿādāt fī asrār al-ʿibādāt*, a work that is held in esteem even now amongst the *ʿulamā'*. Of far greater importance is the *Dīwān* of Burhān al-Dīn, containing over 1500 *ghazal*s (without the normal arrangement in alphabetical sequence and without *makhlaṣ*), 20 *rubāʿīs*, 119 *tuyugh*s (these latter in East-Turkish dialect) and some isolated distichs. The prosody is quantitative and reveals in a number of places metrical deficiencies which would have been impossible in later times. Quantitative half-lines are to be found in the *tuyugh*s side by side with half-lines reckoned in syllables. Burhān al-Dīn is a poet of profane love; mystical notes are sounded more rarely in his work. He conforms in the *ghazal*s, both thematically and rhetorically, to the traditions of Persian lyrical poetry. Although he is a true poet, he remained, as such, unknown to the *Tadhkira*s (only in some of the historians are there brief references to him, in which it is said that he also wrote poetry in Arabic and Persian (cf. Gibb, i, 208)) and he had no influence on the poetical practice either of Ādharbāydjān or of the Ottomans.

Bibliography: To the life of Burhān al-Dīn as a whole is devoted *Bazm u Razm* (commonly known as *Manāḳib-i Ḳāḍī Burhān al-Dīn* and completed in 800/1398), a work written by his companion ʿAzīz b. Ardashīr Astarābādī (Persian text ed. İstanbul 1928), with an introduction in Turkish by Köprülüzāde M. Fu'ād, see Storey ii/2, 410 f.; H. H. Giesecke, *Das Werk des Aziz ibn Ardeşir Asterabadi*, Leipzig 1940, and (according to Babinger, *GOW*, 5) probably identical with the *Ta'rīkh al-Ḳāḍī Burhān al-Dīn al-Siwāsī*, in 4 volumes, of ʿAbd al-ʿAzīz Baghdādī (Ḥādjdjī Khalīfa, no. 2273); Aḥmed Tewḥīd, *Ḳāḍī Burhān al-Dīn Aḥmed*, in *TOEM*, v (1330/1911-1912), 106-109, 178-182, 234-241, 296-307, 347-357 and vi (1331/1912-1913), 405-409, 468-478; Dr. S. Rymkiewiczowa, *Twórczość Burhanaddina* (*na tle epoki i jego dzialalności*), "Burhān al-Dīn's creative power (in the light of his epoch and influence") Warsaw, doctoral thesis 1949 (unpublished); Khalīl Edhem, *Düwel-i Islâmiyye*, İstanbul 1928, 384-388; Gibb, *Ottoman Poetry*, i, 204-224 (based on *al-Durar al-kāmina fī aʿyān al-mi'a al-thāmina* of Ibn Ḥadjar al-ʿAsḳalānī. Text ed. Ḥaydarābād 1348-1350/1929-1932) and vi (texts), 16-20; Köprülüzāde Meḥmed Fu'ād and Shihāb al-Dīn Süleymān, *Yeñi ʿOthmānli Ta'rīkh-i Edebiyyātī*, i, Istanbul 1332/1913-1914, 169-173 (with specimens of the text); *ʿOthmānlī Mü'ellifleri*, i, 396; Mirza Bala, *Kadı Bürhaneddin*, in *İA*, fasc. 55 (1952), 46-48 (excellent); A. Krymskiy, *Istoria Turciyi i yeya literaturî*, i, Moscow 1916, 270-9; there is also much material in idem, *Istoriya Tureččinî ta yiyi pîs'menstva*, ii/2, Kiev 1927; A. Bombaci, *Storia della Letteratura Turca*, Milan 1956, 293 f.; H. Mezioğlu, *Kadı Burhaneddin*, in *Arayış*, no. 9, 1957, 4-5 (a popular article reproducing, in a much shortened form, the beginning and end of the London MS., together with specimens of the text, in Latin characters). References to Burhān al-Dīn can be found here and there in the historical sources: cf. the articles of Aḥmed Tewḥīd and Mirza Bala cited above. See also P. Melioranskij, *Otrîvki iz divana Achmeda Burhan ed-Dina Sivasskogo. Vostočnîye Zametki*, *SPb.* 1895, 131-152 (text and translation of 20 *rubāʿīs* and 12 *tuyughs*); *Ḳāḍī Burhān al-Dīn ghazel ve rubāʿiyātîndan bir ḳismî ve tuyughlarî*, Istanbul 1922, with a preface by Djenāb Shihāb al-Dīn Bey (inadequate: cf. Meḥmed Fu'ād Köprülü, in *Türkiyat Mecmuası*, ii, 220 and Babinger, *GOW*, 4); *Kadı Bürhanettin divanı*, i, İstanbul 1944 (facsimile of the unique MS., Brit. Mus. Or. 4126, of the year 796/1393-1394: a splendid manuscript, probably prepared for the prince-poet himself and revealing on the margin corrections presumably from his own hand); Muharrem Ergin, *Kadı Burhaneddin Divanı üzerinde bir gramer denemesi*, in *Türk Dili ve Edebiyatı Dergisi*, iv/3, İstanbul 1951, 287-327; A. Nihad Tarlan, *Kadi Burhaneddin' de tasavvuf*, in *ibid*; viii/1958, 8-15.

(J. RYPKA)

BURHĀN AL-DĪN GHARĪB, *i.e.*, SHAYKH MUḤAMMAD B. NĀSIR AL-DĪN MAḤMŪD, sister's son of Shaykh Djamāl al-Dīn Aḥmad Nuʿmānī Hānsawī (for him see *Akhyār* 67) and one of the earliest and most devoted disciples, and a *khalīfa* of the *shaykh al-Islām* Niẓām al-Dīn of Delhī (d. 725/1325). He was born in Hānsī (East Pandjāb) in 654/1256 and died in Deōgīr (Dawlatābād) on 11 Ṣafar 738/8 Sept. 1337 (*Nuzha* after *Rawḍat al-Awliyā'*), according to others (*e.g.*, *Khazīna*) in 741/1340-1, and was buried at Rawḍa (Khuldābād). After spending his early years in Hānsī, he went to Delhī and studied *fiḳh*, *uṣūl*, and *ʿarabiyya* [*qq.v.*], from the savants of his time. He then attached himself to the *Shaykh al-Islām*, and attended on him as long as the Shaykh was alive (cf. *Nuzha* 143, *Siyar* 279/15, Mīr Ḥasan, *Fawā'id al-Fuwād*, Lucknow 1908, 15, 33 (708 A.H.)

44 (709 A.H.), 84 (712 A.H.); Ulughkhānī, *Ẓafar al-Wālih*, Leiden 1929, iii, 857 f.). He left Delhī for Deōgīr, in his old age, when Muḥammad b. Tughluḳ (725-52/1325-51) forced the higher society and Shaykhs etc. of Delhī, about 727/1327 (*Mubārak Shāhī*, 98) to more to his new capital Deōgīr (Badā'ūnī, i, 226; M. Sāḳī, *Ma'āthir-i ʿĀlamgīrī*, Bib. Ind., 237; for the opposite view, that the *Shaykh al-Islām* sent him and others to (Burhānpūr and) Deōgīr see Firishta, *Safīna*, Mānduwī, *Adhkār-i Abrār* (tr. of *Gulzār-i Abrār*), Agra 1326, 90, *Maʿāridj*, *Khazīna* 322; contemporary authorities are silent as to the reason why he went to Deōgīr). There he spent the rest of his life doing almost pioneer work in the dissemination of Islām and the spreading of the culture of Islām in the Deccan (*Safīna*), and trained a batch of distinguished adepts (*Khazīna* 333) to follow up his work. One of these (Rukn al-Dīn) collected his *obiter dicta* in the *Nafā'is al-Anfās* (nine of these quoted in the *Maʿāridj l.c.*), while Rukn al-Dīn's two brothers and Ḥamīd Ḳalandar also collected them (*Nuzha*, *Akhyār* 86[6]).

He had a magnetic personality, and enjoyed great popularity in the circle of his Master—he was a dear friend of the poets Amīr Khusraw, Mīr Ḥasan, and Masʿūd Bak (who eulogises him in his works, especially in his *Yūsuf Zulaykhā*), also of Shaykh Naṣīr al-Dīn Čirāgh-i Dihlī (d. 757/1357), Kirmānī etc. (*Siyar al-Awliyā'*), 278 f.). He is described as an embodiment of longing and love, a man of asceticism, piety and ecstasy who charmed people by his heart-alluring discourses, an extremist in the matter of *samāʿ*, who had a peculiar style of his own in the ecstatic derwish-dances, his fellow-dancers being called "Burhānīs" after him. Burhānpūr (on the Ṭapti, in Khāndes) commemorates his name, for he had given his blessings to an ancestor of its founder, Naṣīr Khān Fārūḳī (*regn.* 801-41/1399-1437), when he rested here on his way to Deōgīr and foretold the rise of the Fārūḳīs and their founding of the city (Mānduwī, *Khāfī*, 214). They endowed his Rawḍa with land-grants, still available when Mānduwī wrote (1020/1611-12). According to the same authority, who visited it in 1001/1592-3, a large fair was held at the place, which has graves of several important disciples of the *Shaykh al-Islām*, on the anniversary of Shaykh Burhān al-Dīn's death. Dārā Shukōh also visited it, and Awrangzīb and two Niẓām al-Mulks were buried near it (*Khāfī*, ii, 549 = 572; *Ma'āthir al-Umarā'*, ii, 834).

Bibliography: Apart from the works mentioned above the following are important: Muḥammad-i Mubārak Kirmānī, *Siyar-al-Awliyā'*, Delhī 1302, 278 (= ʿAbd al-Haḳḳ, *Akhbār al-Akhyār*, Delhī 1309, 93 = ʿAlī Ardastānī, *Maḥfil al-Aṣfiyā'*, Ādhar Coll. MS. Pandjāb University f. 796); Abu 'l-Faḍl, *Ā'īn-i Akbarī*, ed. Blochmann, Calcutta, ii, 216, tr. Jarrett iii, 365, ii, 223 n. 3; Amīn-i Aḥmad Rāzī, *Haft Iḳlīm*, Shayrānī MS. Dehlī); Firishta, Bombay 1832, ii, 750; Dārā Shukōh, *Safīnat al-Awliyā'*, Lucknow 1872, 101; ʿUbayd Allāh Khweshgī, *Maʿāridj al-Wilāya*, Ādhar Collection MS., Pandjab University f. 123b-125b; Sabzawārī, *Sawāniḥ* (see Storey; not available to me); Ghulām ʿAlī Āzād, *Rawḍat al-Awliyā'* (available to me only in *Nuzha l.c.*); Muftī Ghulām Sarwar, *Khazīnat al-Aṣfiya'*, Lahore 1284, 332; ʿAbd al-Ḥayy Lucknawī, *Nuzhat al-Khawāṭir* (II) 143; Beale, *Oriental biographical dict.*, Calcutta 1881, 75; Storey, 1025, 1027. (MOHAMMAD SHAFI)

BURHĀN AL-DĪN ḲUṬB-I ʿĀLAM, i.e. ABŪ MUḤAMMAD ʿABD ALLĀH B. NĀṢIR AL-DĪN MAḤMŪD (or Muḥammad) B. DJALĀL AL-DĪN MAKHDŪM-I DJAHĀNIYĀN, usually known as *Ḳuṭb-i ʿĀlam*, a famous Suhrawardī saint and the founder of the Bukhāriyya Sayyids of Gudjarāt (W. India). He was also known as *Thānī-i Makhdūm-i Djahāniyān* (*Maʿāridj*). Born at Uchcha (now in Bahāwalpur) on 14 Radjab 790/19 July 1388, he died at Batwa (Ardastānī, *Maḥfil al-Aṣfiyā*, f. 329b; cf. *Ulughkhānī*, i, 140[7]), or Bātwa (*Maʿāridj*) a village 6 miles south of Aḥmadābād, on 8 Dhu 'l-Ḥidjdja 857/10 December 1453 (*Maṭlaʿ yawm al-tarwiya* = 857 is the chronogram recorded in *Akhbār al-Akhyār*, but one later writer, Khweshgī, gives the date as 856), Conflicting accounts are given as to why and when he came to Gudjarāt, (cf. *e.g.*, *Ā'īn*, *Maʿāridj* and *Ma'āthir al-Umarā'*). The following version occurs in the *Mir'āt-i Aḥmadī*: Being left an orphan at the age of ten, he was brought up by his father's uncle Shāh Rādjū *Ḳattāl* (d. 827/1424, *Khazīna* 733), who directed him to go to Gudjarāt for missionary work. He reached Patan in 802/1399-1400 and was well received by Sulṭān Muẓaffar Shāh I, a disciple of his grandfather. He studied the usual sciences with Mawlānā ʿAlīshīr Gudjarātī, and became eminent in learning. When Aḥmadābād was founded (813/1411) he settled first in the (Old) Asāual, and finally at Batwa, for the rest of his life. For the Shaykhs from whom he received *khirḳa*s, see *Nuzha*, iii, 97. A notable one among these was Shaykh Aḥmad-i K'hattū (d. 849/1446). Ḳuṭb-i ʿĀlam, his successors and their disciples, particularly his son Shāh ʿĀlam did remarkable work for the spiritual uplift of the people of Gudjarāt, who had great faith in them and among whom they enjoyed high repute (cf. *Tuzuk-i Djahāngīrī*, Alīgarh 1864, 208 f., English translation by Rogers-Beveridge, i, 421 f.). They exercised great influence over the Aḥmad Shāhiyya, Kings of Gudjarāt (cf. *Mir'āt-i Sikandarī*, 185[12]), and later several Mughal Emperors, from Djahāngīr onwards, showered benefits on the Shaykhs, and some of the Emperors personally visited the shrines at Aḥmadābād. Shāhdjahān made one of the Shaykhs *manṣabdār* and *ṣadr-i kull*, and Awrangzīb made his son *ṣadr al-ṣudūr* (*Ḳāniʿ* ii. 31; M. Sāḳī, *Ma'āthir ʿĀlamgīrī*. B.I.S., 166, 347). When Ḳuṭb-i ʿĀlam died, the nobles of the Aḥmad Shāhī Court erected a magnificent mausoleum on his tomb, which is now in a ruined condition (see J. Burgess, *Muhammadan Architecture of Ahmadabad*, London 1900, i, 60 f.; for that of Shāh ʿĀlam see *ibid.*, ii, 15 ff. Plates). ʿAlī Muḥammad Khān testifies to the tomb being frequently visited in his time (1176/1762). For a specimen of the language Ḳuṭb-i ʿĀlam spoke, see *Mir'āt-i Sikandarī* 254 (cf. *Mir. Ahmadī*: *Khātima* 28, *Ulughkhānī* i, 236), where a detailed account of an oft-mentioned miracle of his is given.

(MOHAMMAD SHAFI)

BURHĀN AL-DĪN AL-MARGHĪNĀNĪ [see AL-MARGHĪNĀNĪ].

BURHĀN AL-MULK, MĪR MUḤAMMAD AMĪN B. SAYYID MUḤAMMAD NAṢĪR AL-MŪSAWĪ, was a native of Nīshāpūr who founded the Awadh dynasty of Nawwāb-Wazīrs (1136/1724-1167/1754). The exact date of his arrival in India is not known, but this much is certain, that he was in the service of Sarbuland Khān, commandant of Karā-Mānikpūr, in 1123/1711. On the accession of Farrukh-siyar to the throne of Delhi (1124/1713-1131/1719), he managed to obtain the post of a *nāʾib-karōrī* (a revenue official), through the good offices of Muḥammad Djaʿfar, a *manṣabdār*. In 1132/1719 he was appointed commandant of Hindawn-Bayāna when he reduced to submission the turbulent Rādjpūt and Djāt *zamīndārs* of the area. For the rôle that he played in the conspiracy to murder the *amīr al-umarāʾ* Ḥusayn ʿAlī Khān Bārha, one of the Sayyid king-makers, he was awarded in 1133/1720 the title of Saʿādat Khān Bahādur with the personal rank of 5,000 and the command of 3,000 horse. The same year he was appointed governor of Akbarābād (Āgra) with a rapid promotion in rank, and only after a month (Muḥarram 1133/November 1720) the title of Bahādur Djang and the insignia of *māhī marātib*, were conferred on him. In 1135/1722 he was appointed governor of Awadh when he ruthlessly suppressed the *shaykhzādas* of Lucknow. He also ordered a fresh revenue settlement of the province, thereby increasing the imperial income from land, and the emperor Muḥammad Shāh rewarded him for his services with the title of Burhān al-Mulk.

After bringing the whole of Awadh, then in a state of turmoil, under his control, he punished the refractory feudal lords of Banāras and Djawnpūr. In 1148/1735 he was given charge of the district of Kōrah-Djahānābād, whose landlord, Bhagwant Rāy, had been responsible for some trouble; he was ultimately killed in an encounter with the troops of the Nawwāb. The same year Burhān al-Mulk, flushed with repeated successes, waited on Muḥammad Shāh at Delhi in the hope of securing increased royal patronage. In 1149/1737 he attacked the Marāthās, who had seized a part of the Dōāb, defeated and expelled them with heavy losses. The Marāthās in order to avenge this defeat soon afterwards attacked Delhi.

In 1151/1739, when Nādir Shāh Afshār invaded India, Burhān al-Mulk marched out from Awadh with a strong contingent of 30,000 troops. Although his baggage was looted by the enemy before it reached the imperial camp at Karnāl, Burhān al-Mulk decided to lose no time and to give battle to the invaders. In the thick of the action he was, however, recognised by a fellow-townsman from Nīshāpūr and his elephant was, without any resistance, driven away into the enemy's camp. On Nādir Shāh's victory, Burhān al-Mulk, from ulterior motives, prompted the invader to increase the amount of indemnity (5 million rupees) which had been agreed upon between Niẓām al-Mulk Āṣaf Djāh, the emissary of Muḥammad Shāh, and the Persian invader, on the ground that the stipulated sum could be easily paid off by a single *amīr* of the Mughal court. Burhān al-Mulk himself had to pay 33 million rupees in hard cash as his own share to the invader. He, however, suddenly died on 10 Dhu 'l-Ḥidjdja, 1151/19 March, 1739, soon after his return to Delhi. His almost sudden death has given rise to many speculations. He is reported to have committed suicide, unable to bear the insults which Nādir Shāh heaped upon him for his failure to arrange the full amount of indemnity (200 million rupees) which he had foolishly promised the invader. Other authorities, including the *Maʾāthir al-Umarāʾ* (i, 466) maintain that he died of an old neglected wound which had erupted again. The latter statement, however, appears to be an attempt to mitigate his responsibility for actions which brought untold misery and grief to the citizens of Delhi.

Burhān al-Mulk, an otherwise good man, was ambitious to the extreme degree and his passion for self-aggrandisement did not spare even a person like Ḥusayn ʿAlī Khān, whose favourite and client he had been both as a *Sayyid* and a Shīʿī. A disused canal in a part of the city of Delhi is still known after him as Nahr Saʿādat Khān. It appears to be an extension of the Fayḍ Nahr, the main source of the water-supply system of Delhi during the later Mughal period.

(A. S. BAZMEE ANSARI)

BURHĀNPŪR, town in Madhyā Pradēsh (India) situated in 21° 18′ N. and 76° 14′ E., along the north bank of the Tāptī, with bathing-steps (*ghāts*) on the river-side and a solid masonry wall, pierced by a number of massive gates and wickets, on all the other sides. This wall was constructed by Niẓām al-Mulk Āṣaf Djāh I [*q.v.*] in 1141/1728, during his governorship of Burhānpūr. The population in 1951 was 70,066. While the walled town occupies an area of $2^1/_2$ sq. miles, numerous remains outside show that the suburbs, which now comprise ʿĀdilpūra, must have been very extensive.

This town, which was of great strategic importance

during the medieval period, was founded by Naṣīr Khān al-Fārūḳī, founder of the Fārūḳī dynasty of Khāndēsh (renamed Dāndēsh by Akbar after his son Mīrzā Dāniyāl, but the name never caught the popular fancy) in or about 801/1398-9 and named after the Deccan saint Burhān al-Dīn Gharīb [*q.v.*]. Another town on the other side of the Tāptī was also founded at the same time and called Zaynābād, after Shaykh Zayn al-Dīn Dā'ūd al-Shīrāzī, one of the *khulafā'* of Burhān al-Dīn Gharīb.

In 969/1561 Burhānpūr was sacked by Pīr Muḥammad Shirwānī, a servant of Bayram Khān [*q.v.*], who massacred the inhabitants and carried off immense booty. It continued to be the capital of the Fārūḳī dynasty till its overthrow by Akbar in 1010/1601 when the kingdom was annexed to the Mughal empire, although the town itself had been occupied by the imperial forces under the command of Abu 'l-Faḍl ʿAllāmī [*q.v.*], in 1008/1599. ʿAbd al-Raḥīm, *khān-i khānān* [*q.v.*] was appointed governor and stayed in Burhānpūr for a very long period. It was here in Burhānpūr that his eldest son, Mīrzā Īridj (entitled Shāhnawāz Khān), died; his father built a tomb over his grave. Sir Thomas Roe, the English ambassador, had waited on Parwīz, Djahāngīr's eldest son, in this very town in 1023/1614. In 1025/1616 Shahdjahān, then prince Khurram, made it his general headquarters during his Deccan campaigns. Prince Parwīz died here in 1036/1626 and Awrangzīb accused his father Shāhdjahān, after the latter's deposition, of having poisoned him. In 1040-2/1630-2 it again formed the base of Shāhdjahān's military operations against the Deccan states when a great famine, resulting in an extremely heavy death-roll, devastated the town. In 1041/1631 the empress Mumtāz Maḥall, consort of Shāhdjahān, died here and was temporarily interred in Zaynābād, before the removal of her dead body to Āgra for a permanent burial. In 1046/1636 Awrangzīb, then a youth of 18 years of age, was appointed governor of the Deccan, including Khāndēsh, and he made Burhānpūr his headquarters. It was during his viceroyalty of the Deccan that Awrangzīb came to know Shaykh Niẓām Burhānpūrī, who remained in his employment for nearly forty years and was subsequently appointed chairman of the board of *ʿulamā'* and jurists responsible for the compilation of *al-Fatāwā al-ʿĀlamgīriyya* [*q.v.*]. It was again in 1092/1681 that Awrangzīb encamped at Burhānpūr before investing Bīdjāpūr [*q.v.*]. Soon after the emperor left the town in 1096/1685, it was sacked by the Marāthās. There followed a series of battles in its neighbourhood, and peace could only be restored to the harried town in 1132/1719 when the demand of the Marāthās for levying the *čawth* (one fourth of the revenue) was formally conceded. In 1133/1720 when Niẓām al-Mulk Āṣaf Djāh I was appointed to the government of the Deccan, he also made it his headquarters. After his return from Delhi in 1137/1724 till his death in 1161/1748 Burhānpūr continued to remain an important outpost of the new principality which Āṣaf Djāh founded, and also served occasionally as his headquarters. After the death of Āṣaf Djāh I it was occupied by the Marāthās, who were only dispossessed by Lord Wellesley in 1218/1803. It then changed hands several times and became finally a British possession in 1277/1860. In 1266/1849 it was the scene of a terrible Hindu-Muslim riot which claimed many lives. In 1265/1849 a great fire completely gutted Sindhīpūra, a quarter of the town peopled mainly by the descendants of early migrants from various towns in Sind. Next year a large number of houses in Dāwūdpūra were gutted, while the third fire of 1314/1897 destroyed a part of Lohār Mandī, including the mosque in the Čawk. In 1321/1903 bubonic plague took a very heavy toll of life.

Burhānpūr contains a large number of tombs and shrines of saints and mystics, many of them, from Sind and Gudjarāt, find mention in the *Gulzār-i Abrār*, whose author, Muḥammad Ghawthī, visited Burhānpūr frequently. Among other buildings of note are the tombs of Mubārak Shāh al-Fārūḳī and Rādjē ʿAlī Khān entitled ʿĀdil Shāh al-Fārūḳī, the Djāmiʿ Masdjid, built by the latter in 997/1588, and the old fort, along the bank of the Tāptī, now in a state of utter disrepair. A caravanserai built by the *khān-i khānān* ʿAbd al-Raḥīm is still extant.

Djahāngīr's system of water-supply for the town, completed in the 11th/17th century by the *Khān-i Khānān*, compares favourably with any modern waterworks system. During the Mughal period Burhānpūr housed a number of Imperial factories which produced quality and expensive cloth for the royal household. The workers in these *kārkhānas* were mostly skilled weavers from Thatta (Sind), who had migrated to Burhānpūr during the governorship of the *khān-i khānān*.

BŪRĪ b. **AYYŪB** [see ayyūbids].

BŪRĪ TĀDJ al-**MULŪK** [see būrids].

BŪRĪ-BARS b. Alp Arslān, the Saldjūḳ, was sent by Barkiyārūk against Arslan Arghūn, another son of Alp Arslan, who was trying to make himself independent in Khurāsān. In the struggle between the two brothers, Būrī-Bars was at first successful, but in the second encounter, in 488/1095, his troops were scattered and he himself was taken prisoner and strangled by his brother's orders.

BŪRĪ TAKĪN [see KARAKHĀNIDS[.

BŪRIDS, a dynasty of Turkish origin which reigned in Damascus from 497/1104 to 549/1154. Its founder was the *atabeg* [*q.v.*] of Shams al-Mulūk Duķāķ, son of the Saldjūķid sultan Tutush (see SALDJŪĶIDS). This *atabeg*, named Tughtakīn and called Ẓahīr al-Dīn, was the confidant of sultan Tutush, and was entrusted with the direction of affairs in Damascus as early as 488/1095 by Duķāķ, whose mentor he had been. After the death of Duķāķ (12 Ramaḍān 497/18 June 1104), Tughtakīn continued to exercise power in the name of the deceased prince's young son, Tutush, who in turn died shortly after his father. From that moment, Tughtakīn became the master of Damascus. His dynasty was founded, and it endured until the capture of Damascus by Amīr Nūr al-Dīn Zankī on 10 Ṣafar 549/25 April 1154. Tughtakīn ruled until his death, 8 Ṣafar 522/11 February 1128. He was replaced by his son Tadj al-Mulūk Būrī, who died as a result of an attempt made against his life on 21 Radjab 526/6 june, 1132. Just before he expired he named as his successor his son Abu 'l-Faḍl Ismāʿīl, called Shams al-Mulūk, who was himself assassinated by his slaves on 14 Rabīʿ II 529/30 January 1135, by order of his own mother. His brother, Shihāb al-Dīn Maḥmūd, followed him, and was murdered by three of his servants on 23 Shawwāl 533/23 June 1139. His brother Djamālal- Dīn Muḥammad, governor of Baʿlbak, was summoned to replace him, and died as the result of an illness 8 Shaʿbān 534/29 March 1140. The military chiefs then raised to power the son of Djamāl al-Dīn, ʿAbd al-Dawla Abū Saʿīd Abaķ, called Mudjīr al-Dīn, who left the responsibilities of administration to his *atabeg*, Muʿīn al-Dīn Unur, until the death of the latter on 23 Rabīʿ II 544/30 August 1149. He then took the direction of affairs into his own hands, but was very soon obliged to accept the domination of the Zangid Nūr al-Dīn, by whom he was driven from Damascus in 1154.

During the fifty years that the dynasty lasted, the Būrid rulers received their investiture from the caliph and from the sultan of Baghdād, who, in exchange for considerable gifts, did not interfere in the internal affairs of the principality.

Throughout this period, the Būrid princes were confronted by situations which often were very difficult. When Tughtakīn assumed authority, the territory of Damascus was in immediate proximity to the Frankish states of Antioch, Tripoli, and Jerusalem. The Franks of Jerusalem menaced the regions from which Damascus clearly acquired its food provisions; that is, Ḥawrān and the plains of Upper Jordan and of Yarmūk. In order to avoid risking the entire loss of these indispensable territories, and to safeguard the communications of Damascus with Egypt and Arabia, the Būrid princes were induced to negotiate with the Franks on several occasions, and even to conclude with them genuine treaties of alliance. They made them all the more easily since the treaties were not always looked upon with very much apprehension by their Muslim neighbours. Tughtakīn did try to co-operate with the Egyptian garrisons, who still held some coastal positions, Tyre for example, but with little success or effect. On the other hand, the masters of Baghdād were prejudiced by the tortuous politics of the Damascus rulers, so much so that the latter were repeatedly obliged to appear before the sultan and the caliph to justify their actions. Finally, from 524/1130, when the Zangid amīrs, ʿImād al-Dīn and his son Nūr al-Dīn became masters of Aleppo, they grew progressively more threatening toward Damascus. With the exception of Shams al-Mulūk, who was preparing to deliver the city to ʿImād al-Dīn when he was assassinated, the Būrid princes were therefore not displeased to find support in the Franks against the covetousness of the princes of Aleppo. However, the unprofitable attack by the Franks on Damascus during the second Crusade (July 1148) ended this policy and hastened the taking of Damascus by Nūr al-Dīn.

The internal situation of the city was no less troubled during the Būrid epoch. The lower orders of the town, organised into a sometimes very turbulent militia (*aḥdāth*), frequently participated in the political life of the city under the direction of those enterprising persons known by the term *raʾīs*. Over against the militia and actively opposing it, at least on one occasion, was a rural class. Led into action by the Ismāʿīlīs [*q.v.*] or *Bāṭiniyya*, this group also played an important rôle, particularly in 522/1128, with the complicity of some highly placed persons. It was not the first time that the Ismāʿīlīs used Damascus as the arena of their activities; several political murders had been perpetrated there by them, notably that of Amīr Mawdūd the ruler of Mawṣil, on 18 Rabīʿ II 507/2 October, 1113. Amīr Tadj al-Mulūk Būrī was also their victim in 1132.

Until the end, or until just a little before the end, the Būrid princes could count on the support of their Turkish troops whose loyalty was unfailing, and on the neutrality, growing steadily less benevolent, of the bourgeoisie. The latter were not opposed to the dynasty so long as it maintained order and assured, as best it could, the security of commercial transactions. But as the situation deteriorated after the death of Tadj al-Mulūk Būrī, the middle classes of Damascus showed themselves to be increasingly impressed by the prestige of Nūr al-Dīn, and facilitated his entrance into Damascus.

Thus, as long as the Būrid dynasty was represented by men of ability such as Tughtakīn and his son, it had no difficulty in retaining its power in Damascus; but the last twenty years, apart from the administration of Muʿīn al-Dīn Unur, were characterised by sometimes bloody rivalries and by growing economic difficulties. Also the population of Damascus, principally the bourgeoisie, who had never whole-heartedly supported the Būrids, no longer saw any reason for linking its destiny with that of the dynasty. The last prince, Mudjīr al-Dīn, left the city amid indifference, if not hostility.

AL-BŪRĪNĪ, AL-ḤASAN B. MUḤAMMAD AL-DIMASHḲĪ AL-ṢAFFŪRĪ BADR AL-DĪN, an Arab historian and poet, born in the middle of Ramaḍān 963/July 1556, at Ṣaffūrīya in Galilea, came when 10 years old with his father to Damascus, where he received his education at the Madrasa al-Ṣāliḥiyya. After the completion of his studies, which he had to interrupt in 974/1567 by a four years' stay in Jerusalem on account of famine, he lectured in various *madrasas*. In the year 1020/1611 he acted as Ḳāḍī to the Syrian pilgrim caravan. He died on the 13th Djumādā I 1024/11th June 1615. His chief work is the collection of biographies entitled *Tarādjim al-Aʿyān min Abnāʾ al-Zamān*, containing accounts of 205 individuals which he had collected at long intervals and completed in 1023/1614; it was edited by Faḍl Allāh b. Muḥibb Allāh in 1078/1667 and published with a supplement (cf. Ahlwardt, *Verzeichnis der arab. Hdss.... Berlin*, no. 9889; Flügel, *Die arab., pers. und türk. Hdss.... Wien*, no. 1190; *Fihrist al-Kutubkhāne al-Khidīwīye*, v. 33); his *Dīwān* is preserved in Istanbul (Köprülü, no. 1287). There are some of his poems in Berlin (*Marāthī* on the Ṣūfī Muḥammad b. Abi 'l-Barakāt al-Ḳādirī, s. Ahlwardt, *op. cit.* no. 7858, 3), Gotha (poetic epistle to Asʿad b. Muʿīn al-Dīn al-Tibrīzī al-Dimashḳī, with the latter's reply, cf. Pertsch, *Die arab. Hdss. der herzogl. Bibl.*, no. 44, 23) and London (*Catalogus Codd. Or. Mus. Brit.*, ii, no. 630, 2). Lastly he also wrote a commentary on the *Dīwān* of ʿUmar b. al-Fāriḍ, lith. Cairo 1279; he completed the commentary on the *Tāʾiyya al-Ṣughrā* in 1002/1593, cf. Derenbourg, *Les Mss. Or. de l'Escurial* no. 420, 4.

BURMA. Islam made its first major inpact in the early 15th century through the King of Arakan, Narameihkla. This monarch returned from exile in Bengal in 1430, accompanied by Muslim followers. He set up his capital at Mrohaung, where the Sandikhan mosque was erected. Subsequent Arakanese kings, although Buddhists, used Muslim designations, and even issued medallions bearing the *kalima*. Muslim influence was intensified when Prince Shudjāʿ, brother of ʿĀlamgīr, fled to Arakan in 1660. Shudjāʿ was murdered by King Sandathudamma and his treasure sequestrated, but his followers were retained at court as Archers of the Guard, in which rôle they frequently intervened as kingmakers. Descendants of these Mughal courtiers remain distinctive to this day. Before the 19th century, Muslim presence in Burma proper was confined to small numbers of Gudjarātī traders and certain gunners and other foreign technicians conscripted into the service of the Kings of Ava. The British annexation of Arakan in 1826 led to an influx of Muslims from Čittagong into coastal towns, particularly Akyab. The annexation of Lower Burma (1852) was followed by large-scale Indian immigration from the 1880's onwards. The 1931 Census (the last to be completed in detail) gives a Muslim population of 584,839, out of a total of 14,667,146. Of the Muslims, 396,504 were of Indian origin; 1,474 were Chinese (Panthay); and 186,861 were indigenous, mainly Arakanese. Muslim Arakanese were among the early officials and police officers under the British; they took advantage of higher education and many were prominent in government service, banking, and business. Čittagonian Muslims supplied almost all the crews of the coastal and river-steamers. Ismāʿīlīs (Khodjas) and Gudjarātīs dominated the retail trade. The 1930's were a decade of depression and some resentment was vented upon Muslims, conspicuous in the economy. Violent riots occurred in 1930 and '38; the latter lasted from July to December, and were fiercest in Rangoon and Mandalay; some 200 Muslims were killed. Following the Japanese invasion (1942) many Indians fled; numbers returned after the war, but they are less than before. The total Muslim population in 1958 is probably slightly higher than in 1931, perhaps 600,000 (the Census of 1953-4 is quite incomplete). About half are from India and Pakistan. A political organisation, the Burma Muslim Congress, was formed in 1945 and is affiliated to the Anti-Fascist People's Freedom League, the government coalition party. Two Muslims have been Cabinet Ministers during the greater period since independence: M. A. Rashīd (b. 1912) a leading trade unionist and business man, and U Khin Maung Lat (ʿAbd al-Laṭīf, b. 1913) a lawyer. The leaders of independent Burma, notably U Nu, lay great stress upon their Buddhist heritage; Muslims are accepted as equal citizens, but a number of irritants to good relations have existed. The Mudjāhid revolt in northern Arakan led by Ḳāsim, a fisherman, aimed at union of this area with Pakistan. The Mudjāhids terrorised the Buthidaung-Maungdaw area from 1948 to '54, but with the imprisonment of Ḳāsim in a Pakistan gaol their activities were greatly reduced. In September 1954, a national political crisis was created by widespread monastic protests against Islamic teaching in state schools, but in general relations are harmonious. In Arakan, where Buddhists and Muslims are intermingled, many Muslim customs are followed by the Buddhists, even beef-eating. But in Lower Burma beef-eating and animal sacrifice at the ʿĪd are actively discouraged. The Burma Muslim Dissolution of Marriages Act, passed in March 1953, gave Muslim women equal rights to those of Buddhists: equal opportunity to divorce their husbands, and the right to retain their marriage portion on dissolution of the union. The act evoked Muslim protests outside Burma, but was accepted by the Burma Muslim Congress. Married Burmese Muslim women do not take the veil or observe purdah. In 1955, U Nu as Prime Minister initiated a project to translate the Ḳurʾān into Burmese.

BURSA, also called BURUSA by the Ottomans after the ancient city of Prusa (προῦσα) on the northern foothills of Mysian Olympus, became the main capital of the Ottoman state between 726-805/1326-1402.

It was mentioned by Pachymeres along with Nicaea and Philadelphia as one of the three principal cities still in the hands of the Byzantines when the Turkish borderers invaded the whole of western Anatolia about 699/1300.

According to ʿĀshiḳ Pashazāde (ed. Fr. Giese, 22-23) the Ottomans were able to lay siege to Bursa for the first time when they invaded the Bursa plain after their victory over the Byzantine Tekfur [*q.v.*] of Bursa who, in alliance with the other Tekfurs had

attempted to stop the Ottomans at the pass of Dinboz, about 717/1308. This first siege failed. After blockading it for many years (cf. ʿĀshiḳ Pashazāde, 28-29; Ibn Baṭṭūṭa, Paris 1877, ii, 317; Pachymeres quoted by A. Wächter, *Der Verfall des Griechentums in Kleinasien*, Leipzig 1903, 55), the starved city had to surrender to the Ottomans (2 Djumādā I 726/6 April 1326), and to pay a heavy tribute (Pachymeres, *loc. cit.*; in Neshrī, ed. Taeschner, i, 39, 30,000 *flori*). The Byzantine commander was allowed to leave Bursa for Istanbul but his chief adviser, Ṣaroz (?) who was responsible for the surrender, remained with the Ottomans (ʿĀshiḳ Pashazāde, 29; Neshrī, i, 39). The Greek metropolitan of Bursa continued to excercise his duty there under the Ottomans but his revenues diminished considerably (A. Wächter, *loc. cit.*). The Greeks were apparently removed from the castle to a district below it where we still find them in the Ḳāḍī records of the 15th century. The castle itself was settled by the Ottomans and the court. In 836/1432 B. de La Broquière (136) reported that the castle contained 1000 houses. Another description of it, in 1050/1640, is found in Ewliyāʾ Čelebī (Vol. ii, 9). Orkhan [*q.v.*] had his palace (Beg-sarāyī) within its walls near the Byzantine church which had been converted into a mosque (Ibn Baṭṭūṭa, ii, 322). This locality overlooking the plain is called today Tophane. An inscription of 738/1337-38 found near it shows that he had also a mosque built there (A. Tewḥīd, *Bursa'da en eski kitābe*, in *TOEM*, v, 318-320.) Orkhan made Bursa his capital and had his first silver coin, the *aḳča*, struck there in 727/1327 (*Belleten*, x, 207). In 740/1339-40 below the castle on the plain he built a mosque, an *ʿimāret*, a bath and a caravanserai (Beg-khānī). This group of public buildings became the centre of Ottoman Bursa and the place is still the most lively commercial centre in Bursa. New districts such as ʿAlāʾ al-Dīn-beg, Čobān-beg, Kodja Nāʾib, came into existence in this period, and towards 734/1333 Ibn Baṭṭūṭa (*ibid.*) described Bursa as 'a large and great city with attractive bazaars and large streets'. During the subsequent reigns new religious and commercial centres with generous endowments were established by the Sultans and high officials in other parts of the locality. These became nuclei of the new districts of Bursa such as Yïldïrïm, Emīr-sulṭān, Sulṭān-Meḥmed (today Yeshil) etc. A particularly great development of the city took place during the reign of Bāyazīd I [*q.v.*]. Ulu-Djāmiʿ, the Great Mosque, was erected in 802/1399. J. Schiltberger, a contemporary eye-witness, says: "The city contains two hundred thousand (?) houses and eight hospitals (*ʿimāret*) where poor people are received whether they be Christians, infidels or Jews" (ed. Telfer, 40). After Tīmūr's victory over Bāyazīd I in 804/1402 a contingent of his army plundered and burned down Bursa. From that time on Adrianople (see EDIRNE) replaced Bursa as the principal capital (*dār al-salṭana*) of the Ottoman state, though during the civil war (806-816/1403-1413), each party tried hard to gain control of Bursa as well as Adrianople. During the prosperous reign of Murād II [*q.v.*] who was enthroned in Bursa, the city made a quick recovery and greatly expanded. The new districts named after and endowed by Sulṭān Murād, Faḍl Allāh Pasha, Ḥādjdjī ʿIwaḍ Pasha, Ḥasan Pasha, Umūr Beg, Djebe-ʿAlī Beg, Shihāb al-Dīn Pasha and Reykhān were formed. In 836/1432 B. de La Broquière observed: "Ceste ville de Bourse est bien bonne ville et bien marchande, et est la meilleure ville que le Turc aye". Before Meḥemmed II [*q.v.*] made Istanbul his capital, Bursa had risen as a rival of it, but then many of the citizens of Bursa were ordered to migrate to the new capital. Bursa, however, benefited economically from the great expansion of the empire under this Sultan. Moreover he continued to use it as headquarters of his campaigns in the east. During the civil war after his death (886/1481) the people of Bursa took sides with Djem [*q.v.*] who maintained himself there as sultan for 18 days. He had coins struck there in his name and planned to rule at least over Anatolia with Bursa as his capital. The town continued to be considered one of the three capitals of the empire and the palace of Bursa was maintained and occasionally used by the Sultans as late as in the 11th/17th century (Pečewī, ii, 313; Ewliyāʾ Čelebī, ii, 10).

An idea can be obtained about the population growth of the city from the figures included in the Ottoman registers of the *ʿawāriḍ* [*q.v.*] units of families. Thus for example there were 5000 *ʿawāriḍ* families under Meḥemmed II, 6456 in 892/1487, and, 6351 in 936/1530. In the middle of the 10th/16th century P. Belon (*Les observations*, 451) made the remark that "Encores de présent Bource est aussi riche et aussi peuplée que Constantinople et osons dire d'avantage qu'elle est plus riche que Constantinople. La richesse de Bource provient de la soye".

In 985/1577 for security reasons strong gates with guardians were erected between the districts by a special order of the Sultan. The Albanians immigrating from Rumeli to the city had by then become a real threat (documents in H. T. Dağfioğlu, *16. asırda Bursa*, Bursa 1943). Then from 1003/1595 on the Djalālī [*q.v.*] bands threatened the city and in 1017/1608 Kalenderoghlu [*q.v.*] came to plunder it (Naʿīmā, ii, Istanbul 1283, 27).

Bursa was the chief city of the *sandjaḳ* called *Khudāwendigār* or *Beg* in the *eyālet* of Anadolu [*q.v.*]. In 1248/1832 Bursa became the capital city of the newly formed *eyālet* of Khudāwendigār, which included the *mutaṣarrïflïḳ*s of Bursa, Ḳaraḥiṣār, Kütahya, Biledjik, Erdek, and Biga, and when in 1281/1864 a *wilāyet* of Khudāwendigār was formed with the *liwās* of Ḳaresī, Ḳodja-elī, Ḳaraḥiṣār, Kütahya, Bursa became the seat of the *wālī*. It had in 1310/1892 a population of 76,000 of which 5,158 were Greeks, 7,541 Armenians, 2,548 Jews and the rest Muslims. There were 165 mosques, 57 schools, 27 *madrasas*, 7 *ʿimāret*s, 7 churches, 3 synagogues, 49 caravanserais, 36 factories (*Khudāwendigār Wilāyeti Sālnāmesi* for the year 1310/1892).

It can be said that Bursa had a greater economic than political significance in Ottoman history. It soon became an international market as it was, under the Ottomans, one of the closest of the Muslim centres to the Christian world. In fact Iranian silk caravans increasingly came to the Bursa market, partially abandoning earlier ones such as Trebizond and Aleppo. Already around 802/1400 it was, as can be understood from Schiltberger (34), one of the international centres of the silk trade and industry. The main silk route to Bursa passed through Tabrīz, Erzurum and Tokat. Other important trade routes also converged in this city then. The ancient diagonal route Aleppo-Konya-Kütahya seems to regain its importance during this period. In 836/1432 B. de La Broquière (55-59) joined a Mecca caravan in Damascus which followed this route, and the spices it brought were sold to the Genoese merchants of Pera in Bursa.

The Damascus-Aleppo-Bursa route on the one hand and the sea route of Antalya-Alexandria on the other grew in importance during the 9th/15th century because of the active trade in spices, sugar, dyes, soap and perfumes coming from Egypt and Syria to Bursa. Moreover, merchants from India used these routes to come to trade in Bursa. Thus for example about 885/1480 the agents of Maḥmūd Gāwān [*q.v.*] were importing Indian goods to Bursa. This trade must have been important enough for the Florentines about 874/1470 to hope to obtain their spices in the Bursa market. But it must be added that because of higher prices in Bursa the spice trade there never developed to such a degree as to make it a competitor of the Egyptian markets. About 892/1487 the customs duties on dyes and pepper brought to Bursa amounted to 100 thousand *akčas* (about 2,500 Venetian ducats) yearly (Başvekâlet Arşivi, Istanbul, tapu def. no. 23, *muḳāṭaʿāt* of Bursa). But Bursa remained the most important emporium of Eastern goods for Istanbul, the Balkans and even for Eastern Europe until the 11th/17th century.

The silk trade and industry in Bursa was the basis of its prosperity. Caravans from Tabrīz brought to Bursa the precious silk of Gīlān, Astarābād and Sārī, and this was the subject of a very active trade there as the records of the *ḳāḍī*s of Bursa (preserved today in the Bursa Museum) and the Medici documents published by G. R. B. Richards (*Florentine Merchants in the Age of the Medici*, Cambridge, Mass. 1932) attest. The Genoese, Venetians and Florentines, who usually had their agents in Bursa, were in keen competition to buy as much silk as they could, and the usual practice in this trade was to exchange the silk for the woollen cloth which they imported. In 906/1501 Maringhi, an agent in Bursa for the Medici, estimated that one load (*fardello*) of silk made 70 to 80 ducats of profit. In the year of 884/1479 the total value of the silk imported there from Iran amounted to about 150 thousand Venetian ducats. Most of this silk was consumed by the local silk industry. In 907/1502 an official inspection showed that more than one thousand looms were active in this industry in Bursa (*Bursa Ihtisab Kanunu*, ed. Ö. L. Barkan, *Tarih Vesikalari Dergisi*, vii, 30). It was in private hands and had created there a prosperous Muslim bourgeoisie. The upper and middle class people constituted about 70 per cent of the population of Bursa in the second half of the 15th century (see *Iktisat Fakültesi Mecmuası*, Istanbul, xv, no. 1-4, 55-57). Workers in the silk industry were mostly slaves and after a time many of them were freed and became in turn entrepreneurs themselves. The *iḥtisāb* [*q.v.*] regulations mentioned above describe in detail various groups engaged in this business and the processes by which different kinds of silks were manufactured. The precious brocades (*kemhā*) and gold velvets (*mudhahhab ḳadīfe*) of Bursa were exported and much sought after in Europe, Egypt and Iran, but the main consumer was the Ottoman court (see T. Öz, *Türk Kumaşları*, Istanbul 1946; R. Anhegger-H. Inalcık, *Ḳānūnnāme-i Sulṭānī ber mūceb-i ʿörf-i ʿOsmānī*, Ankara 1956, 36). Light silks called *vāle* and *tāfta* (taffeta) were produced in Bursa and exported in great quantities for wider use.

The considerable commercial activity of Bursa is further attested by many caravanserais (*khān*s) built in the 9th/15th century such as Ipek-khānī under Meḥemmed I, Maḥmūd Pasha-khānī under Meḥemmed II, and the larger *khān*s called Koza-khānī and Pirinč-khānī under Bāyezīd II. Bursa became also an entrepôt for the cotton textiles of western Anatolia, which were exported especially to Rumeli and to Eastern Europe. The yearly tax revenues on the imported goods in Bursa amounted to about 140 thousand ducats in 892/1487 (Başvekâlet Arşivi, tapu def. no. 23). The principal mint (see ḌARBKHĀNE) of copper and silver coins was located in Bursa, and this monopoly brought in a yearly revenue of 6,000 ducats at the same date.

Between 1007/1599 and 1037/1628 ʿAbbās the Great attempted to divert Persian silk from the Ottoman market (see *Belleten*, no. 60, 665), and this induced the Ottomans to encourage silk production in Bursa and its environs. In the 12th/18th century the production of good quality silk in Europe (Italy, France) and the competition of Izmir [*q.v.*] as a market of Eastern goods affected Bursa's former prosperity (P. Masson, *Hist. du commerce Français dans le Levant*, Paris 1911, ii, 492). It, however, continued to produce Bursa silk cloth for internal consumption. In the 13th/19th century this local market too was invaded by cheap cotton and silk products from Europe. In 1262/1846 D. Sandison, the British Consul in Bursa, wrote that "Bursa silk and cotton stuffs were always falling in disuse" (Public Record Office, F.O. 78,701). British, German and Swiss imitations of the Bursa silks and cottons were in great demand in Bursa itself. But, in 1253/1837, Bursa was saved from becoming a mere producer of raw silk for Western countries by the introduction of steam power in the local industry. Filatures were 35 in number twenty five years later and the production of raw silk reached one thousand tons by 1332-1914. This development was greatly affected at the time of war of independence (1337-1341/1919-1922). But under the protectionist policy of the Turkish Republic a partial recovery was achieved in silk production (140 tons of raw silk in 1958). On the other hand Bursa textile industry made tremendous progress because artificial silk now provided the raw material (6,000 power looms in 1958). Moreover the establishment of a large woollen factory in 1938 emphasised the industrial character of the city. Its population almost doubled from 77,000 in 1940 to 131,000 in 1955.

(H. Inalcik)

BURSUĶ (Eastern Turkish = "badger"), one of the chief officers of the Great Saldjūķs, whose descendants also played a notable rôle at the beginning of the 6th/12th century. Bursuķ, although youthful, entered history as one of the principal *amīrs* in the service of Ṭughril-Beg, who after restoring control in Baghdād following the tragedies of the years 450-51/1058-59, made Bursuķ his first *shiḥna* (military commander) in Baghdād. However, under the pacified Saldjūķid organisation, the essential power belonged to the *'amīd*, the civil administrator, and it is not certain that there had been a *shiḥna* with any permanence in Baghdād for a dozen years. In any case, Bursuķ did not remain in the position since we find him in 455/1063 as *ḥādjib* of the sultan whom he accompanied (Sibṭ Ibn al-Djawzī, *Mir'āt al-Zamān*, Bibl. Nat., Paris, Arab. 1506, 87v.); then, in 456/1064, he was charged by the new sultan, Alp Arslan, to go and extract from a vassal arrears of tribute (*ibid.*, 99v, 100v). Then, without our being able to explain the reason, silence enshrouds him for 15 years. We discover him again only around 471/1078, under Malikshāh, sent to Anatolia against the Saldjūķid rebel sons of Kutlumush, one of whom, Manṣūr, he killed but without being able to crush the other, Sulaymān (Bar Hebraeus, *Chronography*, trans. Budge, 227). In 479/1086, together with Būzān, he led the advanced guard of Malikshāh's army, which on the death of Sulaymān occupied Aleppo; and probably from there was dispatched to Asia Minor to combat the heir of Sulaymān at Nicaea who, despite the efforts of the sultan, was supported by Alexius Comnenus, the Byzantine Emperor (Anna Comnena, *Alexiad*, Bonn ed., 302-11). It was probably on this occasion that he obtained from Constantinople the tribute of 300,000 *dīnārs* about which Bundarī speaks (ed. Houtsma, 70). A little later Bursuķ organised the celebrations in Baghdād honouring the marriage of the caliph to a daughter of Malikshāh. Following the death of the sultan, in the quarrels among the latter's heirs he took the part of Barkyārūķ, particularly in the resistance to Tutush, and followed his prince to Iṣfahān, there falling victim to the Assassins. His sons avenged him by participating two years later (490/1091) in the execution of the Shī'ī *mustawfī* of Barkyārūķ, Madjd al-Mulk al-Balāsānī, whom they suspected of having been the instigator of the murder of Bursuķ and of others as well.

The sons of Bursuķ—Zenghī, Aķbūrī, Ilbeki, and Bursuķ—appear, generally speaking, as a close-knit family group, which remained attached to Barkyārūķ as long as he lived, but which was more normally established on their *iķṭā'* of the province of Ahwāz, which, with Tustar, foremost town of the province, ware acknowledged to be hereditary, either legally or by fact of possession. Bursuķ assisted Barkyārūķ in recapturing Rayy from his brother Muḥammad. Probably it was for this reason, when in 498/1105 Muḥammad succeeded Barkyārūķ who had died, that we find Zenghī incarcerated by the new sultan. But the family found a way to reconcile itself with Muḥammad by refusing to follow the rebel Mangubars and by betraying him to the sultan. Zenghī, who would have been put to death, was set free, and although the sultan demanded from the Banū Bursuķ the return of their *iķṭā'*, in exchange he conceded to them Dīnawar. Furthermore, even this exchange appears to have been provisional; for we find the Banū Bursuķ subsequently once more in possession of Tustar. Meanwhile, Bursuķ (the son of Bursuķ) was made by Muḥammad governor of the province of Hamadhān, one of the capitals of the Empire (Ibn al-Ķalānisī, ed. Amedroz, 174).

Firmly installed in power, Sulṭān Muḥammad sought to organise war against the Franks in Syria. Bursuḳ b. Bursuḳ was one of the principal participants of the expedition of 505/1111, which miscarried because of quarrels among the chiefs and the jealousies of the Syrian princes toward the "Easterners"; moreover, he was ill almost the whole time. But he received command of the expedition of 509/1115. Again the circumstances were difficult, Ilg͟hāzī, the principal chief of the Diyār Bakr Turkomāns, Tug͟htakīn of Damascus, and Luʾluʾ, regent of Aleppo, having made an alliance with the Franks against him. With such bases as Ḥims, where the prince was his friend, and Ḥamā, which he conquered, Bursuḳ attempted to dislodge the coalition army. He succeeded only on making contact, withdrawing, returning, and finally being overrun at Dānīt͟h, to the east of the Orontes, by Roger, Prince of Antioch. He was preparing to take his revenge when he died, as did his brother Zenghī, in 510/1116. This death and that of Sulṭān Muḥammad two years later, meant the end of political intervention by the Sultanate against the Franks.

It is only on the occasion of the dissensions among the Saldjūḳids that the last heirs of Bursuḳ are heard of again, re-established in K͟hūzistān. Aḳbūrī and some of the sons of Zenghī and Īlbeki figured in the army employed by Sulṭān Maḥmūd against his uncle Sandjar, and Bursuḳ b. Bursuḳ participated in the complicated quarrels of Lower ʿIrāḳ. At the death of Maḥmūd, the brothers Tug͟hril and Bursuḳ were found in the party of Tug͟hril, who protected Sandjar; then, when he (Tug͟hril) died, they joined the party of Dāʾūd, who had the support of the Caliph. Nevertheless, they were able in time to reconcile themselves with the conqueror Masʿūd (529-31/1134-1136). We cannot say whether it was one of these two whose death, under the name of Ḥamza b. Bursuḳ, is mentioned by Ibn Abī Ṭayyī (cited by Ibn al-Furāt, NS. Vienna II, 115r°), as lord of Tustar in 533/1139. In any case, it appears this is the last mention of a member of the family whose heirs are no longer encountered among the vassals of the subsequent masters of K͟hūzistān.

It was as an officer of the first Bursuḳ that Aḳ-Sunḳur al-Bursuḳī [*q.v.*] began his career.

Muḥ. Iḳbāl, index. For the Syrian campaigns, the sources are elaborated in Cl. Cahen, *La Syrie du Nord etc.*, 251-3, 271-4; cf. also Grousset, *Histoire des Croisades*, i, 463 ff., and 495 ff. (Cl. Cahen)

AL-**BURSUḲĪ** [see AḲ SUNḲUR].

AL-**BURT**, pl. al-Burtāt, a Spanish-Arabism derived from the Latin *portus*, the meaning of which the Arab authors explain as the equivalent of Arabic *bāb*, pl. *abwāb*. The triangular shape which the Arabs gave to the Iberian peninsula is well known. Following Ptolemy, they fixed its points at Tarifa in the south, at Cape Finisterre in the west, and in the east in the Narbonne area according to some, or the valley of the Llobregat according to others, or at Port-Vendres (Portus Veneris/Haykal al-Zuhara) according to a third group. The disagreement over the fixing of the third point arises from two causes, to which nobody has given the attention they deserve. In the first place, the Arab geographers of the Middle Ages had no clear idea of the Pyrenees, nor did they give a definite name to them; in the second place, they show the north-east frontier in ways which differ markedly according to the ideas of the times in which they lived and the political situation of the region.

Some, the earliest, such as al-Rāzī and after him Ibn Ḥayyān and al-Yasaʿ, follow the Visigothic tradition and take the limits of the peninsula, as in Wamba's time, to the Narbonne area. Others, coming later, such as al-Bakrī, who knew of the Frankish conquest of the Spanish marches, and had travelled through the country several times by land and sea, on hearing the Catalans of Barcelona and of the Pyrenean countries called Franks and taken for such, place the north-east limit on the line of the Llobregat; on this frontier al-Bakrī mentions al-Burt (the Gate) in the Catalan coastal range; and in order to leave no room for doubt that the frontier between al-Andalus and the continent (*al-arḍ al-kabīra*) stands on that river whose Latin name (Rubricatus) he knew, he states that the gates (*abwāb*) of the Djabal al-Burt face the islands of Majorca and Minorca. This testimony is confirmed by Ibn Saʿīd, and al-Maḳḳarī accepts it as the most accurate since it is corroborated by many travellers. Ibn al-Abbār mentions more than once the famous battle during which the Almoravid *amīr* Ibn ʿĀʾis͟ha died and calls it *waḳīʿat al-Burt* (Christian sources refer to it as the battle of El Congost de Martorell) and Ibn K͟haldūn mentions the embassy which the Frankish count of Barcelona who was living on the other side of al-Burt sent to ʿAbd al-Raḥmān III. Al-Idrīsī, on his part, who was writing in the second half of the 6th/12th century, and witnessed the independence of the Catalan-Aragonese kingdom, takes care not to call the Catalans Franks and puts the frontier of Spain at Port Vendres; in enumerating the 26 provinces or *iḳlīm*s of Andalusia he puts Tortosa, Tarragona, and Barcelona in the *iḳlīm* of al-Burtāt, further south than the Pyrenees, appearing to show that this Djabal al-Burt or al-Burtāt was the centre of the *iḳlīm*.

(A. Huici Miranda)

BURṬĀS, or Burdas (in al-Bakrī Furdās), pagan tribe of the Volga basin. For an account of the Burṭās and their neighbours the K͟hazars and the Bulg͟hārs, to the north and south, see Bulg͟hār. Al-Masʿūdī (*Murūdj*, ii, 14 & *Tanbīh*, 62) lists Burṭās also as a river flowing into the Itil (Volga); Marquart identifies this stream with Samara (*Streifzüge*, 336). The sources do not mention any adherents to Islam among the Burṭās, which contrasts with their accounts of the K͟hazars and Bulg͟hārs. Yāḳūt's report on the Burṭās (i, 567) is based on a misunderstanding, as he applied Iṣṭak͟hrī's remarks on the Bulg͟hārs (225) to the Burṭās. The sources in which they are mentioned, Ibn Rusta (140 ff.), al-Bakrī (Kunik & Rosen, *Izviestiya al-Bekri*, etc., i, 44) and Gardīzī, (Barthold, *Otčet o poyezdkie v Srednyuyu Aziyu*, 96 ff.) content themselves with saying on the subject of the Burṭās religion that they adhere to the same beliefs as the G͟huzz (Turks) and that some of them burn while others bury their dead. They allowed themselves to be outdistanced by their neighbours more in contact with civilisation. They lacked government authority, the direction of affairs

being entrusted to the elders of each tribe. The only commercial dealings of any importance between the Muslim World and the Burṭās was the traffic in furs—the *firā'* mentioned by Yāķūt (*loc. cit.*).

The majority of authorities (V. V. Holmsted, A. P. Smirnov, P. D. Stepanov) identify the Burṭās with the Finnish Mordve-Mok<u>sh</u>a (the "Moksel" of Rubruquis), clans which at the beginning of the Middle Ages inhabited the area between the upper basins of the rivers Khoper and Medveditza and the right branch of the Volga, extending so far northwards until the Finns were the immediate neighbours of the Slavs. Others (A. I. Popov, A. E. Ali<u>kh</u>ova) locate their place of origin in the northern Caucasian steppes and argue that the Burṭās emigrated northwards only at the time of the Golden Horde; others again (Sboev, Rittich) place them among the ancestors of the Čuwa<u>sh</u>. Tokarev believes that the Burṭās were a Finnish tribe more or less Turkicised, and which finally was assimilated partly by the Mordve-Mok<u>sh</u>a and partly by the Čuwa<u>sh</u>.

Russian chronicles from the 13th century onwards mention the Burṭās as vassals of the Golden Horde. After the downfall of Ķazān, their land was conquered and colonised by the Russians in the 16th century. At the beginning of the 18th one reads of insurrections among them but from that time the name Burṭās ceases to figure in Russian documents.

The present Mordve (Mordva in Russian) are divided into two distinct groups: the Mok<u>sh</u>a and the Erzia, numbering about 1,450,000 souls (Soviet census 1939), living in an autonomous Soviet Socialist Republic (Autonomous SSR of the Mordve, capital Saransk). A large number of the Mordve, however, live outside their republic, notably in Tataristān, Ba<u>sh</u>kiria and Siberia.

The Mordves were subject to strong Russian cultural influences, and from the 17th century adopted the Orthodox faith. One must, however, mention the existence of another Mordve-Mok<u>sh</u>a group living in the Tatar region (in the district of Kamsko-Ustinsk of the autonomous *SSR* of Tatarstān)—the Karataï. These from the 17th century have been subjected to Tatar influence and were completely 'Tatarised'. The Karataï have lost the use of their Finnish language and speak the Tatar of Ķazān. Considered officially as Christian Orthodox, they are in fact crypto-Muslims.

(W. Barthold-[Ch. Quelquejay])

BURTUĶĀL, the name given by the Arabs to an ancient town (Cale or Calem, Portus Cale, modern Oporto) at the mouth of the Douro, and later to the kingdom of Portugal. Before the establishment of an independent Portugal in the 12th century, the history of the region belongs to that of Spain (see AL-ANDALUS). At the Arab conquest the whole of the territory of modern Portugal must have passed rapidly into Muslim hands, though details are lacking. We hear only of resistance in the south (see BĀ<u>DJ</u>A) and of the occupation of Evora, Santarem and Coimbra by ʿAbd al-ʿAzīz b. Mūsā b. Nuṣayr (governor of al-Andalus, 95/714-97/716). According to a notice in a late author, but cited on the good authority of Muḥammad b. Mūsā al-Rāzī (3rd/9th century), Santarem and Coimbra had before this been exempted from a general division of the conquered land among the soldiers of Mūsā b. Nuṣayr, apparently under a treaty (cf. E. Lévi-Provençal, *Hist. Esp. Mus.*, iii, 201-202, and see below).

Political confusion in al-Andalus and especially, from about 750 onwards, the withdrawal owing to famine of large numbers of the new inhabitants of the NW. (mostly Berbers) provided conditions for the beginning of the *Reconquista*. Alfonso I of Asturias (739-757) or, according to Ibn Ḥayyān (Maķķarī, *Nafḥ*, I, 213), his son Fruela I (757-768) made himself master of the north of modern Portugal, including the towns of Oporto and Braga north of the Douro and Viseu south of the same river. Another son of Alfonso, Aurelio (reigned 768-774), is given by Ibn al-<u>Kh</u>aṭīb (*Aʿmāl al-Aʿlām*, 373) as conqueror of *'arḍ Burtuķāl'*. Alfonso II (791-842) is said to have taken Lisbon in 182/798 and to have sent a message to Aix-la-Chapelle announcing the news to Charlemagne. But these successes, if authentic, were transitory. It was not till the time of Alfonso III that the line of the Douro was more or less effectively held by the Christians, after the definitive capture of Oporto in 868.

Ķulumriyya (Coimbra) fell in 264/878 but was retaken in 375/985 by al-Manṣūr, whose extraordinary march from Cordova to <u>Sh</u>ant Yaʿķūb (Santiago de Compostella) was directed via Coria and Viseu. Al-U<u>sh</u>būna (Lisbon), which still belonged to the expiring Caliphate in 400/1009 *tempore* al-Mahdī (Ḥumaydī, 18), was later, in the time of the *Mulūk al-Ṭawā'if*, a dependency of the Aftasids of Badajoz, who disputed control of the W. of al-Andalus with the ʿAbbādids of Seville, and after the final loss of Coimbra in 456/1064 (Ibn ʿI<u>dh</u>ārī, iii, 239) remained with <u>Sh</u>antarīn (Santarem) as a Muslim enclave N. of the Tagus, till both were captured by Alfonso Henriques, the first king of Portugal, in 541/1147. Alfonso Henriques is usually said to have taken the royal title after a victory over the Muslims at Ourique near Beja (July, 1139). Before his death (1185) the Portuguese were in possession of most of the south. The fluctuating fortunes of war earlier are illustrated by the case of Lamego, S. of the Douro, which appears to have been captured by Alfonso III in 904. It was afterwards lost, but was retaken by Ferdinand I in 1038, when its king or governor was permitted to remain as vassal of the Christian. Some time before 1102 it passed again under Muslim control, being finally conceded to the Conde Don Henrique in that year (F. Fernandez y Gonzalez, *Mudejares de Castilla*, 29). For the deep-rooted Arabism of the region we may compare an account in the 12th century writer al-Mawāʿaynī (Pons Boigues, *Historiadores*, no. 189) of certain Arabic-

speaking Christians encountered by al-Muʿtaḍid of Seville on an expedition into Portugal *circa* 1020 at Ḥiṣnay al-Ikhwān, now represented by Alafoens or Alafões (< Alajoen), N. of Viseu, who claimed to hold their land by treaty from Mūsā b. Nuṣayr (cf. above) and, though doubtless Mozarabs, alleged their descent from Djabala b. al-Ayham, a Christian Arab of Syria contemporary with Muḥammad (Fernandez y Gonzalez, ibid., cf. Dozy, *Loci de Abbadidis*, ii, 7).

Under the Caliphate several *kūra*s (*i.e.*, provincial districts with chief town, governor and garrison, see art. AL-ANDALUS, 2, iii) belonged in whole or in part to the territory of modern Portugal. 1. In the extreme S, corresponding to the present-day province of Algarve, was the *kūra* of Ukshūnuba (Ocsonoba), so called from the ancient town of that name, inland from modern Faro. The town declined in importance after the Arab invasion and gave way to Shilb (Silves) as provincial capital, but was still in existence in the 5th/11th century (Ibn ʿIdhārī, iii, 215). Silves, situated more to the W. near the estuary of two small rivers, is first mentioned as a port at the time of the descent of the Norsemen in 229/844 (see AL-BAḤR AL-MUḤĪṬ), and grew to be a flourishing city, especially perhaps after the fall of the Caliphate under the ʿAbbādids of Seville. Other towns or large villages in the province were, according to Ibn Saʿīd (*al-Mughrib fī Ḥulā ʾl-Maghrib, Dhakhāʾir al-ʿArab*, x, Cairo 1953-1955, 1, 380 ff.), Shannabūs or Shannarūs (? = Shannabrūs for São Brás), Ramāda, Shantamariyya (Santa Maria de Algarve, now Faro), al-ʿUlyā (Loulé) and Ḳasṭalla (Cacela). Al-Idrīsī (*circa* 1154) in his description of Silves mentions that the inhabitants of its villages, as well as the townspeople, spoke pure Arabic. 2. Immediately N. of Ukshūnuba, *i.e.*, corresponding to modern Baixo Alentejo, was the *kūra* of Bādja (Beja), with principal town of the same name (see BĀDJA). This province, according to Ibn Saʿīd, included Mārtula (Mertola), which is placed by Ibn al-Khaṭīb (*Aʿmāl*, 287) in the *kūra* of Shadhūna (Sidonia). 3. Further N. lay the *kūra* of al-Ushbūna or Lisbon (Maḳḳarī, *Nafḥ*, i, 96), which included Shantarīn (Santarem), Shantara (Cintra) and al-Ḳibdhāḳ or al-Ḳabdhāḳ (cf. al-Ḳabdhāḳ = Alcaudete between Cordova and Granada). Other *kūras* in Portugal are not named. Yābura (Evora) N. of Beja is included by Ibn Saʿīd in the kingdom of Badajoz, and perhaps in Caliphal times formed part of a *kūra* of Mārida or Merida (cf. Maḳḳarī, *Nafḥ*, i, 103). While it still belonged to Islam before 264/878 Ḳulumriyya (Coimbra) may have been the centre of a *kūra* (cf. E. Lévi-Provençal, *Esp. Mus.*, iii, 51).

Like other outlying parts of al-Andalus, Muslim Portugal affords plenty of examples of particularism throughout its history. Partially successful attempts to assert independence of Cordova were made in the 3rd/9th century by ʿAbd al-Raḥmān b. Marwān, often called Ibn al-Djillīḳī ('son of the Galician') and his descendants, operating widely from Badajoz, and by the Banū Bakr at Santa Maria de Algarve in the same century. Much later a militant religious movement in the W. headed by Ibn Ḳasī, who revolted at Mertola in 539/1144, contributed to the downfall of the Almoravids. Ibn Ḳasī became master of Silves, and he and his contemporary Ibn Wazīr were perhaps the only Muslims to coin money on Portuguese soil.

The last period of the struggle in Portugal between Christians and Muslims was marked by a great though unsuccessful effort of the Almohad Abū Yaʿḳub Yūsuf in 580/1184. The Almohad fleet, it seems, failed before Lisbon, and the main land assault on Santarem had to be abandoned. In a Portuguese attack on the *sāḳa* or rearguard of the Almohads Abū Yaʿḳūb received a wound from which he died near Evora on the march back to Seville.

The set-back in Portugal was contrary to general expectation, for at this time Almohad power and prestige stood high. In 1189, the year in which it first fell into Portuguese hands, Silves was described by an anonymous Crusader ('Anonymous of Turin') as much stronger than Christian Lisbon and ten times as rich. After the victory of the Christians at al-ʿIḳāb (Las Navas de Tolosa) in 609/1212, in which Portuguese forces took part, the issue of the prolonged struggle came within sight. Silves fell finally in 1249 and the Muslims lost Algarve, their last holding in the territory of modern Portugal. At a battle fought near Tarifa on the Rio Salado in 741/1340 the Portuguese under their king, Alfonso IV of Portugal, joined forces with the Castilians to oppose the African troops of the Marīnid ruler of Fās, Abu ʾl-Ḥasan ʿAlī and the contingents of Yūsuf I, Sultan of Granada. Ibn al-Khaṭīb describes how the Andalusians almost broke the ranks of the Portuguese at the first charge, but their valour was in vain and the day was lost (*Aʿmāl al-Aʿlām*, 389). Henceforward there was no hope of restoring Muslim rule in the West of al-Andalus.

The principal towns of Muslim Portugal produced a respectable number of literary men, whose names are given in the Arabic biographical works. Among the best known are the historian Ibn Bassām, Abu ʾl-Walīd al-Bādjī (see AL-BĀDJĪ), Ibn ʿAmmār, the poet and friend of al-Muʿtamid b. ʿAbbād, and Ibn Ḳasī, already mentioned, author of the *Khalʿ al-Naʿlayn fī ʾl-Taṣawwuf* and other works.

Some itineraries in 10th century Portugal are given by al-Iṣṭakhrī (*BGA*, I, 46) and Ibn Ḥawḳal (ed. Kramers, i, 116-117).

(D. M. DUNLOP)

AL-BURŪDJ [see NUDJŪM].

BURUDJIRD [see BARŪDJIRD].

BURUḲLUS, *i.e.*, Proclus (A.D. 410-485), head of the pagan philosophical school at Athens (the 'Platonic Academy'), outstandihg scholastic

systematiser of Neoplatonic thought and one of the chief links between ancient and medieval philosophy. Although it would be premature to attempt a monograph about the influence he exercised upon medieval Arabic thought, the information at present at our diaposal is not so scanty that its complete neglect in R. Beutler's comprehensive article on Proclus (*Pauly-Wissowa-Kroll* 45, 1957, col. 186 ff.) appears justified. Better information is available in E. Zeller, *Philosophie der Griechen III* 2[4], 839 n. 1 and E. R. Dodds, *Proclus the Elements of Theology*, Oxford 1933, xxviii f.

A list of those works by Buruklus which in some way became known to Arabic scholars is to be found in Ibn al-Nadīm, *Fihrist*, 252 Flügel (= 333 Egypt, ed.); it was reproduced, with a few omissions, by Ibn al-Kiftī, *Ta'rikh al-Ḥukamā'*, 89, (ed. Lippert).

1.

Some works by Buruklus appear in Arabic under very inappropriate false names.

a. The work referred to by the bibliographers as *Kitāb al-Thālūdjiyā* and ascribed by Ḥādjdjī Khalīfa, v, 66 (Flügel) to Proclus and (!) Alexander appears to have been the systematic manual of Neoplatonic metaphysics known as *Elements of Theology* (Στοιχείωσις Θεολογική). The Arabic text of propositions 15-17 (16-20 Dodds) has been published by A. Badawi, *Arisṭū ʿinda l-ʿArab*, Cairo 1947, 291 f. from a 11th century Damascus MS., where it is wrongly attributed to Alexander of Aphrodisias. The truth was discovered independently by B. Lewin (*Orientalia Suecana* 1955, 101 ff.) and S. Pines (*Oriens* 8, 1955, 195 ff.). The translator was Abū Uthmān Saʿīd b. Yaʿkūb al-Dimashkī, a minor member of the school of Ḥunayn.

b. A work *K. al-Īḍāḥ fī 'l-Khayr al-Maḥḍ*, based on 31 propositions of the *Elements of Theology*, is known in the West since the days of Gerard of Cremona (second half of s. xii) as Aristotle's *Liber de causis*. A critical edition of the Arabic text (which ought to be based on the Latin and Hebrew versions as well and be minutely compared with the Greek) is being prepared by G. C. Anawati (cf. *Mélanges Massignon*, Damascus 1956, 73 ff.). For the time being we have to be content with O. Bardenhewer's edition (Freiburg-Breisgau 1882, reprinted recently) and A. Badawi's text (*Islamica* 19, 1955, i ff.). A resumé of the Arabic text (ascribed to Aristotle), composed about A.D. 1200, was discovered by P. Kraus (*Bulletin de l'Institut d'Égypte* 23, 1940/1, 277) and published by A. Badawi (*op. cit.*, 248 ff.). The question whether the work as we have it was originally translated from an older re-arrangement of extracts from Proclus or compiled by an early Arabic philosopher cannot be decided at present.

2.

a. Proclus himself is mainly familiar to Arabic thinkers as proclaiming the eternity of the world. His 18 propositions about this tenet (Ἐπιχειρήματα περὶ ἀϊδιότητος κόσμου), which are lost in the Greek original, were as well known to the Arabs as John Philoponus' reputation (*De aeternitate mundi contra Proclum*)—of which the Greek MSS. lack the beginning. The first nine propositions are now published in Isḥāk b. Ḥunayn's Arabic version by A. Badawi (*op. cit.*, 35 ff.); eight of them were known from John Philoponus' quotations but the first is preserved in Arabic only (cf. C. G. Anawati, *Mélanges A. Diès*, Paris 1956, 21 f.). Muḥammad Ibn Zakariyā al-Rāzī in his book "On doubts which arise against Proclus" (*K. al-Shukūk allatī ʿalā Buruklus*) referred to this work (cf. S. Pines, *Beiträge zur islamischen Atomenlehre*, Berlin 1936, 93, n. 1)—he may have made use of John Philoponus—and so does, for instance, Al-Shahrastānī (*K. al-Milal wa 'l-Niḥal*, 338 ff. Cureton), who rightly points to Ibn Sīnā's use of Proclus' arguments; Al-Ghazzālī was familiar with them as well (cf. S. van den Bergh, *Averroes' Tahāfut al-Tahāfut*, London 1954, i, xvii; ii, 1).

b. Additional proof for the popularity of Proclus among Arabic philosophers is provided by the chance discovery of fragments of some other writings. There are eight Προβλήματα φυσικά evidently part of a larger treatise which may well be genuine, published by A. Badawi (*op. cit.*, 43 ff., cf. B. Lewin, *Orientalia Suecana* 6, 1958) and a small fragment about the concept of ἀγαθόν from the *Lesser* Στοιχείωσις, mentioned by the Arabic bibliographers (Badawi, *op. cit.*, 257). F. Rosenthal made known, in English translation, a passage from his work *On the immortality of the Soul according to Plato*, and a small section of the lost part of his huge commentary on the *Timaeus* is available in German [see article AFLĀṬŪN]. The Arabs knew of his commentaries on the myth of the *Gorgias* and on Plato's *Phaedo* but neither Syriac nor Arabic remains of them have hitherto been traced. A commentary on the pseudo-pythagorean *Golden Verses* is a misattribution, due to the misreading of B. for the less known Neoplatonist Hierokles (which can be easily explained). (R. WALZER)

BURULLUS (BOROLLOS), the name given to a district and to a lake to the north of the Delta of Egypt. The lake stretches between the mouths of the Rosetta and Damietta branches of the Nile, and is separated from the Mediterranean only by a narrow band of dunes.

The Arabic name is the transcription of the Greek *Paralos*, transmitted through Coptic, and this word, which signifies "the maritime littoral", is applied quite naturally to this region. It may he noted that Yākūt and Ibn Baṭṭūṭa were acquainted with the vocalisation *Barallus*, which has not survived.

It was the administrative centre of a pagarchy (*kūra*) before the division of the country into larger districts. Burullus was then made part of *nastarāwiyya*, and in the 8th/14th century the province took the name of its chief town, Ashmūn Ṭannāḥ; now the region of Burullus belongs to the province of Gharbiyya.

In the Middle Ages the lake was called Buḥayrat Nastarāwa, after the name of a locality which no longer exists today. To Ibn Ḥawkal, it was the lake of Bushmūr, another designation for this swampy country.

Fishing in this lake was farmed out, a practice which represented an ancient fiscal organisation, predating the Muslim era. It can hardly be supposed that the various governments deprived themselves of such a productive source of revenue, and when the sources speak of the creation of this system, in the 3rd/9th century, they are probably referring to an aggravation of fiscal pressure. In the same way references to the suppression of the tax probably denote an alleviation.

The tombs of the Twelve Companions of the Prophet described by al-Harawī very likely recall some episodes of the Arab conquest, although according to the traditions, the chief of Burullus made terms with the conquerors. There may, how-

ever, have been battles following the landing of the Byzantines in 53/673.

The inhabitants of Burullus had the reputation of being expert trackers.

(G. Wiet)

al-**BURZULĪ**, Abu 'l-Ḳāsim b. Aḥmad b. Muḥammad, of the tribe of the Banū Birzāla, a Mālikī author. Born in al-Ḳayrawān, he studied under Ibn ʿArafa for thirty or forty years and under other great masters, and became himself a teacher of Islamic law in Tunis and an *imām* at the Zaytūna mosque. In 806/1403, he passed on the pilgrimage through Cairo, where he issued several *idjāzas*. He died in Tunis in 841/1438 (according to others, in 842 or 843 or 843), at the age, it is said, of 103 years. He is famous on account of his collection of *fatwās* and *nawāzil* entitled *Djāmiʿ Masāʾil al-Aḥkām mimmā nazal min al-Ḳaḍāyā bil-Muftīn waʾl-Ḥukkām*, in two volumes, numerous manuscripts of which are known; it is one of the main sources of the *Miʿyār* of al-Wansharīshī (d. 914/1508); two extracts were made from it in the 9th and in the 12th century. The innumerable *responsa* which al-Burzulī mentions there together with the names of their authors, famous jurists who can easily be situated in space and in time, make his work the most important source for the history of society in Ifrīḳiya under the Zīrids of al-Ḳayrawān and al-Mahdiyya (10th-12th cent.) and the Ḥafṣids 13th-14th cent.).

BŪSHAHR (Būshīr), district and town in the VIIth *Ustān* (Fārs) of Persia. The position of the town is Lat. 28° 59′ N, long. 50° 52′ E. (Greenwich). Būshahr stands on a low outcrop of sandstone at the northern end of a long and narrow peninsula. So low is the isthmus connecting this peninsula with the mainland that it is sometimes flooded at high tide, and a raised causeway had to be built across it in order to maintain communication between Būshahr and the hinterland at such times. At the southern end of the peninsula, 7½ miles south of Būshahr, are the ruins of the ancient town of Rīshahr, where burial urns and cuneiform inscriptions dating back to the Babylonian era have been found. Rīshahr may perhaps be identified with the "Greek town" (Ἰόναχα) of Isidore of Charax. It was founded anew by the Sāsānid king Ardashīr and was given the name of Rīv-Ardashīr, of which Rīshahr is a contraction. In the 10th/16th and 11th/17th centuries the Portuguese had a settlement and fort there.

The derivation of the name Būshahr is uncertain. As "Abū Shahr" ("Father of the Town") does not make good sense, the suggestion has been made, on the analogy of Rīshahr, that the original name was Bukht-Ardashīr ('Ardashīr has delivered'), but this etymology, though possible, is doubtful. British seamen in the 18th century corrupted the name to 'Bushire' and 'Busheer'.

The earliest reference to Būshahr is apparently in Yāḳūt (i, 503). The place remained no more than a village until 1734, when Nādir Shāh [*q.v.*] made it the base of his navy in the Persian Gulf and gave it the name of Bandar Nādiriyya (see the *Gombroon Diary* of the English East India Company, 5th/16th July 1734, in vol. iv of the *Persia and the Persian Gulf Records*, India Office Library, and L. Lockhart, *Nadir Shah*, London 1938, 92-3). Subsequently, an unsuccessful attempt was made to build a large warship at Būshahr, using timber that had been brought overland from the forests of Māzandarān at a vast expenditure of labour. Sir W. Ouseley saw the remains of this vessel when he landed at Būshahr in 1811 (see his *Travels in Various Countries of the East, more particularly Persia*, London 1819, Vol. i, 188). Although this shipbuilding experiment failed, Būshahr prospered in consequence of the attention that Nādir Shāh gave to it. Moreover, it subsequently benefited commercially when the English and Dutch East India Companies transferred their factories there from Bandar ʿAbbās [*q.v.*]. Another factor of great importance in the development of Būshahr in those times was the fact that Shīrāz, with which it was connected by a caravan route, became the capital of Persia in the reign of Karīm Khān Zand [*q.v.*]. The consequence was that Būshahr took the place of Bandar ʿAbbās as the chief port of the country, a position which it was destined to hold for over a century and a half. Abraham Parsons, who visited Būshahr in 1775, stated that, when approached from the sea, the houses were sighted before the land itself came into view. So shallow was the sea there that large vessels had to anchor some 3 miles off shore. He estimated the population in normal times at nearly 20,000, but when he was there two-thirds of the inhabitants were absent at the siege of Baṣra [*q.v.*]. See his *Travels in Asia and Africa*, London 1808, 187-8.

In the 19th century Būshahr easily maintained its supreme position as a port. During the brief Anglo-Persian war, British forces occupied the town in December 1856, and held it until the conclusion of peace in the following March. The British connexion with Būshahr, at first only commercial, but later also political (for it became the headquarters of the Political Resident in the Persian Gulf), increased in importance as time went on. Other nations too participated in the trade of the town. Particulars of this trade and also of the movement of vessels in the latter part of the 19th century are to be found in the *Administration Reports* of the British Resident from 1876 onwards; these reports were published in Calcutta in *Selections from the Records of the Government of India, Foreign Department* (the tables covering the years 1893 to 1897 in Freiherr M. von Oppenheim's *Vom Mittelmeer zum persischen Golf*, Berlin 1900, ii, 310-17, are based on these publications).

For the first quarter of the 20th century Būshahr continued to prosper, but, with the completion of the Trans-Iranian Railway in 1938 and the development of Bandar Shāpūr and Khurramshahr, it lost its position as the principal port of the country. Unlike Būshahr, both Bandar Shāpūr and Khurramshahr have wharves and jetties where large vessels can berth, and they are, moreover, connected with Tehran and other places in the interior by rail.

In 1946 the population of Būshahr was 15,000. It is understood that the Persian Plan Organisation intends to improve the port and other facilities of the town, but it seems unlikely that, even if this project is fully carried out, Būshahr will ever regain its former predominant position as a port.

BUSHĀḲ, Fakhr al-Dīn Aḥmad b. Ḥallādj Abū Isḥāḳ (*kunya* contracted into the *takhalluṣ* Bushāḳ). Born in Shīrāz, he lived principally in Iṣfahān at the court of Iskandar b. ʿUmar Shaykh, grandson of Tīmūr and governor of Fārs and Iṣfahān, where he died (827 or 830/1424 or 1427). That is almost all we know concerning him (apart from an anecdote reported by Dawlatshāh). According to Hidāyat (*Riyāḍ*), he maintained relations with the mystic poet Shāh Niʿmat Allāh [*q.v.*]. From the name Ḥallādj, a noun of occupation, it can be assumed that he was a cotton-carder. In dictionaries of the Persian language (*farhang*) he appears as an authority on culinary matters; hence the nickname *Bushāḳ-i aṭʿima* or simply *Aṭʿima* (prepared dishes) given him. A good edition of his works (*dīwān*) was prepared and published at Istanbul in 1303/1885-86 by the learned Mīrzā Ḥabīb Iṣfahānī, who added a glossary of technical terms with Turkish and Arabic equivalents (H. Ferté has translated some fifty). This diwan contains *Kanz al-ishtihā'* ("Treasury of Appetite") with a preface (trans. by Ferté and by Browne) which shows that the various poetic genres had already been made famous by his precursors and that all he had to say had been said before; he merely transferred the inspirations of a number of great poets (for their names *vide* Browne) on to a culinary and gastronomical plane. He deals, therefore, in parodies. This applies not only to the "Treasure" but also to the second part of the work—the third being composed of two short works in prose mingled with verse, of the same inspiration, and having a conclusion followed by an amusing glossary of culinary terms (some of these have been trans. by Ferté). If one considers ʿUbayd-i Zākānī as the master of satire, one can, while admitting the existence of several earlier parodies, regard Bushāḳ as the creator of this genre to which he devoted all his literary activity. He may have lacked the distinction and "moderation" evinced in the French poet Berchoux's *Gastronomie* (Paris 1800), but he nevertheless excelled in the minor genre he had chosen, revealing humour and originality. A practised stylist, he handled with ease all poetic forms, both in the classical language and in the dialect of Fārs. Finally he rescued from oblivion a series of technical terms, as did his imitator Maḥmūd Kārī, who wrote his "*dīwān* of Dress" (*dīwān-i albisa*) on a plan analogous to that of Bushāḳ's *dīwān*.

BŪSHANDJ, also known as Fūshandj, in Middle Persian probably Pūshang, ancient Iranian town to the south of the river Harīrūd, and 10 parasangs (= one day's journey) W-S-W. of Harāt (Yāḳūt, i, 758) which lies north of the river. The town already existed in pre-Islamic times, and, according to legend, was founded either (considering its name) by the hero Pashang (the son, though in the epos the father, of Afrāsiyāb), or else by the Sāsānid ruler Shāpūr I (242-271) (J. Marquart, *Ērānshahr*, 49). In the year 588, the town is mentioned as the seat of a Nestorian bishop (*ibid.*, 64; it is, however, not referred to by Jean Dauvillier, *Les provinces Chaldéennes "de l'Extérieur"*, in "*Mélanges Cavallera*", Toulouse 1948, 279-282). Wilh. Tomaschek, (*Zur historischen Topographie von Persien*, i, Vienna 1883, 78), connects it with the Πισάγγαι of Theophrastus.

Round the year 650 AD, the town came into the hands of the Muslims, and it remained for 200 years on the frontier between the Arabs and the not fully conquered east-Iranian mountain regions. Here it found support, when in 41/661-2 and again in 160/776-7, it revolted against the Arabs. From 92/791 until 94/793, the place was in the hands of the Khāridjites, and it entered into a quieter period only when the islamisation of the area was largely completed under the rule of the Ṭāhirids [*q.v.*], whose founder was a native of the place. Later, Būshandj was connected with Sīstān, and came under Ghaznawid rule in 392/1002 (cf. B. Spuler, *Iran in früh-islamischer Zeit*, Leipzig 1952, 19, 25, 51, 53, 71 f., 111, 301, with reference to sources).

At that time, the size of Būshandj was roughly half that of Harāt, and throughout the Middle Ages it was known as a strong fortress with three gates. Economically, the town was important as the junction of the roads from Harāt to Nīshāpūr and Harāt to Kūhistān (Iṣṭakhrī, 267, last line, 268, line 8; Ibn Rusta, 172, line 17 f.; *Ḥudūd al-ʿĀlam*, 64, 104, 327; Ḥamd Allāh Mustawfī, *Nuzha*, 152 f., 177, 220 = trans., 151, 171, 212). In addition, Būshandj had timber and furniture industries, kept going by supplies from the nearby woods (Muḳad-

dasī, 307 f. (based on Iṣṭakhrī); Spuler, *op. cit.*, 408; Le Strange, 431)

After the Mongol conquest, under the vassal-dynasty of the Kurts (or Karts [*q.v.*], 1245-1389), Būshandj had a comparatively quiet period until it was conquered and ruthlessly destroyed by Tīmūr in the middle of Dhu 'l-Ḥidjdja 782/March 1381. It was rebuilt soon afterwards. It is also repeatedly mentioned in the 15th century (by Ḥāfiẓ-i Abrū, [*q.v.*]), and a *ribāṭ* supposedly founded by Abraham (Isfizārī, *Rawḍat . . . fi . . . Herāt*, printed in *JA*, v, 16 [July-Dec. 1860], 493 f.) was shown nearby in 897/1491-2. Later on, the place vanished from history; it was presumably destroyed during the Özbek and Türkmen raids. According to W. Tomaschek (*Topographie*, i, 78), the modern Ghūriyān is situated on its site. (W. Barthold-[B. Spuler])

al-**BUSHĀRRĀT**, "pastures" (*sierras de yerba y de pastos*), is the origin of the Spanish name Alpujarras; the Arabic toponym really applies to all the mountainous region which forms the extension of the Sierra Nevada southwards to the Mediterranean, from Motril to Adra and Almería; but more particularly designated by this name are the many fertile valleys which intersect this country (Padul - Béznar - Lanjarón - Orgiva - Cádiar and Ugíjar - Alcoléa - Laujar - Canjáyar - Rágol - Gádor). In the Middle Ages the Alpujarras were of greater extent because the capital was Jaén, and in addition to many fortresses it had more than 600 silk-producing villages. Ibn Ḥafṣūn [*q.v.*], who succeeded in seizing Jaén, must have mastered this region or at any rate found partisans and allies there, for in 300/913 ʿAbd al-Raḥmān III captured his emissaries at Fiñana, crossed the Sierra Nevada, and besieged Juviles where, after a short siege, he captured and beheaded the Christian garrison which Ibn Ḥafṣūn had placed there. The belligerent inhabitants of the many villages in these valleys which intersect each other in all directions, the Alpujarreños, had in fact in Arab times rebellious tendencies, and after 1492 revolts continued to mark their history, in particular the great rebellion of 1568-70 which was directed by Ibn Umayya and ʿAbd Allāh b. ʿAbbō, and which was suppressed with the shedding of much Morisco blood by the Marquis of Mondéjar and Don John of Austria [see moriscos].

(C. F. Seybold-[A. Huici Miranda])

BŪSHĪR [see būshahr].

BŪṢĪR or **ABŪṢĪR**, the name of several places in Egypt, which is not unnatural since it refers to places in which the god Osiris was the object of special veneration.

The name Abūṣīr is found in the large suburban area west of Alexandria, a memory of the site of *Taposiris Magna*.

Būṣīr, on the west bank of the Damietta branch of the Nile, in the province of al-Gharbiyya. In the middle ages this small town was connected to a neighbouring settlement, Banā, so that one spoke of Būṣīr-Banā. Famous in antiquity, Būṣīr was an episcopal seat and the administrative centre of the pagarchy (*kūra*).

Būṣīr al-Sidr, in the province of al-Djīza where there are still pyramids. The description of it by ʿAbd al-Laṭīf is a document of the first order, as are also the discoveries which he mentions in the cemetery of the town.

Būṣīr, called Būṣīr-Ḳūrīdis in the Middle Ages, and, from the 11th/17th century at least, Būṣīr al-Malaḳ, is located at the entrance to the Fayyūm, within the western strip of Middle Egypt. Owing to the great number of places called Būṣīr, Arab authors have found it difficult to situate exactly where the Umayyad caliph Marwān died. It is more than likely—and is in addition supported by a local tradition—that Marwān spent his last days at Būṣīr al-Malaḳ. The information is already given by Ḳudāma. About this town developed a small, ephemeral province, Būṣiriyya, which lay between those of Aṭfīḥ and Bahnasā.

Opposed to this documentation, another school of writers places the final defeat of the Umayyad in a locality also called Būṣīr, opposite Ashmūnayn, on the other bank of the Nile, about 180 kilometres south of Būṣīr al-Malaḳ. The region claimed to be the place of origin of Pharaoh's "magicians" and, according to al-Idrīsī, the inhabitants of his time had a certain reputation as sorcerers. This particular Būsīr has left no traces.

Finally, there is a Būṣīr-Dafadnū in the province of Fayyūm.

al-**BŪṢĪRĪ** [see Supplement].

BUSR b. Abī Arṭāt or b. Arṭāt (there is less authority for the latter form), an Arab general of the Ḳuraysh clan of the Banū ʿĀmir, was born in Mecca in the last decade before the Hidjra. Only traditions which have been influenced by Shīʿī prejudices deny him the title of Ṣaḥābī. He went with the relief column into Syria under Khālid b. al-Walīd, distinguished himself there by his bravery and afterwards took part in the conquest of Africa. His bravery earned him a *duʿāʾ* and rewards from ʿUmar. During the civil war he vigorously declared himself on the side of Muʿāwiya for whom he won over the influential Kindī chief, Shuraḥbīl b. al-Simṭ. At Ṣiffīn we find him in the Syrian camp. He afterwards helped ʿAmr b. al-ʿĀṣ to reconquer Egypt for Muʿāwiya. Busr is perhaps the most striking figure among the lieutenants of this Caliph. He was a typical Bedouin of the old school, utterly impervious to pity, if Shīʿī tradition has not exaggerated the details of the portrait of this fiery opponent of ʿAlī. Sent into Arabia against the the latter's partisans, Busr waged a war of extermination against them. He destroyed the dwellings of the enemies of ʿUthmān in the sacred towns of the Ḥidjāz and displayed a loyalty to the Umayyads which was only surpassed later by Muslim b. ʿUḳba and Ḥadjdjādj. In the Yemen he put to death the two young sons of ʿUbayd Allāh b. ʿAbbās. During the brief campaign, which was terminated by the abdication of Ḥasan, son of ʿAlī, he commanded the vanguard. As a reward, he received the governorship of Baṣra where he established a dictatorial regime. He spent little time in the ʿIrāḳ but returned thither to seize the children of Ziyād b. Abīhi and by this drastic

measure subdued the last armed partisan of ʿAlī. We later find him leading several naval expeditions against the Byzantine Empire.

After the year 50/670, this agent of Muʿāwiya's ambition, general and admiral by turns, disappears from the field of politics. He is said however to have lived at court till the death of the sovereign. According to the Shīʿīs, he went mad because he brought down ʿAlī's curse upon himself. He reappears in the reign of Walīd I, when he is said to have again taken part in an expedition to Africa. Other authorities make him die at Medina in the reign of ʿAbd al-Malik. He seems to have lived to a great age and fallen into his dotage.

(H. LAMMENS)

BUṢRĀ [see BOṢRĀ].

BUST, a ruined city in Sidjistān, among whose imposing remains are the two principal groups of Ḳalʿa-i Bist and Lashkar-i Bāzār. It lies in the south of Afghānistān on the now deserted banks of the Hilmand, near its confluence with the Arghandāb, on the stretch of the route through Girishk between Harāt and Ḳandahār. Its present isolation, to which recent American efforts to rehabilitate the region will no doubt put an end, stands in contrast to the ancient prosperity of the area, celebrated in the middle ages for its great fertility, well irrigated orchards between two water-courses, and for its rôle as stage on the principal route between Khurāsān or Fārs on one hand and Sind on the other, that is, between Baghdād and India, at the very place where a pontoon-bridge crossed the river just as it became navigable in the direction of Zarandj. The Arab geographers of the first centuries, criticising Bust because of the frequent epidemics there, pointed at the same time to the commercial and intellectual activity of the city, and to the produce of its surrounding area, planted in fruit trees, vineyards and palms.

Such prosperity dates very likely from an early period. Precise knowledge is lacking however for the first stages of the development of Bust, whose existence was attested in the time of the Parthians, though we are ignorant of its exact rôle in the province of Sīstān, quarrelled over by the Sāsānid sovereigns and the rulers of the Chionite-Hephtalite kingdom of Zābulistān.

Also rather confused is the history of Bust from the moment when ʿAbd al-Raḥmān b. Samura [*q.v.*] annexed it to the territory of Islam, perhaps in 29/649-50 during the caliphate of ʿUthmān, but more likely in 42/661-62 at the beginning of the Umayyad period. The first Arab expeditions were doubtless no more than raids of little permanent consequence, resulting in the payment of a tribute by the region but not in its occupation. In the second half of the 1st/7th century, Bust "became it seems, the advanced post of Muslim domination against the indigenous and independent princes of the frontier countries of the east, who bore the name or title of *Zunbīl*". (R. Hartmann). And the early sources mention several armed encounters in the neighbourhood, the Umayyads and first ʿAbbāsids having sent Arab governors there to suppress local rebellions in Sidjistān, or troubles instigated by the Khāridjites (troubles emphasised in the *Taʾrīkh-i Sīstān*), and to fight or to negotiate with the ruler of Kābulistān. In particular we know the events of the revolt of Ibn al-Ashʿath [*q.v.*] which took place at Bust and, somewhat later, its suppression by Maʿn b. Zaʾida al-Shaybānī before he was assassinated there in 156/773. Although Yaʿḳūbī speaks of the place then held by Bust, the principal city of a province which rivalled in wealth Khurāsān, and though one can imagine the strategic rôle then played by its fortress, we nevertheless lack detail of the administrative organisation of a city which, in especially troubled political circumstances, seems, like other localities in eastern Iran and central Asia, to have enjoyed relative autonomy.

Subsequently, the Ṣaffārid Yaʿḳūb b. al-Layth, after having taken Kābul in 257/871, extended his domination as far as Bust, cited several times in the *Taʾrīkh-i Sīstān* in connexion with his campaigns against his eastern neighbours and visits he made to the region. In their turn the Sāmānids tried to establish a foothold in the area, and confused quarrels, accompanied by military expeditions, opposed the people of Bust to the envoys from the court in Khurāsān as well as those sent by the caliphs at Baghdād. But it was during the period of the Ghaznawids that Bust, taken by Subuktakīn in 366/976 and thus separated from the province of Zarandj, enjoyed for nearly a century its most brilliant development. It served as a subsidiary residence for the rulers of Ghazna, who had there a permanent camp (*al-ʿAskar*) mentioned by al-Muḳaddasī, and al-Bayhaḳī describes the brilliant life led there, between ambassadorial receptions, hunting, and pleasure parties on the Hilmand, by a ruler such as Masʿūd I during his visit in 428/1036. It was there too, that the troops of the Ghaznawid ʿAbd al-Rashīd successfully opposed in 441/1049-50 the advance of the Saldjūḳs, who had already been defeated several times trying to take the region. The sack of Ghazna, however, in 544/1149 by the Ghūrid ʿAlāʾ al-Dīn, followed shortly after by the conquest of Bust, its pillage and the burning of its royal castles, marked for the latter city the beginning of a decline, echoed in the text of the contemporary geographer Yāḳūt.

The destruction of Bust was at that time far from complete. The old palaces of the Ghaznawids were soon restored and inhabited by the governors of the region on behalf of the Ghūrids, later of the Khwārizm-Shāhs. Despite the various struggles in which the city was the stake, its continued existence is attested above all by funeral steles of beautiful execution, dating from the end of the 6th/12th century or the first half of the 7th/13th century and bearing the titles of important personages, undoubtedly the holders of a power at once religious and temporal established on a basis exclusively local. The destruction resulting from the Mongol invasion, however, about 618/1221, and from the passage of Tīmūr's hordes at the end of the 8th/14th century, brought about the final abandonment of the site, whose cultivated lands became steppe. Only the citadel, which played a rôle during the wars of the Great Mughals against Persia, and underwent at that time architectural modifications which are still visible, was maintained until Nādir Shāh had it dismantled in 1738.

The facts relative to the history of Bust have been illuminated especially since D. Schlumberger's discovery, and the careful study by the French

Archaeological Delegation in Afghānistān, of an architectural group until then unexplored and scarcely mentioned by earlier investigators. North of a field of ruins, about 7 kilometres long and in places 2 kilometres wide, whose southern end alone had previously attracted attention, with its remains of the city wall proper, its citadel and the high silhouette of the "Arch of Bust", the royal residence itself has been identified, the ancient *al-ʿAskar* of the Arab authors and the *lashkargāh* of the Persian writers. Its three monumental palaces, formerly surrounded by gardens still indicated by the high walls, —they constituted, together with a mild climate, the charm of this subsidiary capital of the Ghaznawids— rise from within the enclosure of the "royal city", and the southern castle in particular has been almost completely cleared in the course of several excavations. Fronted by a spacious esplanade, on to which opens a large mosque, and approached by an avenue a half-kilometre long bordered by shops behind a colonnade, it displays about a central court with four *īwāns*, rooms grouped in *bayts*, among which are several larger and luxuriously appointed chambers. Not only have the characteristic details of its plan been revealed. Beneath the heaps of earth caused by the fall of the higher parts—the construction is made largely of rough brick—and despite two successive fires the traces of which are still evident on the building, it was possible to discover important elements of its exterior and especially its interior ornamentation, based on bare brick, of facings sculptured in earth or plaster and of mural paintings of which one is a fresco of human beings. Such archaeological documentation evokes comparisons among which not the least interesting are those which place this unique specimen of civil architecture in mediaeval Iran in the line of the earlier constructions of the ʿAbbāsid caliphs at Baghdād and Samarra. Thus the irrefutable testimony borne by the ruins of Lashkar-i Bāzār concerning the grandeur of Bust and its royal suburb between the 5th/11th and the 7th/13th centuries, contains an eminently suggestive lesson for the historian of Muslim art in one of its remote provinces.

(J. Sourdel-Thomine)

BŪSTĀN, also used in the contracted form Bustān, a Persian word formed from *bū* "smell, perfume", and the suffix of place *estān*, usually used in the sense of "kitchen-garden" and sometimes in the sense of "orchard"; it is used in Turkish in the sense of "kitchen-garden", and in Arabic in the sense of "garden" in general (pl. *basātīn*); in the Algerian dialect it denotes "cypress" (Beaussier), and at Beirut a "plantation of mulberry-trees" (Cuche); it forms part of several Middle Eastern geographical names.—It is the title of a didactic poem by the eminent Persian poet Saʿdī [*q.v.*], written at Shīrāz in 655/1257, in ten chapters. The work is a classic, and has been read in primary schools in every country where Persian has been cultivated, especially in Iran, India, Central Asia and Ottoman Turkey. Indian authors have written several commentaries on this work in Persian, and there exist further commentaries in Turkish, notably those of Shamʿī and Sûdī (both at the end of the 16th century). It was translated into Turkish by the scholar Taftāzānī [*q.v.*] in 755/1354 (Gibb, *Ottoman Poetry*, i, 202), and into various other Oriental languages, such as Bengali, Sindi, and Pandjābī. The principal translations into European languages are those of Forbes Falconer into English (*Selections*, London 1838), of Graf into German verse (*Saʿdi's Lustgarten*, Jena 1856), of Baron Schlechta-Wssehrd into German (Vienna 1852), of Barbier de Meynard into French (Paris 1880), and of Constantin Čaikin into Russian verse (Moscow 1935). The oldest MSS. give this work the title of *Saʿdī-nāma*. (Said Naficy)

I. — Gardens in Islam

The part played by gardens in the past and present life of the Muslim peoples appears to stem from the conception of Paradise, the ideal garden, as portrayed in the Ḳurʾān, which paints so detailed a picture of the state (of blessedness) reserved exclusively for Believers that it might have served as a model for the creators of gardens in both East and West. There are to be found lawns interspersed with winding streams, trees bowed down with fruit, seats on which it is possible to recline in comfort, pavilions occupied by virgins waiting to welcome the elect. It will be noted that there are no flowers, but instead a wealth of fruit trees. Also worthy of note are the open summer-houses and in particular the streams of running water, cooling the air. The layout clearly has much in common with that of the oasis, a haven of freshness and fertility, the more delightful because it is found in the midst of those desert regions in which Islam principally spread.

It is to Iran, the home of most of our (European) fruits, the land *par excellence* of irrigated plantations and cultivated shrubberies, that the Muslim world would appear to owe its initiation into the art of landscape gardening. The fact that Arabic terms such as *bustān* or *firdaws* derive from the Persian gives substantial support to this conjecture.

Persian horticulture flourished long before the birth of Islam and was associated with princely life. Even as early as Xenophon, we find references to the beautiful layout of the park planned at Sardis by Cyrus the Younger (407 B.C.). The palaces of the Sāsānid kings, such as the Ḳaṣr-i Shīrīn of Chosroes II, looked out on extensive vistas of water and greenery. There are, moreover, bas-reliefs to remind us of the vast wooded enclosures stocked with game where the sovereign could give himself up to the pleasures of the chase. Gardens in an architectural

framework, such as esplanades and courtyards planted with trees, on the one hand, and on the other properties outside the towns, as spacious as parks, and embellished here and there by a solitary pavilion, — these two styles of garden were adopted by the Muslim world and spread, with more or less continuity, across the nations and the centuries.

The first style influenced the architects of the ʿAbbāsid era, who built Samarra. The Djawsaḳ al-Khāḳānī of the Caliph al-Muʿtaṣim (218-227/833-842), was made up of an edifice at the front comprising three *iwāns* and a suite of apartments, behind which was a vast esplanade walled with ramparts. "Parallel to these encircling walls were canals which were doubtless bordered by beds of flowers. Marble pools, fountains and other decorative features completed the scene". H. Viollet, who describes this layout, relates it to the "French style" garden with its ample spaces, straight lines and architectural aspect. These common features are perhaps not purely fortuitous, rather they may point to a distant common ancestry. These "French-style" gardens, of which Versailles is the most notable example, were inspired by the Italian garden which in turn derived from the Graeco-Roman garden, such as is found at Pompeii or Hadrian's villa. These last certainly seem to have been much influenced by the gardens of the East.

Nevertheless, it was in Persia, the country of its birth, that this style of garden was to be preserved. The Ṣafawid miniatures in particular bear witness to its permanence. The Prince sits enthroned in a summer-house looking out on to a paved walk broken up by canals and lakes and separated by wooden fences from stretches of ground planted with flowers and trees. No less evocative are the Persian carpets known as *"au jardin"*. The area is divided into rectangles by intersecting canals. Fish swim in the canals and the rectangles are filled with flowers and shrubs (see, for instance, W. Bode, ***Antique Rugs from the Near East***, New York, 1929, fig. 58). This same style of garden is also to be found at the opposite end of the Islamic world.

The private houses of the ʿAbbāsid era doubtless had their interior gardens. It is well-known that the art of the Ṭūlūnids which dominated Egypt in the 3th/9th century was closely linked to that of Sāmarrā. In the houses of Fusṭāṭ, which can be assigned to this period, the rooms opened on to a central court in which brick-lined hollows were dug. Some of these were filled with water, others with soil for growing plants. The townsman, moreover, showed a remarkable taste for gardens. The Persian traveller Nāṣir-i Khusraw draws attention to those which adorned the terraces. An irrigating machine on the top of a seven-storey house and operated by oxen was used for watering orange, banana and other fruit trees as well as many kinds of flowers and fragrant plants.

At this time Ifrīḳiya was held in the name of the ʿAbbāsids by the Aghlabid *amīrs*, who disseminated the fashions of Baghdād throughout the lands of the Berbers. They had first one and then a second residence on the outskirts of al-Ḳayrawān. The second, Raḳḳāda, was seven kilometres distant from the town. The grounds, which according to al-Bakrī, were surrounded by a wall more than 10 kilometres long, must have been mainly laid out as gardens, irrigated by cisterns of which remnants are still in existence. The largest of these hydraulic works is a huge quadrangular reservoir with solid walls reinforced on both sides with buttresses, in whose waters a raised pavilion was reflected.

The tradition of these country seats must have persisted in Ifrīḳiya in spite of hardships which in the 5th/11th century ruined the country. We come upon gardens again in the 8th/14th century under the Ḥafṣids of Tūnis. The vast domain of Abū Fihr, created by al-Mustanṣir (647-75/1249-77) in the neighbourhood of his capital (near the present village of Ariana) included various features which foreshadowed the Maghribī taste for the *agdāl*. Ibn Khaldūn describes it with a wealth of detail which is unusual for him.

"One found there", he tells us, "a forest of trees, some of which were trained on to trellises, while the rest were left to grow in complete freedom. The branches of the lemon and orange trees mingled with those of the cyprus, while, below, the myrtle and jasmine smiled upon the water-lily. In the midst of these groves, a large garden encircled a lake so vast that it might be taken for an ocean. Water was brought there by the ancient aqueduct [which in former times supplied Carthage and which the Ḥafṣid al-Mustanṣir had had repaired]. Following this conduit, the waters gush through a huge outlet into a square reservoir [serving as a decantation basin] and, thence, through a fairly short canal, to the great pool which they fill in swirling torrents. At each end of the pool stands a pavilion, one large, one small, whose roofs rest on columns of white marble and whose walls are faced with marble inlay".

This same period witnessed in Morocco the creation by the Marīnid sultans of vast cultivated enclosures such as that attached to the Palace of Fez al-Djadīd, called Amīna al-Marīniyya, in which terraces and raised pavilions dominated the plantations and the surrounding countryside. Abandoned after the fall of the Marīnids, this park was restored between 1240 and 1250/1824-34 by the ʿAlawid sultan Mūlāy ʿAbd al-Raḥmān. This same sultan created the *agdāl* of Marrākush, which the modern historian al-Nāṣirī describes for us. It was an immense park or rather a group of gardens planted with one or two species of fruit trees or perfumed flowers, either indigenous or imported, cultivated for sale. In the midst of the plantations there were lakes with pleasure boats. The streams which filled these lakes provided water for the gardens and even turned the wheels of water-mills. Pavilions stood in this central section.

We can still see enclosures of this kind in the *agdāls* of the imperial cities of Morocco such as Marrākush or Meknes. Away from the dense urban centres, the *agdāl* is adjacent to the official quarter, a rural annex to the urban palaces. It is profit-making land, enriching the coffers of the sovereign. It also provides a place of recreation and repose for his harem. This type of plantation may have some links with the oriental tradition of royal parks. Nevertheless, the name by which it is known and its general resemblance to the great domain of a Berber chieftain inclines one to look to the West for the models which inspired its creation.

This is not the case with the *riyāḍ*, the interior garden of the palaces and rich dwellings of the Muslim cities of the west. It is almost certainly to Iran that we should look to find the origins of this style of garden whose layout is preserved for us in the Persian carpet: straight pathways, intersecting at right angles and separating square patches of green on which fruit trees and decorative plants abound. Sometimes canals with flowing water cross the

pathways, sometimes their intersections are marked by ornamental fountains. A summer-house at one end of the garden dominates the vista, unless the garden is bordered on two or four sides by galleries, in which case the doors of the apartments give on to this open space. The *riyāḍ* seems, in fact, to be an extension and elaboration of the patio. It is designed in harmony with the architecture of the house and completes its lay out.

If the Maghribī house with its interior courtyard is inspired by the Graeco-Roman peristyle house, the *riyāḍ* which fills this courtyard seems to be a legacy from Persia, like so many other elements in the Muslim civilisations of both East and West. We do not know at what period the West first adopted this style, though we find traces of it as early as the first half of the 6th/12th century.

Excavations carried out at Marrākush beneath the ruins of the first mosque of the Kutubiyya have yielded the plan of a small *riyāḍ* which can be dated as belonging to the period of the Almoravid ʿAlī b. Yūsuf (500-537/1106-1142). Here a rectangular patio is divided by two intersecting paths. The remnants of Castillejo have been uncovered near Murcia. This appears to have been built by Ibn Mardanīsh (541-566/1147-1171). Its rooms enclose a *riyāḍ* intersected by pathways, with two pavilions at the narrower ends. This type of *riyāḍ* appears to be classical in Andalusia. In the 8th/14th century, the Granadan poet Ibn Lūyūn enumerates its features. He recommends the laying out of a garden which offers "in its centre trellises shading walks which should encompass the flower-beds like margins". A summer house, wide-open, surrounded by rambler roses and myrtles, affords a place of rest which commands the whole domain at a single glance. The Naṣrid sultans of Granada incorporated this domestic theme into the sumptuous architecture of their palaces. In the Alhambra of Muḥammad V (763-93/1562-91), the famous Patio of the Lions is nothing more than a *riyāḍ*. Pathways intersecting to form a cross separate four plots which must have been intended to be planted. Two pavilions raised on columns jut out at the two narrow ends of the rectangle. In addition to this interior garden, the guests at the Alhambra had the Generalife (*Djanān al-ʿarif*) at their disposal. Here again, we find shrubberies, canals fed by fountains and galleries enclosing the open space.

It is very probably via Andalusia that this style of town garden, originating in Persia, spread throughout the three countries of North Africa. In Morocco, the Alhambra inspired the Saʿdid Aḥmad al-Manṣūr, who adopted its design on a grandiose scale in the palace of the Badīʿ of Marrākush (986-1012/1578-1603). A court measuring 135 metres by 110 metres, surrounded by apartments and pavilions, looked out on shrubberies alternating with vast lakes. Up to our own day, Moroccan towns like Marrākush and Fez have seen the creation of enchanting *riyāḍs*. In Tunisia, the Andalusians, driven out of Spain, spread the fashion in the towns in which they had taken refuge. As for Algeria, the gardens of the beautiful country houses which are scattered about the outskirts of Algiers were among the luxuries enjoyed by the Corsairs and were tended by a vast number of their captives who laboured in them all the year round.

II. — MUGHAL GARDENS

The Mughal emperors of India, Akbar [*q.v.*], Djahāngīr [*q.v.*] and Shāhdjahān [*q.v.*] were all great lovers of nature, a quality which they inherited from their progenitor, Bābur [*q.v.*] who after the conquest of Hindūstān, lamented the absence of well-planned gardens in his new dominions. Bāgh-i Wafā was the first garden which he laid out near Kābul in 914/1508, followed by larger and more magnificent ones in Āgra [*q.v.*], his Indian capital.

His grandson Akbar, after constructing the fort of Harī Parbat (Kashmir) in 1006/1597 laid out the Nasīm Bāgh flanking the Dal lake. This garden is now in ruins, with the exception of stately *čanār* trees planted by Shāhdjahān (1037/1627-1069/1658). But the most charming of the Kashmir gardens is the Nishāṭ Bāgh laid out by Āṣaf Khān (c. 1035/1625), a brother of Nūrdjahān [*q.v.*], the queen of Djahāngīr. In natural beauty and architectural skill this garden is considered matchless. It was built in 12 terraces, representing the 12 signs of the Zodiac. Its water-supply was temporarily stopped by Shāhdjahān, who considered it too splendid for a subject, but was soon restored. The most-famed Shālīmār was founded in 1029/1619 by Djahāngīr. The etymology of the word *Shālīmār* or *Shālāmār* is dubious; it was in vogue even in pre-Mughal days, being the name of a Dal cascade in the times of Djahāngīr (*Tuzuk-i Djahāngīrī*, trans. Rogers, ii, 151). Nādir Shāh's historian, Mīrzā Mahdī, spells it *Shuʿla Māh*, while the Sikh chieftain, Randjīt Singh (1214/1799-1255/1839), changed it into *Shahlā*, declaring that the word *Shālīmār* had ominous implications (see S. M. Latif, *History of the Panjab*, Lahore 1892, 360).

Apart from the Srīnagar (Kashmir) Shālīmār, there is an equally famous one of the same name at Lahore; a third one, at Delhi, is no longer extant. The Kashmir Shālīmār is remarkable for a pavilion, built by Shāhdjahān, with exquisitely carved pillars of black marble. This pavilion, which is surrounded by a series of cascades, contained four large stone doors in the days of Bernier (1672-1826).

The Lahore Shālīmār was founded, in three terraces, by ʿAlī Mardān Khān, an Iranian nobleman who, after surrendering the town of Ḳandahār, of which he was the Governor, to the investing Mughal armies, had come down to Lahore in 1048/1638. He was warmly received by Shahdjahān, who appointed him Governor of Kashmir and, in 1049/1638, of the Pandjāb also. Being a celebrated canal engineer, he was, immediately on his arrival, entrusted by the Emperor with the digging of a canal from the Rāwī which would supply water

to the gardens. He was, however, transferred to Kābul before the canal reached Lahore. On completion, a year later, it cost the Imperial exchequer a sum of 100,000 rupees. The garden with all the buildings, walks etc. was completed in 1052/1642-3, when it was visited by the Emperor. The name of the first terrace was changed to Faraḥ Bak͟hs͟h by the emperor, S͟hāhd͟jahān; the second and the third terraces, added later, were named Fayḍ Bak͟hs͟h. The Faraḥ Bak͟hs͟h measures 330 yds. sq. and in the days of Bernier had 8 buildings, four in the middle of the side walls and four at the four corners. This garden suffered much damage during the Sikh rule, most of its marble having been looted and taken to Amritsar [*q.v.*]. The canal of ʿAlī Mardān K͟hān, which had silted up, was reopened by Rand͟jīt Singh in 1806. The present entrance is a later construction built by W. L. McGregor, Deputy Commissioner of Lahore, in 1849.

The other Mug͟hal gardens of the Indo-Pakistan sub-continent include Pind͟jawr, near Ambāla [*q.v.*]; Gulābī, Sadā Harā and Dilkus͟hā in Lahore; Raws͟han Ārāʾ, Tālkatōrā and Mahtāb in Delhi; Nagīn, Wērī Nāg, Aččhībal, Habbak, and Pari Maḥall, in Kashmir.

The Mug͟hal gardens follow a definite plan, a salient feature being the construction of a central channel and shallow tanks in the centre surrounded by soft green turf, a lofty boundary-wall, *čanār* trees, artificial pools and numerous fountains. The Mug͟hal garden is generally arranged in squares or geometric patterns, usually in the form of terraces placed in such a way as to make the distribution and flow of water easy. Each terrace has four divisions to conform to the traditional plan of the *Čahār bāg͟h* or four-fold garden. Taken as a whole, the garden looks like a combination of rectangles and straight lines; no curved paths or even circular parterres are allowed.

Great care was taken in the selection of the sites, and the foot of a wooded hill, or a charming cliff, served as the background. The Kashmir S͟hālīmār is the best specimen of Mug͟hal horticulture.

al-BUSTĀNĪ [see Supplement].

al-BUSTĪ, Abuʾ l-Fatḥ ʿAlī b. Muḥammad, Arabic poet of the 4th/10th century. He was of Persian origin and a native of Bust [*q.v.*] where he studied *ḥadīth*, *fiḳh* and *adab*. He was a pupil of the traditionist Ibn Ḥibbān, who was living at Bust from 340/951 till his death 354/965. Another traditionist, al-K͟haṭṭābī (d. 388/1007), was Bustī's friend. In law he followed the S͟hāfiʿī school. As a young man he became secretary (*kātib*) to Bāytūz, the lord of Bust. When in 367/977 Bust was taken by Subuktigīn, al-Bustī went over to the victor. Owing to some intrigue he was compelled to retire to a village in the Ruk͟hk͟had͟j district, but after a few months was called back by Subuktigīn and remained in office together with al-ʿUtbī till the reign of Maḥmūd. In this capacity he composed his much admired state letters announcing the spectacular victories of Maḥmūd. Later on he fell again into disgrace and was banished to the "land of the Turks" *i.e.*, Transoxania. He died in 400/1010 or 401/1011 (or even as late as S͟hawwāl 403/Febr.-March 1016) in Buk͟hārā. According to al-Manīnī, *S͟harḥ al-Yamīnī* (1286/1869-70) vol. i, 73, 2 he died in Uzgend where his tomb was shown.

His varied writings both as a poet and letter-writer show all the traits of rhetorical artificiality typical of the poetry and ornate prose of the 4th/10th century. He was much praised for his skill in applying the *tad͟jnīs* (paronomasia) and especially the *tad͟jnīs mutas͟hābih i.e.* the use of homonyms for the sake of puns. This technique he developed gradually after having heard in his youth a quibble from the poet S͟huʿba b. ʿAbd al-Malik al-Bustī (*Yatīmat al-Dahr*, iv, 233 f.). He was on friendly terms with T͟haʿālibī, who composed his *Aḥsan mā samiʿtu* on his instigation and gives of Bustī's art an appreciative selection in his *Yatīmat al-Dahr*. His *Dīwān* was published at Beirut in 1294/1877-8. Especially famous is his didactic poem *al-Nūniyya* or *ʿUnwān al-Ḥikam*.

Bustī wrote also some poems in his mother-tongue, Persian, but they were never collected (see H. Ethé, in *Morgenländische Forschungen*, Festschrift H. L. Fleischer, 1875, 55-7). He is sometimes confounded with his namesake Abu ʾl-Fatḥ al-Bustī (*recte* al-Baynī) an Egyptian poet of the 5th/11th century (see Ibn Ras͟hīḳ, *al-ʿUmda* i, 200, 18 and Ibn Saʿīd, *Mug͟hrib* 103 Tallquist).

BUT [see budd].

BUṬAYN [see nud͟jūm].

BUṬNĀN, the name of a *wādī* located thirty kilometres east of Aleppo. At this place springs feed a large stream, Nahr al-D͟hahab, which flows south and empties into the salt lake of D͟jabbūl. These natural conditions have permitted the development

of essentially agricultural villages (fruit trees and cotton), of which the most important are the market-towns of Bāb and Buzāʿa. A convenient stage about a day's march from the valley of Ḳuwayḳ, it was always a halting-place on the routes from Edessa and Raḳḳa, and the revenues drawn from the saltbed of Djabbūl formed consistently an appreciable support for the finances of the governors or rulers of northern Syria.

Popular etymology relates Buṭnān to the root *bṭn* and gives it the meaning of "low-lying ground". In fact the name preserves the memory, beyond a Byzantine Batnai and a Roman Batnae, of the principality of Patin.

Conquered by Ḥabīb b. Maslama, Buṭnān fell very soon under the influence of the new centre, Aleppo, and henceforth played only an episodic rôle. In 70/689-90, the caliph ʿAbd al-Malik wintered in the valley, during a struggle against Muṣʿab b. al-Zubayr. The Carmathians made a disastrous appearance there in 901/289. Under Sayf al-Dawla's rule, it was devastated by Nicephoros Phocas in 966/365. In the time of the Mirdāsids the valley was the scene of confused struggles, and fell under the authority of Tutush in 1080/472. The Crusades and the Frankish occupation of Edessa and Antioch opened a period of insecurity which began in 1098/491-92 with an Armenian raid, doubtless in connexion with the siege of Antioch. A prompt response by the Saldjūḳs of Aleppo ended in the extermination of the large Ismāʿīlī community at Bāb. Burned by Joscelin of Tell Bāshir in 1125/518, Buzāʿa as well as Bāb was taken by the Emperor John II Comnenos in 1138/532. The arrival of Nūr al-Dīn in Aleppo brought back security. The Buṭnān of this period is known owing to the descriptions, as numerous as they are stereotyped, of the Arab geographers (cited by Le Strange and Dussaud).

With the Mamlūks, Buṭnān disappeared from the political scene. The region was administered by two Mamlūk *djundīs*, appointed by the *nāʾib* of Aleppo, one for the towns of Bāb and Buzāʿa, the other for the neighbourhood of Djabbūl. The Turks made it a *ḳaḍāʾ*, where a *ḳāʾimmaḳām* subordinate to the Pasha of Aleppo kept an eye on the salt-mines of Djabbūl (400-500,000 pounds annual revenue for the exchequer in the middle of the 19th century). He resided at Bāb, which had 6,000 inhabitants at this period.

(F. Hours)

AL-BUTR, the name given to one of the two groups of tribes who constitute the Berbers [*q.v.*], the other being called al-Barānis [*q.v.*].

The chief groups of whom al-Butr was composed were the Lawāta, the Nafūsa, the Nafzāwa, the Banū Fātin and the Miknāsa. Their earliest habitat is the region of steppe and plateau which extends from the Nile to southern Tunisia; they were thus originally Libyan Berbers. But, very early, several of these peoples (Miknāsa, Banū Fātin, and a part of Lawāta) moved towards the west—to Algeria (the areas round Awrās, Tiaret and Tlemcen) and Morocco (the Moulouya basin, the Saharan country between Sidjilmāsa, Fīgīg and Twāt, and the Sebou basin), and from the western Maghrib many elements penetrated into Spain. An attempt has been made to present the Butr as the Berber nomads and camel-drivers par excellence. This was perhaps their primitive way of life, which is no doubt why Arab historians have attached to this group peoples of definitely nomad habits, such as the Hawwāra and the Zanāta. The Nafūsa, the Nafzāwa and a part of the Lawāta appear nevertheless to have become stabilised rather early in the mountains of Libya, perhaps at the time of the Arab conquest. As for those who moved into Algeria and Morocco, they were soon settled and even established a number of small towns.

The greater part of the tribal names of which this group is composed are still current, but the collective name itself has disappeared. It is the plural of the Arabic (!) adjective *al-abtar*, the alleged surname of Mādghīs, whom these peoples recognised as their common ancestor. The word means "he whose tail is docked, mutilated, he who has no descendants". The last sense is hardly suited to an eponymous ancestor; the first two are bizarre. However, the eponymous ancestor of the other group, Burnus, bears a name coincident with the Arabic word (an early borrowing from the Greek *birros*) designating the garment which we call burnous. Thus, the Barānis might be "the (wearers of) burnous, or long garments" and, in contrast, the Butr would be "those clad in short garments". In fact, in the Arabic dialect of north-west Morocco, there is an adjective *gerṭiṭ* (a quadriliteral expansion of the root *ḳrṭ*) meaning "he who has his tail cut short", and is applied in particular to the very short *jellābas* of the mountaineers (cf. W. Marçais, *Textes de Tanger*, 439).

For other ethnic appellations derived from

peculiarities of dress, note that of the Ṣanhādja Berbers [*q.v.*], who are called ***mulaththimūn*** "those who wear a veil over the mouth"; and that which has been suggested for the Maṣmūda [*q.v.*] Berbers, who are called Shulūḥ (cf. *Mélanges Gaudefroy-Demombynes*, Cairo 1939, 305).

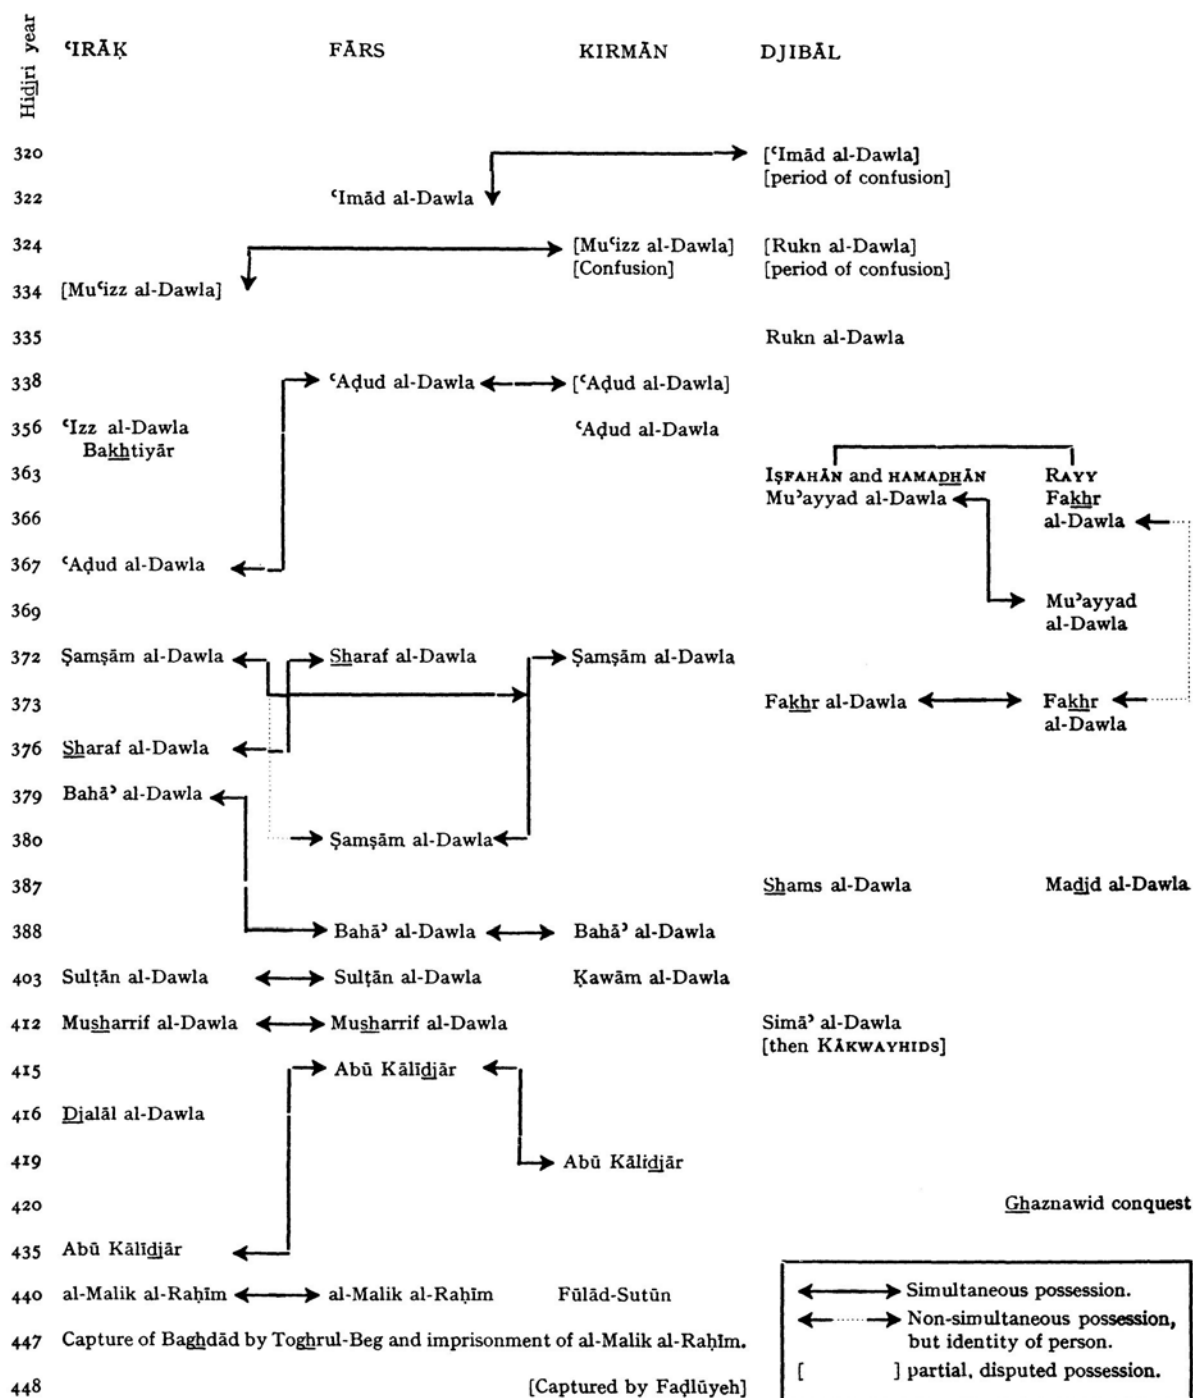
(G. S. COLIN)

BUWAYHIDS or **BŪYIDS**, the most important of the dynasties which, first in the Iranian plateau then in ʿIrāḳ, side by side with the Sāmānids of Khurāsān and of Māwarāʾ al-Nahr, marked the "Iranian intermezzo" (Minorsky) between the Arab domination of early Islam and the Turkish conquest of the 5th/11th century. Its name derives from Buwayh or Būyeh, the father of three brothers who founded it, ʿAlī, al-Ḥasan, and the youngest, Aḥmad. *Condottieri* of humble birth, they belonged to the population of the Daylamites [*q.v.*] who, newly won over to (Shīʿī) Islam, were at that time enlisting in large numbers in all the armies of the Muslim East, including those of the Caliphate.

To some extent, it was the Daylamites who, with the advent of the Buwayhids, assumed power and imposed on the régime something of their own character. While the Daylamites remaining in Daylam formed small principalities, sometimes extending as far as Ādharbaydjān, the others, in Iran and ʿIrāḳ, developed in consequence into a political factor of growing importance. The Buwayhids, who, to begin with, had followed one of their compatriots, Mākān b. Kākī, who had entered the service of the Sāmānids, and then their Gīlānī ally Mardāwīdj [*q.v.*] in his struggle against their common enemy, the Zaydī state of Ṭabaristān (sometimes extending as far as Rayy), continued to follow the Gīlānī Mardāwīdj when he carved out for himself in central Iran a vast autonomous principality. Soon, however, they began to adopt a somewhat intractable attitude towards him. Having become for a time master of Iṣfahān, then, more permanently, of Fārs, ʿAlī, to protect himself against Mardāwīdj, and in spite of being a Shīʿī, got his authority in the government of the province recognised by the Caliph, as the ʿAbbāsid armies would have been incapable of reconquering it. He still had possession of it when in 332/943 Mardāwīdj was assassinated. After confused struggles (see the articles ʿIMĀD AL-DAWLA, MUʿIZZ AL-DAWLA and RUKN AL-DAWLA) against the lieutenants of allies of the Sāmānids or of the various clans who shared among themselves an influence with the Caliphate, ʿAlī, the eldest, kept the province of Fārs, while his brother al-Ḥasan occupied almost the whole of Djibāl and the youngest, Aḥmad, entrenched himself on the one hand in Kirmān and on the other in Khūzistān. These important strongholds, and more especially this last acquisition, drew the Buwayhids into the interplay of factions for power in ʿIrāḳ and the other territories of the Caliphate under the successive ***amīr al-umarāʾ***. Only a very close study can determine whether, in the general post of intrigues and betrayals, the Buwayhids were allied to any one specific faction. However that may be, in 334/945, Aḥmad entered Baghdād. The régime which he set up there lasted until 447/1055. The new era was at once inaugurated by a change of name: Aḥmad, ʿAlī and al-Ḥasan respectively had bestowed on them simultaneously by the Caliph the honorific titles (*laḳab*s) of Muʿizz al-Dawla, ʿImād al-Dawla and Rukn al-Dawla, by which they were henceforth known to history. Before long, ʿImād al-Dawla died without an heir, leaving Fārs to ʿAḍud al-Dawla, son of Rukn al-Dawla. When the latter died (366/977), after Muʿizz al-Dawla, ʿAḍud al-Dawla, finding himself head of the family, dispossessed his nephew, ʿIzz al-Dawla Bakhtiyār, of ʿIrāḳ, and only allowed his brother, Muʾayyid al-Dawla, to remain master of the rest of Buwayhid Iran, by virtue of his incontrovertible loyalty. ʿAḍud al-Dawla, who was the most distinguished personality of the dynasty, achieved the fullest unity that the family was to enjoy.

Outside ʿIrāḳ, the new principalities merely joined the number of those which, for a century, had been carving up the ʿAbbāsid Empire. The Buwayhid principality of ʿIrāḳ in a sense did little more than implant in this last ʿAbbāsid redoubt the form of government which had triumphed elsewhere. But there was, in this instance, a factor of greater importance, in that Baghdād was the very centre of the Caliphate. It is true that its seizure by the Buwayhids did little more than set the seal on the developments which had, in effect, placed the Caliphate under the domination of the army chiefs, promoted ***amīr al-umarāʾ***. But this time there was the added fact that the Buwayhids were professing Shīʿīs, so much so that it might have been asked whether they were not about to suppress a Caliphate whose legitimacy had no special meaning for them. Nothing of the sort happened. Doubtless Muʿizz al-Dawla was aware that the Shīʿīs were in the minority, and that, had he destroyed the Caliphate in Baghdād, the institution would have reappeared elsewhere. It was better therefore to keep it under his thumb, both to legalise his authority over the Sunnīs in his states and to strengthen his diplomatic relations with the world outside by the weight of the respected moral authority which the Sunnī princes still enjoyed by right. In fact, deriving their official authority from the Caliphate, the Buwayhids behaved as though they believed genuinely in the legitimacy of the ʿAbbāsid Caliphate.

The question of the relations between Buwayhids and Caliphate is moreover bound up with that of their religious adherence. It has sometimes been said that the Buwayhids were Zaydīs because Daylam had been the scene of the activity of the emissaries of these same Zaydīs who had set up political hegemonies in Ṭabaristān and, on the very borders of Daylam itself, by those of their rival al-ʿUṭrūsh, around the year 900. All the same, there were also Ismāʿīlīs (Misk., ii, 32-35) in Daylam and, in the entourage of al-ʿUṭrūsh or his descendants, Twelvers (*EI*¹, s.v. al-ʿUṭrūsh), and Mardāwīdj, affected perhaps by Ismāʿīlī propaganda, had at any rate joined the Sunnī Sāmānids in fighting the Zaydīs of Ṭabaristān. At this time, Twelver theology proper was only just beginning to be elaborated, and there is consequently nothing remarkable in the persistence, in later Buwayhid society, of Zaydī doctrinal influences or, linked to these, Muʿtazilī influences. But, for the Buwayhid conquerors, politics took precedence over religion. The notion, for a time entertained, it is said, by Muʿizz al-Dawla, of conferring the Caliphate on a certain Zaydī ʿAlid in his entourage was set aside, never to be taken up again, precisely because it would have been necessary to obey such a Caliph. The distinction between the various branches of Shīʿism was probably not yet clearly defined outside the Zaydī states (leaving Ismāʿīlism aside), and the Twelver tendency, certainly in


ʿIrāḳ and Fārs were united from 367 to 372, 376 to 379, 388 to 415, and 435 to 447.
ʿIrāḳ and Kirmān were united from 334 to 356, and 380 to 388. Kirmān was united with Fārs from 338 to 367 (to 372 with ʿIrāḳ), 380 to 403, 419 to 440; it stood alone from 403 to 446 and from 440 to 448.
ʿIrāḳ stood alone from 334-367, 379 to 380, 416 to 435. Fārs stood alone from 322 to 338 and from 372 to 380.
A union between ʿIrāḳ, Fārs and Kirmān was achieved from 367 to 372, 388 to 403, 435 to 440.
The Djibāl always stood alone, except during the early days of the dynasty.
ʿUmān, except for a short time under Ṣamṣām al-Dawla, when it was united with ʿIrāḳ, was united with Fārs.
Baṣra and Ahwāz, after ʿAḍud al-Dawla, were often separated from ʿIrāḳ or constituted an autonomous government at the heart of the ʿIrāḳī kingdom; they were often incorporated in the kingdom of Fārs.
Complete genealogical tables are to be found in Zambaur 212-16 and Q.

Mesopotamia and probably in central Iran, was the majority form of Shīʿism. In fact, about the time when the Buwayhids were seizing power (and was this purely fortuitous?) the doctrine was spreading among adherents of this movement that after the period in which the imāms were present in person, followed by that in which they were represented by a *wakīl*, the time of the "great occultation" was coming, when nothing more would be known of them. Thus, if the ʿAbbāsid Caliph was not, strictly speaking, legitimate, at least, if he tolerated Shīʿism, there was nothing discreditable in putting up with him. It is certain that the Buwayhids welcomed somewhat indiscriminately Shīʿīs or Muʿtazilīs of different shades of opinion, but politically they were Twelvers.

At no time did the Buwayhids plan the persecution of the Sunnīs by the Shiʿis — both sects were represented in their army; rather they intended to set up a sort of ʿAbbāsid-Shīʿī condominium, which freed the Shīʿīs from the obligation of a certain *taḳiyya* and provided them, as well as the Sunnīs, with an official organisation. Basically, they were reviving, from the Shīʿī angle, what had been the dream of many ʿAbbāsids from the time of al-Maʾmūn. Thus, they believed, they acquired a strong following, without at the same time alienating the rest of the population. Without the smallest doubt, Twelver Shīʿism owes to the Buwayhid régime not only this organisation, but even a part of its doctrinal structure. The importance of the rich Shīʿīs and the *Sharīfs* towards the end of the ʿAbbāsid era is well-known. It was upon them that —leaving aside the army—the Buwayhid régime depended in its social relations with the local population. The régime organised the ʿAlids—or as they are more usually called, the Ṭālibids—into an autonomous body to counterbalance the ʿAbbāsids, whereas formerly this family unit was merely integrated into, though, of course, dominated by, the ʿAbbāsids. On the doctrinal level, the presence of Imāms in the 3rd/9th century and the fact that the Twelvers had for a long time been, in a somewhat negative fashion, those among the Shīʿīs who had not joined in active rebellion, had obstructed the work of the traditionists and theoreticians. The Buwayhids now made up for lost time. While al-Kulīnī, the first of the great theologians whom the Twelvers recognised as specifically their own, died at the dawn of the Buwayhid régime in Iran, the second and more important, Ibn Bābawayh (Bābūya) was encouraged in his work by the Buwayhids in the third quarter of the century. He was followed by others among whom—also important in Iranian Shīʿism—were Arabs from the old ʿAlid citadel of Ḳumm. In Baghdād, the brother *sharīfs* al-Rāḍī and al-Murtaḍā were, throughout the whole of the first quarter of the 11th century, the real masters of the town, acting as intermediaries between the Buwayhids, the Caliphs and the population, at the same time as the Shīʿī scholars and traditionists. It is said that at this moment when the four schools remaining to the Sunnīs were beginning to be defined by them as exclusively orthodox, they would have wished that their form of Shīʿism might be recognised in the heart of the *umma* as a sort of fifth authorised school. More readily apparent from the outset of the régime is the organisation or recognition of forms which are still those of Shīʿism to this day. Influenced perhaps by Daylamite practices, Muʿizz al-Dawla openly created or consecrated the lamentations of the ʿĀSHŪRĀʾ. He also created the festival of Ghadīr Khumm. The ʿAlid *mashhad*s, genuine or conjectural, were embellished, and ʿAḍud al-Dawla was the first to be buried there after ʿAlī. Shīʿī schools were created, such as the Dār al-ʿilm of the vizier Sābūr, endowed with *waḳf*s, a replica (393/993) of the Fāṭimid "University", and considerably earlier than the Sunnī Niẓāmiyya of the Saldjūḳids; and in the mosques, the Shīʿī cult, including the public call to prayer, was in dangerous competition with the Sunnī cult.

Naturally, it was out of the question that the recognised Caliph should govern effectively. In the same way as the *laḳab* of Nāṣir al-Dawla, the first of its kind conferred on the Ḥamdānid, the Buwayhid *laḳab*s show that, while it was the Caliph who legalised their power, they alone were its custodians. Al-Mustakfī, the Caliph who welcomed them, had joined forces with many others before them. He was replaced by his personal enemy al-Muṭīʿ, who nineteen years later himself had to yield the throne to al-Ṭāʾiʿ for having backed the wrong side in the struggle between the heirs of Muʿizz al-Dawla. Al-Ṭāʾiʿ in his turn abandoned the throne to al-Ḳādir. Nevertheless, the life-span of the Caliphs in the time of the Buwayhids—three and a half reigns in a century—was appreciably longer than that of their predecessors—precisely because they no longer ruled in anything but name. As to the *laḳab*s, they became more numerous as they declined in value. As each prince in the family, then little by little princes of other dynasties, claimed them too, it was necessary first to double and then treble those of the head of the Buwayhids. Thus ʿAḍud al-Dawla was also called Tādj al-Milla etc. The last Buwayhid went so far as to claim that he had conferred upon himself a title ending in *dīn*, faith,—a procedure and implication (a condemnation of Sunnism) which obviously the Caliph could not accept. In the same way, the supreme prince marked his superiority over his *umarāʾ* relatives by proclaiming himself from ʿAḍud al-Dawla onwards, *malik*, and even, in Iran though not in ʿIrāḳ, *shāhanshāh*, the old Sāsānid title. The last of the Buwayhids committed the sacrilege of styling himself al-Malik al-Raḥīm, a title properly reserved for Allāh alone. The exalted position of the Buwayhids was shown also in the mention of their name, after that of the Caliph, in the *khuṭba*, except in the Caliph's quarter, and on coins, as well as in the privilege of having the *ṭabl*s beaten in front of the princely residences at the three principal, and later five, hours of prayer.

To turn to the exercise of power, the essential point is that there was no longer any instrument of government in Baghdād which depended even in law upon the Caliph—though for a time under Nāṣir al-Dawla this had been the case. Everything, especially the wazīrate, was now an institution directly attached to the amīrate, though this transfer did not in itself mark any change in the distribution of functions. Topographically, everything in Baghdād was now at the Dār al-Mamlaka [see below]. During the period in which the power of the régime conferred on the wazīrate, as on the principality, a certain stability, there were Buwayhid wazīrs who were by no way inferior to the greatest wazīrs of the Caliphate, and who stayed even longer in office. Such was al-Muhallabī under Muʿizz al-Dawla, Ibn al-ʿAmīd under Rukn al-Dawla, the Ṣāḥib Ibn al-ʿAbbād under Muʾayyid al-Dawla and Fakhr Dawla. All three of these were very cultured men and at the same time great administrators. Nevertheless, some

of the Buwayhids, principally ʿAḍud al-Dawla, the greatest of them all, preferred to keep the co-ordination of the instruments of government in their own hands and, in practice, divided the functions of the wazīrs, with or without the title, among two or three high dignitaries. Their inadequate knowledge of Arabic had made it impossible for the Buwayhids of the first generation to do more themselves than reap the benefits of the work done by their more effective wazīrs. Under the last of the Buwayhids, the wazīrate was more unstable although wazīrs were frequently drawn from a single family. Of course, the Caliphate still kept a secretariat and a Chancellery, but these were exclusively occupied with the administration of matters pertaining strictly to the Caliphate or with international correspondence on behalf of the *amīrs*.

The functions of the Caliphate comprised the administration of its goods and the organisation of the palace, the representative duties which devolved upon the Caliph, the control of the good works and religio-legal life of the Sunnīs and a certain moral share in the administration of Baghdīd. The income of the Caliph, apart from family and private means, was no longer what he set aside for him self out of State revenue, for it was no longer the Caliph who authorised wages and salaries. On the contrary, as was already the case in the time of Nāṣir al-Dawla, an allowance was granted to him by the *amīr* out of the public funds which, in former times, had been administered by himself. The total was smaller than before though still worthy of his station—two or three hundred thousand *dīnār*s under the early Buwayhids —to which must be added the numerous gifts made to him by the entire Muslim world and by the foreign ambassadors, as well as what he received from the Buwayhids themselves at festivals and investitures. Against these however, must be set the forced contributions extorted by the Buwayhids in times of crisis. As to his religio-legal powers, they consisted in the nomination and control of the personnel of the mosques and the holders of the office of ḳāḍī for the Sunnīs, in particular in Baghdād where the Caliph al-Ḳādir compensated for his powerlessness to oppose the Buwayhid government by a drive to enforce the letter of Sunnī orthodoxy, especially among the Muʿtazilīs and the Ismāʿīlīs.

The transfer of government from the Caliphate to the amīrate did not *ipso facto* alter the character of the government. In practice, the Buwayhid régime established the absolute supremacy of the army in the government. However, since the general functions of public administration still had to be carried out, this supremacy meant also that, in a sense, the military authority now extended its competence to fields which previously had been outside its province. The innovation which probably had the most serious consequences was the transformation of the *iḳṭāʿ* régime. For a long time, faithful supporters and, increasingly, the military chiefs, had been rewarded by the Caliphate with the grant in quasi-ownership of lands appropriated from the state domain. In fact, for the last hundred years or so, this source having been inadequate, high-ranking officers were sometimes granted the right to the taxes of a fiscal district, with no further obligation than to pay the standard Muslim tithe to the public Treasury. The Buwayhid régime, following in the footsteps of the Ḥamdānids, extended and ruthlessly intensified this practice. Many districts were systematically distributed as *iḳṭaʿ*s of this new type, now without even tithe obligations to the Treasury. Miskawayh, or, before him, Thābit b. Sinān, have described perfectly some of the consequences of this system. From the point of view of the central administration it meant the loss of control of fiscal transactions in part of the country and, in the long run, even of factual knowledge of the nature and extent of the tax levied. In so far as the fiscal value of each district remained roughly calculable, it tended no longer to be within the province of the *dīwān* of Taxes, but that of the Army. The *dīwān* of Taxes, deprived of part of its functions, correspondingly reduced its staff and the number of its departments. Nevertheless, the Buwayhid *iḳṭāʿ* was not a fief, but an assignment of salary; the beneficiary would exchange it, at his own or the government's wish, if the revenue of the district were no longer equal to the balance due to him, or for any other expedient cause. He had no permanent ties with the district and therefore no interest in its development. At best, the means thus placed at his disposal enabled him to build up more stable properties. Nevertheless, they were not yet either *iḳṭāʿ*-holders of the provincial governments—these functions, when they exercised them, were paid in the normal way—nor bound to maintain their troops out of their *iḳṭāʿ*. Each soldier received his pay direct from the Treasury in whatever form it might be given to him. One should not exaggerate: a variable proportion of the pay was still paid in kind, a part of the land was still administered in the traditional manner by the traditional authority, of which some fiscal handbooks for this period have been preserved for us.

With these reservations, socially and economically, a new and more powerful aristocracy, that of the military leaders, was gaining ascendancy over the middle-class and slowly declining aristocracy of the great merchants, civilian landlords and high-ranking officials who had been at the height of their power in the ʿAbbāsid era. But, under the great Buwayhids, the princes exercised a clean-cut authority over these leaders and made it their business to see that the new aristocracy respected their strict control in such matters as the police, public order (*ḥimāya*) and even taxation. There was, of course, no question of relaxing the tax on all subjects which was the basis of the upkeep of the army, whether this applied to pay or *iḳṭāʿ*; and, for the taxpayer, a change of tax-collector and beneficiary did not mean any corresponding change in the fiscal system. The great Buwayhid wazīrs, after the period of conquest during which their masters behaved as common thieves and looters, applied themselves to establishing a sound administration, which was made possible by the restoration of public order; side by side with new taxes, we hear of the remission of others, and the currency of the early Buwayhids was sound. Nevertheless, it may also be observed that the successors of ʿAḍud al-Dawla provoked riots in Baghdād by their attempts to tax the cloth manufacturers who were responsible for the livelihood of thousands of artisans in the capital. State revenue, under the great Buwayhids, slightly exceeded that of the Caliphate over an equivalent area. In agriculture, disturbances dating back to before the Buwayhid conquest had resulted in damage to the irrigation works. Repairing the damage and building new canals, etc., were among the burdens which fell upon the Buwayhid administration. The roads and bridges used for commercial traffic were also restored, and the capitals, Baghdād, Shīrāz and Iṣfahān benefited from the presence of the princes,

who built themselves sumptuous palaces. In east Baghdād the whole group of these buidings formed the Dār al-Mamlaka, as opposed to the Dār al Khilāfa, and the buildings erected at the gates of Shīrāz by ʿAḍud al-Dawla at Kard Fanākhusraw enchanted al-Muḳaddasī. The close union of ʿIrāḳ and Fārs resulted in some attempts to introduce ʿIrāḳī customs into Fārs, although no administrative unification was ever achieved. This union, from which local industries may have derived some profit, was in contrast with the periods which preceded and followed it, when the ties between ʿIrāḳ and Iran were directed, across the central plateau, towards Khurāsān.

Culturally, the early Buwayhids were rough fellows without education, but their successors were moulded by the cultured indigenous aristocracy of Iran. In contrast with the remote Iran of the Sāmānids, the Buwayhid sphere of influence in Iran—not to mention, a *fortiori*, in ʿIrāḳ—had the appearance of a strongly arabicised area. We have already observed that the early Buwayhids, with Ibn al-ʿAmīd and Ibn ʿAbbād as their wazīrs, thus commanded the services of two of the most illustrious Arabic scholars of their day. Furthermore, a galaxy of Arabic poets were present at their courts. It was under the Buwayhids that Abu 'l-Faradj al-Iṣfahānī's "Book of Songs" and al-Nadīm's *Fihrist*, two treasuries of Arabic literature, were compiled. If Abū Isḥāḳ al-Ṣābī had grounds for complaint against ʿAḍud al-Dawla, his grandson, the historian Hilāl al-Ṣābī. lived comfortably in the Baghdād of the later Buwayhids, who also protected the philosopher-historian, Miskawayh. Generally speaking, sages were well-received by the Buwayhids, especially those whose special knowledge could be put to practical use. Such—leaving aside the religious sciences—were the geographer, Iṣṭakhrī, the mathematician, Abu 'l-Wafāʾ al-Buzdjānī, al-Nasawī, who disseminated the "Indian numerals", the astrologers, for whom Sharaf al-Dawla built an observatory in Baghdād, the physicians (such as al-Madjūsī), who had cause for self-congratulation especially on the foundation by ʿAḍud al-Dawla of a remarkable hospital in the ancient palace of Khuld at Baghdād, and another at Shīrāz [see BĪMĀRISTĀN]. The libraries of Shīrāz, Rayy, Iṣfahān, organised by successive Buwayhids, excited universal admiration. It is common knowledge that Avicenna found sanctuary and high preferment (as a wazīr?) under Shams al-Dawla. The great patron-wazīrs were scarcely less munificent as long as they did not see in their protégés possible rivals for glory (Abū Ḥayyān al-Tawḥīdī as against Ibn ʿAbbād). Ibn al-Bawwāb, a high Buwayhid dignitary, was one of the inventors of *naskhī* calligraphy.

But, while the Buwayhids and their ministers patronised literature and science of a traditionally Arabic character, they also showed a genuine interest in neo-Persian literature. If the first Daylamite generation were not sufficiently polished to have any such pretentions, those who followed were in the widest sense more fully Iranian than Daylamite. It was not for nothing that, as Mardāwīdj had dreamed, they revived the title of Shāhānshāh and caused to be drawn up for themselves a Sāsānid genealogy which, however, was universally recognised by their contemporaries as being historically unsound. Though their rôle in literature cannot be compared with that of the Sāmānids, they nevertheless had their Persian poets, and Firdawsī found a welcome at the court of Bahāʾ al-Dawla. The indubitable decline of Zoroastrianism, still flourishing in the Fārs province at the dawn of the Buwayhid régime, is probably in part linked with the fact that henceforth it was possible to form a separate block within Islam itself, under a "national" dynasty.

The place of the Buwayhid era in the history of Persian art would perhaps seem equally great if more thoroughly reliable testimony were available. Their buildings have already been mentioned in another connexion in which their places of worship perhaps count for less than their palaces, fortresses, hospitals, etc. Recent finds of textiles have now made it possible to study in actual examples this apparently traditional branch of Iranian craftsmanship. A good recent study on the art of the Buwayhid period is that of E. Kühnel [see *Bibliography*], to which the reader is referred.

More generally, it is certain that, among the Buwayhids as elsewhere, the establishment of regional principalities, by setting up many new courts and cultural centres outside what until then was the more or less unique cultural centre of Baghdād, enriched and disseminated the life of the spirit and, by bringing it into contact with the varying requirements of different peoples, conferred upon it a new vitality.

The foreign policy of the Buwayhids seemed scarcely to have been affected by doctrinal considerations. In Iran, their great opponents in the 4th/10th century, were the Sāmānids with their Ziyārid (descendants of Mardāwīdj) and Ṣaffārid (of Sīstān) vassals. Very naturally, they supported the Khurāsānī rebels, especially the Simdjūrids, against the Sāmānids, and took advantage of the ascendancy of the Ghaznawids at the beginning of the century and of the final ruin of the Sāmānids at the end. In the north-west, their policy was to establish or maintain a vague protectorate over the small Daylamite dynasties, so as to have them on their side in the fight against the Ziyārids on the one hand and the Kurds on the other. The struggle against the Kurds falls partly under the heading of "foreign policy", on the Ādharbāydjān side, and partly of internal security—in other words mere public order—on the Djibāl side (the Ḥasanwayhid Kurds). The same is true of the hostilities, carried out for the most part in the time of ʿAḍud al-Dawla, against the Ḳufṣ and the Balūč of Kirmān and Makrān. Finally, the occupation of the ʿUmān, or more precisely of the vital strategic coastal areas of the region, at times by the Buwayhids of Fārs, at others by those of ʿIrāḳ, was clearly related to considerations of economic security. In Mesopotamia, following the liquidation of the Barīdīs of Baṣra, the main efforts of the two first generations of Buwayhids consisted above all in the neutralisation and then the liquidation of the Ḥamdānids who, though Shīʿīs like themselves, were Arabs, and had been only recently their rivals in Baghdād. Naturally, a small semi-permanent war was essential for the maintenance of order on the borders of Arabia, and, in ʿIrāḳ itself, in the Baṭīḥa as also in the Persian Gulf against the Carmathians of Baḥrayn.

The appearance of the Fāṭimids in 968 in Egypt, then in Syria, confronted the Buwayhids of the second generation and their descendants with a problem unknown to the first. The claim of the new dynasty to be ʿAlid could not fail to excite interest among all Shīʿīs. Nor could this dynasty, with its "imperialist" ambitions, fail to try and further its own expansion by claims of this kind. It would, however, have been necessary for all Shīʿīs to accept

the heterodox doctrines of the Ismāʿīlīs which were the official doctrines of the Fāṭimid State, and, further, it was difficult to avoid clashes between two powers bent on dominating the territories between Egypt and ʿIrāḳ. The Buwayhids occasionally joined forces with the Carmathians, when they quarrelled with the Fāṭimids, and also, of course, with the Arab tribes fighting the Fāṭimids on one front and the Ḥamdānids or their heirs fighting them on another. It is difficult to assess just how far the anti-Fāṭimid manifesto of the Caliph al-Ḳādir (402/1011) was an exact reflection of Buwayhid policy or whether it was also instigated by the desire to counteract Ismāʿīlī infiltration. At any rate, there is nothing to support a view that it was done against the wishes of the Buwayhids, and it is remarkable that it was signed jointly by the Sunnī and Twelver sages. It was not until the end of the dynasty that a Buwayhid, Abū Kālīdjār, lent a complacent ear to the explanations of al-Muʾayyad al-Shīrāzī, the Ismāʿīlī missionary, though, officially at least, nothing came of it (*Sīra* of al-Shīrāzī; al-Balkhī, 118; Abū Shudjāʿ, 232). And the fact that after the fall of the dynasty in Baghdād their Turkish general, al-Basāsīrī [*q.v.*], thoroughly intransigent while they were in power, declared his allegiance, against the Saldjūḳid conqueror, to the Fāṭimid Caliphate, which alone was capable of coming to his aid, cannot be regarded as characteristic of Buwayhid policy in general.

However stable the Buwayhid dynasty may have appeared from the outset, however brilliant some of its achievements, it was not without its weaknesses. Some of these were common to other régimes, others were peculiar to itself, others again came not from within but from without. In this last category was the maritime trading crisis which had an appreciable effect upon the end of the Buwayhid era. It is certain that towards the year 1000 A.D. trade with the West from the Indian Ocean ceased to flow mainly through the Persian Gulf, being diverted to the Red Sea (see B. Lewis, *The Fatimids and the Route to India*, in *Revue de la Fac. de Sc. Econ. d'Istanbul*, 1953). The persistent troubles of Lower ʿIrāḳ and the presence in Baḥrayn of the Carmathians, whom the Buwayhids were never able to control, must certainly have had something to do with this, as had also the complete segregation of Syria from Mesopotamia brought about by the Fāṭimid and Byzantine conquests. Probably an even more significant influence, however, was the economic imperialism of the Fāṭimids and the favourable conditions which attracted the attention of the merchant ships of Italy. When a natural catastrophe (in about the year 1000) ruined Sīrāf, which up to that time had been the great Persian port of the Gulf, the town was not rebuilt, and the mastery of the Gulf belonged henceforth to the Lord of the Island of Kīsh, who seems to have been more or less a Corsair chieftain. Although we cannot accurately assess the consequences of these facts, it is scarcely likely that they were not serious both for the merchant classes of society, who were doubtless henceforth less well able to resist the growing power of the military aristocracy, and for the internal economics of the Buwayhid régime and consequently its general stability. Even before the year 1000, the Buwayhids were unable to avoid the devaluation of their silver coinage, and doubtless it was for this reason that in the 11th century, gold was used more and more, though one wonders how it came there. The Buwayhids were increasingly forced, in order to raise taxes, to have recourse to tax-farming, selling offices, etc.

A more domestic and congenital weakness in the Buwayhid, régime as in most of the near-eastern régimes of this period, lay in that very army which had brought about the ruin of the Caliphate. The Buwayhid army, in spite of the pay being supplemented by *iḳṭāʿ*, was no more easily satisfied than its forerunner, the army of the Caliph. Like its predecessor, it knew itself to be the cornerstone of the system, and took advantage of its position. It was not, however, united. The original Daylamite nucleus was not adequate for long and, even before the conquest of Baghdād, the Buwayhids, like Mardāwīdj, had added to it the corps of Turkish slaves indispensable to every Muslim army in the East. These, on the one hand, could be used against the Daylamites in the event of a breach of discipline (and vice versa), and on the other hand, and even more important, they were mainly horsemen, while the Daylamites, who came from the mountains and forests, were infantrymen. Occasionally, Kurds, Ḳufṣ, etc., were also recruited. To the rivalry between this diversity of ethnic groups, must be added the fact that, at the beginning at least, the Turks taken over by the Buwayhids from the Caliphate were Sunnīs. Finally, for reasons which are still unexplained, the recruitment of Daylamite troops dried up progressively. The last descendants of the princes who owed their power to them were surrounded almost entirely by Turkish soldiers.

The third cause of weakness, rather more peculiar to the Buwayhid dynasty, was the splitting-up of power. From the beginning, it has been noted, there was not one but three Buwayhid principalities. The circumstances of the conquest may have had something to do with this, but another factor must surely have been a patrimonial or familial conception of power. When strength and chance combined to permit ʿAḍud al-Dawla to establish an almost complete unity to his own advantage, he did no more than his predecessors to perpetuate this unity, which was disrupted at his death. This splitting-up of power, which distinguishes the Buwayhid dynasty from all the other Muslim dynasties before the Ḳarakhānid and Saldjūḳid Turkish dynasties, inevitably brought about internal strife, once the three founder-brothers were dead. It goes without saying that the army and all the trouble-makers benefited, so much so that this flaw in the dynastic organisation in its turn aggravated the vices born of the military régime and the other internal weaknesses of the system. The disturbances among the urban population, a harsh warning to the early Buwayhids, started up again; a revolt of Iṣṭakhr caused the destruction of the old metropolis, and Baghdād was at times in the power of the *ʿayyārūn* [*q.v.*]. If the late *isnāds* of the *futuwwa* are to be believed, Abū Kālīdjār was one of them. The policy of religious equilibrium followed by the Buwayhids in practice did no more than foster in this same town and elsewhere the struggle between Shīʿīs and Sunnīs, and the Ḥanbalī extremists went so far as to burn the *mashhad* of Ḥusayn and the tombs of the Buwayhids. The later Buwayhids, especially in ʿIrāḳ, were virtually powerless to command obedience from anyone.

This powerlessness to some extent benefited the Caliphate. The Caliph, who sometimes arbitrated in dynastic disputes, regained some measure of influence, at least in the affairs of ʿIrāḳ. Finally the Caliph al-Ḳāʾim was able to have once more in his service after the lapse of a century a wazīr in the

person of the intransigent Sunnī Ibn al-Muslima. Hope of a partial recovery of the Caliphate as an institution now became something more than a utopian dream, witness the treatise *al-Aḥkām al-Sulṭāniyya* of the great ḳāḍī al-Māwardī, closely associated with the policies of the Caliph. It was even possible, in Sunnī circles, to look forward to the removal of the heretical protector. True, the weakness of the Buwayhids was not sufficient to restore to the Caliphate the material power needed for the reconstitution of an autonomous government; but it was possible to hope at least that an orthodox and more respectful guardian might be found.

There was no lack of candidates to succeed the Buwayhids, some having only local ambitions, others aspiring to the unification of the Muslim East to their own advantage. Barely twenty years after the fall of the Ḥamdānids, faced by the Marwānid Kurds of Diyār Bakr, it became necessary to recognise the power of the ʿUḳaylid Arabs in Djazīra. Twenty years after the fall of the Ḥasanwayhid Kurds of Djibāl, the ascendancy of the ʿAnnāzid Kurds had to be recognised in the same region; not to mention the various Bedouin tribes who held the ʿIrāḳ-Arab or ʿIrāḳ-Syrian borderlands, and the frontiers of the almost independent principality of the marshes of the Baṭīḥa at the gates of Baghdād.

In Iran, a family related to the Buwayhids and for this reason called Kākwayhids or Kākōyids (from Kākōyeh; in Daylamite: maternal uncle), had taken over first Iṣfahān and then Hamadhān. But the gravest danger came from the east. Here, the Ghaznawids had become a power to be reckoned with, and Maḥmūd of Ghazna now openly aspired to liberate the Caliphate. Meanwhile, he took advantage of the quarrels and imprudences of the Buwayhids to send his son Masʿūd to occupy Rayy. His forces massacred the Shīʿīs and burnt the treasures of their library as well as those of the Muʿtazilīs (420/1027). The death of Maḥmūd, followed by the defeat of Masʿūd by the Saldjūḳids, gave a brief respite to the rest of the Buwayhids. But the triumph of the Saldjūḳids enabled them to take up on their own account and with greater efficiency the plans for a Sunnī empire. They had supporters in the *entourage* of the Caliphate. Buwayhid acceptance of Saldjūḳid suzerainty was of no avail. In 1055, Tughril-Beg entered Baghdād without striking a blow, and imprisoned al-Malik al-Raḥīm. Fārs, in spite of fortifications set up at Shīrāz, also fell, being attacked from the north and from Kirmān. The Buwayhid dynasty was at an end.

Bibliography: Sources: We are fortunate in possessing three collections of correspondence and official documents: that of Abū Isḥāḳ al-Ṣābī, secretary to the Caliphs al-Muṭīʿ and al-Ṭāʾiʿ, important for the study of diplomatic history (some extracts edited by Shakīb Arslān, 1898, the greater part unpublished); that of the wazīr Ṣāḥib Ibn ʿAbbād (the papers relating to the reign of Muʾayyid al-Dawla only have been preserved, ed. ʿAbd al-Wahhāb ʿAzzām and Shawkī Ḍayf, Cairo 1947), of considerable interest for the study of home administration; finally that of ʿAbd al-ʿAzīz b. Yūsuf, a high official under ʿAḍud al-Dawla (summary by Cl. Cahen in *Studi Orientallistici in onore ... G. Levi della Vida*): all three from the third quarter of the 4th/10th century. See also Kalkashandī, *Ṣubḥ*, xiii, 129 & 139.

Nevertheless, the principal sources are the chronicles. The fundamental chronicle is that of Thābit b. Sinān, continued by Hilāl al-Ṣābī until 447 A.H. All that has been preserved pertaining to the Buwayhid period is an extract relating to the period from the end of 389 to the beginning of 393, but whose general substance seems to have been carried over into the later chroniclers who made use of it, first the *Tadjārib al-Umam* of Miskawayh and his successor Abū Shudjāʿ al-Rudhrawarī, the single manuscript of which links up with the fragment of Hilāl al-Ṣābī (the whole ed. trans. Margoliouth, *The Eclipse of the Abbasid Caliphate*, 7 vols, 1920-21), but also, completing and often correcting the *Tadjārib*, the *Takmila* of Muh. b. ʿAbd al-Malik al-Hamadhānī (preserved only up to 367) (ed. Kanʿān in *Machriq*, 1955-58), the *Kāmil* of Ibn al-Athīr, the *Mirʾāt al-Zamān* of Sibṭ Ibn al-Djawzī (unpublished for this period, more complete than the *Muntaẓam* of his ancestor Ibn al-Djawzī from which it also derives): these last three sources only cover the years after 393 A.H. An apologia for the early Buwayhids in the form of a chronicle was composed (in order to obtain his release from prison) by Abū Isḥāḳ al-Ṣābī, under the title of *al-Kitāb al-Tādjī* (for ʿAḍud al-Dawla Tādj al-Milla), the beginning of which, recently rediscovered in the Yemen, is in the possession of Dr. Minovi (it was not accessible to me); the work seems to have been known by later historiographers. Among the remaining mass of Arabic historiographical literature, the following deserve special mention: Masʿūdī, *Murūdj*, ix, 1-34 (origins); Yaḥyā of Antioch; Ibn Ẓāfir, *al-Duwal al-Munḳaṭiʿa* (relations with the Fāṭimids, unpublished but used by Wüstenfeld, *Geschichte der Fatimiden-Chalifen*); Ibn Khallikān (lives of Muʿizz, Rukn and ʿImād al-Dawla); Ibn Tiḳṭaḳāʾ (late, but Shīʿī traditions); al-ʿUtbī (relations with the Ghaznawids); and the unduly neglected *Nestorian History* of Mārī b. Sulaymān, ed. Gismondi, Rome 1903).

Persian historiography comes into the picture with the anonymous *Mudjmal al-Tawārīkh* (ed. Bahmanyār, 1940), linked as regards Buwayhid history to al-Hamadhānī, and with the chronicles of the border states, the Ghaznawids (Gardīzī, Bayhaḳī), Ziyārids and other southern Caspian dynasties (Ibn Isfandiyār). Moreover, several important local histories have come down to us in Persian. Examples of these are the *Taʾrīkh-i Ḳumm* of Ḥasan b. Muḥ. Ḳummī, ed. Djalāl al-Dīn Tihrānī, 1934, and the anonymous *Taʾrīkh-i Sīstān*, ed. Bahār, 1937.

In parahistoric literature, some information is to be found in al-Tanūkhī's *Nishwār* (41, 151, 157, 169 and also in the Damascus 1930 volume, 150), and in the autobiography, *Sīra*, by the Fāṭimid missionary al-Muʾayyad al-Shīrāzī, ed. Kāmil Ḥusayn, Cairo 1949 (relating to propaganda in the time of Abū Kālīdjār). The *dīwān*s and anthologies of such poets as al-Thaʿālibī (*Yatīma*), al-Bākharzī (*Dumya*), al-Tawḥīdī (especially *K. al-Imtāʿ*) are also useful; there is also some original information in the *Irshād* of Yāḳūt, ii, 273 f., iii, 180 f., v, 347 f., vi, 250 f., etc.

To the three great classics of geography, Iṣṭakhrī, Ibn Hawḳal and al-Muḳaddasī—all three contemporaries of the Buwayhids (the first-mentioned was their subject)—may be added Nāṣir-i Khusraw's *Safar-nāma* and some information contained in Yāḳūt's *K. al-Buldān*. (especially iii, 149, art. Sāmīrān), and, in Ibn Balkhī's *Fārsnāma* (ed. Nicholson; historical passage, 117-119).

Among juridico-institutional works, al-Māwardī, *al-Aḥkām al-Sulṭāniyya*, on which see *supra*, and, recently discovered at al-Azhar, the *Rusūm Dār al-Khilāfa* by Hilāl al-Ṣābī or his son Muḥ., on the etiquette of the Caliphate and the rules of the chancellery up to the Buwayhid period (which was made accessible to me by the courtesy of Prof. Duri, Baghdād). The financial history of the era can be studied through the treatises on fiscal mathematics by Abu 'l-Wafāʾ al-Buzdjānī (unpublished) and the anonymous *K. al-Hāwī* (analysed by Cl. Cahen in *AIEO*, Algiers 1952). See also Niẓām al-Mulk's *Siyāsat-nāma* (ed. Schefer), especially 183. For religious history, see the theological works cited above, especially those of Ibn Bābawayh.

Epigraphical material is to be found in *RCEA* (v, 1831-32, 1877, 1956; vi, 2079, 2177; vii, 2577), to be supplemented by G. Wiet, *Soieries Persanes* (cited below). For numismatic material, incompletely published, see, in addition to the *Catalogue of the British Museum* by Lane Poole, G. C. Miles, *A Numismatic History of Rayy*, 1938.

Modern Studies. No detailed comprehensive study of the Buwayhids exists and, apart from the suggestive sketch of V. Minorsky, *La domination des Daylamites*, Paris 1932, readers should consult those sections of B. Spuler's *Iran in früh-islamischer Zeit*, 1952, and of A. Mez's *Die Renaissance des Islams*, devoted to the Buwayhids. More specialised aspects are dealt with in Mohsen Azizi, *La domination arabe et l'épanouissement du sentiment national en Iran*, 1938; *Survey of Persian Art*, Vols. ii & iii, G. Wiet, *Soieries Persanes*, 1948, 99-178 (much more general than the title suggests); A. Duri, *Taʾrīkh al-ʿIrāk al-Iḳtiṣādī fi 'l-Ḳarn al-Rābiʿ al-Hidjri*, Baghdad 1948; C. Elgood, *A Medical History of Persia*, 1951; Donaldson, *The Shīʾite Religion*, 1933; R. Strothmann, *Die Zwölfer-Schīʿa*, 1925 (summarised in *EI*[1], art. SHĪʿA); H. Laoust's introduction to *La Profession de Foi d'Ibn Batta*, 1958; Cl. Cahen, *L'évolution de l'iḳtāʿ*, in *Annales ESC*, 1953; and E. Tyan, *Institutions de droit public musulman*, ii, 1957, Chap. 1 (but cf. *Arabica*, 1958, 70 ff.).

From his unpublished London University thesis entitled *The Buwayhid dynasty of Baghdad from the accession of ʿIzz al-dawla to the end*, Maf. Kabīr has abstracted several articles, in particular *Cultural Development under the Buwayhids of Baghdad*, in *Journal of the Asiatic Society of Pakistan*, i, 1956.

Special studies to be noted are H. Bowen, *The last Buwayhids*, in *JRAS*, 1929; N. Abbott, *Two Buyid coins* (with detailed historical commentary), in *AJSL*, lvi, 1939; Cl. Cahen, *Notes pour l'histoire de la himaya*, in *Mélanges Massignon*, i; Amedroz, *Three years of Buwayhid rule*, in *JRAS*, 1901; idem, *Der Vizier Ibn al-ʿAmid*, in *Der Islam*, iii; M. H. Al-Yāsīn, *al-Ṣāḥib Ibn ʿAbbād*, Baghdād 1376/1957 (solely from the cultural point of view); E. Kühnel, *Die Kunst Persiens unter den Buyiden*, in *ZDMG*, 1956; Kurkis ʿAwwād, *al-Dār al-Muʿizzī fi Baghdād*, in *Sumer*, x, 1950-2. On foreign relations, Muḥ. Nāẓim, *The life and times of Maḥmūd of Ghazna*, 1931; M. Canard, *Les Hamdanides*, i, 1951; A. Kasrawī, *Shahriyārān-i gumnām*, Tehran 1335/1928 (on Ādharbāydjān in the 4th/10th-5th/11th centuries).

(Cl. Cahen)

BUXAR, a town on the south bank of the Ganges in the Shāhābād district of the Patna division of the Indian State of Bihār. Population: 18,087. (1951 Census). It seems to have been a place of great sanctity in ancient times and was originally called Vedagarbha 'the womb of the Vedas'. Local tradition derives the name of the town from a tank originally called *aghsar*, or effacer of sins, which was later changed to *baghsar*, the tiger tank. It was at Buxar, on 23 October 1764, that the forces of Mīr Ḳāsim, ex-nawāb of Bengal, and Shudjāʿ al-Dawla, nawāb-wazīr of Awadh, were defeated by Major Hector Munro. This victory completed the work of Plassey. Henceforward the English were the unchallenged rulers of Bengal. It also placed Awadh at the disposal of the English Company.

Bibliography: C. E. A. W. Oldham, *The Battle of Buxar*, in *JBORS*, Vol. xii, 1-38; A. L. Srivastava, *Shuja-ud-Daulah*, Calcutta 1939, Vol. i, Ch. viii. (C. Collin Davies)

BŪYIDS [see BUWAYHIDS].

BUYURULDU (بيورلدى), also Buyrultu, Buyurdu, etc., order of an Ottoman grand vizier, vizier, *beglerbegi*, *defterdār*, or other high official to a subordinate. The term is derived from the word *buyuruldı*, 'it has been ordered', in which the order usually ends and which gradually developed into a conventional sign. *Buyuruldu*s are of two main types: a) decisions written in the margin (*der kenār*) of an incoming petition or report, often ordering that a *fermān* (or *berāt*, etc.) be issued to a certain effect (cf. *Ḳānūnnāme-i Āl-i ʿUthmān*, *TOEM*, Suppl., 1330, 16); b) orders issued independently (*reʾsen*, *beyāḍ üzerine*). The form of many of the latter was modelled on the Sultans' *fermān* [*q.v.*]. Many *Buyuruldu*s had a seal and (or) a *tughra*-like substitute of a signature, the so-called *pençe* [*q.v.*], affixed. Sometimes the word *ṣaḥḥ*, 'it is correct', was added for authentication. *Buyuruldu*s deal with various administrative matters, especially appointments, grants of fiefs, economic regulations, safe passage, etc. Originals are preserved in many archives in Turkey and elsewhere. The *Başvekâlet Arşivi* [*q.v.*] at Istanbul also possesses numerous volumes of *Buyuruldu* copies. Other texts are found in *inshā* works (*e.g.*, library of Türk Tarih Kurumu, Ankara, MS no. 70; Bibl. Nat., Paris, suppl. turc, MS no. 90) and in the records (*sidjill*) of *Sharīʿa* courts.

Bibliography: I. H. Uzunçarşılı's articles in *Belleten*, iv (1940), 497 ff., v (1941), 101-57, 289-318 (with photos.) and his *O. D. Merkez ve Bahriye Teşkilâtı*, Ankara 1948, index; L. Fekete, *Einführung in die osman.-türk. Diplomatik*, Budapest 1926, liv-lv; J. Deny, *Sommaire des archives turques du Caire*, le Caire 1930, 147-8; U. Heyd, *Ottoman Documents on Palestine* 1552-1615, Oxford 1959, index. See further DIPLOMATIC.

(U. Heyd)

BUZĀʿĀ (or Bizāʿā), a locality in northern Syria about forty kilometres east of Aleppo in the rich valley of the Nahr al-Dhahab or Wādī Buṭnān [*q.v.*], which has lost its former prosperity in favour of its western suburb Bāb al-Buzāʿa, today the small town of al-Bāb. The freshness of its gardens and its commercial activity attracted the attention of Ibn Djubayr who stopped there in 580/1184, on the caravan route from Manbidj to Aleppo. Half town and half village according to that writer, and dominated by a citadel from which its strength was derived, it managed to withstand after the establish-

ment of the Crusaders in Syria numerous attacks resulting either in the plunder of its territory, or even, in 532/1138, its seizure by the Franks, followed in the same year by Zankī's reoccupation. An inscription there mentions in 567/1171 the name of Ismāʿīl, the son of Nūr al-Dīn, before the town fell in 571/1175 to Ṣalāḥ al-Dīn, and passed after that into the hands of the Mongols in 657/1258. It is also known that in 570/1174-75 there was a massacre of the Ismāʿīlīs there who seem to have dominated the country formerly, and that in the vicinity the ***mashhad*** of ʿAḳīl b. Abī Ṭālib was venerated.

It was during the period of the Mamlūks that the village of al-Bāb, whose name was not separated from that of Buzāʿa in the medieval texts, appears to have clearly taken the lead. The importance of this place, which was the principal town of the 24th district of the province of Aleppo, and which Yāḳūt formerly described as an exportation point of cotton stuffs, is attested by the construction at that time of its great mosque (connected with the erection of the minarets of Buzāʿa and Tādhif, dated by inscriptions of 756/1355 and 755/1354), and by the number of administrative measures which were engraved on the gates of this building between 775/1374 and 858/1454.

Several epigraphical fragments are preserved as well in the neighbouring village of Tādhif.

(J. Sourdel-Thomine)

BŪZ-ABEH, governor of Fārs under the Saldjūḳs. Būz-Abeh was one of the *amīrs* of Mengubars, the governor of Fārs, for whom he administered the province of Khūzistān. He was also in the army of his superior when the latter, accompanied by other *amīrs*, moved against the Saldjūḳ sultan Masʿūd and was made prisoner at the battle of Kurshanba (other sources call the scene of the encounter Pandj Angusht), later being put to death, in 532/1137-38. Since, after their victory, the sultan's troops began to plunder the enemy camp, Būz-Abeh attacked and dispersed them. Several prominent *amīrs* of the sultan's retinue were captured, and the sultan himself escaped only with great difficulty, in the company of the *atabeg* Ḳara Sonḳor. Enraged at the death of his superior, Būz-Abeh had all of the prisoners executed, among whom was the son of Ḳara Sonḳor. In order to avenge his son, the *atabeg* undertook in the following year an expedition against Fārs, where he installed the Saldjūḳ prince Saldjūḳshāh. But scarcely had Ḳara Sonḳor retired with his troops when Būz-Abeh, who had in the interim withdrawn to the fortress of Safīddiz (*Ḳalʿat al-bayḍāʾ*), reappeared and conquered the defenceless Saldjūḳshāh (534/1139-40). Sulṭān Masʿūd was forced then to abandon to him the province of Fārs. Būz-Abeh found an opportunity to confirm his situation by allying himself with two other *amīrs*, ʿAbbās, ruler of Rayy, and ʿAbd al-Raḥmān Tughanyarak. The sultan tolerated for some time the tutelage of these men, but succeeded in freeing himself by having assassinated the two latter *amīrs*. Būz-Abeh marched against the sultan, but was captured and killed at the battle of Mardj Ḳaratakīn, a day's march from Hamadhān, in 542/1147. Būz-Abeh appears to have left a good administrative record at Shīrāz. Conforming with the tendency of all of the generals educated in the Saldjūḳ tradition, he had erected a *madrasa*, richly endowed and at first Ḥanafī, though it became later Shāfiʿī.

al-**BŪZADJĀNĪ** [see abuʾ l-wafāʾ].

BUZĀKHA, a well in Nadjd in the territory of Asad or their neighbours Ṭayyiʾ (cf. *Mufaḍḍalīyāt*, 361, n. 3). The forces of the Banū Asad, who, led by the false prophet Ṭulayḥa, had relapsed from Islam on Muḥammad's death, were defeated at Buzākha in 11/632 by Abū Bakr's general Khālid b. al-Walīd. Khālid's army was reinforced for the battle by 1000 men of Ṭayyiʾ, detached from Ṭulayḥa's side; Ṭulayḥa had the help of ʿUyayna b. Ḥiṣn and 700 men from Fazāra of Ghaṭafān, old allies of Asad's. After fierce fighting, ʿUyayna saw that Ṭulayḥa's alleged prophetic powers were in practice proving useless against the Muslims, and fled the field. Ṭulayḥa had to flee to Syria; Asad submitted to Khālid; and neighbouring tribes like ʿĀmir, who had been awaiting the outcome, now rallied to Islam.

BUZURG b. SHAHRIYĀR, a Persian ships'-captain (*nākhudā*) of Rām-Hurmuz of the first half of the 4th/10th century and author of the *Kitāb ʿAdjāʾib al-Hind* (Marvels of India). This is a collection in Arabic of 134 stories and anecdotes gathered by the author from ships'-captains, pilots, traders and other seafaring men who used to sail the Indian Ocean and liked to spin a yarn about their adventures in East Africa, the Indian Archipelago and China. Incidentally they also give some information about these countries and the customs of their inhabitants. Sometimes the year of the event referred to is given, the latest being 342/953. The language of the book shows some Middle-Arabic traits (see ʿarabiyya, above, 570b).

Bibliography: The Arabic text, extant only in the Istanbul MS. Aya Sofya 3306, was edited by P. A. van der Lith together with a French translation by M. Devic, Leiden 1883-6. A new translation in French by J. Sauvaget is given in his *Mémorial*, i, Damascus 1954, 188-300; Russian translation by R. I. Ehrlich, Moscow 1959. See also Brockelmann S I, 409.

BUZURGMIHR, Iranian personal name (arabicised form Buzurdjmihr) which according to a tradition transmitted by Iranian and Arab writers, was given to a man endowed with every ability and virtue who was the minister of Khusraw I Anūsha-

rawān (6th century A.D.). The earliest authorities who were acquainted with the Pahlawī *Khvadhāynāmāgh* ("Book of Sovereigns"), written towards the end of the Sāsānid period (7th century), the source of the oldest accounts of pre-Islamic Iranian history penned by Arab writers (al-Ṭabarī, Ibn Ḳutayba), have no reference to Buzurgmihr. It is only in later works that he becomes the hero of anecdotes deriving from popular tradition (in Thaʿālabī's "History of the Persian Kings", a section of the *Ghurar al-Siyar* — *vide EI*[1], iv, 770 col. a, and, more freely than one would expect, in Firdawsī's "Book of Kings", the *Shāh-nāma*), and sometimes the originator of numerous wise precepts, survivals from the collections (*andarz*) of the Sāsānid period, preserved in some minor post-Sāsānid Pahlawī works (notably the *Pandnāmāgh-e Vuzurghmihr-e Bokhtaghān*, "the Book of precepts of Buzurgmihr son of Bōkhtagh"). These precepts were translated into Arabic and Persian by several authors: al-Masʿūdī, Firdawsī (in whose poem Buzurgmihr presents the king with a book of wisdom, the fruit of their conversations, which in reality derived from the *Pandnāmāgh*), Niẓām al-Mulk, and others. There are three anecdotes concerning Buzurgmihr which are significant because of their elements of popular origin: I—the King of Persia dreams that, as he is drinking, a pig puts his snout in the cup. No one can interpret this until the young Buzurgmihr informs the king that one of his wives is bestowing her favours on another and that, in order to be certain, the women must be summoned to appear naked: among them is discovered a youth disguised as a woman (in addition to the popular theme of the oneiromancy practised by an adolescent, one recalls a similar review of women in a tale from ancient Egypt). II—Buzurgmihr discovers the secret of the game of chess, sent as a challenge by the King of India to the King of Persia; he then invents the game of tric-trac, the secret of which the latter and his counsellors do not succeed in discovering (the source of this is a small Pahlawī work of a popular type, the "Story of the Game of Chess", *Mādhighān-e čatrang*). III—Buzurghmihr, in disgrace and in prison, is recalled when the Byzantine Emperor refuses to pay tribute to the Persian sovereign unless he guesses the contents of a sealed coffer which he has sent him; the king summons Buzurgmihr, who resolves the enigma and is reinstated in royal favour (to the preceding theme is joined that of the sage liberated and recompensed for his wisdom: Nöldeke recognised the similarity of this episode with another in the history of the sage Aḥiḳar). These anecdotes put Buzurgmihr in direct contact with popular tradition, but is he a historical or a legendary figure? A. Christensen, in a noteworthy article, has rightly noted that, apart from the references to Buzurgmihr, there are others relating to the sentence of death passed by Hormizd, the son and successor of Anūsharawan, on three of the latter's counsellors, one of whom bore the name of Burzmihr (in Thaʿālibī), Burzmihr, then Simāh Burzēn—a hypocoristic of Burzmihr (in Firdawsī). In the name of Burzōē, the famous physician, the supposed author of the Pahlawī adaptation of *Kalīla wa Dimna* who was a contemporary of Anūsharawān, Justi (*Iran Namenbuch*, 74) and Christensen see the same root *burz* ("high") and a hypocoristic ending (as in Burzēn): as names with the root *burz-*, peculiar to the Sāsānid period, are very rare, Burzmihr ("[protected by] the *High* Mithra") is semantically related to Buzurgmihr ("[protected by] the *Great* Mithra"); further it is enough to write both words in the Arabic script in order to see how easily they can be confused. Finally, certain passages in the preface to the *Kalīla*, traditionally attributed to Burzōē and known through the Arabic translation of Ibn al-Muḳaffaʿ, give biographical details which the authors also attribute to Buzurgmihr or divide them between both personalities. To sum up, Iran in the reign of Anūsharawān was influenced by Indian civilisation, thanks to certain intellectuals, of whom Burzōē was one, and who was made famous by his Pahlawī adaptation of the Pančatantra; the introduction of chess in Iran was attributed to him, a number of precepts and maxims, and later certain characteristics of sagacity and divination which already existed in popular tradition; then a false reading of his name as transcribed in Arabic led to the creation of a double personality.

Bibliography: A. Christensen, *La légende du sage Buzurjmihr*, in *Acta Orientalia*, 1930, iii/1, 81-128 (a basic and detailed study, with an analysis of and extracts from the sources); idem, *Iran sous les Sassanides* (particularly 57-8, and index, *s.vv.* Vuzurgmihr, Burzōē); on the *Ẓafar-nāma*, *vide* the text in Ch. Schefer, *Chrest. persane*, i, 1-7 and Christensen's trans. in *La légende . . .*, 121; *Grundriss der Iran. Philologie*, ii, 346-7.

(H. Massé)

BUZURG-UMMĪD, Kiya, second *dāʿī* (1124-1138) at Alamūt [*q.v.*] of the Nizārī Ismāʿīlīs. He was evidently related by marriage to the ruling families of Māzandarān. From 495-518/1102-1124 he was Ismāʿīlī governor of Lummasar, a stronghold in the Rūdbār of Alamūt. He with three other chiefs had captured it for Ḥasan-i Ṣabbāḥ when its holders had broken their agreement with the Ismāʿīlīs and had planned to call in the Saldjūḳ *amīr*, Nūshtagīn Shīrgīr. Using local forced labour, he rebuilt it, equipping it with water and fine gardens. There he successfully resisted the last and gravest attack on the Ismāʿīlīs by Muḥammad Tapar's troops under Shīrgīr in 511/1117. In 518/1124 Ḥasan-i Ṣabbāḥ on his deathbed appointed him his successor as head *dāʿī* of the sect, with three associates. Under his rule the Ismāʿīlī state retained its independence against renewed attacks [see alamūt (II) The Dynasty] several new strongholds were established, including Maymūndiz in 520/1126. In 526/1131 he defeated and killed a Zaydī *imām*, Abū Hāshim, who had arisen in Daylamān and had followers as far as Khurāsān. Buzurg-ummīd died in 532/1138, leaving the position of *dāʿī* to his son Muḥammad. He was buried next to Ḥasan-i Ṣabbāḥ, where his tomb was piously visited. His descendants formed the leading family in Alamūt.

Bibliography: Rashīd al-Dīn, *Djāmiʿ al-Tawārīkh*, section on Nizārīs; Djuwaynī, iii, 208 ff.; and further in M. G. S. Hodgson, *The Order of Assassins*, The Hague 1955, index.
